SUPPLEMENTARY INFORMATION: The objective of this effort is to organize and conduct a peer review of the CONTAIN code, light water reactor version. The peer review is to provide an independent assessment of the modeling capabilities and limitations, and adequacy of the CONTAIN code. The results of the peer review are to be documented in a summary report that describes the results of the independent assessment by the peer review participants and the technical acceptability of the code.

A peer review committee has been organized using recognized experts from the national laboratories, universities, CONTAIN user community and independent contractors. Meetings are held to discuss and evaluate the applicability and state of validation of the various CONTAIN phenomenological models. The meeting scheduled for May 24–27, 1993, is the first meeting of the CONTAIN Peer Review Committee. The Committee will (1) review the Committee charter, (2) review the code design objectives and targeted applications, (3) select a process for conducting the review, (4) identify and select a standard for determining technical adequacy, and (5) receive briefings from the code development staff about the integrated code and the detailed models in the code.

Dated at Rockville, Maryland, this 26th day of April, 1991.

Editorial Note: This document was received at the Office of the Federal Register on April 29, 1993.

For the U.S. Nuclear Regulatory Commission.

Chief, Accident Evaluation Branch, Division of Systems Research, Office of Nuclear Regulatory Research.

[FR Doc. 93–10465 Filed 5–3–93; 8:45 am]

BILLING CODE 7590–01–M

[Docket No. 999–0001; License No. 2467–3128; EA 92–203]

Order Modifying Order Imposing Civil Monetary Penalty

In the Matter of Capital Materials Testing, Inc. Ballston Spa, New York 12020.

I

Capital Materials Testing, Inc. (Licensee) is the holder of a Byproduct Material License issued by the State of New York which authorizes the Licensee to use byproduct materials in industrial radiography and replacement of sources in accordance with the conditions specified therein. On October 6–7, 1992, the New York State Licensee was working at a field site in Pittsfield, Massachusetts under NRC jurisdiction subject to the reciprocity requirements set forth in 10 CFR 150.20.

II

An NRC inspection of the Licensee's activities was conducted on October 6–7, 1992. The results of the inspection indicated that the Licensee had not conducted its activities in full compliance with NRC requirements. A written Notice of Violation and Proposed Imposition of Civil Penalty (Notice) was served upon the Licensee by letter dated November 20, 1992. The Notice stated the nature of the violations, the provisions of the NRC's requirements that the Licensee had violated, and the amount of the civil penalty proposed for the violations. The Licensee responded to the Notice in a letter, dated December 9, 1992. In its response, the Licensee did not deny the violations, but requested remission of the civil penalty.

After consideration of the Licensee's response and the statements of fact, explanation, and argument for mitigation contained therein, the NRC staff determined that the violations occurred as stated and that the penalty proposed for Violation I designated in the Notice should be imposed. Accordingly, NRC issued an Order Imposing a Civil Monetary Penalty to the licensee on February 3, 1993. The licensee responded in a letter dated February 24, 1993 and requested a hearing. In correspondence dated February 26, 1993 and March 13, 1993, the NRC confirmed telephone conversations between Mr. Stanley Liebert, Licensee President, and NRC representatives in which the Licensee requested delay in processing of the Licensee's February 24, 1993 hearing request until after NRC reviewed additional information the Licensee was to submit for consideration. On March 25, 1993, the Licensee submitted the additional information. The information specified the corrective actions taken by the Licensee following the October 6–7, 1992 NRC inspection and provided financial information to support the Licensee's assertion concerning its ability to pay.

III

Upon review of the facts of this case, including the information submitted in the licensee's March 25, 1993 letter, I find that the Licensee's prompt and extensive corrective actions support a $2,500 reduction of the $7,500 civil penalty imposed in the February 3, 1993 Order, based on mitigation consistent with the NRC Enforcement Policy.

IV

In view of the foregoing, and pursuant to Section 234 of the Atomic Energy Act of 1954, as amended (Act), 42 U.S.C. 2282, and 10 CFR 2.205, *it is hereby ordered that:* The NRC February 3, 1993 Order Imposing a Civil Monetary Penalty in the amount of $7,500 be modified to the amount of $5,000.

V

The Licensee may request that the NRC proceed with the Licensee's February 24, 1993 request for a hearing within 10 days of the date of this Order. If the Licensee requests that the NRC proceed with its hearing request, the Commission will issue an Order designating the time and place of the hearing. If the Licensee does not request the NRC to proceed with its request for hearing within 10 days of the date of this Order, the provisions of this Order shall be effective without further proceedings. If full payment has not been made by this time, or if either arrangements for payment over time are not completed by that time, the matter may be referred to the Attorney General for collection.

In the event the Licensee requests proceeding with a hearing as provided above, the issue to be considered at such hearing shall be whether, on the basis of Violation I, admitted by the Licensee, this Order should be sustained.

For the Nuclear Regulatory Commission.

Dated at Rockville, Maryland, this 26th day of April 1993.

Hugh L. Thompson, Jr.,

Deputy Executive Director for Nuclear Materials Safety, Safeguards and Operations Support.

[FR Doc. 93–10458 Filed 5–3–93; 8:45 am]

BILLING CODE 7590–01–M

[Docket No. 50–482]

Wolf Creek Nuclear Operating Corp.; Consideration of Issuance of Amendment to Facility Operating License and Opportunity for a Hearing

The U.S. Nuclear Regulatory Commission (the Commission) is considering issuance of an amendment to Facility Operating License No. NPF–42, issued to Wolf Creek Nuclear Operating Corporation (the licensee), for operation of the Wolf Creek Generating Station (WCGS) located in Coffey County, Kansas.

The proposed amendment would revise the WCGS operating license and technical specifications (TS) to increase the rated core power level from the present specification 3411 megawatts thermal (MWt) to a specification of 3565 MWt, thereby allowing the plant to operate at a nuclear steam supply system power of 3579 MWt. The revisions would also allow the licensee to implement a proposed hot leg temperature (T_{HOT}) reduction program that would extend the range of T_{HOT} down 15 degrees fahrenheit from the current design value of 618.2 degrees fahrenheit. The licensee intends to operate with a 5 degree fahrenheit reduction in T_{HOT}. the proposed amendment would change: (1) The definition of rated thermal power in Section 1.25 of the TS, (2) the overtemperature delta T and overpower delta T setpoint parameters in Table 2.2–1, "Reactor Trip System Instrumentation Trip Setpoints," and (3) the indicated reactor coolant system T_{avg} limit in Table 3.2–1, "DNB Parameters," and in Section 3/4.2.5 of the Bases.

Before issuance of the proposed license amendment, the Commission will have made findings required by the Atomic Energy Act of 1954, as amended (the Act) and the Commission's regulations.

By June 3, 1993, the licensee may file a request for a hearing with respect to issuance of the amendment to the subject facility operating license and any person whose interest may be affected by this proceeding and who wishes to participate as a party in the proceeding must file a written request for a hearing and a petition for leave to intervene. Requests for a hearing and a petition for leave to intervene shall be filed in accordance with the Commission's "Rules of Practice for Domestic Licensing Proceedings" in 10 CFR part 2. Interested persons should consult a current copy of 10 CFR 2.714 which is available at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC 20555 and at the local public document rooms located at the Emporia State University, William Allen White Library, 1200 Commercial Street, Emporia, Kansas 66801 and Washburn University School of Law Library, Topeka, Kansas 66621. If a request for a hearing or petition for leave to intervene is filed by the above date, the Commission or an Atomic Safety and Licensing Board, designated by the Commission or by the Chairman of the Atomic Safety and Licensing Board Panel, will rule on the request and/or petition; and the Secretary or the designated Atomic Safety and Licensing Board will issue a notice of hearing or an appropriate order.

As required by 10 CFR 2.714, a petition for leave to intervene shall set forth with particularity the interest of the petitioner in the proceeding, and how that interest may be affected by the results of the proceeding. The petition should specifically explain the reasons why intervention should be permitted with particular reference to the following factors: (1) The nature of the petitioner's right under the Act to be made a party to the proceeding; (2) the nature and extent of the petitioner's property, financial, or other interest in the proceeding; and (3) the possible effect of any order which may be entered in the proceeding on the petitioner's interest. The petition should also identify the specific aspect(s) of the subject matter of the proceeding as to which petitioner wishes to intervene. Any person who has filed a petition for leave to intervene or who has been admitted as a party may amend the petition without requesting leave of the Board up to 15 days prior to the first prehearing conference scheduled in the proceeding, but such an amended petition must satisfy the specificity requirements described above.

Not later than 15 days prior to the first prehearing conference scheduled in the proceeding, a petitioner shall file a supplement to the petition to intervene which must include a list of the contentions which are sought to be litigated in the matter. Each contention must consist of a specific statement of the issue of law or fact to be raised or controverted. In addition, the petitioner shall provide a brief explanation of the bases of the contention and a concise statement of the alleged facts or expert opinion which support the contention and on which the petitioner intends to rely in proving the contention at the hearing. The petitioner must also provide references to those specific sources and documents of which the petitioner is aware and on which the petitioner intends to rely to establish those facts or expert opinion. Petitioner must provide sufficient information to show that a genuine dispute exists with the applicant on a material issue of law or fact. Contentions shall be limited to matters within the scope of the amendment under consideration. The contention must be one which, if proven, would entitle the petitioner to relief. A petitioner who fails to file such a supplement which satisfies these

VOL 58 ISS 84 MY 4 1993 UMI

requirements with respect to at least one contention will not be permitted to participate as a party.

Those permitted to intervene become parties to the proceeding, subject to any limitations in the order granting leave to intervene, and have the opportunity to participate fully in the conduct of the hearing, including the opportunity to present evidence and cross-examine witnesses.

A request for a hearing or a petition for leave to intervene must be filed with the Secretary of the Commission, U.S. Nuclear Regulatory Commission, Washington, DC 20555, Attention: Docketing and Services Branch, or may be delivered to the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington, DC 20555, by the above date. Where petitions are filed during the last 10 days of the notice period, it is requested that the petitioner promptly so inform the Commission by a toll-free telephone call to Western Union at 1–(800) 248–5100 (in Missouri 1–(800) 342–6700). The Western Union operator should be given Datagram Identification Number N1023 and the following message addressed to Suzanne C. Black, Director, Project Directorate IV–2: Petitioner's name and telephone number; date petition was mailed; plant name; and publication date and page number of this **Federal Register** notice. A copy of the petition should also be sent to the Office of the General Counsel, U.S. Nuclear Regulatory Commission, Washington, DC 20555, and to Jay Silberg, Esq., Shaw, Pittman, Potts and Trowbridge, 2300 N Street, NW., Washington, DC 20037, attorney for the licensee.

Nontimely filings of petitions for leave to intervene, amended petitions, supplemental petitions and/or requests for hearing will not be entertained absent a determination by the Commission, the presiding officer or the presiding Atomic Safety and Licensing Board that the petition and/or request should be granted based upon a balancing of the factors specified in 10 CFR 2.714(a)(1)(i)–(v) and 2.714(d).

If a request for a hearing is received, the Commission's staff may issue the amendment after it completes its technical review and prior to the completion of any required hearing if it publishes a further notice for public comment of its proposed finding of no significant hazards consideration in accordance with 10 CFR 50.91 and 59.92.

For further details with respect to this action, see the application for amendment dated January 5, 1993, which is available for public inspection at the Commission's Public Document Room, the Gelman Building, 2120 L Street, NW., Washington DC 20555, and at the local public document rooms located at the Emporia State University, Williams Allen White Library, 1200 Commercial Street, Emporia, Kansas 66801 and Washburn University School of Law Library, Topeka, Kansas 66621.

Dated at Rockville, Maryland, this 26 day of April 1993.

For the Nuclear Regulatory Commission.

Suzanne C. Black,

Director, Project Directorate IV–2, Division of Reactor Projects III/IV/V, Office of Nuclear Reactor Regulation.

BILLING CODE 7590–01–M

[Docket No. 030–01244; License No. 06–00819–03; EA 93–016]

Confirmatory Order Modifying License (Effective Immediately)

In the Matter of Yale-New Haven Hospital New Haven, Connecticut.

I

Yale-New Haven Hospital (Licensee), New Haven, Connecticut, is the holder of Byproduct/Source Material License No. 06–00819–03 (License), issued by the U.S. Nuclear Regulatory Commission (NRC or Commission) pursuant to 10 CFR parts 30 and 33. The License authorizes the Licensee to perform diagnostic and therapeutic procedures with the radioactive material as well as research. This is a broad scope license. The License was most recently renewed on August 13, 1985, and was due to expire on August 31, 1990 but was extended by the NRC pending staff action on the Licensee's renewal request and is considered to be in timely renewal.

II

Between December 3, 1992, and January 27, 1993, the NRC performed two inspections of licensed activities at the Licensee's facility. The inspections were conducted to review two incidents involving therapeutic misadministrations and a failure to control licensed material that occurred between November 30 and December 1, 1992, and on January 21, 1993, which are described in detail in a Notice of Violation and Proposed Imposition of Civil Penalties issued concurrently on this date. During the inspections, five violations of NRC requirements were identified.

The violations associated with the first incident included: (1) The failure to perform a survey of patient linens prior to removing them from the patient's room as required; (2) the failure to maintain security and control of licensed material; (3) the existence of radiation levels above the regulatory limit in unrestricted areas; and (4) the failure to implement written procedures and policies to ensure that brachytherapy administrations were done in accordance with the written directive as required under the Licensee's Quality Management (QM) program. One violation of the Licensee's QM program was identified with regard to the second incident in that the administering physician failed to verify that the treatment site for a brachytherapy treatment using a High Dose Rate afterloader device was in accordance with the written directive and treatment plan.

There violations are of significant concern because in the first incident, a failure to perform a required survey resulted in the failure to maintain control of a radioactive source and could have resulted in misuse of the material by, and created a potential for an unnecessary excessive exposure to, members of the public. Secondly, the failure to: (1) Implement QM procedures that would identify if a brachytherapy source were not properly implanted or inadequately secured against accidental removal and (2) follow QM procedures requiring that the treatment site be confirmed with the written directive and treatment plan prior to administering the treatment dose directly contributed to misadministrations to two patients.

III

The violations are particularly disturbing to the NRC since the Licensee possesses a large broad scope license which places a significant responsibility on the Radiation Safety Committee (RSC), as well as the Radiation Safety Officer (RSO), to ensure that licensed activities are conducted safely and in accordance with NRC requirements. Although the NRC issued a Notice of Violation and Proposed Civil Penalty to the Licensee on August 3, 1989, for the improper disposal of a radioactive source resulting from inadequate control of licensed material, as well as a Severity Level III Notice of Violation to the Licensee on April 15, 1992, for other violations of NRC requirements associated with use of brachytherapy sources, sufficient management attention has not been provided to improve the radiation safety program, as evidenced by the recent findings.

The Licensee's failure to maintain sufficient control of radioactive materials raises significant questions regarding the adequacy of oversight of

activities at its facility, as well as the ability of the Licensee to assure that activities at that facility are conducted safely and in accordance with requirements. Accordingly, without additional requirements, there is a substantial question as to whether licensed activities will be adequately controlled at the Licensee's facility.

IV

In a letter to the NRC, dated February 10, 1992, the Licensee committed to: (1) Retain the services of an independent expert to perform an assessment of the radiation safety program, (2) make available to NRC the final assessment report, and (3) provide to NRC quarterly reports on the Licensee's progress in implementing the recommendations developed as a result of the assessment. During a telephone conversation on February 22, 1993, between Ravinder Nath, Ph. D., of the Licensee's staff and Mr. James Dwyer of the NRC Region I staff, the Licensee committed to retaining the services of an independent expert in order to perform an assessment of the radiation safety program that will include the program areas described in Section V of this Order. In view of the concerns set forth in Section III of this Order, I have concluded that these additional actions are needed to increase and improve management attention to licensed activities so as to assure that these activities are conducted safely and in accordance with NRC requirements. Specifically, I have determined that the public health and safety require that Licensee No. 06–00819–03 be modified to confirm the Licensee's commitment to: (1) The performance of an independent assessment of the Licensee's radiation safety program, and, in particular, the management of that program, and (2) development and implementation of an improvement program to correct the deficiencies identified by the assessment. The Licensee consented to the issuance of this Confirmatory Order during the February 22, 1993 telephone call referenced above. Pursuant to 10 CFR 2.202, based on the significance of the violations described above, and on the licensee's consent to the Order, I have also determined that the public health and safety require that this Order be immediately effective.

V

Accordingly, pursuant to sections 81, 161b, 161i, 161o, 182 and 186 of the Atomic Energy Act of 1954, as amended, and the Commission's regulations in 10 CFR 2.202 and 10 CFR parts 30 and 33, *it is hereby ordered*, Effective immediately, that License No. 06–00819–03 is modified as follows:

A. The Licensee shall retain the services of an expert, independent of the Licensee's staff, with extensive experience in the management and implementation of a broad scope radiation safety program to perform an assessment of the Licensee's radiation safety program and provide recommendations for a performance improvement program. Within 30 days from the date of this Order, the Licensee shall submit to the Regional Administrator, NRC Region I, for approval, the name and qualifications of the expert.

B. Within 120 days of NRC approval of the expert selection as described above, the assessment shall be completed, and a copy of the assessment report, including the expert's recommendations for an improvement plan, shall be submitted to the NRC within the following 15 days. The assessment of the Licensee's radiation safety program shall include, but not be limited to, a review of:

1. The Licensee's organization, and assigned responsibilities and authorities within that organization;

2. The Licensee's program for training and retraining individuals working with NRC-licensed materials, in NRC regulations, in the conditions of the License, in the licensee's QM program, and in safe practices for using licensed material;

3. The Licensee's methods of approving individuals for the use of licensed materials and developing procedures for the safe use of licensed materials;

4. The Licensee's program for training and qualifying all individuals involved in managing, supervising, inspecting and auditing licensed activities;

5. The Licensee's program of surveillance and audits to determine compliance by individual users of licensed materials with NRC regulations, the conditions of the NRC Licenses, the Licensee's QM program, and the Licensee's own procedures for the safe use of radioactive materials;

6. The adequacy of the existing staffing within the radiation safety department, to ensure that the items set forth in Section V.B.5 of this Order are adequately performed; and,

7. The Licensee's management of the radiation safety program, including the function of the Radiation Safety Committee and its methods of monitoring the program to ensure that problems are identified and promptly corrected.

C. Within 30 days of the Licensee's receipt of the assessment report, the Licensee shall submit a performance improvement plan to the Regional Administrator, NRC Region I, describing the methods of implementing the recommendations of the assessment report, or providing justification for alternate or no corrective action if any specific recommendations are not adopted. This plan shall include:

1. Action items completed or to be performed;

2. Schedules for, or dates of, completion of each specific action item; and

3. A system for monitoring and tracking the status and completion of the action items.

D. During implementation of the consultant's assessment, as well as the subsequent performance improvement plan, the Licensee shall provide written quarterly status reports to the NRC Region I office concerning the findings of the assessment, the development of the improvement plan, and the implementation of the plan, until such time as all items in the performance improvement plan have been implemented. Upon completion of all action items, a final report shall be submitted to the Regional Administrator, NRC Region I.

The Regional Administrator, NRC Region I, may, in writing, relax or rescind any of the above conditions upon demonstration by the Licensee of good cause.

VI

Any person adversely affected by this Confirmatory Order, other than the Licensee, may request a hearing within 20 days of its issuance. Any request for a hearing shall be submitted to the Secretary, U.S. Nuclear Regulatory Commission, ATTN: Chief, Docketing and Service Section, Washington, DC 20555. Copies also shall be sent to the Director, Office of Enforcement, U.S. Nuclear Regulatory Commission, Washington, DC 20555, to the Assistant General Counsel for Hearings and Enforcement at the same address, to the Regional Administrator, NRC Region I, 475 Allendale Road, King of Prussia, Pennsylvania 19406, and to the Licensee. If such a person requests a hearing, that person shall set forth with particularity the manner in which his interest is adversely affected by this Order and shall address the criteria set forth in 10 CFR 2.714(d).

If a hearing is requested by a person whose interest is adversely affected, the Commission will issue an Order designating the time and place of any hearing. If a hearing is held, the issue to be considered at such hearing shall be

VOL 58 ISS 84 MY 4 1993 UMI

whether this Confirmatory Order should be sustained.

Pursuant to 10 CFR 2.202(c)(2)(i), any person adversely affected by this Order other than the Licensee, may, in addition to demanding a hearing, at the time the answer is filed or sooner, move the presiding officer to set aside the immediate effectiveness of the Order on the ground that the order, including the need for immediate effectiveness, is not based on adequate evidence but on mere suspicion, unfounded allegations, or error.

In the absence of any request for hearing, the provisions specified in Section V above shall be final 20 days from the date of this Order without further order or proceedings. An answer or a request for hearing shall not stay the immediate effectiveness of this order.

For the Nuclear Regulatory Commission.

Dated at Rockville, Maryland, this 26th day of April 1993.

Hugh L. Thompson,

Deputy Executive Director for Nuclear Materials Safety, Safeguards, and Operations Support.

[FR Doc. 93-10459 Filed 5-3-93; 8:45 am]

BILLING CODE 7590-01-M

PHYSICIAN PAYMENT REVIEW COMMISSION

Requests for Letters of Intent and Notice for Cooperative Agreements and Grants for Fiscal Year 1993

AGENCY: Physician Payment Review Commission.

ACTION: Notice.

The Physician Payment Review Commission is soliciting letters of intent for the development of research and analysis proposals in support of its ongoing work to advise Congress on issues specified in its legislative mandate. The Commission is looking to researchers to propose methodologies and databases that can make significant contributions to its deliberations in a number of policy areas. This notice describes the application procedures, general policy considerations, and criteria to be used in reviewing applications for the Commission's cooperative agreements and grants. This will be a two-stage process. First, all interested applicants must submit a letter of intent. Based upon the criteria discussed below, the Commission will select researchers to submit full proposals.

Background on the Commission

The Physician Payment Review Commission was established in 1986 (Pub. L. 99-272) to advise the U.S. Congress on physician payment policy under Part B of the Medicare program. The 13-member Commission is comprised of physicians, health economists, health services research experts, and individuals representing the perspectives of Medicare beneficiaries, private payers, nurses, and others expert in the field of health policy. Supporting the Commission is an multidisciplinary staff with skills in research, policy analysis, and administration.

In 1990, the Commission's legislative mandate was substantially expanded to include topics in addition to Medicare physician payment. Its responsibilities now include consideration of a broader set of interrelated policies affecting the financing, quality, and delivery of health services. These include access to care for residents of underserved areas, including those covered by Medicaid, medical malpractice reform, development of information and tools to improve quality and contain costs, cost containment under health system reform, financing of graduate medical education, and ensuring competency of physicians.

The Commission submits an annual report to the Congress on March 31. It also submits a series of reports in May making recommendations on Medicare Volume Performance Standards, monitoring access to care and the financial liability of Medicare beneficiaries, and commenting on the President's budget.

Priority Areas for Cooperative Agreements and Grant Funding

The Commission invites proposals on the following topics:

(1) *Use of tools to improve medical practice.* The Commission is interested in learning about the uses of tools to improve medical practice—such as profiling, protocols, and practice guidelines—by physician organizations, health plans, and in practice settings. It would like to known about the extent to which these entities are actively working with physicians (both to involve them in developing tools and to feed back information to them) and innovative ways in which these tools are being used. It is interested in examining whether and how groups that have ongoing relationships with physicians are providing them with information or engaging in activities to foster more cost-effective delivery of medical services.

(2) *Use of physicians and other health professionals in HMOs and multispecialty group practices.* For its work on both health system reform and graduate medical education, the Commission would like to learn more about the staffing experiences of group and staff model HMOs and multispecialty group practices. The types of issues studied should address include how these organizations use physicians and nonphysician practitioners, how work is allocated among primary care physicians and specialists, the impact of their hiring practices on the market for primary and specialty care physicians, how much retraining they find necessary for new staff, and their role in graduate medical education.

(3) *Effects of changes in payment policy for assistants-at-surgery.* In recent years, payments to assistants-at-surgery were reduced from 20 percent to 16 percent of the principal surgeon's payment and procedures with physicians billing as an assistant-at-surgery less than 5 percent of the time nationwide were excluded from payment. In addition, policies such as overvalued procedures and implementation of the Medicare Fee Schedule have reduced payments further by reducing the payment rates for surgery that payment to assistants is tied to. The result of these policies was to reduce aggregate payment to assistants-at-surgery by more than half. The Commission is interested in studies that would assess the impact of these payment policies on the pattern of use of assistants and the implications of any changes for patient care.

(4) *Certification of physicians to perform procedures.* The Commission will be taking up issues related to physician competency and credentialing in the coming year. As part of that work, it needs information on how hospitals and professional organizations certify physicians to perform certain procedures. It is interested in both the performance measures applied and the process used to determine competence for credentialing purposes.

(5) *Bundling of physicians' services for payment purposes.* Medicare and private payers have long used a bundled payment for major surgery that includes at least a defined range of pre- and postoperative evaluation and management services as well as the operation. The Commission is interested in research on options for additional bundling of related services performed by a single physician (for example, combining payment for certain diagnostic tests with payment for procedures or visits).

The Commission will also consider proposed studies related to bundling services in which multiple physicians are involved. It has a particular interest in a study of trauma services that would analyze the services provided by critical care and trauma specialists, review current methods of payment for trauma services, develop options for paying for these services, and consider whether there is a need for financial incentives to encourage the use of these specialists in the care of medicare beneficiaries. (this study would have to be completed by December 31, 1993.)

(6) *Delivering care to inner city populations.* To support its work on improving access to care for underserved populations, the Commission would like to learn from existing successful programs. The type of study it has in mind would: (1) Develop criteria for determining program success, (2) using those criteria, identify successful programs, (3) define the characteristics of these programs that have contributed to their success and determine whether there are common elements among successful programs that distinguish them from weak programs, and (4) assess which elements that increase the chances for success can be influenced through policy measures.

(7) *Risk measurement.* The Commission is interested in research to explore approaches to risk measurement that would be applicable to applying risk adjustments to the premiums paid to plans by an employer or a local health board. In particular, the Commission is interested in risk measures based on demographic data or health status (as opposed to those based on prior utilization). The Commission is specifically interested in identifying databases that could be used for testing the ability of such risk adjusters to predict average utilization for groups of enrollees.

(8) *Managed care and physicians.* The Commission, as part of its work on health system reform, is interested in the types of arrangements that managed-care plans, especially IPAs, PPOs, and point-of-service plans, make with physicians. It is interested in exploratory research to address several questions: (1) How do managed-care plans select physicians for their networks and remove physicians from networks; (2) how do they pay their primary-care physicians and their specialists (e.g., what types of capitation arrangements and fee schedules are used and for which physicians); (3) how do they monitor the care delivered by their physicians (e.g., what use is made of techniques such as profiling); and (4) what methods do they use to influence the practice patterns of their physicians (e.g., how do they use practice guidelines).

(9) *Categorization of ICD-9-CM diagnostic data.* The Commission is interested in developing a general-purpose research tool using ICD-9-CM diagnosis data. It plans to use this tool to investigate access to care in the elderly population using both outpatient and inpatient diagnostic data available on Medicare claims records.

At a minimum, it is looking for a summary and critique of the currently available commercial software packages that categorize patients by diagnosis and procedure. In addition, it is interested in developing a database (or possibly software) to analyze diagnosis data along several dimensions, including: (1) Broad and detailed categories of disease; (2) conditions avoidable through early detection or preventive care; (3) stage of disease (as in cancer staging); (4) conditions requiring follow-up care; (5) conditions requiring routine and periodic monitoring; (6) conditions attributable to socioeconomic but possibly non-medical factors (malnutrition, contagious disease); (7) chronic diseases common in the elderly; (8) conditions that limit ability to travel for care; (9) conditions indicative of significant cognitive impairment; (10) conditions for which there are clear-cut alternative surgical and medical treatment paths, and (11) such other categories as the researcher believes would be helpful in assessing access to care and patterns of health care delivery.

(10) *Episode of care analysis.* The Commission is interested in research to develop flexible definitions of episodes of care for the elderly, along with methods to categorize patterns of care. It intends to apply this research to its Medicare claims files to analyze differentials in access to care across the Medicare population. An example might clarify the type of research that is needed. A typical episode might center around hospitalization for diabetic ketoacidosis, and would examine the patterns of service use both before and after hospitalization. A lack of care prior to hospitalization or a lack of follow-up after discharge might both be considered indicators of poor access. This research project would determine a list of such sentinel events, appropriate pre- and post-event periods to include in the episode, and markers for adequate and inadequate care both prior to and following the event.

Application Process

The Commission encourages applications that seek to make significant contributions to knowledge in any of the areas mentioned above. All interested organizations that wish to be considered for an award must submit a letter of intent.

Criteria for Letter of Intent

Six copies of the letter of intent must be submitted by June 7, 1993. The letter should be double-spaced and contain the following:

1. Proposed area of research.
2. Brief summary of the application's objectives (2-3 paragraphs).
3. Brief summary of the proposed project including issues to be examined, research design, analysis plan, and date sources as appropriate (not to exceed 3-5 pages).
4. Resources available to conduct project (not to exceed 1 page).
5. Estimated budget and duration of project (not to exceed 1 page).
6. Knowledge and experience of principal investigator (not to exceed 1 page).

Applicants are discouraged from including extensive discussions of the nature of the problem, extensive reviews of the literature, general statements of capabilities, and summaries of the Commission's statements on the issues to be addressed.

Evaluation of Letters of Intent

Applicants' letters of intent will be reviewed by a technical review panel composed of at least three (3) persons. The panel will evaluate all letters and determine which applicants will be requested to submit a complete proposal. The recommendations for review will be based on the following criteria.

1. The relevance of the project to the Commission's work.
2. Description of the project objectives.
3. The adequacy of the study design, including specific hypotheses to be examined and data sources, as appropriate.
4. What the project will accomplish and how it relates to or differs from previous work in the area.
5. Investigator's knowledge and experience in the area.
6. The level of effort needed to conduct the project.

In addition to the recommendation of the review panel, the Commission may consider other factors in selecting which applicants will be asked to submit a formal proposal. These include compatibility of applications with

VOL 58 ISS 84 MY 4 1993 UMI

Commission priorities, as judged by senior staff, and the availability of resources.

The Commission will notify those applicants who have been selected to submit full proposals by sending them a formal Request for Proposal. Applicants will be given a minimum of 30 days to submit their formal proposal.

Formal Proposals

The following provides a basic outline of what selected applicants will be expected to submit in a formal proposal:

1. Project title and objectives.
2. Background and policy relevance of issue to be studied.
3. Study design, including statement of hypotheses, specification of variables, data source, sampling strategy, development of measures and/or survey instruments, and database management, as appropriate.
4. Analysis plan, including how data will be used and analyzed, analytic methods, potential problems and strategies for resolving problems.
5. Work plan including description of tasks, time schedule, and level of effort for key individuals and the number of days devoted to each task.
6. Qualifications of key project staff.
7. Organizational chart.
8. Detailed budget providing justifications and explanations for amounts requested.

Review of Proposals

Proposals will be reviewed by a panel composed of at least three (3) individuals. Reviewers will score applications, basing their scoring decisions and approval recommendations on the criteria published in the Commission's Request for Proposals, Part IV, Section M, "Technical Evaluation and Criteria for Award." This information is provided to all applicants invited to submit proposals.

General Information

Number and Size of Projects

The number of agreements depends on the availability of funds. Most awards range from $50,000 to $350,000 per project. It is anticipated that up to six (6) projects could be awarded through this solicitation.

Authority: The Commission's authority for making these awards is based on section 1845(c)(2)(B) of the Social Security Act (42 U.S.C. section 1395–1).

Regulations

General policies and procedures that govern the administration of cooperative agreements and grants are located in title 45 of the Code of Federal Regulations parts 74 and 92. Applicants are urged to review the requirements contained in those regulations.

Submission Address: Physician Payment Review Commission, 2120 L Street, NW., Suite 510, Washington, DC 20037.

Obligation

This solicitation in no way obligates the Commission to fund any applicant.

Contact: Paul B. Ginsburg, Ph.D., Director or Lauren LeRoy, Ph.D., Deputy Director, Physician Payment Review Commission, 2120 L Street NW., Suite 510, Washington, DC 20037. (202) 653–7220.

Dated: April 28, 1993.

Paul B. Ginsburg,

Executive Director.

BILLING CODE 6820–SE–M

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–32221; File No. SR–NSCC–93–3]

Self-Regulatory Organizations; National Securities Clearing Corporation; Order Approving on a Temporary Basis a Proposed Rule Change Regarding the Establishment of a Pilot Program Relating to the Handling of Physical Securities and Paper Transactions for Participants Located in New York City

April 26, 1993.

On January 27, 1993, the National Securities Clearing Corporation ("NSCC") filed with the Securities and Exchange Commission ("Commission") a proposed rule change (File No. SR–NSCC–93–3) under section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")[1] to establish a pilot program relating to the receipt, delivery, and handling of physical securities and paper transactions for participants located in New York City. Notice of the proposal was published in the Federal Register on February 16, 1993.[2] No comment letters were received. This order approves the proposal on a pilot basis until April 30, 1994.

I. Description

A. Background

Currently, NSCC offers certain services (collectively "Direct Clearing services")[3] to and acts as agent for participants not located in New York City. Direct Clearing services include: (i) Over-The-Window ("OTW") service;[4] (ii) interfacing with NSCC's Envelope Settlement Service ("ESS"),[5] Funds Only Settlement Service ("FOSS"),[6] and Dividend Settlement Service ("DSS");[7] (iii) processing transfers of physical securities;[8] (iv) processing securities deposits to and withdrawals from The Depository Trust Company ("DTC");[9] and (v) processing securities deliveries to designated agents in connection with reorganizations and other corporate actions.[10] In the course of providing these and other Direct Clearing services, NSCC may have custody of participants' physical securities, including overnight custody for one or more days, and may assist participants in orchestrating physical underwritings.[11]

Direct Clearing services are provided under the following conditions. First, in all instances, NSCC acts as agent for the applicable Direct Clearing participant and not as principal. Second, all actions taken by NSCC are based on instructions from the applicable Direct Clearing participant.[12] Finally, each Direct Clearing participant agrees that it will not be entitled to reimbursement from NSCC for any losses suffered or liabilities incurred as a result of Direct Clearing operations.[13]

B. NSCC's Rationale for the Proposed Rule Change

In recent years, NSCC participants who are located in New York City have been experiencing a continual decline in their activities associated with the processing of physical securities ("window activity").[14] This has been primarily a result of the increasing book-entry eligibility of securities that previously had been settled physically. Because window operations of NSCC participants have high fixed costs, the declining volume of window activity has caused certain participants, who for financial reasons no longer find it desirable to maintain their own window operations, to ask NSCC to offer Direct Clearing type services to participants located in New York City ("New York Window" or "NYW" service).

C. New York Window Services

The services to be offered under the NYW pilot program will be in the same general categories as those Direct Clearing services enumerated above which are offered to participants not located in New York City. That is, the NYW pilot program will include: (i) OTW service;[15] (ii) interface with NSCC's ESS, FOSS, and DSS functions; (iii) process transfers of physical securities;[16] (iv) process deposits to and withdrawals from DTC; and (v) process deliveries to designated agents in connection with reorganizations and other corporate actions. In the course of providing these services, NSCC may have custody of a participant's physical securities and may assist a participant in orchestrating a physical underwriting.

The NYW services will also be offered under the same conditions noted above which govern Direct Clearing services.[17] These conditions include: (i) In all instances, NSCC would act as agent for the applicable NYW pilot participant and not as principal; (ii) all actions taken by the NYW will be based on

[1] 15 U.S.C. 78(b)(1) (1988).

[2] Securities Exchange Act Release No. 31861 (February 16, 1993), 58 FR 9582.

[3] NSCC's Direct Clearing services are covered in NSCC's Procedures Section IX (Special Services), Subsections C (Depository Processing), D (Direct Clearing Department), and E (Cashiering Services).

[4] The Over-The-Window ("OTW") service accepts securities on behalf of, and delivers securities to, parties designated by participants. Securities received are checked for good form and apparent negotiability, and then are matched with receive instructions. Securities which are not in good form (i.e., not negotiable) or do not match receive instructions within specified tolerances are returned to the delivering participant. OTW receives can be reclaimed upon instruction from the delivering participant.

[5] ESS facilitates physical securities deliveries among participants. Participants may deliver envelopes containing securities to NSCC's designated location in New York (i.e., The Depository Trust Company ("DTC")) or at NSCC branch offices. Each delivery must be accompanied by a credit list, in duplicate, which lists each of the envelopes being delivered, the participant number of the participant to whom each envelope is addressed, and the total money value of the items contained in each envelope. Along with each envelope, the participants must include the corresponding balance order ticket issued by NSCC.

All envelopes delivered to NSCC will be verified against the credit list to ensure that each listed envelope, has, in fact, been received. If the envelopes are properly listed on the credit list, NSCC will stamp the duplicate copy of the credit list and make it available to the participant's representative making the delivery.

NSCC neither examines the contents of the envelopes nor verifies the amounts of money shown on the credit list, and is not responsible for such. NSCC is responsible only to deliver the envelopes accepted by it to the authorized representatives of the participants to whom they are addressed and to receive payment.

After the envelopes are verified against the credit list, they are then made available to participants designated as receivers on the envelopes. In the case of any irregularity in the item being delivered (e.g., incorrect securities, number of shares, or contra-party number, etc.), the receiving participant may return such item to the delivering participant under NSCC's reclamation procedures. Such reclaims must be submitted to NSCC on the day the items were received for same day credit or on the following day for next day credit.

At the time NSCC stamps the envelope's credit list, the envelope shall be deemed, according to NSCC Rules, to have been delivered to the receiving participant. Once the credit list is stamped, NSCC guarantees payment or a return of the envelope to the delivering participant. This means that in the event a receiving participant becomes insolvent, NSCC either will make payment to the deliverer for the value of the envelope in the event that NSCC has already delivered the envelope or, if possible, will intercept the envelope and return it to the delivering participant.

[6] FOSS facilitates delivery of money-only charges among participants. FOSS operates under the same procedures as ESS. A settling participant who desires to charge the account of another settling participant for a FOSS charge may do so by delivering a FOSS envelope to NSCC's designated location. The envelope must be accompanied by a credit list containing, among other items, the clearing number of the settling participant to whom each FOSS envelope is addressed and the amount of charges for each envelope.

Upon receiving the envelopes, NSCC neither examines the contents thereof nor verifies the amounts listed on the FOSS credit list against the amounts of the FOSS charges contained in the FOSS envelopes. NSCC also does not verify that the clearing number of the receiver listed on the FOSS credit list is identical to the clearing number listed on the FOSS envelope.

If the number of FOSS envelopes listed on the FOSS credit list is received by NSCC, NSCC will stamp the duplicate copy of the credit list and will return it to the settling participant's representative making the delivery. After NSCC stamps the credit list, such FOSS envelopes referenced on the stamped list are deemed for all purposes to have been delivered to the settling participants to whom they are addressed, and the envelopes will be made available at NSCC's designated locations to the settling participants. NSCC then will credit the delivering settling participant's account with the total amount of FOSS charges shown on the stamped FOSS credit list and will debit the receiving settling participants' accounts. FOSS charges are not guaranteed by NSCC and are subject to reversal.

In the case of any irregularity or error in a FOSS charge, the settling participant receiving the FOSS charge may adjust the FOSS charge directly with the charging settling participant or may reclaim the FOSS charge by submitting on the same day a Reclamation Notice setting forth the reason for the reclamation and delivering it to NSCC.

[7] DSS allows participants to submit claims against other participants for dividends or interest payments owed to the claiming participant. Prior to any charge against a participant for dividends or bond interest, the participant making the claim ("receiving participant") must submit a Notice of Intent to notify the delivering participant that a charge for such item will be made. Five business days after the day the Notice of Intent is sent to the delivering participant, the receiving participant will forward two copies of a Claim Form to the delivering participant. All Notices and Forms are sent to NSCC via the envelope system.

Similar to ESS and FOSS, DSS envelopes must be accompanied by a credit list. NSCC will stamp the duplicate list and will return it to the delivering participant's representative. Once the list is stamped, the envelopes referenced on the list are deemed for all purposes to have been delivered to the participants to whom the envelopes are addressed. NSCC then will credit the receiving participants' accounts with the dollar amount stated on the credit list and debit the delivering participants' accounts for the same amount.

DSS claims are not guaranteed by NSCC and are subject to reversal. The participant against whom the charge is made can reconcile a disputed charge directly with the charging participant or through NSCC by delivering a Reclamation Notice to NSCC on the same day the disputed claim is received or on a subsequent day.

[8] Using Direct Clearing services, a participant can have securities delivered to a designated transfer agent and/or picked up after the securities have been reregistered.

[9] Through Direct Clearing, participants can have securities held in custody or received through the OTW or ESS interface services packaged and delivered to DTC for deposit. Using Direct Clearing, participants also can deliver prepackaged securities for deposit at DTC. At the request of participant, NSCC also will retrieve withdrawals and rejected securities deposits from DTC.

[10] Direct Clearing handles reorganizations and other corporate actions to the extent that it is instructed to do so by participants. Direct Clearing is not responsible for following or informing participants of any upcoming or impending corporate reorganizations or other actions. It is each participant's responsibility to instruct NSCC to make Direct Clearing deliveries of securities (either out of custody positions or from OTW or ESS interface receives) to the designated agent. Furthermore, as distinct from the Transfer service, in Direct Clearing NSCC only acts in the capacity of a messenger for the securities being delivered to the designated agent. Thus, if any documentation is required to accompany the securities delivery (e.g., letters of transmittal), the participant must complete the necessary documents and must arrange for these documents to be picked up by or delivered to NSCC so that NSCC can include the documents with the securities delivery through Direct Clearing. NSCC does not examine these documents.

[11] A participant that is the lead manager in a physical underwriting can use Direct Clearing to assist in orchestrating the closing. Specifically, a lead manager participant can use Direct Clearing to pick up the securities at closing from a registrar based in New York City, to count them, to verify that they are registered in accordance with the lead manager's instructions, to receive checks from selling group members, and to release securities to selling group members after closing. For purposes of monitoring flipping activity, the lead manager can use Direct Clearing to track the certificate numbers that are delivered to each member of the selling group and that are received through Direct Clearing on behalf of the lead manager during the stabilization period.

[12] These instructions may be special instructions or standing instructions.

[13] In compliance with New York law, there is an exception for losses resulting from NSCC's gross negligence or willful misconduct. As with any NSCC operations, any lack of entitlement to reimbursement for losses does not prevent NSCC from determining in its sole and absolute discretion to provide such reimbursement in particular instances.

[14] The activities associated with the processing of physical securities are similar to those provided by NSCC in its Direct Clearing service described above.

[15] The pilot program's scope of services is narrower than the Direct Clearing services currently offered (*supra*, note 4). To the extent that OTW deliveries are to be paid for by check, NSCC's NYW will accept checks on behalf of NYW participants and either deliver them to participants or deposit them on behalf of participants. If the payment obligation is to settle in same day funds, NSCC will transmit related wire payment instructions to NYW participants for their execution. NSCC's NYW service will neither actually make wire payments nor will it sign checks on behalf of participants.

[16] The NYW will offer both accommodation transfers and direct transfers. For accommodation transfers, the NYW will act simply as a messenger service which makes deliveries to and pickups from transfer agents. NSCC will not examine the items being delivered or picked up. In a direct transfer, the NYW participant must specify which securities should be sent to the transfer agent and the registration details. NSCC then will prepare appropriate transfer documentation and make the delivery to the transfer agent. Upon pickup, NSCC will check to ensure that the transfer agent has complied with the transfer instructions.

[17] *Supra* notes 12 and 13 and accompanying text.

VOL 58 ISS 84 MY 4 1993 UMI

instructions from the applicable NYW pilot participant; and (iii) each NYW pilot participant will agree that it will not be entitled to reimbursement from NSCC for any losses suffered or liabilities incurred as a result of the operations of the NYW pilot program. Additionally, the NYW pilot participants will each be responsible for their own payment obligations resulting from NYW processing. Thus, to the extent that receives or deliveries processed by the NYW result in same-day funds payment obligations, the wire transfers will be made directly between the NYW participants and the other parties to the transactions and not through NSCC. To the extent that they result in next-day funds payment obligations, checks will be exchanged directly between the NYW participants and the other parties to the transactions with the NYW serving only as a conduit through which checks can be received and picked up.[18]

The needs of NYW participants differ from the needs of direct clearing participants located outside of New York; therefore, NSCC will keep the NYW program operationally separate and distinct from the direct clearing services currently offered to non-New York City participants. The participants' needs differ primarily because the physical securities processed for participants located in New York City will consist mostly of money market instruments (e.g., commercial paper, bankers acceptances, certificates of deposit, etc.) and asset-backed securities, whereas the physical securities processed under current direct clearing operations for non-New York City participants are primarily equity securities and corporate and municipal debt.

A result of helping New York City participants manage deliveries and receipts of money market instruments will be a greater need for NSCC to process same day turnarounds. Another result will be an increase in the dollar value of securities being held in temporary custody by NSCC. A difference in custodial needs not related to the processing of money market instruments is that NSCC expects to be asked to hold certain securities (i.e., primarily non-money market securities) for longer periods of time than is usual in current direct clearing operations.[19]

NSCC will lease vault space from DTC in order to safeguard the securities they expect to hold overnight under the NYW program. DTC personnel will not have access to the vault space leased to NSCC.[20] NSCC will have full responsibility for the securities under its custody, and only its staff will have access to and will handle these securities. In addition, NSCC will be responsible for keeping the books and records with respect to securities so held.

The securities belonging to different participants will not be commingled with the securities being held for any other participant, and unless these securities are bearer instruments, they will be held in street name or in customer name but not in NSCC's nominee name. NSCC will be responsible for following participants' instructions regarding the segregation of customer positions which are held in custody by NSCC, and no deliveries will be made from customer positions absent specific instructions from the relevant participant. All deliveries from NSCC, as custodian, to the relevant participant will be free deliveries (i.e., they will not require payment), and NSCC will specifically disclaim any lien on customer positions held in custody.

In its initial phase, the NYW pilot program will utilize the systems of the participants in the program. Thus, each participant in the pilot program will install at the NYW location the terminals and printers currently used in its own New York window operations. NSCC NYW employees, to the extent they are not hired from the participating firms, will be trained to use these systems, and the receives and deliveries for each participant will be processed by the NYW in the same manner as they are currently processed by the participants in their own New York window operations.

II. Discussion

Section 17A(a)(1)(B) of the Act sets forth Congress' findings that inefficient procedures for clearance and settlement of securities transactions impose unnecessary costs on investors and persons facilitating transactions by and acting on behalf of investors.[21] Section 17A(a)(1)(D) states Congress' findings that the linking of all clearance and settlement facilities and the development of uniform standards and procedures for clearance and settlement will reduce unnecessary costs and increase the protection of investors and persons facilitating transactions by and acting on behalf of investors.[22]

The Commission believes that NSCC's proposed pilot program will help minimize the inefficient procedures currently utilized by the individual New York City participants by concentrating these operations in one centralized location. As a result, the individual participants will be able to eliminate their New York City window operations and the high fixed costs associated with them and will be able to rely upon NSCC's experience in providing Direct Clearing services.

As stated above, during the pilot stage NSCC will operate the individual participants' window programs. After operating the pilot for a period of time, NSCC will evaluate the program to determine whether any changes should be made and whether to expand and standardize the operations to allow a larger number of participants to participate.[23] The Commission believes that by enabling NSCC to coordinate the processing of physical securities NSCC should be able to develop more efficient and standardized procedures for the clearance and settlement of physical securities and, thereby, should be able to reduce unnecessary costs on investors and persons facilitating transactions by and acting on behalf of investors.

Section 17A(b)(3)(A) of the Act requires that a clearing agency be organized and have the capacity to safeguard securities and funds in its custody or control or for which it is responsible.[24] NSCC will undertake several safeguards to comply with this statutory mandate. The safety procedures established and currently employed in Direct Clearing services for participants not located in New York City will be incorporated into the NYW program. As previously stated, NSCC will act only as agent for NYW participants and will act only upon instructions from the participants. NSCC also will limit its liability for direct clearing losses to losses resulting from NSCC's gross negligence or willful misconduct.

[18] Service charges resulting from NSCC's ESS, FOSS, or DSS functions will continue to be settled through NSCC's net settlement system.

[19] This can partially be attributed to NYW participants wanting NSCC to hold these securities in anticipation of a redelivery, generally to another New York City participant, within a few days of receipt. It is inefficient to have NSCC deliver these securities to the receiving participant where the receiving participant soon will redeliver them to NSCC for delivery to another participant. Non-New York City participants generally do not redeliver these securities as quickly, if at all and, therefore, prefer to take physical possession. Meeting between Peter J. Axilrod, Vice President and Associate General Counsel, NSCC, and Peter R. Geraghty, Attorney, Division of Market Regulation ("Division"), Commission (March 3, 1993).

[20] Letter from Karen G. Lind, Associate Counsel, DTC, to Peter R. Geraghty, Attorney, Division, Commission (April 5, 1993).

[21] 15 U.S.C. 78q–1(a)(1)(B).

[22] 15 U.S.C. 78q–1(a)(1)(D).

[23] Any changes to the New York Window program will necessitate the filing of a proposed rule change under section 19(b)(2) of the Act.

[24] 15 U.S.C. 78q–1(b)(3)(A).

In addition, NSCC will initiate procedures and safeguards specific to the NYW program. Under the NYW program, NSCC will serve only as a conduit through which participants can deliver checks to and receive checks from other participants and will not wire funds to participants. NSCC will take additional precautionary measures to help ensure the safety of the securities for which it has custody under the NYW program. NSCC will lease separate vault space to hold only these securities, and access will be restricted to NSCC personnel. NSCC also will be responsible for keeping the books and records for securities held under the NYW program. Securities belonging to different participants will not be commingled, and NSCC will follow participants' instructions regarding the segregating of customer accounts. Securities in NSCC's custody will not be held in NSCC's nominee name. The Commission believes the measures taken by NSCC enable NSCC to meet its statutory responsibility regarding safeguarding the securities in its custody or control or for which it is responsible under the NYW program.

The Commission is approving NSCC's pilot program on a temporary basis until April 30, 1994, in order that the Commission and NSCC may further study the effects and efficiencies of the program.

III. Conclusion

The Commission finds that the proposed rule change is consistent with the requirements of the Act and in particular with the requirements of section 17A of the Act.

It is therefore ordered, Pursuant to section 19(b)(2) of the Act,[25] that the proposed rule change (File No. SR–NSCC–93–3) be, and hereby is approved on a temporary basis until April 30, 1994.

For the Commission by the Division of Market Regulation, pursuant to delegated authority.[26]

Jonathan G. Katz,

Secretary.

Self-Regulatory Organizations; Participants Trust Co.; Filing and Order Granting Accelerated Approval of a Proposed Rule Change Relating to an Increase in the Number of Directors

[Release No. 34–32213; File No. SR–PTC–93–01]

April 26, 1993.

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),[1] notice is hereby given that on March 26, 1993, Participants Trust Company ("PTC") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice and order to solicit comments on the proposed rule change and to grant approval of the proposed rule change on an accelerated basis.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The proposed rule change would amend Article 3, Section 3.2 of PTC's By-laws to increase the number of directors on PTC's Board of Directors from twelve to fifteen.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in sections (A), (B), and (C) below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

Section 3.2 (Number; Classification; Election; Term of Office) of Article 3 (Directors) of PTC's Bylaws provides that PTC's Board of Directors shall consist of twelve directors, divided into three classes of four directors each. PTC proposes to amend Section 3.2 of PTC's By-laws to increase the number of directors to fifteen by the addition of one director to each of the three classes. The change would be implemented commencing with the election of directors to be held at the 1993 annual stockholders meeting.[2] PTC believes that the increase in directors will enhance the fair representation of its stockholders. The additional positions will provide the stockholders an increased opportunity to elect directors who represent their views.

PTC believes that the proposed rule change is consistent with the requirements of section 17A of the Act.[3] Specifically, PTC believes the proposed rule change is consistent with section 17A(b)(3)(C) of the Act in that it helps assure the fair representation of stockholders and participants.

B. Self-Regulatory Organization's Statement on Burden on Competition

PTC does not believe that the proposed rule change will impose any burden upon competition.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Comments were not and are not intended to be solicited with respect to the proposed rule change, and none were received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

PTC requests the Commission find good cause for approving the proposed rule change on an accelerated basis prior to the thirtieth day after the date of publication of notice of the filing. The Commission finds good cause exists under section 19(b)(2) of the Act for granting accelerated approval in that accelerated approval would permit the stockholders of PTC to elect directors for the newly created positions at the Annual Meeting of Stockholders to be held on April 28, 1993.[4]

Section 17A(b)(3)(C) of the Act requires that the rules of a clearing

[1] 15 U.S.C. 78s(b)(1) (1988).

[2] At the annual meeting, scheduled for April 28, 1993, the shareholders first will vote on the proposed Board increase, as required by Section 3.2 of PTC's By-laws, prior to the election of the new directors.

[3] 15 U.S.C. 78q–1.

[4] Pursuant to section 19(b)(4)(A) of the Act, 15 U.S.C. 78s(b)(4)(A) (1988), the Commission contacted the Board of Governors of the Federal Reserve System ("Federal Reserve"), PTC's appropriate regulatory agency, regarding the proposed rule change. Staff of the Federal Reserve believes that the proposed rule change is consistent with PTC's obligation to safeguard securities and funds in its custody or control or for which it is responsible, and did not object to the proposed accelerated approval. Telephone conversation between Don R. Vinnedge, Manager, Trust Activities Program, Federal Reserve, and Christine Sibille, Staff Attorney, Division of Market Regulation, Commission (April 16, 1993).

UMI

agency assure the fair representation of its stockholders and participants in the election of its directors and administration of its affairs. The Commission previously has found that PTC's rules for selecting its directors were designed to assure fair representation.[5] Under PTC's Rules, only a participant of PTC may become a PTC stockholder. Once a year, all participants are given an opportunity to purchase shares of PTC stock, either from PTC or from stockholders who want to sell some of their holdings. At no time may a single stockholder own more than 5% of the total issued and outstanding PTC stock. The stockholders agreement, executed upon the initial purchase of shares by each participant, provides for cumulative voting in the election of directors.[6]

By permitting each participant to decide how much PTC stock to own, and thereby to decide the size of the role it wishes to play in the election process, PTC provides an opportunity to each participant to be represented on the Board. This, along with the 5% limitation on stock ownership by any individual participant, will restrict the ability of any large participant to control the Board to the detriment of the smaller participants. The increase in the number of directors, from twelve to fifteen, will permit the Board to represent a larger portion of the participant base in a fair way, by permitting greater representation of different interests on the Board. The change, together with the cumulative voting feature of PTC's rules, should provide for fair representation from all segments of PTC's market participant base. The Commission therefore finds that the proposed rule change is consistent with section 17A(b)(3)(C) of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street NW., Washington, DC 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Section, 450 Fifth Street NW., Washington, DC 20549.

Copies of such filing will also be available for inspection and copying at the principal office of the above-mentioned self-regulatory organization. All submissions should refer to File Number SR–PTC–93–01 and should be submitted by May 25, 1993.

V. Conclusion

On the basis of the foregoing, the Commission finds that PTC's proposed rule change is consistent with the Act and, in particular, with section 17A of the Act.

It is therefore ordered, Under section 19(b)(2) of the Act, that the proposal (File No. SR–PTC–93–01) be, and hereby is, approved.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.

Jonathan G. Katz,

Secretary.

[5] See Securities Exchange Act Release No. 26671 (March 28, 1989), 54 FR 13266.

[6] Section 3.2 of PTC's By-laws provides for stockholder election of directors. Under cumulative voting, a stockholdw is given a total number of votes it may cast, equalling the number of shares owned times the number of directors' positions to be filled. The stockholder may give all its votes to one candidate, or may divide its votes among the candidates in any manner.

[Rel. No. IC–19442; 811–3413]

American General Equity Accumulation Fund, Inc.; Application for Deregistration

April 28, 1993.

AGENCY: Securities and Exchange Commission ("SEC" or the "Commission").

ACTION: Notice of application for deregistration under the Investment Company Act of 1940 (the "1940 Act").

APPLICANT: American General Equity Accumulation Fund, Inc.

RELEVANT 1940 ACT SECTION: The application was filed pursuant to section 8(f) of the 1940 Act and Rule 8f–1 thereunder.

SUMMARY OF APPLICATION: The applicant seeks an order declaring that it has ceased to be an investment company as defined by the 1940 Act.

FILING DATE: The application was filed initially on February 9, 1993. An amended and restated application was filed on April 23, 1993.

HEARING OR NOTIFICATION OF HEARING: An order granting the application will be issued unless the Commission orders a hearing. Interested persons may request a hearing by writing to the Secretary of the Commission and serving the applicant with a copy of the request, personally or by mail. Hearing requests must be received by the SEC by 5:30 p.m. on May 24, 1993, and should be accompanied by proof of service on the applicant in the form of an affidavit or, for lawyers, a certificate of service. Hearing requests should state the nature of the writer's interest, the reason for the request, and the issues contested. Persons may request notification of a hearing by writing to the Secretary of the Commission.

ADDRESSES: Secretary, SEC, 450 Fifth Street, NW., Washington, DC 20549. Applicant, Huey P. Falgout, Jr., Esq., American Capital Asset Management, Inc., 2800 Post Oak Blvd., Houston, TX 77056.

FOR FURTHER INFORMATION CONTACT: Patrice M. Pitts, Attorney, or Michael V. Wible, Special Counsel, at (202) 272–2060, Office of Insurance Products (Division of Investment Management).

SUPPLEMENTARY INFORMATION: Following is a summary of the application. The complete application may be obtained for a fee from the Commission's Public Reference Branch.

Applicant's Representations

1. The applicant was organized as a Maryland corporation on December 4, 1981.

2. On March 10, 1982, the applicant filed a notification of registration on Form N–8A under the 1940 Act. On that same date, the applicant filed a registration statement under the 1940 Act and the Securities Act of 1933 on Form N–1 (File No. 2–76419) for five hundred million (500,000,000) shares of common stock of a single class. The Form N–1 registration statement became effective on June 29, 1982, and the initial public offering commenced on July 23, 1982.

3. The Variable Annuity Life Insurance Company ("VALIC"), American General Life Insurance Company of New York ("AGNY"), and American General Life Insurance Company of Delaware ("AG Life") each maintain and operate separate accounts (the "Separate Accounts") which invest in the applicant, the American General Fixed-Income Accumulation Fund, Inc., and the American General Money Market Accumulation Fund, Inc. (collectively, the "ACAM Funds").

4. After experiencing several years of substantial net redemptions of ACAM Funds shares, the management of the ACAM Funds met with representatives of VALIC, AGNY, and AG Life to discuss means of reversing that trend. These discussions led VALIC, AGNY, AG Life, and the Separate Accounts, to pursue the substitution of shares of the American General Series Portfolio Company ("AGSPC") and the American Capital Life Investment Trust (the "LIT Fund") for shares of the ACAM Funds.

5. In March 1991, VALIC, AGNY, AG Life, the Separate Accounts, AGSPC, the LIT Fund, and the ACAM Funds filed an application with the Commission requesting an order under section 26(b) of the Investment Company Act of 1940 (the "1940 Act") approving the substitution of AGSPC and LIT Fund shares for ACAM Funds shares (the "Substitution"), and, under section 17(b), or alternatively, under section 6(c) of the 1940 Act, granting exemptions from sections 17(a)(1) and 17(a)(2) of the 1940 Act to the extent necessary to permit the transfer of portfolio securities of the ACAM Funds to AGSPC and the LIT Fund.

6. On September 20, 1991, the Commission issued an order pursuant to section 26(b) of the 1940 Act, approving the substitution of shares of AGSPC and the LIT Fund, and pursuant to section 17(b) or, alternatively, section (6)(c) of the 1940 Act, exempting VALIC, AGNY, AG Life, and the Separate Accounts from section 17(a) of the 1940 Act to the extent necessary to permit certain purchase and sale transactions between affiliates in connection with the Substitution.

7. Effective September 30, 1991, the applicant, acting on behalf of its shareholders and in satisfaction of redemption requests by such shareholders in connection with the Substitution, transferred: To the LIT Fund, securities valued at $7,022,837.50, and $5,630,383.52 in cash; and to AGSPC, securities valued at $28,141,962.50, and $22,029,763.93 in cash.

8. All expenses incurred in connection with carrying out the Substitution were borne by American Capital Asset Management, Inc., the applicant's investment adviser.

9. In connection with Substitution, the applicant made distributions to all of its security holders.

10. The applicant has no assets, debts, other liabilities, or security holders. The applicant has not transferred any of its assets to a separate trust, the beneficiaries of which were security holders of the applicant.

11. The applicant is not a party to any litigation or administrative proceeding (other than this deregistration proceeding).

12. The applicant presently is not engaged, nor does it propose to engage, in any business activities other than those necessary to wind up its affairs.

13. The applicant represents that, as of the time of the filing of this application, it was current in all filings required to be made pursuant to the 1940 Act, including any required Forms N–SAR.

For the Commission, by the Division of Investment Management, under delegated authority.

Jonathan G. Katz,

Secretary.

[FR Doc. 93–10489 Filed 5–3–93; 8:45 am]

BILLING CODE 8010–01–M

[Rel. No. IC–19438; 812–7972]

The Benchmark Funds, et al.; Application for Exemption

April 27, 1993.

AGENCY: Securities and Exchange Commission ("SEC" or "Commission").

ACTION: Notice of application for exemption under the Investment Company Act of 1940 (the "Act").

APPLICANTS: The Benchmark Funds ("Trust"), The Northern Trust Company ("Northern"), and Goldman, Sachs & Co. ("Goldman Sachs").

RELEVANT ACT SECTIONS: Exemption requested pursuant to section 6(c) from sections 2(a)(32), 2(a)(35), 18(f)(1), 18(g), 18(i), 22(c), 22(d) and rule 22c–1 thereunder.

SUMMARY OF APPLICATION: Applicants seek a conditional order pursuant to section 6(c) of the Act to permit the Trust and other investment companies for which Northern acts in the future as investment adviser, sub-adviser or, if and when permitted under applicable law, distributor to issue and sell an unlimited number of classes or series of new units of securities representing interests in the same portfolio, and to permit the imposition and waiver of a contingent deferred sales charge ("CDSC") on certain redemptions of units.

FILING DATE: The application was filed on July 2, 1992, and amended on November 18, 1992. By supplemental letters dated April 9, 1993 and April 22, 1993, counsel, on behalf of applicants, agreed to file a further amendment during the notice period to make certain technical changes. This notice reflects the changes to be made to the application by such further amendment.

HEARING OR NOTIFICATION OF HEARING: An order granting the application will be issued unless the Commission orders a hearing. Any interested person may request a hearing by writing to the SEC's Secretary and serving applicants with a copy of the request, personally or by mail. Hearing requests should be received by the SEC by 5:30 p.m. on May 24, 1993 and should be accompanied by proof of service on applicants in the form of an affidavit, or for lawyers, a certificate of service. Hearing requests should state the nature of the writer's interest, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by writing to the SEC's Secretary.

ADDRESSES: Secretary, SEC, 450 Fifth Street, NW., Washington, DC 20549. Applicants: The Benchmark Funds, 4900 Sears Tower, Chicago, Illinois 60606; The Northern Trust Company, 50 S. LaSalle Street, Chicago, Illinois 60675; and Goldman, Sachs & Co., 85 Broad Street, New York, New York 10004.

FOR FURTHER INFORMATION CONTACT: Felicia H. Kung, Senior Attorney, at (202) 504–2603, or Elizabeth G. Osterman, Branch Chief, at (202) 272–3016 (Division of Investment Management, Office of Investment Company Regulation).

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application may be obtained for a fee from the SEC's Public Reference Branch.

Applicants' Representations

1. The Trust is a Massachusetts business trust registered under the Act as an open-end management investment company. Northern is the Trust's investment adviser, transfer agent and custodian. Goldman Sachs is the Trust's distributor and administrator. The Trust currently offers twelve series of units representing interests in twelve separate investment portfolios: The Diversified Assets Portfolio, the Government Portfolio, the Government Select Portfolio, the Tax-Exempt Portfolio, the California Municipal Portfolio, the Equity Index Portfolio, the Small Company Index Portfolio, the Diversified Growth Portfolio, the U.S. Treasury Index Portfolio, the U.S. Government Securities Portfolio, the Short-Intermediate Bond Portfolio, and the Bond Portfolio. The Diversified Assets, Government, Government Select, Tax-Exempt and California Municipal Portfolios use the amortized cost method of valuation under rule 2a–7 of the Act (together with any similar future investment portfolios, the "Money Market Portfolios"). The Trust's registration statement has been

VOL
58
ISS
84
MY
4
19 93
UMI

amended to include two additional portfolios, but shares of such portfolios currently are not offered.

2. Units of the Trust's active portfolios currently are offered by Goldman Sachs exclusively to Northern, its affiliates, and correspondent banks and their customers at net asset value.

3. Applicants seek an exemptive order from the SEC permitting the Trust and other investment companies for which Northern acts in the future as investment adviser, sub-adviser or, if and when permitted under applicable law, distributor (collectively with the Trust, the "Companies") to offer an unlimited number of classes or series of new units of securities in their existing and future investment portfolios ("New Classes"). These classes may be offered (a) in connection with a plan adopted pursuant to rule 12b–1 ("Distribution Plan"); and/or (b) in connection with a non-rule 12b–1 administrative plan ("Administrative Plan"); and/or (c) subject to the imposition of varying front-end sales charges; and/or (d) subject to the imposition of varying CDSCs.

4. With respect to each New Class, a Company could adopt a Distribution Plan and/or an Administrative Plan (collectively, "Plan" or "Plans")[1] concerning the financing of marketing programs intended to result in the sale of units and the provision of various distribution and administrative services. Such services might be provided directly by a Company's distributor, or by groups, organizations, or institutions ("Organizations") which have entered into agreements (collectively, "Plan Agreements") with the Company or its distributor or administrator concerning the provision of services to the clients, members, or customers of such Organizations who from time to time beneficially own units of a particular class ("Class Unitholders").

5. Under a Distribution Plan, a Company's distributor or Organizations could provide distribution-related services undertaken in connection with the sale of units covered by the plan. For example, such services could include engaging in advertising provided on behalf of the Company for clients, and preparing, printing, and distributing prospectuses and unitholder reports. For New Classes with a CDSC, under a Distribution Plan a Company might pay an annual fee to the Company's distributor as compensation related to the offering of such New Classes. These expenses could include, but would not be limited to, the payment of sales commissions and incentive compensation, as well as advertising and promotional costs. Organizations also may provide administrative services under a Distribution Plan.

6. Under an Administrative Plan, Organizations would provide services relating to the indirect relationship between a Company and the beneficial unit owners, such as, for example, aggregating and processing purchase exchange and redemption requests for units from clients, and placing net purchase exchange and redemption orders with the distributor. The services provided under an Administrative Plan would not duplicate the services provided by a Company's investment adviser, transfer agent, and administrator. In addition, Organizations may charge other fees directly to their Class Unitholders in connection with their Class Unitholder accounts. These fees would be in addition to any amounts received by the Organization under a Plan Agreement.

7. Payments to a Company's distributor or Organizations for expenses, services, and assistance would be made in accordance with the terms of the particular Plan ("Plan Payments") and would be borne entirely by the beneficial owners of the New Class of the portfolio to which the payments relate. Plan Payments paid pursuant to a Distribution Plan currently are not expected to exceed .75% per annum of the average daily net asset value of the units of the New Class subject to the particular Distribution Plan. Payments paid pursuant to an Administrative Plan also are not expected to exceed .75% per annum of the average daily net asset value of the units of the New Class subject to the particular Administrative Plan. In addition, for any New Class having both a Distribution Plan and an Administrative Plan, total Plan Payments under both Plans currently are not expected to exceed 1.25% per annum of the average daily net asset value of the units of the New Class. Certain provisions of Article III, Section 26 of the Rules of Fair Practice of the National Association of Securities Dealers, Inc. ("NASD") relating to the maximum amount of asset based sales charges that may be imposed by an investment company, which become effective on July 7, 1993, would effectively limit total Plan Payments under a Distribution Plan and an Administrative Plan to 1.00% per annum of the average daily net asset value of the units of a New Class with both Plans. The maximum level of payments made pursuant to a Plan might vary based upon an independent determination by the board of trustees of the Company involved, and in the case of a Distribution Plan, subject to unitholder approval of the affected New Class. In all cases, however, the Companies shall comply with Article III, Section 26 of the Rules of Fair Practice of the NASD as it relates to the maximum amount of asset-based sales charges that may be imposed by an investment company, when and in the form (as amended from time to time) the provisions of such Rules relating to such charges become effective, and for as long as they remain in effect.

8. Expenses of a Company that could not be attributed directly to any one portfolio ("Company Expenses") would be allocated to each portfolio based on the relative net assets of such portfolio or as otherwise determined under the supervision of its trustees. Such expenses could include, for example, trustees' fees and expenses, and insurance premiums. Certain expenses may be attributable to a portfolio but not to a particular class ("Portfolio Expenses"). All such Portfolio Expenses incurred by a portfolio would be allocated to each class based on the relative net asset value of the respective classes in the portfolio. Portfolio Expenses could include, for example, advisory fees, portfolio accounting fees, custodian fees, and fees related to preparation of separate documents of the portfolio. In addition, certain expenses may be directly attributable to a particular class and will be allocated to that class exclusively ("Class Expenses"), in accordance with the conditions described hereinafter.

9. The net asset value per unit in each portfolio would be calculated and determined in the same manner and on the same days and at the same times, regardless of class. The net investment income and capital gains, if any, of each portfolio would be declared and paid at the same times to all unitholders of the portfolio. Expenses, other than Plan Payments and Class Expenses, would be borne on a *pro rata* basis by each class on the basis of the relative net asset value of the respective class. Although the method of determining net asset value of classes within a portfolio would be identical, the net asset value of classes within the portfolios (excluding the Money Market Portfolios, which maintain a stable net asset value per unit) may differ because of different

[1] Units offered in connection with an Administrative Plan will not necessarily be accorded the voting rights specified in rule 12b–1, although the trustees of the Company involved might approve an Administrative Plan with such rights in order to give holders of such units rights identical to holders of units subject to a Distribution Plan.

Plan Payments and Class Expenses assessable to a particular class.

10. Units of certain of the New Classes may be subject to the imposition of a CDSC if such units are redeemed within a particular period of time after their purchase. The CDSC would be imposed at a rate equal to a specified percentage or percentages of the lesser of the net asset value of the units at the time of purchase or the net asset value of the units at the time of redemption. The CDSC would be deducted from the redemption proceeds otherwise payable to the unitholder and would be retained by the distributor.

11. No CDSC would be imposed with respect to: (a) The portion of redemption proceeds attributable to increases in the value of the units due to capital appreciation; (b) units acquired through the reinvestment of income dividends or capital gain distributions; or (c) units held for more than a certain period of time after their purchase.

12. In determining whether a CDSC would be payable, it would be assumed that units, or amounts representing units, that are not subject to a CDSC would be redeemed first and other units or amounts would be redeemed in the order purchased. The same CDSC would be imposed on all unitholders of a New Class except that scheduled variations in or elimination of CDSCs may be offered to particular classes of unitholders or in connection with classes of particular transactions.

13. The amount of the CDSC and the timing of its imposition for a New Class of a portfolio may vary among the portfolios, as may the circumstances under which the CDSC may be waived. Any change in the specified terms of a CDSC arrangement with respect to its implementation by a portfolio will be reflected in the portfolio's prospectus, and will not affect units already issued unless such change will result in more favorable terms to the holders of such units. No CDSC would be imposed on any units purchased prior to the effective date of the requested order or prior to the amendment of the affected portfolio's prospectus disclosing the CDSC arrangement.

14. The CDSC would be waived for the following redemptions: (a) Redemptions in connection with distributions to participants or beneficiaries of an employee pension, profit-sharing or other trust or qualified retirement plan; (b) redemptions in connection with distributions to participants in qualified retirement plans due to death, disability or the attainment of age 59½; (c) redemptions effected pursuant to a portfolio's right to liquidate a unitholder's account if the aggregate net asset value of units held in the account is less than the minimum account size; or (d) redemptions in connection with the combination of the portfolios with any other investment company registered under the Act by merger, acquisition of assets, or by any other transactions.

15. A Company will offer an exchange privilege whereby units of a New Class in a portfolio could be exchanged for units of the corresponding New Class in another portfolio in accordance with rule 11a–3.

Applicants' Legal Analysis

1. Applicants request an exemptive order under section 6(c) to permit the proposed issuance and sale of units representing interests in a Company's existing and future portfolios to the extent that such issuance and sale might be deemed to: (a) Result in the issuance of a "senior security" within the meaning of section 18(g), (b) be prohibited by section 18(f)(1), and (c) violate the equal voting provisions of section 18(i). Applicants also seek an exemption from sections 2(a)(32), 2(a)(35), 22(c) and 22(d) of the Act and rule 22c–1 thereunder to the extent necessary to permit the imposition and waiver of a CDSC on redemption of units of the non-Money Market Portfolios.

2. Applicants contend that the proposed multi-class system will better enable Companies to facilitate the distribution of their securities while expanding the scope of their services without excessive operational costs or unnecessary investment risks. Applicants also contend that the proposed multi-class structure would permit Companies to match more precisely their distribution costs, administrative support, and transfer agency and other expenses with those investors on whose behalf such costs and expenses are incurred. In addition, applicants assert that the proposed arrangement will enable a Company and its unitholders to save the organizational and other continuing costs that would be incurred if a Company were required to establish a new separate investment portfolio for each class of units.

3. Applicants assert that the requested relief does not present the concerns which section 18 was designed to address because the proposed arrangement does not involve borrowings or affect the Companies' existing assets or reserves. Applicants further assert that the proposed arrangement does not increase the speculative character of the units in a portfolio because all units in a portfolio will participate *pro rata* in all of the portfolio's income and expenses, with the exception of the proposed Plan Payments and Class Expenses. In addition, applicants contend that the Companies' capital structures under the proposed arrangement will not induce any group of unitholders to invest in risky securities to the detriment of any other group of unitholders since the investment risks of each portfolio will be borne equally by all of its unitholders. Applicants assert that mutuality of risk will be preserved with respect to all units in a portfolio.

4. Applicants assert that investors will not be given misleading impressions as to the safety from risk of the units and the nature of the units will not be rendered speculative because all units in a portfolio will be redeemable at all times, no class of units will have any distribution or liquidation preference or priority over another class of units in the portfolio and no class will be protected by any reserve or other account, and the similarities of the units will be fully disclosed in the portfolio's prospectuses.

5. Applicants represent that the Companies' capital structures under the proposed arrangement will not enable insiders to manipulate the expenses and profits among the classes of units because (a) the Companies are not organized in a pyramid fashion, (b) all expenses and profits of a class, except the Plan Payments and Class Expenses, will be allocated in proportion to the net asset values of the units of each portfolio, irrespective of class, and (c) all unitholders will have equal voting rights, except with respect to matters pertaining to the Plans and Plan Agreements applicable to particular classes of units of a portfolio.

Conditions to Relief

If the requested relief is granted, applicants agree to the following conditions:

1. Each class of units representing interests in the same portfolio of investments of a Company will be identical in all respects, except as set forth below. The only differences between the classes of units of the same portfolio will relate solely to: (a) The impact of (i) expenses assessed to a class pursuant to a Plan; (ii) other Class Expenses which would be limited to (A) transfer agent fees identified by the transfer agent as being attributable to a specific class of units; (B) printing and postage expenses related to preparing and distributing materials such as unitholder reports, prospectuses and proxies to current unitholders of a class; (C) blue sky registration fees incurred by

VOL
58
ISS
84
MY
4
1993
UMI

a class of units; (D) SEC registration fees incurred by a class of units; (E) the expense of administrative personnel and services as required to support the unitholders of a specific class; (F) litigation or other legal expenses or audit or other accounting expenses relating solely to one class of units; and (G) trustees' fees incurred as a result of issues relating to one class of units; and (iii) any other incremental expenses subsequently identified that should be properly allocated to one class and which are approved by the Commission pursuant to an amended order; (b) the fact that the classes will vote separately with respect to a portfolio's Plans; (c) the different exchange privileges of the classes of units; (d) the designation of each class of units of a portfolio; (e) the front-end sales load that certain classes may carry due to differing distribution methods; (f) the CDSCs that certain classes may carry; and/or (g) the net asset values of the various classes of units in a non-Money Market Portfolio that may differ as a result of the expenses described above and the allocation of portfolio expenses and income in proportion to the different net asset values of each class.

2. The board of trustees of a Company, including a majority of the independent trustees, will approve the offering of different classes of units under the multi-class distribution system. The minutes of the meetings of the trustees regarding the deliberations of the trustees with respect to the approvals necessary to implement a multi-class system will reflect in detail the reasons for the trustees' determination that the proposed multi-class system is in the best interests of both the Company involved and its unitholders.

3. The initial determination of the Class Expenses that will be allocated to a particular class and any subsequent changes thereto will be reviewed and approved by a vote of the board of trustees of a Company, including a majority of the trustees who are not interested persons of the Company. Any person authorized to direct the allocation and disposition of monies paid or payable by a Company to meet Class Expenses shall provide to the board of trustees, and the trustees shall review, at least quarterly, a written report of the amounts so expended and the purposes for which such expenditures were made.

4. On an ongoing basis, the trustees of a Company, pursuant to their fiduciary responsibilities under the Act and otherwise, will monitor each portfolio having a multi-class system for the existence of any material conflicts among the interests of the various classes of each portfolio. The trustees, including a majority of the independent trustees, shall take such action as is reasonably necessary to eliminate any such conflicts that may develop. A portfolio's investment adviser and distributor will be responsible for reporting any potential or existing conflicts to the trustees. If a conflict arises, a portfolio's investment adviser and distributor at their own cost will remedy such conflict up to and including establishing a new registered management investment company.

5. Any Administrative Plan will be adopted and operated in accordance with the procedures set forth in rule 12b–1 (b) through (f) as if the expenditures made thereunder were subject to rule 12b–1, except that unitholders will not enjoy the voting rights specified in rule 12b–1.

6. The trustees of a Company will receive quarterly and annual statements concerning the expenditures under each Plan complying with paragraph (b)(3)(ii) of rule 12b–1, as it may be amended from time to time. In the statements, only expenditures properly attributable to the sale or servicing of a particular class of units will be used to justify any distribution or servicing expenditure charged to that class. Expenditures not related to the sale or servicing of a particular class will not be presented to the trustees to justify any fee attributable to that class. The statements, including the allocations upon which they are based, will be subject to the review and approval of the independent trustees in the exercise of their fiduciary duties.

7. Dividends paid by a portfolio with respect to each class of its units, to the extent any dividends are paid, will be calculated in the same manner, at the same time, on the same day, and will be in the same amount, except that Plan Payments relating to each respective class of units and the Class Expenses relating to each class of units will be borne exclusively by that class.

8. The methodology and procedures for calculating the net asset value and dividends and distributions of the various classes in any portfolio having a multi-class distribution system and the proper allocation of expenses among the various classes in each such portfolio have been reviewed by an expert ("Expert") who has rendered a report to the Company involved, which report has been provided to the staff of the Commission, that such methodology and procedures are adequate to ensure that such calculations and allocation will be made in an appropriate manner. On an ongoing basis, the Expert, or an appropriate substitute Expert, will monitor the manner in which the calculations and allocations are being made and, based upon such review, will render at least annually a report to the Company involved that the calculations and allocations are being made properly. The reports of the Expert will be filed as part of the periodic reports filed with the Commission pursuant to sections 30(a) and 30(b)(1) of the Act. The work papers of the Expert with respect to such reports, following request by the Company involved (which the Company agrees to provide), will be available for inspection by the Commission staff upon written request to the Company for such work papers by a senior member of the Division of Investment Management or a regional office of the SEC. Authorized staff members would be limited to the Director, an Associate Director, the Chief Accountant, the Chief Financial Analyst, an Assistant Director, and any Regional Administrators or Associate and Assistant Administrators. The initial report of the Expert is a "Special Purpose" report on the "Design of a System" as defined and described in SAS No. 44 of the AICPA, and the ongoing reports will be "reports on policies and procedures placed in operation and tests of operating effectiveness" as defined and described in SAS No. 70 of the AICPA, as it may be amended from time to time, or in similar auditing standards as may be adopted by the AICPA from time to time.

9. The applicants have adequate facilities in place to ensure implementation of the methodology and procedures for calculating the net asset value and dividends and distributions of the various classes of units and the proper allocation of expenses among the classes of units and this representation will be concurred with by the Expert in the initial report referred to in condition 8 above and will be concurred with by the Expert, or an appropriate substitute Expert, on an ongoing basis at least annually in the ongoing reports referred to in condition 8 above. The Applicants will take immediate corrective measures if this representation is not concurred in by the Expert or appropriate substitute Expert.

10. The prospectuses of each portfolio having a multi-class system will contain a statement to the effect that a salesperson and any other person entitled to receive compensation for selling or servicing units in a portfolio may receive different compensation with respect to one particular class of units over another in the same portfolio.

11. The distributor for a Company having a multi-class system will adopt compliance standards for any portfolio which has a multi-class system, which standards will relate to when each class of units may appropriately be sold to particular investors. The applicants will require all persons selling units of a portfolio having a multi-class system to agree to conform to such applicable standards.

12. The conditions pursuant to which the exemptive order is granted and the duties and responsibilities of the trustees with respect to the multi-class system will be set forth in guidelines which will be furnished to the trustees of a Company having a multi-class system.

13. Each portfolio having a multi-class system will disclose the respective expenses, performance data, distribution arrangements, services, fees, front-end sales loads, CDSCs, and exchange privileges applicable to each class of units in a portfolio in every prospectus relating to such portfolio, regardless of whether all classes of units are offered through each prospectus. Each such portfolio will disclose the respective expenses and performance data applicable to all classes of units in a portfolio in every unitholder report relating to such portfolio. The unitholder reports will contain, in the statement of assets and liabilities and statement of operations, information related to the portfolio as a whole generally and not on per class basis. Each portfolio's per unit data, however will be prepared on a per class basis with respect to all classes of units of such portfolio. To the extent any advertisement or sales literature describes the expenses or performance data applicable to any class of units, it will also disclose the respective expenses and/or performance data applicable to all classes of units. The information provided by the applicants for publication in any newspaper or similar listing of any portfolio's net asset value and public offering price will present each class of units separately.

14. The applicants acknowledge that the grant of the exemptive order requested by the application will not imply Commission approval, authorization or acquiescence in any particular level of payments that the portfolios may make pursuant to a Plan in reliance on the exemptive order.

15. If a CDSC arrangement is implemented with respect to units of a portfolio, the applicants agree to comply with the provisions of proposed rule 6c–10 under the Act, Investment Company Act Release No. 16619 (November 2, 1988), as currently proposed and as it may be reproposed, adopted or amended.

For the Commission, by the Division of Investment Management, under delegated authority.

Jonathan G. Katz,

Secretary,

BILLING CODE 8010–01–M

[Rel. No. IC–19436; 812–7925]

Liberty All-Star Equity Fund, et al.; Application for Exemption

April 27, 1993.

AGENCY: Securities and Exchange Commission ("SEC").

ACTION: Notice of application for exemption under the Investment Company Act of 1940 (the "Act").

APPLICANTS: Liberty All-Star Equity Fund ("All-Star"); and Liberty Asset Management Company ("LAMCO").

RELEVANT ACT SECTIONS: Conditional order requested under section 6(c) for an exemption from section 15(a) of the Act.

SUMMARY OF APPLICATION: Applicants, for themselves and on behalf of present and future sub-advisers of All-Star and their successors, request an order which would permit All-Star and LAMCO to enter into a new sub-advisory agreement incident to a change in sub-advisers recommended by LAMCO or an addition of a sub-adviser recommended by LAMCO, and delay shareholder approval of such contract until All-Star's next annual meeting.

FILING DATE: The application was filed on May 20, 1992 and amended on July 9, 1992.

HEARING OR NOTIFICATION OF HEARING: An order granting the application will be issued unless the SEC orders a hearing. Interested persons may request a hearing by writing to the SEC's Secretary and serving applicants with a copy of the request, personally or by mail. Hearing requests should be received by the SEC by 5:30 p.m. on May 24, 1993, and should be accompanied by proof of service on the applicants, in the form of an affidavit or, for lawyers, a certificate of service. Hearing requests should state the nature of the writer's interest, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by writing to the SEC's Secretary.

ADDRESSES: Secretary, SEC, 450 Fifth Street, NW., Washington, DC 20549. Applicants, Federal Reserve Plaza, Boston, Massachusetts 02210.

FOR FURTHER INFORMATION CONTACT: James E. Anderson, Staff Attorney, at (202) 272–7027, or Elizabeth G. Osterman, Branch Chief, at (202) 272–3016 (Office of Investment Company Regulation, Division of Investment Management).

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application may be obtained for a fee at the SEC's Public Reference Branch.

Applicants' Representations

1. All-Star is a closed-end diversified investment company. All-Star's shares are listed and traded on the New York Stock Exchange. In accordance with that exchange's rules, All-Star holds annual meetings of its shareholders.

2. LAMCO is a registered investment adviser and an indirect wholly-owned subsidiary of Liberty Financial Companies, Inc. ("LFC"). LFC is an indirect wholly-owned subsidiary of Liberty Mutual Insurance Company.

3. All-Star allocates its investment portfolio on an approximately equal basis among several independent investment management firms ("Sub-Advisers") selected and recommended by LAMCO based on specific criteria. The goal of this multi-manager methodology of portfolio management is to produce better investment performance over time with less volatility than that of the average single-manager fund with the same investment objective and policies. To achieve this goal (a) each of All-Star's Sub-Advisers must consistently employ a distinct, identifiable investment style; (b) each Sub-Adviser's style must be different from those of the other Sub-Advisers; (c) the blending of the different styles employed by the Sub-Advisers must be appropriate to All-Star's investment objective, and the range of styles represented must be sufficiently broad so that at least one of such styles can reasonably be expected to be in market favor in all reasonably foreseeable market conditions; and (d) each Sub-Adviser's longer-term investment performance must be satisfactory when compared to other investment management firms employing a similar style.

4. LAMCO continuously reviews the performance of the Sub-Advisers to identify the presence of factors or conditions which would tend to neutralize the effect of All-Star's multi-management methodology, such as a departure by a Sub-Adviser from its investment style, a deterioration in its investment performance relative to that of other investment management firms employing similar styles, or an adverse change in its personnel or organization,

VOL
58
ISS
84
MY
4
1993
UMI

and recommends changes in Sub-Advisers accordingly.

5. Each new sub-advisory agreement initially affects no more than 25% of All-Star's assets. In addition, each new sub-advisory agreement contains substantially the same terms and conditions as existing agreements. A new Sub-Adviser's fee can be no higher than that provided in All-Star's existing sub-advisory agreements. In the event that fees under the new sub-advisory agreement are less than in the existing agreements, the difference will be passed on to All-Star through a corresponding reduction in the fund management fee payable to LAMCO.

6. None of the Sub-Advisers have any affiliation with All-Star or LAMCO other than as Sub-Adviser, and the responsibility of the Sub-Advisers is limited to the discretionary investment management of the respective portions of All-Star's portfolio assets assigned to them by LAMCO from time to time, and related recordkeeping and reporting.

Applicant's Legal Analysis

1. Section 15(a) makes it unlawful for any person to act as an investment adviser to a registered investment company except pursuant to a written contract, whether with such registered company or with an investment adviser of such registered company, which has been approved by the vote of a majority of the outstanding voting securities of such registered company and which precisely describes all compensation to be paid thereunder.

2. Rule 15a–4 permits an investment adviser to an investment company to act under an agreement not approved by shareholders for up to 120 days after the termination of an investment advisory agreement by the board of directors or the shareholders of the investment company. Rule 15a–4 does not provide adequate relief to All-Star because a change in Sub-Adviser often occurs more than 120 days before the next regularly scheduled annual meeting, resulting in the necessity of a special meeting of shareholders.

3. Applicants submit that requiring shareholder approval consistent with section 15(a) before changing a Sub-Adviser in accordance with All-Star's multi-manager methodology results in substantial expense to All-Star, without any corresponding benefit in terms of shareholder protection.

4. Applicants assert that because of the lack of affiliation between LAMCO and the Sub-Advisers (unlike conventionally structured single-manager investment companies), LAMCO has no interest other than the efficient and effective functioning of All-Star's multi-manager methodology and the enhancement of All-Star's investment performance when recommending the replacement or addition of a Sub-Adviser.

5. Applicants assert that the terms and conditions of All-Star's "employment" of its Sub-Advisers will in effect have already been approved by shareholders because any new sub-advisory agreements will be identical in all material respects to the existing agreements which have been approved by shareholders, with no increase in expense to All-Star.

6. Applicants further assert that in view of the limited function of the Sub-Advisers and the fact that no more than 25% of All-Star's assets will be affected by any one Sub-Adviser change or addition, All-Star's shareholders are significantly less dependent on any one Sub-Adviser than are the shareholders of a conventionally structured single manager fund, and the need for the protection provided by the shareholder approval requirement of section 15(a) is correspondingly less.

7. Applicants submit that the requested relief is necessary or appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the policy and provisions of the Act.

Applicants' Conditions

Applicants agree that any order granting the requested relief shall be subject to the following conditions:

1. Each new sub-advisory agreement is submitted for ratification and approval to the vote of All-Star's shareholders no later than at the regularly scheduled annual meeting of shareholders of All-Star (usually held in the third week of April) next following the effective date of the new agreement, and its continuance after such meeting is conditioned on approval by the required majority vote of such shareholders.

2. All-Star continues to hold annual meetings of its shareholders, whether or not required to do so by the rules of the New York Stock Exchange, Inc. or otherwise.

3. The trustees of All-Star, in addition to approving the new sub-advisory agreement in accordance with the requirements of section 15(c) of the Act, specifically determine that entering into a sub-advisory agreement with the new or additional Sub-Adviser in advance of the next regular annual meeting of shareholders of All-Star and without prior shareholder approval is in furtherance of All-Star's multi-manager methodology and is in the best interest of All-Star and its shareholders.

4. The new sub-advisory agreement involved will, when entered into, affect no more than 25% of All-Star's assets.

5. The new Sub-Adviser will have no affiliation with All-Star or LAMCO other than as Sub-Adviser, and will have no duties or responsibilities with respect to All-Star beyond the investment management of the portion of All-Star's portfolio assets allocated to it by LAMCO from time to time and related record keeping and reporting.

6. The new sub-advisory agreement provides for a sub-advisory fee no higher than that provided in All-Star's existing sub-advisory agreements, and, except for the provisions relating to shareholder approval referred to in condition 1, is on substantially the same other terms and conditions as such existing agreements, and, if the new sub-advisory agreement provides for sub-advisory fees at rates less than those provided in the existing sub-advisory agreements, the difference will be passed on to All-Star and its shareholders through a corresponding voluntary reduction in the fund management fee payable by All-Star to LAMCO.

7. The appointment of the new Sub-Adviser is announced by press release promptly following the trustees' action referred to in condition 3 above, and a notice of the new sub-advisory agreement, together with a description of the new Sub-Adviser, is included in All-Star's next report to shareholders.

8. LAMCO will provide general management and administrative services to All-Star, including overall supervisory responsibility for the general management and investment of all of All-Star's securities portfolio subject to All-Star's investment objectives and policies and any directions of All-Star's Trustees. In particular, LAMCO will (i) provide overall investment programs and strategies for All-Star, (ii) recommend to All-Star's Trustees investment management firms for appointment or replacement as All-Star Sub-Advisers, (iii) allocate and reallocate All-Star's portfolio assets among the Sub-Advisers, and (iv) monitor and evaluate the investment performance of the Sub-Advisers, including their compliance with All-Star's investment objectives, policies and restrictions.

By the Commission.

Jonathan G. Katz,

Secretary.

BILLING CODE 8010–01–M

[Rel. No. IC–19439; 812–8164]

The Preferred Group of Mutual Funds; Application for Exemption

April 27, 1993.

AGENCY: Securities and Exchange Commission ("SEC").

ACTION: Notice of application for exemption under the Investment Company Act of 1940 (the "Act").

APPLICANT: The Preferred Group of Mutual Funds (the "Trust").

RELEVANT ACT SECTIONS: Order requested pursuant to sections 6(c) and 17(b) of the Act granting an exemption from section 17(a) of the Act.

SUMMARY OF APPLICATION: Applicant seeks an order pursuant to sections 6(c) and 17(b) of the Act granting an exemption from section 17(a) of the Act to the extent necessary to permit each present or future series of the Trust to engage in principal transactions with securities dealers that may be deemed to be affiliated persons of affiliated persons of the series solely because of subadvisory relationships with one or more of applicant's other series.

FILING DATE: The application was filed on November 13, 1992, and an amendment thereto was filed on March 26, 1993. By supplemental letter dated April 19, 1993, counsel, on behalf of applicants, agreed to file a further amendment during the notice period to make certain technical changes. This notice reflects the changes to be made to the application by such further amendment.

HEARING OR NOTIFICATION OF HEARING: An order granting the application will be issued unless the SEC orders a hearing. Interested persons may request a hearing by writing to the SEC's Secretary and serving applicant with a copy of the request, personally or by mail. Hearing requests should be received by the SEC by 5:30 p.m. on May 24, 1993, and should be accompanied by proof of service on the applicant, in the form of an affidavit or, for lawyers, a certificate of service. Hearing requests should state the nature of the writer's interest, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by writing to the SEC's Secretary.

ADDRESSES: Secretary, SEC, 450 Fifth Street NW., Washington, DC 20549. Applicant, 100 NE. Adams Street, Peoria, Illinois 61629–5330.

FOR FURTHER INFORMATION CONTACT: John V. O'Hanlon, Staff Attorney, at (202) 272–3922, or Elizabeth G. Osterman, Branch Chief, at (202) 272–3016 (Office of Investment Company Regulation, Division of Investment Management).

SUPPLEMENTARY INFORMATION: The following is a summary of the application. The complete application may be obtained for a fee at the SEC's Public Reference Branch.

Applicant's Representations

1. The Trust is a Massachusetts business trust registered under the Act as an open-end, diversified investment company, and is a "series company" as described in Rule 18f–2 under the Act. The Trust has seven investment series (together with each future series of the Trust, the "Funds") with different investment objectives and strategies.

2. Applicant's investment adviser is Caterpillar Investment Management Ltd. ("CIML"). CIML also provides executive and other personnel for management of the Trust. Shares of each Fund are offered without a sales charge at net asset value by Caterpillar Securities Inc., the Trust's principal underwriter and a wholly-owned subsidiary of CIML.

3. In order to assist it in carrying out its responsibilities, CIML has retained several subadvisers (the "Subadvisers") to render advisory services to the Funds (other than the Preferred Short-term Government Securities Fund, for which CIML provides advisory services) under the supervision of CIML and the Trust's board of trustees. CIML pays the fees of each of the Subadvisers.

4. Oppenheimer Capital serves as Subadviser to the Preferred Value Fund. Jennison Associates Capital Corp. serves as Subadviser to the Preferred Growth Fund. Mellon Capital Management Corporation and PanAgora Asset Management, Inc. each serve as a Subadviser to the Preferred Asset Allocation Fund. Mercator Asset Management, Inc. serves as Subadviser to the Preferred International Fund. J.P. Morgan Investment Management Inc. ("Morgan") serves as Subadviser to the Preferred Money Market Fund and the Preferred Fixed Income Fund. Pursuant to subadvisory agreements with CIML, each Subadviser provides investment advisory services to a single Fund (except for Morgan which provides such services to two Funds).

Applicant's Legal Analysis

1. Applicant requests an order pursuant to sections 17(b) and 6(c) of the Act to permit each present or future series of the Trust to engage in principal transactions with securities dealers that may be deemed to be affiliated persons of affiliated persons of the series solely because of subadvisory relationships with one or more of applicant's other series.

2. Section 17(a), among other things, prohibits an affiliated person of a registered investment company, or any affiliated person of such a person, acting as principal, (a) from selling to or purchasing from such registered company, or any company controlled by such registered company, any security or other property, or (b) from borrowing money or other property from such registered company. Section 17(b) provides, however, that the Commission may exempt a transaction from the provisions of section 17(a) if evidence establishes that the terms of the proposed transaction, including the consideration to be paid, are reasonable and fair and do not involve overreaching on the part of any person concerned, and that the proposed transaction is consistent with the policy of the registered investment company concerned and with the general purposes of the Act.

3. Section 6(c) provides that the Commission may conditionally or unconditionally exempt any person, security, or transaction, or any class or classes of persons, securities, or transactions, from any provision or provisions of the Act or of any rule or regulation thereunder, if and to the extent that such exemption is necessary or appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the policy and provisions of the Act.

4. Because the Funds have the same investment adviser and the same trustees and officers, each Fund might be deemed to be under common control with all other Funds and, therefore, an affiliated person (within the meaning of section 2(a)(3) of the Act) of each other Fund. While applicant does not concede that all Funds are under common control, it assumes, solely for purposes of the application, the existence of such control relationship so that each Fund may be deemed to be an affiliated person of each other Fund. Accordingly, because a Subadviser is an affiliated person of any Fund that it advises, it may be deemed to be an affiliated person of an affiliated person of any Fund that it does not advise.

5. Each Subadviser, as an affiliated person of each Fund it advises and as an affiliated person of an affiliated person of each other Fund, is prohibited by section 17(a) of the Act from engaging in principal transactions with any of the Funds. In addition, affiliated persons of each Subadviser are prohibited from engaging in principal transactions with a Fund advised by that Subadviser. Finally, because the staff has, in a number of instances,

VOL
58
ISS
84
MY
4
19 93
UMI

treated a parent company and it wholly-owned subsidiary as a single entity for purposes of the affiliated person definition, section 17(a) may also prohibit wholly-owned subsidiaries of a Subadviser, parents of a Subadviser, and wholly-owned subsidiaries of such parents from engaging in principal transactions with Funds not managed by such Subadviser.[1]

6. Applicant asserts that under the terms of the requested order, a Subadviser would not be able to cause a Fund to trade with an affiliated person of anyone with the theoretical or actual power to affect its business relationship as Subadviser to the Fund. In each transaction permitted by the requested relief, the Subadviser would be dealing, on behalf of the Fund it managed, with an entity that, in economic reality, is a competitor of that Subadviser. Each such transaction would be the product of arms-length bargaining between competitors. Applicant submits that this is not a situation where a controlling person of an investment company might try to circumvent the prohibition against self-dealing by acting through an affiliate. Applicant states that it would be contrary to the interests of applicant's shareholders to create artificial barriers to dealing with any registered securities dealer where there is not the possibility of self-dealing.

7. Applicant believes that the proposed transactions will meet the standards of sections 6(c) and 17(b). Because there will be no conflict of interest inherent in a Subadviser's decision to execute a portfolio transaction with a dealer that is an affiliated person of an affiliated person of the Trust solely because of a subadvisory relationship with one or more of applicant's other Funds, there is no danger of overreaching on the part of any person concerned with the transaction. Because the pecuniary interests of the Subadvisers are solely and directly aligned with those of the Funds they advise, it is reasonable to conclude that the consideration to be paid or received by the Funds will be reasonable and fair. Moreover, transactions permitted by the requested order will be consistent with the policies of the Fund involved, inasmuch as each Subadviser is required by its agreement with CIML to formulate and implement a continuous investment program for each Fund consistent with the investment objectives and related investment policies for each such Fund. Finally, applicant argues that permitting the proposed transactions is consistent with the general purposes of the Act, because the ability to engage in such transactions increases the likelihood of the Funds achieving the best price and execution on their principal transactions.

8. Based upon the foregoing, applicant believes that it is appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the policy and provisions of the Act to issue an order pursuant to sections 6(c) and 17(b) of the Act exempting principal transactions of the type for which relief is requested from the provisions of section 17(a) of the Act.

For the Commission, by the Division of Investment Management, pursuant to delegated authority.

Jonathan G. Katz,

Secretary.

[FR Doc. 93-10492 Filed 5-3-93; 8:45 am]

BILLING CODE 8010-01-M

[1] Applicant states that in the alternative, if it is assumed that the Trust (and not the Funds) is the only relevant registered investment company, CIML and each of the Subadvisers could be affiliated persons of the Trust. Each Subadviser could be prohibited by section 17(a) from engaging in principal transactions with any of the Funds. In addition, affiliated persons of each Subadviser would be prohibited from engaging in such transactions with any of the Funds. Applicant assumes, solely for purposes of the application, that each Subadviser is an affiliate of the Trust and that any affiliated person of any Subadviser would be prohibited from engaging in any such transaction with any of the Funds.

National Boating Safety Advisory Council; Meeting

Pursuant to section 10(a) of the Federal Advisory Committee Act (Pub. L. 92-463; 5 U.S.C. app. 1), notice is hereby given of a meeting of the National Boating Safety Advisory Council to be held on Monday and Tuesday, May 17 and 18, 1993, at the Stouffer Rochester Plaza Hotel, 70 State Street, Rochester, New York, beginning at 8:45 a.m. and ending at 4 p.m. The agenda for the meeting will be as follows:

1. Review of action taken at the 50th meeting of the Council.
2. Executive Director's Report.
3. Update on Global Positioning System.
4. Report of the Consumer Affairs and Standards Review Subcommittee.
5. Multiple-Use Waterways Subcommittee Report.
6. Personal Watercraft Definition and Requirements Subcommittee Report.
7. Presentation on the Clean Vessel Act of 1992.
8. Report on Boat Factory Visit Program.
9. Boating Education Update.
10. Report on Recreational Boat Collision Accident Research.
11. Anchoring Regulation Discussion.
12. Presentation on New Boating Safety Videos.
13. Boat Operation Simulator Discussion.
14. Report on Boating Accident Investigation Seminars.
15. Chairman's Session.

Attendance is open to the interested public. With advance notice, members of the public may present oral statements at the meeting. Persons wishing to present oral statements should so notify the Executive Director no later than the day before the meeting. Any member of the public may present a written statement to the Council at any time. Additional information may be obtained from Mr. Albert J. Marmo, Executive Director, National Boating Safety Advisory Council, U.S. Coast Guard, (G-NAB), Washington, DC 20593-0001, or by calling (202) 267-1077.

BILLING CODE 4910-14-M

National Highway Traffic Safety Administration

[Docket No. 93-08; Notice 2]

Determination That Nonconforming 1975 Laverda 1000 Motorcycles Are Eligible for Importation

AGENCY: National Highway Traffic Safety Administration (NHTSA), DOT.

ACTION: Notice of determination by NHTSA that nonconforming 1975 Laverda 1000 motorcycles are eligible for importation.

SUMMARY: This notice announces the determination by NHTSA that 1975 Laverda 1000 motorcycles not originally manufactured to comply with all applicable Federal motor vehicle safety standards are eligible for importation into the United States because they are substantially similar to a vehicle originally manufactured for importation into and sale in the United States and certified by its manufacturer as complying with the safety standards (the U.S.-certified version of the 1975 Laverda 1000 motorcycle), and they are capable of being readily modified to conform to the standards.

DATES: The determination is effective May 4, 1993.

FOR FURTHER INFORMATION CONTACT: Ted Bayler, Office of Vehicle Safety Compliance, NHTSA (202-366-5306).

SUPPLEMENTARY INFORMATION:

Bakground

Under section 108(c)(3)(A)(i) of the National Traffic and Motor Vehicle Safety Act (the Act), 15 U.S.C. 1397(c)(3)(A)(i), a motor vehicle that was not originally manufactured to conform to all applicable Federal motor vehicle safety standards shall be refused admission into the United States on and after January 31, 1990, unless NHTSA has determined that the motor vehicle is substantially similar to a motor vehicle originally manufactured for importation into and sale in the United States, certified under section 114 of the Act, and of the same model year as the model of the motor vehicle to be compared, and is capable of being readily modified to conform to all applicable Federal motor vehicle safety standards.

Petitions for eligibility determinations may be submitted by either manufacturers or importers who have registered with NHTSA pursuant to 49 CFR part 592. As specified in 49 CFR 593.7, NHTSA publishes notice in the Federal Register of each petition that it receives, and affords interested persons an opportunity to comment on the petition. At the close of the comment period, NHTSA determines, on the basis of the petition and any comments that it has received, whether the vehicle is eligible for importation. The agency then publishes this determination in the Federal Register.

J.K. Motors, Inc. of Kingsville, Maryland (Registered Importer R-90-006) petitioned NHTSA to determine whether 1975 Laverda 1000 motorcycles are eligible for importation into the United States. NHTSA published notice of the petition on March 8, 1993 (58 FR 12979) to afford an opportunity for public comment. The reader is referred to that notice for a thorough description of the petition. No comments were received in response to the notice. Based on its review of the information submitted by the petitioner, NHTSA has determined to grant the petition.

Vehicle Eligibility Number for Subject Vehicles

The importer of a vehicle admissible under any final determination must indicate on the form HS-7 accompanying entry the appropriate vehicle eligibility number indicating that the vehicle is eligible for entry. VSP 37 is the vehicle eligibility number assigned to vehicles admissible under this determination.

Final Determination

Accordingly, on the basis of the foregoing, NHTSA hereby determines that a 1975 Laverda 1000 motorcycle not originally manufactured to comply with all applicable Federal motor vehicle safety standards is substantially similar to a 1975 Laverda 1000 motorcycle originally manufactured for importation into and sale in the Untied States and certified under section 114 of the National Traffic and Motor Vehicle Safety Act, and is capable of being readily modified to conform to all applicable Federal motor vehicle safety standards.

Authority: 15 U.S.C. 1397(c)(3)(A)(i)(I) and (C)(ii); 49 CFR 593.8; delegations of authority at 49 CFR 1.50 and 501.8.

Issued on: April 27, 1993.

William A. Boehly,

Associate Administrator for Enforcement.

SUMMARY: This notice requests comments on a petition submitted to the National Highway Traffic Safety Administration (NHTSA) for a

VOL 58 ISS 84 MY 4 1993 UMI

determination that a 1981 Volvo 262C passenger car that was not originally manufactured to comply with all applicable Federal motor vehicle safety standards is eligible for importation into the United States because (1) it is substantially similar to a vehicle that was originally manufactured for importation into and sale in the United States and that was certified by its manufacturer as complying with the safety standards, and (2) it is capable of being readily modified to conform to the standards.

DATES: The closing date for comments on the petition is June 3, 1993.

ADDRESSES: Comments should refer to the docket number and notice number, and be submitted to: Docket Section, room 5109, National Highway Traffic Safety Administration, 400 Seventh Street, SW., Washington, DC 20590. (Docket hours are from 9:30 a.m. to 4 p.m.).

FOR FURTHER INFORMATION CONTACT: Ted Bayler, Office of Vehicle Safety Compliance, NHTSA (202–366–5306).

SUPPLEMENTARY INFORMATION:

Background

Under section 108(c)(3)(A)(i) of the National Traffic and Motor Vehicle Safety Act (the Act), 15 U.S.C. 1397(c)(3)(A)(i), a motor vehicle that was not originally manufactured to conform to all applicable Federal motor vehicle safety standards shall be refused admission into the United States on and after January 31, 1990, unless NHTSA has determined that the motor vehicle is substantially similar to a motor vehicle originally manufactured for importation into and sale in the United States, certified under section 114 of the Act, and of the same model year as the model of the motor vehicle to be compared, and is capable of being readily modified to conform to all applicable Federal motor vehicle safety standards.

Petitions for eligibility determinations may be submitted by either manufacturers or importers who have registered with NHTSA pursuant to 49 CFR part 592. As specified in 49 CFR 593.7, NHTSA publishes notice in the **Federal Register** of each petition that it receives, and affords interested persons an opportunity to comment on the petition. At the close of the comment period, NHTSA determines, on the basis of the petition and any comments that it has received, whether the vehicle is eligible for importation. The agency then publishes this determination in the **Federal Register.**

Wallace Environmental Testing Laboratories, Inc. of Houston, Texas ("WETL") (Registered Importer R–90–005) has petitioned NHTSA to determine whether 1981 Volvo 262C passenger cars that were not originally manufactured in conformity with all applicable Federal motor vehicle safety standards are eligible for importation into the United States. The vehicle that WETL believes is substantially similar is the 1981 Volvo 262C that was manufactured for importation into and sale in the United States and that was certified by Volkswagen as complying with all applicable Federal motor vehicle safety standards.

The petitioner stated that it performed a careful evaluation of the non-U.S.-certified 1981 Volvo 262C, and determined that it is substantially similar to its U.S.-certified counterpart. Based on this evaluation, the petitioner contends that the non-U.S.-certified 1981 Volvo 262C, as originally manufactured, conforms to many Federal motor vehicle safety standards in the same manner as the U.S.-certified 1981 Volvo 262C, or is capable of being readily modified to conform to those standards.

Specifically, the petitioner claims that the two models are identical with respect to compliance with Standards Nos. 102 *Transmission Shift Lever Sequence * * *,* 103 *Defrosting and Defogging Systems,* 104 *Windshield Wiping and Washing Systems,* 105 *Hydraulic Brake Systems,* 106 *Brake Hoses,* 107 *Reflecting Surfaces,* 109 *New Pneumatic Tires,* 111 *Rearview Mirrors,* 113 *Hood Latch Systems,* 114 *Theft Protection,* 116 *Brake Fluid,* 118 *Power Window Systems,* 124 *Accelerator Control Systems,* 201 *Occupant Protection in Interior Impact,* 202 *Head Restraints,* 203 *Impact Protection for the Driver From the Steering Control System,* 204 *Steering Control Rearward Displacement,* 205 *Glazing Materials,* 206 *Door Locks and Door Retention Components,* 207 *Seating Systems,* 208 *Occupant Crash Protection,* 209 *Seat Belt Assemblies,* 210 *Seat Belt Assembly Anchorages,* 211 *Wheel Nuts, Wheel Discs and Hubcaps,* 212 *Windshield Retention,* 214 *Side Door Strength,* 216 *Roof Crush Resistance,* 219 *Windshield Zone Intrusion,* and 302 *Flammability of Interior Materials.*

Petitioner also contends that the non-U.S.-certified 1981 Volvo 262C is capable of being readily modified to meet the following standards, in the manner indicated:

Standard No. 101 *Controls and Displays:* Recalibration of the speedometer/odometer from kilometers to miles per hour.

Standard No. 108 *Lamps, Reflective Devices and Associated Equipment:*

(a) Installation of U.S.-model headlights;

(b) Installation of sidemarkers and reflectors.

Standard No. 110 *Tire Selection and Rims:* Installation of a tire information placard.

Standard No. 115 *Vehicle Identification Number:* Installation of a VIN plate that can be read from outside the left windshield pillar, and a VIN reference label on the edge of the door or latch post nearest the driver.

Standard No. 301 *Fuel System Integrity:* Installation of a rollover valve in the fuel tank vent line between the fuel tank and the evaporative emissions collection canister.

Additionally, the petitioner states that a certification label must be affixed to the vehicle to comply with vehicle certification requirements found in 49 CFR part 567.

Interested persons are invited to submit comments on the petition described above. Comments should refer to the docket number and be submitted to: Docket Section, National Highway Traffic Safety Administration, room 5109, 400 Seventh Street SW., Washington, DC 20590. It is requested but not required that 10 copies be submitted.

All comments received before the close of business on the closing date indicated above will be considered, and will be available for examination in the docket at the above address both before and after that date. To the extent possible, comments filed after the closing date will also be considered. Notice of final action on the petition will be published in the **Federal Register** pursuant to the authority indicated below.

Authority: 15 U.S.C. 1397(c)(3)(A)(i)(I) and (C)(ii); 49 CFR 593.8; delegations of authority at 49 CFR 1.50 and 501.8.

Issued on: April 27, 1993.

Receipt of Petition for Determination That Nonconforming 1986 Volkswagen Scirocco Passenger Cars Are Eligible for Importation:

AGENCY: National Highway Traffic Safety Administration, DOT.

ACTION: Notice of receipt of petition for determination that nonconforming 1986 Volkswagen Scirocco passenger cars are eligible for importation.

SUMMARY: This notice requests comments on a petition submitted to the National Highway Traffic Safety Administration (NHTSA) for a determination that a 1986 Volkswagen Scirocco passenger car that was not originally manufactured to comply with all applicable Federal motor vehicle safety standards is eligible for importation into the United States because (1) it is substantially similar to a vehicle that was originally manufactured for importation into and sale in the United States and that was certified by its manufacturer as complying with the safety standards, and (2) it is capable of being readily modified to conform to the standards.

DATES: The closing date for comments on the petition is June 3, 1993.

ADDRESSES: Comments should refer to the docket number and notice number, and be submitted to: Docket Section, room 5109, National Highway Traffic Safety Administration, 400 Seventh Street SW., Washington, DC 20590. (Docket hours are from 9:30 a.m. to 4 p.m.)

FOR FURTHER INFORMATION CONTACT: Ted Bayler, Office of Vehicle Safety Compliance, NHTSA (202–366–5306).

SUPPLEMENTARY INFORMATION:

Background

Under section 108(c)(3)(A)(i) of the National Traffic and Motor Vehicle Safety Act (the Act), 15 U.S.C. 1397(c)(3)(A)(i), a motor vehicle that was not originally manufactured to conform to all applicable Federal motor vehicle safety standards shall be refused admission into the United States on and after January 31, 1990, unless NHTSA has determined that the motor vehicle is substantially similar to a motor vehicle originally manufactured for importation into and sale in the United States, certified under section 114 of the Act, and of the same model year as the model of the motor vehicle to be compared, and is capable of being readily modified to conform to all applicable Federal motor vehicle safety standards.

Petitions for eligibility determinations may be submitted by either manufacturers or importers who have registered with NHTSA pursuant to 49 CFR part 592. As specified in 49 CFR 593.7, NHTSA publishes notice in the **Federal Register** of each petition that it receives, and affords interested persons an opportunity to comment on the petition. At the close of the comment period, NHTSA determines, on the basis of the petition and any comments that it has received, whether the vehicle is eligible for importation. The agency then publishes this determination in the **Federal Register.**

Wallace Environmental Testing Laboratories, Inc. of Houston, Texas ("WETL") (Registered Importer R–90–005) has petitioned NHTSA to determine whether 1986 Volkswagen Scirocco passenger cars that were not originally manufactured in conformity with all applicable Federal motor vehicle safety standards are eligible for importation into the United States. The vehicle that WETL believes is substantially similar is the 1986 Volkswagen Scirocco that was manufactured for importation into and sale in the United States and that was certified by Volkswagen as complying with all applicable Federal motor vehicle safety standards.

The petitioner stated that it performed a careful evaluation of the non-U.S.-certified 1986 Volkswagen Scirocco, and determined that it is substantially similar to its U.S.-certified counterpart. Based on this evaluation, the petitioner contends that the non-U.S.-certified 1986 Volkswagen Scirocco, as originally manufactured, conforms to many Federal motor vehicle safety standards in the same manner as the U.S.-certified 1986 Volkswagen Scirocco, or is capable of being readily modified to conform to those standards.

Specifically, the petitioner claims that the two models are identical with respect to compliance with Standards Nos. 102 *Transmission Shift Lever Sequence * * *,* 103 *Defrosting and Defogging Systems,* 104 *Windshield Wiping and Washing Systems,* 105 *Hydraulic Brake Systems,* 106 *Brake Hoses,* 107 *Reflecting Surfaces,* 109 *New Pneumatic Tires,* 113 *Hood Latch Systems,* 116 *Brake Fluid,* 118 *Power Window Systems,* 124 *Accelerator Control Systems,* 201 *Occupant Protection in Interior Impact,* 202 *Head Restraints,* 203 *Impact Protection for the Driver From the Steering Control System,* 204 *Steering Control Rearward Displacement,* 205 *Glazing Materials,* 206 *Door Locks and Door Retention Components,* 207 *Seating Systems,* 209 *Seat Belt Assemblies,* 210 *Seat Belt Assembly Anchorages,* 211 *Wheel Nuts, Wheel Discs and Hubcaps,* 212 *Windshield Retention,* 216 *Roof Crush Resistance,* 219 *Windshield Zone Intrusion,* and 302 *Flammability of Interior Materials.*

Petitioner also contends that the 1986 Volkswagen Scirocco is capable of being readily modified to meet the following standards, in the manner indicated:

Standard No. 101 *Controls and Displays:*

(a) Substitution of a lens marked "Brake" for a lens with an ECE symbol on the brake failure indicator lamp;

(b) Recalibration of the speedometer/odometer from kilometers to miles per hour.

Standard No. 108 *Lamps, Reflective Devices and Associated Equipment:*

(a) Installation of U.S.- model headlights;

(b) Installation of sidemarkers and reflectors;

(c) Installation of a high mounted stop lamp.

Standard No. 110 *Tire Selection and Rims:* Installation of a tire information placard.

Standard No. 111 *Rearview Mirrors:* Replacement of the passenger's outside rearview mirror with one bearing the required warning statement or permanently marking that statement on the existing mirror.

Standard No. 114. *Theft Protection:* Installation of a buzzer microswitch in the steering lock assembly, and a warning buzzer.

Standard No. 115 *Vehicle Identification Number:* Installation of a VIN plate that can be read from outside the left windshield pillar, and a VIN reference label on the edge of the door or latch post nearest the driver.

Standard No. 208 *Occupant Crash Protection:*

(a) Installation of a seat belt warning system;

(b) Replacement of the seat belt latch with one containing a microswitch to activate the seat belt warning system.

Standard No. 214 *Side Door Strength:* Installation of reinforcing beams.

Standard No. 301 *Fuel System Integrity:* Installation of a rollover valve in the fuel tank vent line between the fuel tank and the evaporative emissions collection canister.

Additionally, the petitioner states that a certification label must be affixed to the vehicle to comply with vehicle certification requirements found in 49 CFR part 567.

Interested persons are invited to submit comments on the petition described above. Comments should refer to the docket number and be submitted to: Docket Section, National Highway Traffic Safety Administration, room 5109, 400 Seventh Street SW., Washington, DC 20590. It is requested but not required that 10 copies be submitted.

All comments received before the close of business on the closing date indicated above will be considered, and will be available for examination in the docket at the above address both before and after that date. To the extent possible, comments filed after the

BILLING CODE 4910–59–M

[Docket No. 93–13; Notice 2]

Determination That Nonconforming 1970 Mercedes-Benz 300SEL Passenger Cars Are Eligible for Importation.

AGENCY: National Highway Traffic Safety Administration (NHTSA), DOT.

ACTION: Notice of determination by NHTSA that nonconforming 1970 Mercedes-Benz 300SEL passenger cars are eligible for importation.

SUMMARY: This notice announces the determination by NHTSA that 1970 Mercedes-Benz 300SEL passenger cars not originally manufactured to comply with all applicable Federal motor vehicle safety standards are eligible for importation into the United States because they are substantially similar to a vehicle originally manufactured for importation into and sale in the United States and certified by its manufacturer as complying with the safety standards (the U.S.certified version of the 1970 Mercedes-Benz 300SEL), and they are capable of being readily modified to conform to the standards.

DATE: The determination is effective May 4, 1993.

FOR FURTHER INFORMATION CONTACT: Ted Bayler, Office of Vehicle Safety Compliance, NHTSA (202–366–5306).

SUPPLEMENTARY INFORMATION:

Background

Under section 108(c)(3)(A)(i) of the National Traffic and Motor Vehicle Safety Act (the Act), 15 U.S.C. 1397(c)(3)(A)(i), a motor vehicle that was not originally manufactured to conform to all applicable Federal motor vehicle safety standards must be refused admission into the United States on and after January 31, 1990, unless NHTSA has determined that the motor vehicle is substantially similar to a motor vehicle originally manufactured for importation into and sale in the United States, certified under section 114 of the Act, and of the same model year as the model of the motor vehicle to be compared, and is capable of being readily modified to conform to all applicable Federal motor vehicle safety standards.

Petitions for eligibility determinations may be submitted by either manufacturers or importers who have registered with NHTSA pursuant to 49 CFR part 592. As specified in 49 CFR 593.7, NHTSA publishes notice in the **Federal Register** of each petition that it receives, and affords interested persons an opportunity to comment on the petition. At the close of the comment period, NHTSA determines, on the basis of the petition and any comments that it has received, whether the vehicle is eligible for importation. The agency then publishes this determination in the **Federal Register.**

Champagne Imports Inc. of Lansdale, Pennsylvania (Registered Importer R–90–009) petitioned NHTSA to determine whether 1970 Mercedes-Benz 300SEL passenger cars are eligible for importation into the United States. NHTSA published notice of the petition on March 8, 1993 (58 FR 12980) to afford an opportunity for public comment. The reader is referred to that notice for a thorough description of the petition. No comments were received in response to the notice. Based on its review of the information submitted by the petitioner, NHTSA has determined to grant the petition.

Vehicle Eligibility Number for Subject Vehicles

The importer of a vehicle admissible under any final determination must indicate on the form HS–7 accompanying entry the appropriate vehicle eligibility number indicating that the vehicle is eligible for entry. VSP 36 is the vehicle eligibility number assigned to vehicles admissible under this determination.

Final Determination

Accordingly, on the basis of the foregoing, NHTSA hereby determines that a 1970 Mercedes-Benz 300SEL (Model ID 109.056) not originally manufactured to comply with all applicable Federal motor vehicle safety standards is substantially similar to a 1970 Mercedes-Benz 300SEL originally manufactured for importation into and sale in the United States and certified under section 114 of the National Traffic and Motor Vehicle Safety Act, and is capable of being readily modified to conform to all applicable Federal motor vehicle safety standards.

Authority: 15 U.S.C. 1397(c)(3)(A)(i)(I) and (C)(ii); 49 CFR 593.8; delegations of authority at 49 CFR 1.50 and 501.8.

Issued on: April 27, 1993.

William A. Boehly,

Associate Administrator for Enforcement.

DEPARTMENT OF THE TREASURY

Public Information Collection Requirements Submitted to OMB for Review

The Department of the Treasury has submitted the following public information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1980, Public Law 96–511. Copies of the submission(s) may be obtained by calling the Treasury Bureau Clearance Officer listed. Comments regarding this information collection should be addressed to the OMB reviewer listed and to the Treasury Department Clearance Officer, Department of the Treasury, Room 3171, Treasury Annex, 1500 Pennsylvania Avenue, NW., Washington, DC 20220.

Bureau of Alcohol, Tobacco and Firearms

OMB Number: 1512–0026.

Form Numbers: ATF F 3 (5320.3).

Type of Review: Extension.

Title: Application for Tax Exempt Transfer of Firearms and Registration of Special (Occupational) Taxpayer (26 U.S.C. 53, Firearms).

Description: This application allows a special taxpayer firearms licensee to transfer National Firearms Act firearms without payment of tax to another eligible special taxpayer upon approval of ATF. The approved form is proof that the firearm is legally held and legally transferred to the current holder of the firearm. Conversely, lack of the form could indicate illegal possession.

Respondents: Individuals or households, State or local governments, Businesses or other for-profit, Small businesses or organizations.

Estimated Number of Respondents: 3,000.

Estimated Burden Hours Per Respondent: 30 minutes.

Frequency of Response: On occasion.

Estimated Total Reporting Burden: 15,000 hours.

Clearance Officer: Robert N. Hogarth, (202) 927–8930, Bureau of Alcohol, Tobacco, and Firearms, Room 3200, 650 Massachusetts Avenue, NW., Washington, DC 20226.

OMB Reviewer: Milo Sunderhauf, (202) 395–6880, Office of Management and Budget, Room 3001, New Executive Office Building, Washington, DC 20503.

Dated: April 28, 1993.

Lois K. Holland,

Departmental Reports, Management Officer.

Public Information Collection Requirements Submitted to OMB for Review

April 28, 1993.

The Department of the Treasury has submitted the following public information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1980, Public Law 96–511. Copies of the submission(s) may be obtained by calling the Treasury Bureau Clearance Officer listed. Comments regarding this information collection should be addressed to the OMB reviewer listed and to the Treasury Department Clearance Officer, Department of the Treasury, room 3171 Treasury Annex, 1500 Pennsylvania Avenue, NW., Washington, DC 20220.

Internal Review Service

OMB Number: 1545–1045.

Form Number: None.

Type of Review: Reinstatement.

Title: Conducting 1993 Focus Group Interviews on Federal Tax Forms.

Description: Focus group interviews are necessary to obtain public input on revised and new tax forms. The results will be used to further simplify and improve the forms so that taxpayers will understand them more easily.

Respondents: Individuals or households.

Estimated Number of Respondents: 3,000.

Estimated Burden Hours Per Respondent: 3 hours.

Frequency of Response: Other (One-time focus group interviews).

Estimated Total Reporting Burden: 1,152 hours.

Clearance Officer: Garrick Shear (202) 622–3869, Internal Revenue Service, room 5571, 1111 Constitution Avenue, NW., Washington, DC 20224.

OMB Reviewer: Milo Sunderhauf (202) 395–6880, Office of Management and Budget, room 3001, New Executive Office Building, Washington, DC 20503.

Lois K. Holland,

Departmental Reports Management Officer.

Sunshine Act Meetings

Federal Register
Vol. 58, No. 84
Tuesday, May 4, 1993

This section of the FEDERAL REGISTER contains notices of meetings published under the "Government in the Sunshine Act" (Pub. L. 94-409) 5 U.S.C. 552b(e)(3).

FEDERAL ENERGY REGULATORY COMMISSION

FEDERAL REGISTER CITATION OF PREVIOUS ANNOUNCEMENT: April 26, 1993, 58 FR 22019.

PREVIOUSLY ANNOUNCED TIME AND DATE OF MEETING: 10:00 a.m., April 28, 1993.

CHANGE IN THE MEETING: The following Docket Numbers have been added to Item CAG-57 on the Agenda scheduled for April 28, 1993:

Item No., Docket No. and Company

CAG-57
RP92-104-000 and RP92-131-000, K N Energy, Inc.

Lois D. Cashell,
Secretary.

FEDERAL RESERVE SYSTEM
BOARD OF GOVERNORS OF THE FEDERAL RESERVE SYSTEM

TIME AND DATE: 11:00 a.m., Monday May 10, 1993.

PLACE: Marriner S. Eccles Federal Reserve Board Building, C Street entrance between 20th and 21st Streets, NW., Washington, DC 20551.

STATUS: Closed.

MATTERS TO BE CONSIDERED:

1. Personnel actions (appointments, promotions, assignments, reassignments, and salary actions) involving individual Federal Reserve System employees.
2. Any items carried forward from a previously announced meeting.

CONTACT PERSON FOR MORE INFORMATION: Mr. Joseph R. Coyne, Assistant to the Board; (202) 452-3204. You may call (202) 452-3207, beginning at approximately 5 p.m. two business days before this meeting, for a recorded announcement of bank and bank holding company applications scheduled for the meeting.

Dated: April 30, 1993.

Jennifer J. Johnson,
Associate Secretary of the Board.

Part II

Department of Labor

Occupational Safety and Health Administration

29 CFR Part 1926
Lead Exposure in Construction; Interim Final Rule

VOL 58 ISS 84 MY 4 1993 UMI

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

29 CFR Part 1926

[Docket No. H-004L]

Lead Exposure in Construction

AGENCY: Occupational Safety And Health Administration (OSHA), Labor.

ACTION: Interim final rule.

SUMMARY: This interim final rule amends the Occupational Safety and Health Administration (OSHA) standards for occupational health and environmental controls in subpart D of 29 CFR part 1926 by adding a new § 1926.62 containing employee protection requirements for construction workers exposed to lead.

This standard reduces the permitted level of exposure to lead for construction workers from 200 micrograms per cubic meter of air (200 $\mu g/m^3$) as an 8-hour time weighted average (TWA) to an 8-hour TWA of 50 $\mu g/m^3$. The standard also includes requirements addressing exposure assessment, methods of compliance, respiratory protection, protective clothing and equipment, hygiene facilities and practices, medical surveillance, medical removal protection, employee information and training, signs, recordkeeping, and observation of monitoring. An action level of 30 $\mu g/m^3$ as an 8-hour TWA is established as the level at which employers must initiate certain compliance activities. In instances where employers can demonstrate that employee exposures are below 30 $\mu g/m^3$ as an 8-hour TWA, the employer is not obligated to comply with most of the requirements in this interim final rule.

This interim final rule is mandated by, and issued under the exclusive authority of, title X, subtitle C, sections 1031 and 1032, Worker Protection, of the Housing and Community Development Act of 1992.

DATES: This interim final standard shall become effective June 3, 1993. Start-up dates for various provisions are set forth in paragraph (r) of the standard (§ 1926.62(r)).

FOR FURTHER INFORMATION CONTACT: Mr. James F. Foster, U.S. Department of Labor, Occupational Safety and Health Administration, Office of Public Affairs, room N-3647, 200 Constitution Avenue, NW., Washington, DC 20210. Telephone (202) 219-8151.

SUPPLEMENTARY INFORMATION:

I. Background

In 1971, in accordance with section 6(a) of the OSH Act, OSHA adopted standards incorporating a permissible exposure limit (PEL) of 200 $\mu g/m^3$ to regulate occupational exposure to lead in general industry (29 CFR 1910.1000) and in the construction industry (29 CFR 1926.55). In both standards, the PEL had to be achieved by engineering and work practice controls. Some years later in 1978, after a section 6(b) rulemaking, OSHA promulgated a final lead standard for general industry (29 CFR 1910.1025), which lowered the PEL to 50 $\mu g/m^3$. The 1978 lead standard also required that the PEL be achieved, to the extent feasible, by engineering and work practice controls and in addition included a number of ancillary provisions requiring employers to provide medical surveillance, medical removal protection (MRP), hygiene facilities, appropriate respirators, and air monitoring, among other things.

The 1978 lead standard in paragraph (a) excluded the construction industry from its coverage. OSHA in the preamble explained that it had exempted the industry because of insufficient information in the record to resolve issues raised about the applicability of the standard to conditions in the construction industry. OSHA said it would request the Construction Advisory Committee (ACCSH) to review the record and make recommendations for a lead standard for the construction industry (43 FR 52986, November 14, 1978).

Subsequently, OSHA's exemption of the construction industry was challenged in litigation involving the lead standard for general industry. In response to that challenge, the court upheld OSHA's decision. Although the court declared that "OSHA would be shirking its statutory responsibilities if it made no effort to protect workers in the construction industry from lead exposure * * *" the court accepted OSHA's assurances at the time "that it will take reasonably prompt steps to fashion this protection", and indicated that "So long as it does so, OSHA has met its duty." "Nothing in the Act," the court said, "prevents the agency from exercising discretion in delaying specific standards according to the unique problems of specific industries. * * *" (*United Steelworkers of America* v. *Marshall*, 647 F.2d 1189, 1310 (DC Cir. 1980).)

Since 1979, employers have been required to comply with a PEL for lead in the construction industry that is four times the PEL for general industry. Employers have also been required to take other actions to protect construction workers from excess lead exposure to the extent that employers' obligations to provide respirators, protective clothing, hygiene facilities, training, and the like were imposed by generic standards that covered construction (e.g., 1910.20; 1910.94; 1910.134; 1926.20; 1926.21; 1926.28; 1926.51; 1926.55; 1926.57; 1926.59; 1926.103; 1926.200; 1926.353; 1926.354). However, there has still been no comprehensive standard regulating occupational lead exposure in construction.

In 1990, NIOSH set as a national goal the elimination of exposures that result in workers having blood lead concentrations greater than 25 $\mu g/dL$ of whole blood. Under these circumstances, OSHA in the fall of 1990 announced it would begin to develop a proposal for a comprehensive standard regulating occupational lead exposure in construction. In addition, on June 12, 1992 OSHA proposed to amend its existing air contaminants standards by, among other things, reducing the PEL for occupational lead exposure in construction from 200 $\mu g/m^3$ to 50 $\mu g/m^3$ (57 FR 26001). However, progress on that air contaminants proposal was suspended because of the decision by the U.S. Court of Appeals for the Eleventh Circuit vacating an earlier rule on air contaminants for general industry (*AFL-CIO* v. *OSHA* 965 F.2d, 962 (1992)).

The Housing and Community Development Act of 1992

Because Congress did not anticipate publication of OSHA's proposed comprehensive lead standard for the construction industry before late spring of 1993 or publication of a final standard before 1996 (House Report on H.R. 5730, pp. 14-15), Congress in October 1992 passed Sections 1031 and 1032 of Title X of the Housing and Community Development Act of 1992 ("the Act," Pub. L. 102-550, signed by the President on October 28, 1992, 106 Stat. 3924).

In those sections, Congress included worker protection provisions expressly requiring that:

(1) No later than 180 days after enactment (April 26, 1993), the Secretary of Labor must issue an interim final lead standard covering the construction industry.

(2) The standard must be as protective as the worker protection guidelines for identification and abatement of lead-based paint in public and Indian housing issued by the Department of Housing and Urban Development (Revised Chapter 8, "HUD Guidelines"; 55 FR 38973, Aug. 1991).

(3) The interim final standard is to take effect upon "issuance," except that the standard may include a reasonable delay in the effective date.

(4) The standard will have the effect of an OSH Act standard and will apply until a final standard becomes effective under Section 6 of the OSH Act.

(5) The Secretary of Labor in developing this standard must consult and coordinate with the Environmental Protection Agency (EPA) to achieve maximum enforcement of the Toxic Substances Control Act (TSCA) and the OSH Act while minimizing duplication.

Congressional Intent

From its language and legislative history, the broad Congressional intent behind the Act of 1992 is clear. OSHA is required within 180 days after enactment to issue an interim final regulation that provides protection to construction workers from occupational exposure to lead that is as effective as the HUD guidelines and OSHA's lead standard for general industry.

Congressional intent is clear as well with regard to many particular provisions. OSHA is mandated, for example, to include medical surveillance provisions similar to the HUD Guidelines and OSHA's lead standard. Engineering controls are to continue to be preferred, to the extent feasible, over respirators as the method of choice for compliance. More generally, most of the provisions of the interim final standard, such as those concerning housekeeping, air monitoring, record keeping, and hazard communication, are to be like those in the Guidelines and general industry lead standard, except insofar as it was necessary to adapt requirements of the interim final to conditions in the construction industry.

To determine Congressional intent, OSHA looked to the relevant language in the worker protection provisions of Section 1031 of title X of the Housing and Community Development Act of 1992 and to the legislative history of that section of the Act. As can be seen below, the language of the Act provides help in resolving many of the issues raised. Nonetheless, OSHA has had to rely at times on the legislative history to clarify Congress' mandate.

The legislative history is embodied in and essentially limited to three sources. First, the primary source is the House Committee on Labor and Education Report on H.R. 5730, which is the origin of the worker protection requirements that were then incorporated in House housing bill, H.R. 5334 and were adopted without objection by the conference committee. Second, there is a statement concerning the conference bill H.R. 5334 on the House floor by Rep. William D. Ford, the author of the worker protection provisions, which repeats verbatim relevant portions of the House Report on H.R. 5730 (138 Cong. Rec., H11475-76; daily ed. Oct. 5, 1992). And third, there is a statement by ranking minority member Representative Paul B. Henry (138 Cong. Rec. H11470; daily ed. Oct. 5, 1992).

II. Key Issues

(A) Procedural Requirements

Aside from the general requirement that the Secretary of Labor consult and coordinate with EPA, Congress in the 1992 Act did not impose any procedural requirements that must be followed in developing and promulgating the interim final standard. Furthermore, the legislative history of the Act makes it clear that Congress intended the Secretary to be free to follow whatever procedures he chooses. Specifically, the Secretary need not follow the procedural requirements of the OSH Act or the Administrative Procedures Act ("APA"; 5 U.S.C.A. 551, 553).

The Secretary's freedom from procedural constraints imposed by this legislation is clear from the Report on H.R. 5730, p. 16, where the House Committee states:

(1) "[T]he procedural requirements of section 6 of the OSH Act do not apply to the promulgation of the interim final regulation."

(2) "Nor * * * do the notice and comment provisions of the Administrative Procedures Act apply."

(3) Indeed, "the Secretary is not required to follow any specific notice and comment procedures before issuing the interim final regulation * * *."

Nonetheless, the Committee does say that "it is the Committee's hope that the Secretary [will] solicit input from and consider the views of affected industry and labor representatives as well as public health and industrial hygiene experts in fashioning an interim lead regulation for the construction industry." But here again, the Committee declares that "The Secretary is free to select whatever method she feels is best suited to obtain public input into the development of the interim final regulation, so long as the procedures she selects do not have the effect of delaying publication of the regulation."

Prior to issuing this interim final rule OSHA consulted members of the Lead Work Group of the Construction Advisory Committee, which included representatives of labor, management and the public health community. In the process, OSHA provided the work group with a draft of the interim final, listened to members' comments on the draft, and made modifications to the draft in response to their comments. The chairman of the work group was sufficiently satisfied with the results that in his report to the full ACCSH on February 16, 1993, he made a motion recommending that the full Committee support OSHA's efforts, which was unanimously passed by the Advisory Committee.

In addition, in accordance with Congress' mandate, OSHA has established a dialogue with EPA in order to coordinate the actions of the two agencies to maximize effectiveness and minimize duplication. This began with a preliminary meeting on February 22, 1993. Subsequently, OSHA and EPA are sharing working documents and will continue this cooperative effort throughout the ongoing EPA work on its rulemaking, also mandated by the Housing and Community Development Act of 1992.

(B) Scope

The language of the 1992 Act, in conjunction with the legislative history, leave little doubt that Congress intended the interim final rule to extend to all lead exposed construction workers, not simply to those removing lead-based paint. Thus, the worker protection section of the Act uses all-inclusive language: It requires OSHA to issue "an interim final regulation regulating occupational exposure to lead in the construction industry". Moreover, by its terms, the interim final is to "apply until a final standard becomes effective under section 6 of the Occupational Safety and Health Act of 1970." As Congress knew, OSHA has been developing a lead standard for all workers in the construction industry, not simply those engaged in lead paint abatement. Nowhere in the 1992 Act or the legislative history does Congress say that it intended the interim final regulation to have a narrower scope than OSHA's final standard.

In addition, from the legislative history it is clear that the gap Congress sought to fill by passing this Act was nothing less than the gap left when OSHA exempted the construction industry as a whole from the 1978 general industry standard for lead. The Committee report repeatedly refers to the general failure to protect construction workers and does not limit its focus to workers engaged in lead paint abatement. Indeed, the HUD Guidelines, which apply only to lead-

UMI

based paint abatement work, are first raised in the Report only as the "most significant" effort to provide "alternative forms of protection to construction workers * * * [i]n the absence of a comprehensive OSHA lead standard protecting workers in the construction industry * * *" Thus, the protections Congress mandated OSHA to incorporate in its interim final rule are to be extended to all construction workers exposed to lead.

There are a few indications in the 1992 Act and legislative history that Congress might have intended to protect only construction workers engaged in lead paint abatement, but they are not persuasive. For example, the short title of title X of the Act is the "Residential Lead-Based Paint Hazard Reduction Act of 1992" and the short title of Subtitle C—Worker Protection is the "Lead-Based Paint Exposure Reduction Act." Moreover, the criterion in the Act for assessing the sufficiency of the interim final regulation is the HUD guidelines, which apply only to lead paint abatement in housing. Furthermore, related sections of the Act focus on lead paint abatement (e.g., Sec. 1032). Finally, remarks by Representative Paul Henry suggest that he thought the scope of the interim standard would be limited to residential lead-based paint abatement work (138 Cong. Rec. H11470; daily ed. Oct. 5, 1992).

Nevertheless, conventional rules of legislative interpretation give considerably more weight to the express language in legislation than to its title. Moreover, the fact that the source of the criterion for determining the level of protection to be afforded workers is guidelines for abating lead paint in residential housing does not necessarily mean or imply that the intention was to protect only those engaged in such abatement. Finally, Representative Henry's views on scope seem to misunderstand and diverge from the views on scope of the majority. Indeed, Representative Henry was not present when the provisions that became section 1031 were discussed, did not seek clarification of the scope issue, voted against the conference agreement, and did not sign the Conference Report to H.R. 5334. His views, then, can hardly be taken to represent the intention of the majority. This understanding is confirmed by a letter from Representative William D. Ford, the Chairman of the originating House Committee on Education and Labor written on November 26, 1992, after the fact, to then Secretary of Labor, Lynn Martin.

(C) The Justification and Explanation Required for the Interim Final Rule

The in the Act of 1992 does not impose an independent duty to justify the interim final rule. Without such a duty in the authorizing legislation, if OSHA has a duty to provide a justification or explanation, it must come from two sources: First, the common law or generic legislation like the APA; and second, any other applicable specific law or regulation, such as the OSH Act or Executive Order ("EO") 12291. As to the first of these, the Agency believes that it is inherently obligated under the APA to give a reasonable explanation for its actions in order to provide a basis for judicial review (5 U.S.C.A. 551, 553(C)).

As to the second, because the interim final is being issued under the authority of the Housing and Community Development Act of 1992 and not under the OSH Act, OSHA is not required to comply with any of the requirements of the OSH Act for 6(b) rulemakings. Consequently, for example, OSHA need not undertake and provide a formal analysis of economic and technological feasibility. Nor need the Agency make a determination of significant risk. As a result, no quantitative risk assessment is required.

The Act does state that the interim final regulation "shall have the legal effect of an Occupational Safety and Health Standard * * *." However, by that, Congress seems only to mean that the interim final is to be enforced by OSHA as a 6(b) standard. There is no reason to infer from such language that OSHA must justify the interim final in accordance with the legal tests developed under the OSH Act. On the contrary, precisely because the interim final is not a 6(b) standard it was necessary for Congress to give it that "effect." If Congress had expected OSHA to justify the interim final in the same manner that OSHA justifies 6(b) standards, the legislature could hardly have expected OSHA to issue the interim final in 180 days.

However, the 1992 Act does not appear to exempt OSHA from any other preexisting duties to explain the interim rule. Thus, OSHA still might be required to perform some form of regulatory impact analysis ("RIA") under Executive Order 12291. The extent of that obligation is limited in this case by three considerations: (1) Congress ordered OSHA to produce this rule. OSHA did not, based upon its own priorities, decide to issue it at this time. The Agency therefore should not be responsible for justifying the rule as if it were a typical OSHA determination. (2) Congress also broadly decided the level of protection that must be provided. OSHA, therefore, should not be responsible for justifying that decision as if it were a typical OSHA determination. For all practical purposes, whatever the costs and benefits, OSHA must issue the interim final with the level of protection determined by Congress. (3) The duty to perform an RIA may be further limited by the time constraints imposed by the Congressional deadline. The EO by its own terms is inapplicable to any regulation for which performing the analysis required by the Order "would conflict with the deadlines imposed by statute or by judicial order * * *." (EO 12291, sec. 8(a)(2)). As a result, in the event of conflict, the duty to perform an RIA is limited by the statutory deadline."

In summary, in issuing this interim final rule, OSHA must: (1) comply with the Congressional mandate in Section 1031 of Title X of the Housing and Community Development Act of 1992; and (2) provide a sufficiently reasoned explanation for the rule to permit judicial review (5 U.S.C.A. 551, 553(C); and see note 198).

That is the focus of what follows in this preamble. First comes a general discussion of the criteria for compliance with the Congressional mandate. That is followed by a conventional "summary and explanation" to help employers, employees and others understand the particular provisions in the interim final standard and to help them and the courts understand why OSHA chose to require certain things and not others.

(D) Complying With the Congressional Mandate That the Interim Final be as Protective as the HUD Guidelines

Applying Congress mandate to issue an interim final standard that provides workplaces that are "as safe and healthful as those that would prevail under" the HUD Guidelines raises a number of questions. Some are relatively easy, but others are difficult, to answer.

In the first place, the HUD Guidelines (Revised Chapter 8) are neither sufficiently comprehensive nor sufficiently clear to be translated directly into an enforceable OSHA standard regulating occupational exposure to lead in the construction industry. Second, the HUD Guidelines were written exclusively with regard to lead paint abatement in housing and therefore have to be adapted to the diverse conditions in the construction industry as a whole. Third, the HUD Guidelines expressly incorporate many provisions of the OSHA lead standard

for general industry, but the extent to which the lead standard is incorporated differs in different provisions.

Fourth, there is the question of what criterion should be used to trigger application of the standard in the first place. Although the HUD Guidelines refer to the OSHA general industry standard, there is no explicit reference to a general action level or PEL. In fact, there is no reference to any trigger level or in Chapter 8 of the Guidelines. The only such reference is in the Introduction to the Guidelines and that reference is not in the context of worker protection. (This issue is discussed later in more detail).

Thus, OSHA has to fill in the gaps, clarify, modify, make choices, and adapt the Guidelines to conditions in the construction industry at large. Based upon the Committee report, Congress clearly understood this and signalled that it did not intend for OSHA to simply adopt the HUD Guidelines whole cloth. Rather, the Guidelines are to serve "as the basis" for developing the interim final rule, but "the Secretary may alter the provisions of the HUD Guidelines, so as long as the interim regulation provides workers with health and safety protections which are equally as effective." (House Committee report on H.R. 5730, pp. 15–16). Thus, Congress provided OSHA with flexibility to determine what modifications should be made to those Guidelines, in part based upon the need to adapt the HUD Guidelines to the broader construction industry. So Congress expected that OSHA would have to exercise judgement in determining the contents of the interim final rule.

OSHA considered somewhat different interpretations of how Congress intended the Guidelines to relate to the OSHA general industry standard with regard to such issues as trigger levels. After careful consideration, OSHA has concluded that the Guidelines were intended to be understood in conjunction with OSHA's lead standard for general industry.

The Guidelines are based on, and to a substantial degree repeat, much of the language of the standard. In most respects the Guidelines and the lead standard can be read to be consistent. The close relationship between the two is attested to by the many, often sweeping references in the Guidelines to OSHA's lead standard. For example, the introduction to the worker protection chapter in the Guidelines declares that the Guidelines "are intended to provide, at a minimum, the level of protection afforded by * * * OSHA['s] general industry lead standard" (55 FR 39874). Similarly, in paragraph 8.6 concerning MRP, the Guidelines say that public housing agencies should "refer to OSHA's general industry standard for lead for complete guidance on this subject." Again, in paragraph 8.8 regarding worker training, the employer is required to inform workers of the content of the OSHA lead standard and its appendices. Likewise, just preceding a list of the major elements that employers are advised to include in their employee protection plan, the Guidelines note that "Employers can refer directly to the OSHA lead standard * * * for complete requirements." Finally, near the end of the Guidelines, HUD says, "In addition to the lead standard, there are many standards that abatement employers must comply with." But abatement employers need not comply with OSHA's lead standard, which exempts construction, unless "required" to do so by the HUD Guidelines. These and other similar references to OSHA's lead standard give the strong impression that HUD Guidelines either incorporate that standard or are so dependent on it that they cannot be understood separately from it.

The legislative history of the 1992 Act makes clear that Congress regarded the Guidelines as very similar in essentials to OSHA's lead standard for general industry. Thus, the Committee Report states that "The HUD guidelines are based on, and in most respects mirror, OSHA's general industry lead standard." It further adds that, "Where the guidelines differ from OSHA's standard, the differences are intended to reflect the unique circumstances of the construction industry." Moreover, by requiring OSHA to issue an interim final regulation as protective as the HUD Guidelines, Congress' overriding intention appears to have been to extend to construction workers the protection afforded by OSHA's lead standard for general industry: "By relying on the HUD guidelines as the basis for the Secretary's interim final regulation, the Committee expects that construction workers will gain the same benefits available to general industry workers under the lead standard, i.e., a PEL of 50 $\mu g/m^3$, medical surveillance, medical removal protection, etc." The reference to a PEL of 50 $\mu g/m^3$ is repeated elsewhere in the legislative history: "the HUD guidelines recognize that compliance with a 50 $\mu g/m^3$ PEL in the construction industry likely will require greater reliance on respirator use than is accepted in general industry."

The references to the PEL are important. If the HUD Guidelines were not understood by Congress to have incorporated requirements from the general industry standard, Congress could not have expected a PEL of 50 $\mu g/m^3$ to apply to construction since there is no explicit reference to a PEL in the language of the Guidelines. Thus, from the legislative history it is clear that Congress intended the interim final regulation to incorporate the PEL and other provisions from the general industry standard. This interim final standard is patterned very closely on the HUD Guidelines and the general industry standard for lead.

OSHA is confirmed in this position by its understanding, based upon the language of the Act and its legislative history, that Congress conceived of the interim final standard within a broader perspective. First, Congress intended the interim final as a long overdue protective measure which generally would not break significant new ground. Second, Congress expected that the interim final would involve an adaption of OSHA's lead standard for general industry to the construction industry along the lines of the HUD Guidelines, which incorporate much of OSHA's lead standard. Finally, Congress assumed that a stricter construction standard or one that breaks new ground, if OSHA determines that one is needed, should be the product of a future 6(b) rulemaking, which provides for extensive notice and comment.

(E) Reasons for Differences With HUD Guidelines on Certain Provisions

In the previous discussion, issues involved in satisfying Congress' mandate that the interim final standard should be as protective as the HUD Guidelines were outlined. In what follows, the resolution of some of these issues is discussed with particular reference to where and why this interim final standard may differ somewhat in specific instances from the HUD Guidelines and/or from the OSHA lead standard. Further detailed discussion of the contents of each of the individual provisions of the standard is provided in the Summary and Explanation below.

Trigger Levels

One of the most important of these issues concerns the criteria by which applicability of the standard and of particular provisions of the standard are triggered. The most basic trigger determines whether an employer is covered by the standard at all. In addition, specific provisions of the standard can be triggered by other criteria or exposure levels.

The trigger criteria for the OSHA general industry standard and the HUD Guidelines appear to be different. For

VOL 58 ISS 84 MY 4 1993 UMI

example, the general industry standard triggers are the PEL of 50 µg/m³ and the action level of 30 µg/m³. Exposures above the PEL require implementation of feasible engineering and work practice controls, and provision of personal protective equipment and hygiene facilities supplemented by the use of respirators, if necessary, to reduce exposures to below 50 µg/m³. For employees exposed at or above the action level of 30 µg/m³, employers must provide biological monitoring. Additional medical examinations are required for those with elevated blood-lead levels, and upon development of signs of lead intoxication. Exposures at or above the action level also require implementation of exposure monitoring and training.

Chapter 8 of the Guidelines seems to require the employer to comply with all provisions where there is any potential of exposure to lead at any level. These provisions include use of respirators (Section 8.2), medical surveillance (Section 8.5), protective clothing (Section 8.3), hygiene facilities (Section 8.4), medical examinations (Section 8.53) and training (Section 8.8) for all employees who work where there is any potential of exposure to lead at any level. Chapter 8 further states that engineering controls, where feasible, must be used to minimize employee exposures (Section 8.1) without regard to the specific air level. That could mean that if it is feasible, engineering controls must be used to reduce exposures to zero.

Thus if OSHA were to adopt the scoring requirements of Chapter 8 without modification, it would apply all of the above provisions to people who are exposed at any level as well as to people who are exposed to higher levels. This would not only be unduly costly but would be impossible to comply with. For example, nearly every person on nearly every lead-related construction site would have to wear protective clothing and a respirator, and would have to be provided an annual medical examination even if they were only exposed to an air lead level of 5 µg/m³ for less than one hour per day and for one week per year. OSHA does not believe this is what Congress intended; nor is it what HUD intended in its Guidelines.

Although the HUD Guidelines do not address a specific trigger in the context of worker protection, the Introduction to the Guidelines states that wherever the lead concentration in a painted surface exceeds 1 mg/cm², abatement is required. This level is based on the hazard which the painted surface presents to occupants of the building, and the abatement is for their protection. It is only where abatement is already required in the Guidelines that most provisions in Chapter 8 are triggered by "any potential exposure". Since abatement is required only when the surface concentration of the painted surface exceeds 1 mg/cm², this level effectively establishes a trigger for the worker protection provisions.

On the basis of the foregoing, several options were theoretically open to OSHA in deciding the basic trigger for application of the standard and its provisions. The first was to trigger the standard, as Chapter 8 of the Guidelines appears to, at any potential exposure. In this case, requirements would be triggered in cases where little risk can be shown to exist. Every workplace where any lead can be shown to exist would be covered, even if the exposures could be shown, for example, to be 1 or 2 µg/m² of lead in the air. Such a requirement could not be justified in terms of substantial adverse health effects and would involve unprecedented annual costs.

An alternative option that would follow the Guidelines would be to trigger the standard based on a minimum lead concentration in paints or coatings of 1 mg/cm² in any surface coated with lead-containing material. However, there is no reliable connection between such a concentration and any risk of adverse health effects. That connection would have to be established by relating the surface concentration to an air concentration. Where this has been tried, the results were so variable as to be impossible to apply.

For example, in preparing a proposal for a standard for lead in construction, the state of California developed a mathematical model with which they calculated the air lead levels that would arise in certain specific work situations as a result of having 1 mg/cm² of lead in a painted surface. (Draft proposed standard: Occupational Exposure to Lead in Construction Operations, May 11, 1992, Department of Health Services/Department of Industrial Relations, State of California). The results are highly variable, depending in part on the method of removing the paint from the surface. For example, in the case of wet scraping of paint containing 1 mg/cm² it was calculated that an air lead level of about 37 µg/m³ would result. However, dry scraping of the same surface was estimated to result in an exposure level of about 371 µg/m³. Therefore, in the latter case, if OSHA were to follow the HUD guidelines approach, it could permit exposures to 371 µg/m³ of lead in the air before the standard would be applicable. Thus in the absence of a firm correlation between lead-in-paint concentration and air lead levels, OSHA would have no idea what health effects might be produced by such a surface concentration. Moreover, the trigger applies only to lead painted surfaces. It does not deal at all with the broad range of jobs in the construction industry that involve lead that is not in paint. As a result, the incorporation of this trigger from the HUD Guidelines into an OSHA standard would not be appropriate. Nor did Congress intend such a result. To quote the conference report once more, "By relying on the HUD guidelines as the basis for the Secretary's interim final regulation, the Committee expects that construction workers will gain the same benefits available to general industry workers under the lead standard, i.e., a PEL of 50 µg/m³ * * *." Thus, Congress intended OSHA to incorporate a PEL of 50 µg/m³ into the interim final standard regardless of whether such a PEL was part of the HUD Guidelines.

This approach follows the general industry standard for lead and establishes that a potential hazard must exist prior to requiring an employer to implement the standard. As described above, some provisions will be triggered by the 50 µg/m³ PEL, while others will be triggered by a 30 µg/m³ action level. These trigger levels are taken from the OSHA lead standard for general industry and are based upon health effects data generated for that standard and thus have a health-related foundation.

Task-related Triggers

In response to Congress' mandate that OSHA should modify the HUD Guidelines in this interim final standard as needed to adapt to the particular conditions in the construction industry, OSHA has added a provision included in neither the HUD Guidelines nor the general industry standard. This approach is consistent with the approach taken in the HUD Guidelines. The air lead levels that trigger the standard are determined by an employee exposure assessment, most often containing air sampling. However, there is often a time lapse between taking the sample and receiving the results. Certain construction tasks are known to commonly produce exposures above the PEL—sometimes many orders of magnitude above the PEL. In such tasks, workers could be exposed to high concentrations of lead in air during the period between sampling and receipt of the results without sufficient protection. In addition, because many construction jobs are of short duration, workers could

complete one job before monitoring results are in and go on to another, again in a high exposure situation, still without adequate protection in the absence of monitoring results.

To address this problem, OSHA has included within the regulatory text three lists of tasks, the performance of which in the presence of lead trigger basic protective provisions prior to air lead monitoring. The first consists of tasks which commonly produce a substantial proportion of exposures above the PEL of 50 µg/m³, but less than 10 times the PEL. The second consists of tasks which commonly produce a substantial proportion of exposures greater than 10 times the PEL (500 µg/m³), but less than 50 times the PEL (2500 µg/m³). The third set of tasks consists of those which commonly produce a substantial proportion of exposures greater than 50 times the PEL (2500 µg/m³). For all three sets of tasks, employers are required to provide respiratory protection appropriate to the tasks' anticipated exposure level, protective work clothing and equipment, change areas, hand washing facilities, training, and initial medical surveillance consisting of blood sampling and analysis. OSHA believes that these basic provisions are essential where employees are exposed to air levels above the PEL. In the absence of monitoring results to the contrary, tasks which commonly produce air levels above the PEL must be assumed to continue to do so and, thus, it is necessary to require these provisions. The only difference in the provisions among task categories is in the kind of respirators which are required. For example, abrasive blasting workers need a much higher performance respirator than do workers doing spray painting.

Criteria for selection of the tasks in each category were based on three sources—advice from the Department of Labor Advisory Committee on Construction Safety and Health (ACCSH) Lead Workgroup; recommendations of the Society for Occupational and Environmental Health (SOEH) in conference proceedings entitled Protective Work Practices for Lead-Based Paint Abatement; and limited exposure data provided to OSHA by a firm contracted to perform an assessment of lead exposure levels encountered in the construction industry.

The first set of tasks, consisting of those which commonly produce exposures between 50 µg/m³ PEL and 500 µg/m³, includes manual demolition; manual scraping; manual sanding; heat gun applications; general cleanup; power tool cleaning with dust collection systems; and spray painting. This selection of tasks was suggested by the chairman of the ACCSH Lead Workgroup. It is further supported by the SOEH recommendation that, when these tasks are performed, halfmask air purifying respirators—with a protection factor of 10—should be used. In addition, the selection of these tasks is based partly on limited exposure data available to OSHA.

Since the data which OSHA has obtained indicate a wide range of exposure levels in particular tasks, and are sometimes based on a limited number of samples, OSHA had to consider the data in relation to recommendations from knowledgeable people or organizations. For example, in the case of spray painting, available data showed exposures ranging from 1 µg/m³ to 460 µg/m³. However, the average exposure was 74 µg/m³, and a level of 101 µg/m³ would be expected to be exceeded only five percent of the time. Moreover, SOEH recommends using halfmask negative pressure air purifying respirators for this task, i.e., respirators with a protection factor of 10. Therefore, spray painting seems to belong in the task category with anticipated exposures between 50 µg/m³ and 500 µg/m³. In general, the other tasks in this category also entail a likelihood of exposures in this range, which is supported both by the contractor data and the SOEH recommendations.

The second category, from 500 µg/m³ to 2500 µg/m³, includes the use of lead-containing mortar; lead burning; rivet busting; power tool cleaning without dust collection systems; cleanup of dry expendable abrasives; and abrasive blasting enclosure movement and removal. Following is a discussion of why these tasks were selected for this exposure range and why powered air purifying respirators (PAPRs) are required to be used when performing them.

The only information OSHA has on the use of lead-containing mortar and lead burning comes from its contractor report which suggests control exposure levels for both that are greater than 600 µg/m³, greater than would be safe with an air purifying respirator with a protection factor of 10. ("Control exposure levels" here refers to levels that would not be expected to be exceeded in 95% of the time the activity was monitored.) With an assigned protection factor of from 25 to 50, depending on which specific type is used, a PAPR will provide adequate protection in an exposure range from 1250 to 2500 µg/m³, and thus appears to be effective for these applications.

Rivet busting falls under the SOEH category of "Chipping and Breaking with Pneumatic Tools". SOEH recommends that powered air purifying respirators be used for this group of tasks. Since such respirators have protection factors greater than 10, OSHA infers that SOEH regards likely exposures for rivet busting to be greater than ten times the PEL—greater than 500 µg/m³. Data reflecting actual exposures in this task, however, were not provided to OSHA by its contractor.

Without the use of dust collection systems, the use of power tools for grinding, sanding and wire brushing can raise large concentrations of lead in the air. The OSHA contractor report suggests control exposure levels of more than 1000 µg/m³. SOEH recommends the use of powered air purifying respirators. Thus, placing this task in the 500 µg/m³—2500 µg/m³ category is consistent with both sources.

Clean-up after abrasive blasting when the blasting involves dry expendable abrasives, while not characterized by exposure data available to OSHA, was identified by SOEH as a task with potentially high exposures. SOEH consequently recommends powered air purifying respirators as the minimum respiratory protection. OSHA has classified it accordingly.

In addition to the high concentrations of air lead produced by abrasive blasting operations, the enclosures within which the work is done are left with a substantial accumulation of lead when the blasting is completed. Therefore, movement and removal of these enclosures can themselves create high air lead concentrations, although not to the same extent as the blasting. Available contractor data show a control exposure level for this operation to be between 1100 and 1200 µg/m³. On this basis OSHA has included abrasive blasting enclosure movement and removal in the category where exposures between 500 and 2500 µg/m³ can commonly be expected.

The final category requiring interim protection prior to receiving exposure assessment covers tasks commonly associated with air lead exposures greater than 2500 µg/m³ (50 times the PEL). This category includes abrasive blasting as well as welding, cutting and torch burning on steel structures. In the case of abrasive blasting, the possibility of extremely high exposures is well known and documented by data which show control exposure levels between 20,000 and 40,000 µg/m³. Consistent with these numbers, SOEH recommends the use of supplied air respirators.

Data obtained by OSHA's contractor regarding welding, cutting and burning

VOL 58 ISS 84 MY 4 1993 UMI

show control exposure levels to be from about 970 to about 1560 µg/m³ depending on the specific operation involved. Such levels would not seem to qualify these tasks for the over-2500 µg/m³ exposure category. The numbers, however, represent estimates from a very wide spread of data points, thus providing a high degree of uncertainty. The data show that actual exposures can reach 28,000 µg/m³. Further, SOEH recommends use of supplied air respirators during performance of welding, cutting and burning on steel structures. Therefore, based on exposure data showing that exposures often exceed 2,500 µg/m3 and based on the SOEH recommendation, OSHA has chosen to be conservative and has assigned these tasks to its highest hazard category with respect to required interim protection.

OSHA believes that it has taken a well-reasoned approach to identifying tasks in the foregoing categories, given the limited amount of firm data available at the time of promulgation of this standard. Because the interim protection of workers in these tasks is very important, the approach has been conservative. If the Agency has erred in selecting these tasks, it has erred as authorized by the U.S. Supreme Court on the side of overprotection (*IUD v. API*, 448 U.S. 601 (1980)). In any event, once the monitoring results are received, if they show air lead levels to be lower than presumed, the presumed level of protection need no longer be provided. OSHA intends to study this issue comprehensively in a forthcoming rulemaking on a permanent final rule for lead exposures in the construction industry.

Medical Surveillance

One of the most important sets of provisions of any substance specific standard is that of medical surveillance. Medical surveillance is particularly relevant to lead exposures because, in the measurement of blood lead levels, there is a true indicator of health risk and, in the case of high blood lead levels, a course of action to address the risk. The medical surveillance provisions of the HUD Guidelines are essentially the same as in the OSHA general industry standard. The essential difference is in the conditions under which the provisions must be implemented. The medical surveillance provisions of this interim final standard are in most respects similar to those in the HUD Guidelines and the OSHA lead standard for general industry.

The Guidelines, in Chapter 8, appear to require full medical surveillance whenever any employee working in lead paint abatement is potentially exposed to any concentration of lead. This effectively places all workers covered by the Guidelines under medical surveillance. If this requirement were used in the interim final standard, it would apply to all of the more than 900,000 workers who might have some contact with lead, no matter how small the exposure. However, limited available data indicate that most exposures in many highly-populated segments of the industry are well below the 30 µg/m³ action level of the general industry standard, and the blood lead levels of such employees are almost always below any level that, based upon the health effects analysis accompanying the OSHA general industry lead standard, would require medical action. For example, exposure data collected by NIOSH during the Demonstration Project for HUD Lead-based Paint Abatement (The HUD Lead-Based Paint Abatement Demonstration (FHA), U.S. Department of Housing and Urban Development, August 1991), revealed that, in those cases where surface concentration exceeded 1 mg/cm². "Over 80% of the combined numbers of all air samples, both personal and area, showed airborne lead levels below 10 µg/m³." Therefore, in a very large number of cases, the full medical surveillance would serve no purpose and would entail very significant costs. Under these conditions, the same degree of real worker protection can be obtained without the identical requirements of the Guidelines.

The medical surveillance provisions of the OSHA general industry standard are triggered initially by air lead exposure levels. Since it is the air lead level that is relevant, not the industry in which one is exposed, specific air lead triggers in the construction industry should be the same as those in general industry. Thus, medical surveillance in the interim final standard is triggered by the same exposure levels as in the general industry standard.

There are, however, two modifications to this program. As discussed above, in the three categories of high exposure tasks, blood sampling and analysis are triggered by performance of the specified tasks when lead is involved. In addition, the employer must provide every worker who will be exposed to an air lead level greater than the 30 µg/m³ action level, if only for a single day in any consecutive 12 month period, with blood testing. The construction-related reason for the blood testing related to the high exposure task categories has been discussed earlier. The reason for blood monitoring for workers exposed above the action level, even on one day, also arises from the peculiarities of the construction industry where jobs are frequently of short term, turnover is rapid and exposure levels vary. OSHA believes it important that exposures of duration up to 30 days not be neglected since such exposures in some applications will be very high. A worker exposed at high levels for only a few days can still incur a large lead burden in his or her blood and, if that happens, it is important to keep track of the levels.

In view of the fact that workers who need medical surveillance, based on air lead levels established in the rulemaking for the general industry standard, on high exposure tasks, and on short duration exposures above the action level receive it, the medical surveillance provisions of the interim final standard are more protective than the OSHA general industry standard and are as protective as the Guidelines.

Exposure Assessment

The HUD Guidelines do not require initial monitoring. They do, however, require that an initial determination be made "to determine whether employees are potentially exposed to lead. The goal is to establish the level of exposure expected." The Guidelines go on to say, "Indications of possible overexposure to lead, such as employee health complaints, prior abatement experience, and prolonged or intense lead-based paint removal, should lead to an initial monitoring of the workplace." The monitoring results are to be used to determine the frequency of further monitoring, and to select appropriate respiratory devices and determine the need for engineering controls. However, in using monitoring results for the foregoing purposes, the Guidelines refer to the PEL of the OSHA general industry standard and the respirator selection table that is used for selecting a respirator that will maintain exposures below the PEL. They allow consideration of objective factors before initial monitoring needs to be performed. Thus, every workplace with very low exposures need not do monitoring where it serves no purpose in identifying excessive exposures. If monitoring is done, however, the Guidelines recommend that the procedures in the general industry standard be followed.

The interim final standard is effectively very similar to the Guidelines. It requires, as a first step, an initial determination which can be an objective assessment of exposure, based on specific data or on previous

monitoring or on past experience in identical workplaces. Once again, however, the requirements for the high exposure tasks are slightly more stringent. In order for any data other than from initial monitoring to be acceptable, it must be based on specific and documented monitoring performed during work operations conducted under workplace conditions closely resembling the processes, type of material, control methods, work practices, and environmental conditions used and prevailing in the employer's current operations. Also the sampling and analytical methods used to obtain the data must meet the accuracy and confidence levels specified in the standard.

The remainder of the monitoring requirements are the same as in the general industry standard and the same as the Guidelines for situations where monitoring is performed.

On balance, the exposure assessment requirements for the interim final standard are more specific and somewhat more stringent than those in the Guidelines.

Protective Clothing and Respiratory Protection

Protective clothing and respirators are required in the Guidelines whenever the potential for exposure is present. As discussed earlier in this paragraph, this provision, on its face, would place every worker in a respirator and protective clothing regardless of extent of exposure. When applied across the entire spectrum of construction operations, the overall burden of this provision would be extremely high and difficult to justify. In particular, requiring respirators and personal protective equipment in the 80% of all cases in which NIOSH found that air lead exposures were less than 10 µg/m³ would be difficult to justify on health grounds. Such a requirement would thus entail a significant burden to employers and employees without demonstrated benefit. For these reasons, and because there is no reason to believe that the relationship between health risks in the construction industry and air lead levels is different from that in general industry, the provisions for protective clothing and respiratory protection in this interim final standard are triggered by the PEL, as in the general industry standard.

The actual provisions covering the use and selection of respirators in the Guidelines are the same as in the general industry standard. The interim final standard, however, has one important difference. The respirator selection table of the general industry standard was based on information as of 1978 and contained no specific reference to construction—particularly abrasive blasting. The selection table in the interim final standard has expanded the types of respirators permitted under the various exposure categories, including those uniquely permitted for abrasive blasting, and added another exposure level category (1250 µg/m³) to provide greater flexibility in selection and higher probability of adequate fit. The table has been taken from the latest version of the NIOSH Respirator Decision Logic, which has been a standard reference since its publication. Therefore, in terms of respirator selection the interim final rule is more appropriate and more protective than the HUD Guidelines.

Information and Training

Regarding employee information and training, the Guidelines require comprehensive training for everyone who may be potentially exposed to lead. As discussed previously, this provision, applied to the entire construction work force, would cover a large number of workers who encounter only minimal exposure. The OSHA general industry standard requires comprehensive training only for those workers who are exposed above the action level. The interim final standard has the same provision for comprehensive training; however, other training provisions are also included. First, all employees, regardless of exposure, are required by the Hazard Communication Standard (29 CFR 1926.59) to receive training regarding any hazardous materials, including lead, they may be exposed to at their work site. The interim final standard specifically incorporates this requirement by reference. Second, all construction employees are required to undergo training relevant to all the health and safety hazards of the workplace by the Safety Training and Education Standard (29 CFR 1926.21) which the interim final standard also incorporates by reference. In addition, for those tasks listed as likely to encounter high exposure levels, training in use of respirators is required automatically, until it is shown by monitoring results that exposures will not reach the level at which respiratory protection is necessary.

In view of the foregoing, OSHA believes that the interim final standard requires training as protective as that provided for in the HUD Guidelines.

III. Summary and Explanation of the Standard

As discussed earlier, OSHA believes that the intent of Congress' mandate, to a significant degree, was the issuance of a interim final standard that provided a level of protection to workers exposed to lead in construction equivalent to that afforded other lead workers under OSHA's general industry standard. To that end, the interim final construction standard incorporates many provisions as they are set-forth in the general industry standard. Although some provisions carried from the general industry standard into the interim rule are not adopted verbatim, the regulatory intent of the provisions in the rules is consistent. Thus, the discussion and justifications set forth in the preamble and supplements to the general industry standard (43 FR 52985) are applicable to the "Summary and Explanation" in this interim final rule. Provisions derived from the general industry standard and incorporated into the interim final standard include the following paragraphs of this rule: (b) Definitions; (c)(1),(2),(3), Permissible exposure limit; (d)(1),(3),(4),(5),(6),(7),(8), Exposure assessment; (e)(2)(i)-(v),(4) Methods of compliance; (f)(1)(i)-(iv),(2),(3),(4), Respiratory protection; (g)(1),(2), Protective work clothing and equipment; (h)(1),(2),(3),(4), Housekeeping; (i)(1),(2), Hygiene facilities and practices; (j)(1)(ii)-(iv),(2)(i)(B)-(C),(ii)-(iv),(3),(4), Medical surveillance; (k)(1)(ii)-(v),(2), Medical removal protection; (l)(1)(ii)-(iii),(2),(3), Information and training; (m)(1),(2), Signs; (n)(1),(2),(3),(5),(6), Recordkeeping; and (o)(1),(2), Observation of monitoring.

A. Scope and Application Paragraph (a)

This interim final lead standard for the construction industry applies to all occupational exposure to lead in all construction work in which lead, in any amount, is present in an occupationally related context. Exposure of employees to the ambient environment which may contain small concentrations of lead unrelated to the job is not subject to this standard; however, where the source of lead is employment related, all exposure to lead is covered by the standard. The forms of lead to which this construction standard applies is defined to include metallic lead, all inorganic lead compounds, and organic lead soaps.

Construction work is defined as work involving construction, alteration and/or repair, including painting and decorating. Such work includes but is not limited to: demolition or salvage of structures where lead or materials containing lead are present; removal or encapsulation of materials containing lead; construction, alteration, repair, or renovation of structures, substrates, or portions thereof, that contain lead, or

VOL
58
ISS
84
MY
4
1993
UMI

materials containing lead; installation of products containing lead; lead contamination/emergency cleanup; transportation, disposal, storage, or containment of lead or materials containing lead on the site or location at which construction activities are performed; and maintenance operations associated with the construction activities described above. All construction work excluded from coverage in the general industry standard, section 1910.1025(a)(2), is covered by this interim final rule. OSHA intends that there should be no gaps and no overlaps between the two standards.

It should be recognized that although this standard may apply to a particular employer or workplace, almost all of the obligations in the standard are triggered by certain minimum levels of lead exposure. For example, the employer is required to provide requirements for periodic exposure monitoring and medical surveillance only if employees are exposed to airborne lead in excess of the action level. Employers whose employees are exposed below this level are not required to comply with most provisions of the standard. This distinction is made in order to differentiate between hazardous and relatively unhazardous work operations and to impose obligations commensurate to the degree of hazard present.

B. Definitions: Paragraph (b)

The terms "*Action Level*", "*Assistant Secretary*", "*Director*" and "*Lead*" in this interim standard are defined as set forth in 29 CFR 1910.1025.

"Action level" is defined as an airborne concentration of lead of 30 µg/m³ of air calculated as an 8-hour time-weighted average. Several provisions of the standard, such as periodic exposure monitoring, biologic monitoring and initial and annual employee training are triggered whenever exposure measurements reach or exceed the action level. For employees exposed to lead at or above the action level for more than 30 days per year, employers are also required to provide an ongoing medical surveillance program. Past experience with the action level concept in other OSHA standards has demonstrated its usefulness to employers as an objective means of determining whether compliance activities are required, thus relieving them of most compliance obligations where exposures are maintained below the action level.

Action levels are important because their use permits employers to concentrate their resources on those employees and workplace conditions with the potential for high lead exposures. Thus the action level in the interim standard provides for the most cost-effective means of employee protection. The action level provides a mechanism to tailor certain requirements of the standard to a minimum level of employee exposure to lead by triggering preventive action by the employer for employees who face exposure at or above that level. The use of the action level to trigger various provisions of the lead standard is consistent with other final OSHA health standards (e.g., the Lead standard for general industry, as well as Asbestos, 51 FR 22612, June 20, 1986; Benzene, 52 FR 34460, September 11, 1987; Formaldehyde, 52 FR 4668, December 4, 1987; Ethylene Oxide decision (796 F.2d 1479 (DC Cir., 1986) and, *Public Citizen Health Research Group* v. *Tyson*, 796 F.2d 1479 (DC Cir., 1986), and Acrylonitrile, 43 FR 45809, October 3, 1978).

This substantive consistency provides administrative consistency and continuity to employers in developing and implementing compliance strategies for this and other applicable OSHA health standards at individual worksites. In addition, use of an action level has been found to encourage employers, where feasible, to lower lead exposure levels to below the action level to avoid the added costs of required compliance with provisions triggered by the action level.

A definition of "*Competent person*" is included in this paragraph. Paragraph (e)(2)(iii) of the standard broadly establishes the duties of the "competent person." The duties and definition of the "competent person" under this standard are essentially identical to those already prescribed for construction work in 29 CFR 1926.20 and 29 CFR 1926.32, respectively, and are included in this section to primarily ensure that employers are aware of these existing requirements. Thus, no new burdens are imposed by the "competent person" provisions in this section. The term "competent person" means a person who is capable of identifying hazards and has authorization to take corrective measures to eliminate them. Compliance programs required to be developed by employers under paragraph (e) of this section must provide for inspections of job sites, materials, and equipment to be made by the "competent person" to achieve the duties of the competent person set forth in the definition.

C. Permissible Exposure Limit: Paragraph (c)

The employer is required to assure that no employee is exposed to lead at concentrations in excess of the PEL of fifty micrograms of lead per cubic meter of air (50 µg/m³). The PEL adopted in this interim rule is the same as the PEL provided for in OSHA's general industry lead standard (29 CFR 1910.1025). This is in accordance with Congress' intention, as expressed in the legislative history of the 1992 Act.

The PEL is an eight-hour average of exposure for any work day. If respiratory protection is permissibly being used to comply with this limit and all of the requirements relating to selection, fitting, and maintenance of respirators are met, the employee needs to wear the respirator only for a period of time that, when averaged with periods of time the respirator is not worn, will result in a TWA exposure to or below the PEL. For this purpose, the employee's exposure level when a respirator is worn may be considered to be the airborne concentration, without regard to the respirator, divided by the protection factor of the respirator. For example, if an employee is exposed to 100 ug/m³ for 8 hours without a respirator, he would have to wear a respirator with a protection factor of 10 for about 4.4 hours or with a protection factor of 50 for about 4.1 hours, in order to comply with the PEL.

Of course, a class of respirator more protective than required by paragraph (f) may be selected, and if selected, would reduce the amount of time a respirator would need to be worn.

OSHA recognizes that workshifts can extend beyond the regular 8-hour period as the result of overtime or other alterations of the work schedule. This extension of worktime also extends the time during which the employee is exposed. The effects of this additional exposure time must be considered in arriving at a permissible level of exposure. For the purpose of calculating such a level, the relationship of concentration and length of time of exposure has been assumed to be linear. As the exposure time increases, the factor of concentration multiplied by time (C × T) should remain constant. As a result, it is believed that by not exceeding the total allowable exposure of the 8-hour time-weighted average (8 hrs × 50 µg/m³=400), reasonable assurance of maintaining a safe exposure level is retained.

The interim final standard contains a formula by which adjustments to the permissible exposure limit can be made due to overtime. For example, if an

employee is exposed to lead for 10 hours, the permissible limit as a 10 hour average would be 400/10 or 40 µg/m³. This is the same formula used in the lead General Industry Standard to calculate the allowable exposure level for employees working beyond 8 hours in lead exposed jobs.

D. Exposure Assessment: Paragraph (d)

Each employer who has a workplace or work operation covered by this standard is required to determine if any employee may be exposed to lead at or above the action level of 30 µg/m³ as an 8-hour TWA. This initial determination need not be based exclusively on employee exposure monitoring. Where the employer has objective data demonstrating that under any expected conditions of use a particular product or material containing lead or a specific process, operation or activity involving lead cannot result in employee exposure to lead at or above the action level during processing, use, or handling, the employer may rely upon such data instead of implementing initial monitoring. The employer must establish and maintain a record documenting the nature and relevancy of the objective data (see paragraph (n)(4)). As is discussed elsewhere in this preamble, certain specified tasks are treated differently.

Where objective data as described above is not available to employers, employers must monitor employee exposures, except as noted below, and base initial determinations on the employee exposure monitoring results and any of the following relevant considerations: Any information, observations, or calculations which would indicate employee exposure to lead; any previous measurements of airborne lead; and any employee complaints of symptoms which may be attributable to exposure to lead.

Historical measurements of airborne lead may be used to satisfy the initial exposure assessment requirement if all the requirements of (d)(3)(iii) are met. OSHA has included this provision to allow employers who have been conducting relevant exposure monitoring on construction sites to use such data for current construction jobs that are substantially similar to previous jobs for which monitoring was conducted.

However, such monitoring data must have been obtained from projects conducted by the employer within the past 12 months under conditions which in all relevant and significant respects are essentially the same as the current project. These conditions include the following:

(1) The data upon which employee exposure assessments are based are scientifically sound and collected using methods that are sufficiently accurate and precise.

(2) The processes and work practices in use when the historical data were obtained are essentially the same as those to be used during the job for which initial monitoring will not be performed.

(3) The characteristics of the lead containing material being handled when the historical data were obtained are essentially the same as those on the job for which initial monitoring will not be performed.

(4) Environmental conditions prevailing when the historical data were obtained are essentially the same as for the job which initial monitoring will not be performed.

OSHA believes that if an employer has previous monitoring data that meet all these conditions, these data can be reasonably assumed to be representative of employee exposures that will be encountered on a new construction site. The employer must develop and maintain a record of the relevancy of previous exposure data if used for the initial exposure assessment. These provisions are set-forth in paragraph (d)(3)(iii) of this section.

The initial monitoring requirement only requires monitoring of a representative sample of the employees believed to have the highest exposure levels. If these measurements indicate exposures are all below the action level no further monitoring is required except where subsequent process or control changes would trigger a redetermination pursuant to paragraph (d)(8) due to additional employee exposure. If any employee is determined to be at or above the action level, then full-scale representative monitoring for all exposed employee is required as set-forth in paragraph (d)(4) of this section. However, under paragraph (d)(4)(ii) historical exposure monitoring data, which is permitted to be used to assess whether exposures are either above or below the action level, as discussed above, can also be used to satisfy the determination of the level of exposure that employees will be subject to above the action level.

In conducting the monitoring of employee exposures under paragraph (d)(4), the standard does not require that each individual employee's exposure level be measured. In establishments having more than one work operation involving the use of lead, in order for monitoring to be representative, it must be performed for each type of employee exposure within each operation. An employer, of course, is allowed to take individual exposure measurements of each of his employees. Representative monitoring merely establishes the minimum that the employer must meet.

All exposure monitoring performed pursuant to this section must consist of personel breathing zone samples which are representative of the monitored employee's regular, daily exposure to lead over a full shift and which must consist of at least one sample for each job classification in each work area either for each shift or for the shift with the highest exposure level. The exposure data may be collected during a single shift only if the activities in the other shifts are essentially the same as that shift.

The purposes served by air sampling for employee exposures include: Determination of the extent of exposure at the worksite; prevention of employee overexposure; identification of the sources of exposure to lead; collection of exposure data so that the employer can select the proper control methods to be used; and evaluation of the effectiveness of selected controls. Monitoring further enables employers to notify employees of their exposure levels, as required by section 8(c)(3) of the Act.

Required periodic monitoring provides the employer with assurance that employees are not experiencing higher exposures that may require the use of additional controls. In addition, periodic monitoring reminds employees and employers of the continued need to protect against the hazards associated with exposure to lead.

The collection of exposure monitoring data also enables an examining physician to be informed of the existence and extent of potential sources of occupational diseases.

The results of initial and periodic monitoring determine whether subsequent monitoring is necessary. Exposure monitoring is important not only to determine the level of lead to which employees are exposed and the frequency at which employees should be monitored, but also determine whether other protective provisions of the standard need to be implemented.

Where exposure monitoring is required under this standard samples must be taken within the employee's breathing zone (i.e., personal samples) and must reflect the employee's exposure, without regard to the use of respirators, to airborne concentrations of lead over an eight-hour period. A full description of "Breathing zone" is provided in the OSHA Instruction CPL 2–2.20B, CH–1, Nov. 13, 1990, Directory of Technical Support, Basically, it

VOL 58 ISS 84 MY 4 1993 UMI

encompasses a sampling area as close as practical to the nose and mouth of the employee.

If the initial determination or subsequent determination reveals employee exposure to be at or above the action level but at or below the PEL the employer is required to perform monitoring at least every 6 months. The employer must continue monitoring at the required frequency until at least two consecutive measurements, taken at least 7 days apart, are below the action level at which time the employer may discontinue monitoring for that employee.

If the initial determination reveals that employee exposure is above the PEL the employer must perform monitoring at least quarterly. The employer must continue monitoring at the required frequency until at least two consecutive measurements, taken at least 7 days apart, are at or below the PEL but at or above the action level at which time the employer shall repeat monitoring at least every 6 months.

Within 5 working days after completion of the exposure assessment, the employer is required to notify each employee in writing of the results which represent that employee's exposure. Whenever the results indicate that the representative employee exposure, without regard to respirators, is at or above the PEL, the employer shall include in the written notice a statement that the employees exposure was at or above that level and a description of the corrective action taken or to be taken to reduce exposure to below that level. Section 8(c)(3) of the Act requires employee notification of monitoring results which reveal excess exposures to toxic substances, and requires employers to also notify affected employees of corrective actions that will be taken to reduce exposures.

Where monitoring is required under this standard the employer must use a method of monitoring and analysis which has an accuracy (to a confidence level of 95%) of not less than plus or minus 25 percent for airborne concentrations of lead equal to or greater than 30 $\mu g/m^3$. This accuracy requirement is consistent with the most recent criterion established under the NIOSH/OSHA Standards Completion Program with regards to monitoring and analyses of airborne lead concentrations.

As discussed earlier, OSHA is aware that in many instances in the construction industry the exposure assessment required under this standard will not be completed until after lead operations have begun or even ended (i.e. exposure monitoring usually must be conducted during actual performance of the lead activity in order to be representative). Thus, employees performing certain tasks which will generate airborne lead due to the presence of lead either in paint or in other materials being worked on, might be exposed without protection to some unknown, and potentially high concentrations of lead, pending the outcome of the exposure assessment. The Lead Workgroup of the Department of Labor's Advisory Committee on Construction Safety and Health (ACCSH), which was consulted by OSHA in development of this standard expressed concern to the Agency regarding this issue. The ACCSH Workgroup comprised of representatives from labor, industry, state government, and the public, recommended that some degree of interim protection, pending completion of the exposure assessments, should be provided to employees performing activities which are recognized as having the potential to produce exposures to lead in excess of the PEL. The Agency agrees with the ACCSH Workgroup that the need for interim employee protection should be presumed necessary for certain tasks until demonstrated otherwise. The Workgroup indicated that minimal interim protective measures, pending completion of the exposure assessment, should include provision of respirators, protective clothing and equipment, hygiene facilities, training, and biological monitoring.

The list of lead-related tasks/operations that have been developed by OSHA are based on available exposure data and recommendations of SOEH and the Workgroup, and are grouped by the presumed degree of overexposure to lead and, therefore, are differentiated by the type of respirator to be provided. One group of tasks/operations presumes employee exposures above the PEL, but not so high as to require the employer to provide the employee with more than the least protective, allowable respirator (e.g. a respirator with a protection factor of 10). The second task group presumes employee exposure above 500 $\mu g/m^3$ and requires the employer to provide the employee with a respirator with a protection factor of at least 25. The third task group presumes very high exposures to lead (in excess of 2500 $\mu g/m^3$) and, therefore, requires the employer to provide the employee with a respirator permitted by the standard for use during that exposure condition (e.g a respirator with a protection factor above 50).

The tasks identified as requiring interim worker protection are briefly described below.

Abrasive blasting: Removes scale, paint, and dirt from surfaces prior to repainting; abrasive media includes sand, steel grit, steel shot, aluminum oxide, "Black Beauty" (processed boiler slag, and others).

Welding, cutting and burning on steel structures: Involves the process of heating coated steel to its melt temperature typically by using an oxy-acetylene torch or an arc welder.

Lead burning: Involves torch melting or fusing of lead or alloyed lead to another lead object.

Manual scraping and sanding: Associated with lead paint removal and involves the application of hand-held scraping or sanding tool to the painted surface containing lead.

Manual demolition of structures: Involves removal of walls (plaster, gypsum) or building components coated with lead based paint by sledge hammer or similar tool.

Heat gun application: Involves use of a heat gun that produces a stream of hot air which is directed to surfaces to melt lead paint which is subsequently scraped off.

Using lead containing mortar: Typically used in high pressure acid tanks lined with specialized tile or lead brick held in place with specialized lead-containing mortar or grout; these tank linings periodically require repainting, repairing or relining involving lead containing mortar.

Abrasive blasting enclosure movement and removal: Involves movement and removal of blasting enclosure or containment units as work proceeds on structures; such units are often comprised of flexible nylon, plastic or burlap tarpaulins upon which lead dust will accumulate and be reentrained when movement of the structure occurs.

Power tool cleaning: Involves the use of power tools (grinders, brushes, needle guns, sanders, etc.) to remove dirt, scale, or paint from structures where lead based paint is present.

Rivet busting: Involves removal of rivets from steel structures where lead containing paints are present; rivet busting can involve use of torches and mechanical means for rivet extraction.

Cleanup activities where dry expendable abrasives are used: Pertains to the use of non-recycled dry abrasives during abrasive blasting operations on structures where lead containing paint is found.

The requirements regarding interim employee protection during performance of these specific tasks, when lead is involved typically as in a paint or coating, are discussed below.

Paragraph (d)(2)(i) includes a listing of the following tasks which are presumed to frequently entail lead exposure levels above the PEL: Where lead containing coatings or paint are present; manual demolition of structures (e.g. dry wall), manual scraping, manual sanding, heat gun applications, and power tool cleaning with dust collection systems; and spray painting with lead based paint. With respect to these tasks, paragraph (d)(2)(i) requires that, until the employer performs an employee exposure assessment as required in paragraph (d) of this section and documents that the employee performing any of the listed tasks is not exposed above the PEL, the employer must treat the employee as if the employee were exposed above the PEL by providing the protective measures as prescribed in paragraph (d)(2)(v) of the standard (discussed below).

In addition, with regard to tasks not listed in paragraph (d)(2)(i), paragraph (d)(2)(ii) requires that where the employer has any reason to believe that an employee performing a task may be exposed in excess of the PEL, until the employer performs an employee exposure assessment as required by paragraph (d) and documents that the employee's lead exposure is not above the PEL, the employer must treat the employee as if the employee were exposed above the PEL by providing the protective measures as prescribed in paragraph (d)(2)(v) of this standard.

Paragraph (d)(2)(iii) includes a listing of the following tasks: Using lead containing mortar; lead burning; rivet busting; power tool cleaning without dust collection systems; cleanup activities where dry expendable abrasives are used; and abrasive blasting enclosure movement and removal. With respect to these tasks, paragraph (d)(2)(iii) requires that until the employer performs an employee exposure assessment as required in paragraph (d) of this section and documents that the employee performing any of the listed tasks is not exposed in excess of 500 $\mu g/m^3$, the employer must treat the employee as if the employee were exposed to lead in excess of 500 $\mu g/m^3$ by providing the protective measures prescribed in paragraph (d)(2)(v) of this section. Where the employer has established that employee exposure is at or below 500 $\mu g/m^3$ during these tasks, a less protective respirator, in accordance with Table 1 of this section, shall be provided as protection.

Paragraph (d)(2)(iv) includes a listing of the following tasks which are presumed to frequently entail exposures to lead above 2,500 $\mu g/m^3$: Abrasive blasting, and welding, cutting, and torch burning on steel structures where lead containing coatings or paint are present.

With respect to these tasks, paragraph (d)(2)(iv) requires that until the employer performs an employee exposure assessment as required in paragraph (d) and documents that the employee performing any of the listed tasks is not exposed to lead in excess of 2,500 $\mu g/m^3$ (50 × PEL), the employer must treat the employee as if the employee were exposed to lead in excess of 2,500 $\mu g/m^3$ by providing the protective measures prescribed under paragraph (d)(2)(v) of the standard. Where the employer has established that the employee is exposed to levels of lead below 2,500 $\mu g/m^3$ during these tasks, the employer shall provide the exposed employee with a less protective respirator in accordance with Table I of this section.

Paragraph (d)(2)(v) of the standard sets forth the interim protective measures that employers must implement during performance of the tasks discussed above at least until an exposure assessment as prescribed in paragraph (d) of the standard is completed.

These protections are required when an employee performs a specified task where lead is present. Interim protection to be provided to affected employees includes: (1) Appropriate respiratory protection in accordance with paragraph (f) of the standard; (2) appropriate personal protective clothing and equipment in accordance with paragraph (g) of the standard; (3) change areas in accordance with paragraph (i)(2) of the standard; (4) hand washing facilities in accordance with paragraph (i)(5) of the standard; (5) biological monitoring in accordance with paragraph (j)(1)(i) of the standard; and (5) training as required under paragraph (l)(1)(i) of the standard, which incorporates the relevant requirements of 29 CFR 1926.59 (Hazard Communication), as required under 29 CFR 1926.21 (Safety training and education), and as required under paragraph (l)(2)(ii)(c) of the standard regarding the purpose, selection, fitting, use and limitation of respirators.

It should be noted that the interim respiratory protection required to be provided to employees performing the tasks listed above is based on a presumed 8-hour exposure period. Where the tasks listed above are performed for lesser periods than 8-hours, the employer may be able to provide a less protective respirator if compliance with the PEL as an 8-hour TWA can be achieved.

E. Methods of Compliance: Paragraph (e)

The interim final standard requires employers to institute engineering and work practice controls to the extent feasible to reduce exposures to or below the PEL. Where all feasible engineering and work practice controls that can be instituted are not sufficient to reduce employee exposure to or below the PEL, appropriate respiratory protection is required to be provided as a supplement to such controls to reduce employee's exposures to lead to or below the PEL.

OSHA thus continues to maintain its preference for engineering and work practice controls in this standard. However, in the construction industry generally based on available data, OSHA is unable to show for purposes of this interim final rule that the PEL can be achieved by engineering and work practice controls in most operations most of the time. Consequently, as Congress anticipated, OSHA expects employers to place broader reliance on respirators than in General Industry.

The standard has a requirement for the development and implementation of a written compliance plan prior to the commencement of the job where employee exposure to lead, without respect to respiratory protection, will be in excess of the PEL. The plan should be a written strategy and schedule for protecting workers from occupational hazards, and must incorporate all relevant information that relates to those goals, so that one could determine whether the employer reasonably analyzed the problems and their solutions, including alternatives and has implemented the plan in accordance with its schedules.

These written plans must be furnished upon request for examination and copying to affected employees and their designated representatives and to representatives of the Assistant Secretary and the Director. They must be reviewed and updated periodically at least every 6 months to reflect the current status of exposure control. OSHA views the requirement for written plans as an essential part of the compliance program since it will form the basis for determining the employer's ability to achieve the controls and provide the necessary documentation to employees and their designated representatives of the compliance methods chosen, the extent to which controls have been instituted, and of the plans to institute further controls.

Where mechanical ventilation is used to control employee exposure to lead, the employer is required to evaluate the performance of the system in controlling

VOL
58
ISS
84
MY
4
1993
UMI

exposure as necessary to maintain its effectiveness.

Finally, the standard requires that when administrative controls are used to lower employee exposure, a rotation schedule is to be kept and followed and made a part of the written compliance plan. This will enable affected employees and OSHA to determine the effectiveness of the administrative control program.

F. Respiratory Protection: Paragraph (f)

This section contains specific requirements for the usage, selection, maintenance, and fitting of respirators.

The interim final standard, requires that respirators be used whenever the concentration of lead is at or above the PEL, in work situations in which engineering and work practice controls are not sufficient to reduce exposures to or below the PEL, or whenever an employee requests a respirator. This last requirement is to provide protection for those employees who wish to reduce their lead burden below what is required by the interim standard. For example, male and female workers whose blood lead levels are in the 30–50 µg/100g range may desire increased protection, especially if they intend to parent in the near future.

Because of the discomfort and hazards associated with negative pressure respirators, coupled with the possibility of routine and long-term use in some industries, OSHA has required employers to provide powered, air purifying (positive pressure) respirators (PAPR) to employees who request one, so long as it will provide adequate protection against the hazard for which a respirator is worn. Powered air positive-pressure respirators simultaneously provide greater protection to individuals, especially those who cannot obtain a good face fit on a negative pressure respirator, and greater comfort when a respirator needs to be worn for long periods of time. OSHA believes employees will have a greater incentive to wear respirators if discomfort is minimized.

The standard requires the employer to provide respirators at no cost to the employee and to select respirators from those approved by MSHA or NIOSH under the provisions of 30 CFR part 11 and in accordance with the respirator selection table (Table I) set-forth in the standard. The respirator selection table will enable the employer to provide the type of respirator which affords the proper degree of protection based on the airborne concentration of lead. While the employer must select the appropriate respirator from the table on the basis of the airborne concentration of lead, the employer may always select a respirator providing greater protection, that is, one prescribed for higher concentration of lead than present in the workplace. The respirator table is based on NIOSH recommendations.

The standard requires that the employer institute a respirator program in accordance with 29 CFR 1910.134 which contains basic requirements for proper selection, use, cleaning and maintenance of respirators. Under the respirator program the employer must change the filter elements of filter respirators whenever an employee detects an increase in breathing resistance, and must permit employees to leave work areas to wash their face and respirator facepiece when necessary to prevent skin irritation associated with respirator use.

The employer is also required to assure that the respirator facepieces fit properly and exhibit minimum facepiece leakage. Proper fit of the respirator is critical. As a negative pressure is created within the facepiece when the wearer inhales, unfiltered air may enter the facepiece between the facepiece and the employees' face. Obtaining a proper fit on each employee may require the employer to provide two or three different mask styles.

Employers are required to perform either quantitative or qualitative face fit tests at the time of initial fitting and at least every six months thereafter for each employee wearing negative pressure respirators. The qualitative fit tests may be used only for testing the fit of half-mask respirators where they are permitted to be worn, and must be conducted in accordance with appendix D. The tests are to be used to select facepieces that provide the required protection as prescribed in the respirator selection table included in the standard (Table I).

G. Protective Clothing and Equipment: Paragraph (g)

This paragraph contains requirements that the employer provide, at no cost to employees, protective clothing and equipment that are appropriate for the hazard. Such clothing and equipment is necessary in order to protect employees from lead compounds which may cause skin or eye irritation (e.g., lead arsenate, lead azide) where encountered and, for employees who are exposed to lead above the PEL, to assure that clothing, shoes, and equipment on which lead dust can accumulate during the work shift are not worn home. Wearing contaminated clothing outside the work place will lengthen the duration of the employee's exposure through both inhalation and ingestion routes and potentially expose others in the family.

Clean work clothing is required to be provided at least weekly to employees whose exposure levels are above the PEL and daily to those above 200 µg/m³ as an 8-hour TWA. The employer must also repair or replace required protective clothing and equipment as needed to maintain its effectiveness. Removal of lead from protective clothing or equipment by blowing, shaking, or other means which disperses lead into the air is prohibited in order to minimize secondary exposure to lead in work areas.

The employer is required to provide for the cleaning, laundering, or disposal of protective clothing and equipment and must repair or replace required protective clothing and equipment as needed to maintain its effectiveness. The employer must assure that all protective clothing is removed at the completion of a work shift only in change areas provided for that purpose and must assure that contaminated protective clothing which is to be cleaned, laundered, or disposed of, is placed in a closed labelled container in the change area.

The employer must also inform in writing any person who cleans or launders protective clothing or equipment of the potentially harmful effects of exposure to lead. These requirements regarding personal protective equipment and clothing are commonplace in OSHA standards.

H. Housekeeping: Paragraph (h)

The interim standard requires that all surfaces be maintained as free as practicable of accumulation of lead dust. This is to be accomplished primarily by vacuuming floors, rafters, and other surfaces or by methods equally effective in preventing the dispersal of lead into the workplace. This clean-up is an exceptionally important provision because it minimizes the reentrainment of lead dust into the air which can provide an additional source of exposure that engineering controls are generally not designed to control.

OSHA's view is that as rigorous a housekeeping program as practicable is necessary in many jobs to keep airborne lead levels below permissible limits. This contemplates a regular housekeeping schedule adapted to exposure conditions at a particular site.

Vacuuming is considered to be the most reliable method of cleaning surfaces on which dust accumulates, but equally effective methods may be used, for example, a wet floor scrubber. Where vacuuming methods are selected, the vacuums must be equipped with HEPA filters. Dry or wet sweeping, shoveling, or brushing may not be used except where vacuuming or other equally effective methods have been tried and do not work.

Blowing with compressed air is generally prohibited as a cleaning method, unless the compressed air is used in conjunction with a ventilation system designed to capture the airborne dust created by the compressed air.

I. Hygiene Facilities: Paragraph (i)

This paragraph requires employers to provide hygiene facilities and to assure employee compliance with basic hygiene practices. These provisions are universally recognized industrial hygiene tools for minimizing additional sources of lead absorption from inhalation or ingestion of lead that accumulates on a worker's clothes or body. The employer must provide adequate shower facilities, if feasible, clean areas for changing clothes, and eating areas for employees who have exposure above the PEL. Hand washing facilities are to be provided for all employees occupationally exposed to lead in accordance with 29 CFR 1926.51(f). In addition, employers must assure that employees use the facilities as required by the standard as well as observe prohibitions on the use of tobacco, food, and cosmetics in contaminated areas. OSHA expects that strict compliance with these provisions will control several sources of lead exposure which substantially contribute to increased lead absorption.

The interim final standard requires employers to prohibit smoking, eating, applying cosmetics and the presence of tobacco products, food stuffs, or cosmetics in all work areas where employees are exposed to lead above the PEL. This prohibition will prevent unnecessary contamination of food or tobacco products caused by exposure to lead dust or fumes within the work area. It also decreases the likelihood of lead absorption in employees due to ingestion or inhalation of products contaminated with lead within the work environment.

The standard requires employers to provide separate storage facilities in change areas for street and work clothing to prevent cross-contamination between the two. This provision coupled with showering, where feasible, and the prohibition on wearing work clothing home will minimize employee exposure to lead after the work shift ends because it limits the period in which work clothes contaminated with lead dust may be worn.

Employers are also required to assure that employees exposed to lead during their work shift shower before leaving the workplace, where showers are provided, and do not leave wearing protective work clothing. Showering reduces the worker's period of exposure to lead and removes lead particles which accumulate on the skin and hair. Employees are not permitted to leave the worksite wearing any protective work clothes or equipment required to be provided by the employer.

The interim final standard also requires employers to provide employees working in lead areas where their airborne exposures exceed the PEL with lunchroom facilities or eating areas which are as free as practicable from lead contamination and are readily accessible to employees. Employers must also assure that employees wash their hands and face prior to eating or smoking and do not enter the lunchroom facilities or eating area wearing protective clothing, unless properly cleaned beforehand. This is to further minimize the possibility of food contamination and reduce the likelihood of additional lead absorption from contaminated food, beverages or tobacco.

J. Medicol Surveillance: Paragraph (j)

The medical surveillance provisions are part of this standard's comprehensive approach to prevention of lead-related disease. Its purpose is to supplement the standard's primary mechanisms of disease prevention, the elimination or reduction of airborne concentrations of lead and sources of ingestion, by facilitating the early detection of medical effects associated with exposure to lead. These provisions in most respect are very similar to parallel provisions in the HUD Guidelines and lead standard for general industry.

All medical examinations and procedures are to be performed by or under the supervision of a licensed physician and are to be provided without cost to employees at a reasonable time and place. The standard does not make participation in the medical surveillance program mandatory for the employee. The employer's obligation is to "provide" and "make available" the medical tests and procedures as required. Where employee confidence in the medical program exists, refusal to participate should be minimal.

The medical surveillance provisions contemplate two phases of medical surveillance: one is initial medical surveillance, the other is a medical surveillance program. The employer is required to provide initial medical surveillance to employees occupationally exposed to airborne concentration of lead on any one day at or above the action level, consisting of biological monitoring in the form of blood sampling and analysis for lead and zinc protoporphyrin levels. Where this initial biological monitoring indicates that an employee's blood lead level is at or above 40 µg/dl, the employer must continue to provide biological monitoring at least every two months. The frequency is to continue until two consecutive blood samples and analyses indicate that the employee's blood lead level is below 40 µg/dl.

If an employee's airborne lead exposure is at or above the action level for more than 30 days a year, the employer shall provide a medical surveillance program to the employee consisting of routine monitoring of an employee's blood lead and ZPP levels, made available at least every 2 months for the first 6 months in the exposed job and every 6 months thereafter. If an employees PbB exceeds 40 µg/dl, the monitoring frequency must be increased to at least every 2 months and not reduced until two consecutive PbB's are below 40 µg/dl. If PbB levels exceed the removal criteria under paragraph (k)(1)(i), a second PbB must be provided within 2 weeks after the employer receives the results of the first blood test to confirm the accuracy of the results. This follow-up is intended to assure that no unnecessary removals occur. If the second test exceeds the removal criterie then the employee must be removed. Blood lead level sampling and analysis must have an accuracy (to a confidence level of 95 percent) within plus or minus 15 percent or 6 µg/dl, whichever is greater, and must be conducted by a laboratory approved by OSHA.

Within five working days after the receipt of biological monitoring results, the employer is to notify each employee in writing of his or her blood lead level. The employer must notify each employee who underwent biological monitoring whose blood lead level exceeds 40 µg/dl, that the standard requires temporary medical removal with Medical Removal Protection benefits when an employee's blood lead level exceeds the numerical criterion for medical removal.

The employer's obligation to provide a full medical surveillance program to an employee, including annual medical exams, is triggered by a determination that the employee's blood lead level exceeds 40 µg/dl if the employee's airborne exposure is or may be at or

VOL 58 ISS 84 MY 4 1993 UMI

above the action level for more than 30 days a year.

The required examination includes a work history and medical history; a physical examination; determinations of blood lead level (PbB), hematocrit, hemoglobin, peripheral smear morphology and red cell indicus; levels of zinc protoporphyrin (ZPP), routine urinalysis (specific gravity, sugar, protein determinations, and microscopic examination), blood urea nitrogen (BUN), and serum creatinine (S-Creat).

Medical consultations, with examinations as appropriate, are required to be provided upon notification by an employee (1) that the employee has developed symptoms commonly associated with lead-related disease, (2) that the employee desires advice concerning the effects of lead on reproductive capacity, and (3) that the employee has demonstrated difficulty in breathing during fit testing or use of a respirator. Additional examinations must be made available when an employee is removed from exposure or otherwise limited under paragraph (k) of the regulation. The content and frequency of these examinations is to be at the discretion of the physician. Upon request of an employee, however, a pregnancy test or male fertility test (at a minimum analyzing sperm number, motility, and morphology) must be provided. These tests will facilitate the protection of reproductive capacity.

The employer must make medical examinations and consultations available to each employee exposed to lead at or above the action level for more than 30 days per year on the following schedule: at least annually for those employees for whom a blood sampling test conducted at any time during the preceding 12 months indicated a blood lead level at or above 40 µg/dl; as soon as possible, upon notification by an employee either that the employee has developed signs or symptoms commonly associated with lead intoxication, that the employee desires medical advice concerning the effects of current or past exposure to lead on the employee's ability to procreate a healthy child, that the employee is pregnant, or that the employee has demonstrated difficulty in breathing during a respirator fitting test or during use; and as medically appropriate for each employee either removed from exposure to lead due to a risk of sustaining material impairment to health, or otherwise limited pursuant to a final medical determination.

The medical surveillance provisions of the final standard contain a multiple physician review mechanism which gives workers an opportunity to obtain a second and possibly third opinion regarding the medical determinations made pursuant to the standard. An employee may designate a second physician to review any findings, determinations or recommendations of an initial physician chosen by the employer. Efforts are to be made to resolve any disagreement which may arise between the two physicians. Should they be unable to agree, a third physician they select will resolve the disagreement.

OSHA's reasons for the provision of this review process are twofold: first, to broaden and strengthen the basis for medical determinations in situations where a worker questions the results of the initial examination or consultation provided by the employer; and second, to assure employee confidence in the soundness of medical determinations made pursuant to the standard. OSHA views the multiple physician review mechanism as an important element of the lead standard's medical surveillance program both due to the importance attached to medical surveillance by the Act, and due to the crucial role medical surveillance will play in the operation of the standard's medical removal protection program.

Medical surveillance, as under the HUD Guidelines and OSHA lead standard, must be provided by employers without cost to employees. Since the multiple physician review mechanism will be one means by which medical surveillance is provided to an employee, employers must bear the expense of this mechanism when it is used. In practice, the costs of this mechanism should not be burdensome, particularly since employers will have substantial control over the frequency of its use. Where employers carefully structure and administer medical surveillance programs which engender, merit and maintain worker confidence, workers will see no need to seek a second medical opinion.

The multiple physician review mechanism commences after an initial medical examination or consultation provided by a physician chosen by the employer. OSHA recognizes the value to employers and employees alike of having the mechanism operate in an expeditious fashion, and thus has established explicit criteria for the beginning of the process. After an initial physician conducts an examination or consultation pursuant to the standard, the employer must promptly notify the employee of his or her right to seek a second medical opinion. This notification need be no more than an oral reminder of the existence and content of this multiple physician review mechanism. After this notification has been given, an employer may condition employee participation in, and payment for, the mechanism upon the employee acting within 15 days after receipt of the foregoing notification, or receipt of the physician's written opinion, whichever is later. Before or within this 15-day period the employee must inform the employer (orally or otherwise) that the employee intends to seek a second medical opinion. The employee must also initiate steps within this time to make an appointment with a second physician. These steps would include actually making an appointment or contacting a physician with the request that a referral to a specialist be arranged.

The standard contains no more limitation upon an employee's choice of a second physician than the standard places on an employer's choice of the initial physician. The second physician, like the initial physician, need only be licensed to practice medicine. There is no subspecialty of medicine solely concerned with lead-related diseases, and since lead-related diseases affect numerous systems of the body, it would not be appropriate to limit the choice of doctors to any one specialty. It is certainly to an employee's advantage to choose a competent physician, thus OSHA relies on this self-interest to assure the value of the second opinion. For example, where an employee's difference with the initial physician revolves around a particular body system—e.g., nervous system—it is likely that the employee will choose a specialist in that body system—e.g., a neurologist. Where, however, the dispute revolves around several body systems, or the employee cannot identify one specific system, the employee will likely choose the general practitioner or internist most familiar with the employee's medical history or current health status.

The standard provides that the second physician shall review any findings, determinations or recommendations of the initial physician, and may conduct such examinations, consultations and laboratory tests as the second physician deems necessary to facilitate this review. An additional provision in the standard requires the employer to supply the same information to the second physician upon request that must be supplied to an initial physician. The second physician, therefore, is provided an opportunity to fully assess the employee's health status with access to the same background information supplied to the initial physician.

If the second physician's findings, determinations and recommendations are the same as those of the initial physician, then the multiple physician review process comes to an end. If, however, the opinions of the two physicians are in conflict, then the standard provides that the employer and the employee shall assure that efforts are made for the two physicians to communicate with each other to resolve their differences. This professional interaction among peers should in most cases resolve any differences between the two physicians. The preceding elements of the multiple physician review mechanism assure that if differences of opinion remain, these differences are likely to be genuine and substantial.

Where the first two physicians have been unable to quickly resolve any differences of opinion with respect to an employee, then it is necessary for a third qualified physician to resolve the dispute. It is important that this third physician be competent to resolve the dispute, thus the standard provides that the third physician shall be designated by the employer and the employee jointly through their respective physicians. It is the responsibility of the employer and the employee to assure that a third physician is selected, but the selection is to be made by the two prior physicians.

The standard provides the third physician with full opportunity to review the findings, determinations, and recommendations of the prior physicians by conducting such examinations, consultations, and laboratory tests as the third physician deems necessary. The standard incorporates the expectation that the third physician will consult with the two prior physician, and upon request, the employer must supply the same information to the third physician given to the initial physicians. The third physician is required to provide a written medical opinion to the employer, which will operate to resolve the disagreement between the earlier physicians. The standard finally requires the employer to act in a manner consistent with the findings, determinations, and recommendations of the third physician, unless the employer and the employee reach an agreement which is otherwise consistent with the recommendations of at least one of the three physicians.

The medical surveillance section of the standard includes a provision stating that the employer and employee or authorized employee representative may agree upon the use of any alternate physician determination mechanism in lieu of the multiple physician review mechanism. The only conditions are that the alternate mechanism be as expeditious and protective as the multiple physician review mechanism. For example, the parties might decide, in cases of dispute, for an employee to go directly from an initial physician chosen by the employer to an agreed upon final physician—thus dispensing with the need for a second physician. Alternately, a mutually agreed upon physician might be used in the first instance without recourse to other physicians. Or, an employee might be given the opportunity to choose this final physician. OSHA desires to encourage employers and employees to adopt medical determination procedures in which all parties have trust and confidence.

The interim final standard prohibits prophylactic chelation of any employee by any person the employer employs, retains, supervises, or controls, and requires the employer to assure that any therapeutic or diagnostic chelation, if administered, is done under the supervision of a licensed physician in a clinical setting with thorough and appropriate medical monitoring. In cases where the examining physician determines that chelation is appropriate, the employee must be notified of this fact before such treatment. This is to inform the employee that chelation can be a potentially harmful treatment, and will afford the employee the opportunity to seek the review of this determination by another physician.

K. Medical Removal Protection: Paragraph (k)

The employer is required to remove an employee from work having an exposure to lead at or above the action level on each occasion that a periodic and a follow-up blood sampling test indicate that the employee's blood lead level is at or above 50 µg/dl. Although OSHA's General Industry Standard (1910.1025) requires removal based on the average of three blood tests indicating blood leads in excess of 50 µg/dl, OSHA believes that the length of time associated with taking these three tests (up to four months) would not be appropriate for activities in construction which often will not last 4 months. The provisions for blood testing under this construction standard to determine whether removal is necessary, would be accomplished within a much shorter period (e.g., a periodic test revealing blood lead above 50 µg/dl requires a follow-up test within 2-weeks). OSHA further believes that this more stringent requirement for removal based on fewer blood tests is warranted in view of the high airborne lead exposures that construction workers have been permissibly exposed to (e.g., 200 µg/m³).

The employer must also remove an employee from work having an exposure to lead at or above the action level on each occasion that a final medical determination results in a medical finding, determination, or opinion that the employee has a detected medical condition which places the employee at increased risk of material impairment to health from exposure to lead. The phrase "final medical determination" means the written medical opinion on the employee's health status by the examining physician or, where relevant, the outcome of the multiple physician review mechanism or alternate medical determination mechanism.

Where a final medical determination results in any recommended special protective measures for an employee, or limitations on an employee's exposure to lead, the employer must implement and act consistent with the recommendation.

For an employee removed from exposure to lead at or above the action level due to a blood lead level at or above 50 µg/dl the employer may return that employee to former job status when two consecutive blood sampling tests indicate that the employee's blood level is at or below 40 µg/dl. For an employee removed from exposure to lead due to a final medical determination, the employee must be returned when a subsequent final medical determination results in a medical finding, determination, or opinion that the employee no longer has a detected medical condition which places the employee at increased risk of material impairment to health from exposure to lead.

The requirement that an employer return an employee to his or her former job status is not intended to expand upon or restrict any rights an employee has or would have had, absent temporary medical removal, to a specific job classification or position under the terms of a collective bargaining agreement.

Thus, for example, where an employee's job is concluded while the employee is on medical removal, the employee is not entitled to continuing MRP benefits or to the job since, if the employee had not been removed, the employment would have ended in any case.

The employer shall remove any limitations placed on an employee or end any special protective measures provided to an employee pursuant to a final medical determination when a

VOL
58
ISS
84
MY
4
19 93
UMI

subsequent final medical determination indicates that the limitations or special protective measures are no longer necessary.

Where the multiple physician review mechanism, or alternate medical determination mechanism used pursuant to the medical surveillance provisions has not yet resulted in a final medical determination with respect to an employee, the employer may either remove the employee from exposure to lead, provide special protective measures to the employee, or place limitations upon the employee, consistent with the medical findings, determinations, or recommendations of any of the physicians who have reviewed the employee's health status. In such circumstances, the employer may return the employee to his or her former job status, end any special protective measures provided to the employee, and remove any limitations placed upon the employee, consistent with the medical findings, determinations, or recommendations of any of the physicians who have reviewed the employee's health status, unless the initial removal, special protection, or limitation of the employee resulted from a final medical determination which differed from the findings, determinations, or recommendations of the initial physician or the employee has been on removal status for the preceding eighteen months due to an elevated blood lead level.

If a removed employee files a claim for workers' compensation payments for a lead-related disability, then the employer must continue to provide medical removal protection benefits pending disposition of the claim. To the extent that an award is made to the employee for earnings lost during the period of removal, the employer's medical removal protection obligation may be reduced by such amount. The employer may not receive credit for workers' compensation payments received by the employee for treatment related expenses. The employer's obligation to provide medical removal protection benefits to a removed employee may be reduced to the extent that the employee receives compensation for earnings lost during the period of removal either from a publicly or employer-funded compensation program, or receives income from employment with another employer made possible by virtue of the employee's removal.

For employees removed from exposure to lead due to an elevated blood lead level whose blood lead level has not declined within the past eighteen (18) months of removal to allow the employee to be returned to his or her former job status, the employer must make available to the employee a medical examination to obtain a final medical determination with respect to the employee. The employer must also assure that the final medical determination obtained indicates whether or not the employee may be returned to his or her former job status, and if not, what steps would be taken to protect the employee's health. Further, where the final medical determination has not yet been obtained, or once obtained indicates that the employee may not yet be returned to his or her former job status, the employer must continue to provide medical removal protection benefits to the employee until either the employee is returned to former job status, or a final medical determination is made that the employee is incapable of ever safely returning to his or her former job status.

Finally, where the employer acts pursuant to a final medical determination which permits the return of the employee to his or her former job status despite what would otherwise be an unacceptable blood lead level, later questions concerning removing the employee again must be decided by a final medical determination. The employer, however, need not automatically remove such an employee pursuant to the blood lead level removal criteria provided in the standard.

Where an employer, although not required by this section to do so, removes an employee from exposure to lead or otherwise places limitations on an employee due to the effects of lead exposure on the employee's medical condition, the employee is entitled to full medical removal protection benefits as provided for under the standard.

L. Employee Information and Training: Paragraph (l)

The final standard requires the employer to provide an information and training program for all employees exposed to lead at or above the action level. Information and training are an essential aspect of the overall protection of employees who can do much to protect themselves if they are informed of the nature of the hazards in the workplace. To be effective, an employee education system must apprise the employee of the specific hazards associated with his work environment, protective measures which can be taken, and his rights under the standard.

The provisions under this paragraph also alert employers of their existing obligation to comply with provisions under OSHA's Hazard Communication Standard (20 CFR 1926.59), which currently applies to construction activities. Under the Hazard Communication Standard (HCS) all chemical manufacturers and importers are to assess the hazards of the chemicals they produce or import and are to develop appropriate information about those hazards, which they are required to communicate in various ways to their own exposed employees and to relevant downstream employers, as specified under paragraphs (d)–(h) of the standard. Downstream employers, in turn, are required to communicate the information concerning the hazards of such chemicals in various ways to their own employees. The transmittal of hazard information to employees is to be accomplished by means of comprehensive hazard communication programs, which must include container labeling and other forms of warning, material safety data sheets and employee training.

Employers are also obligated to comply with existing training requirements set forth in 29 CFR 1926.21, Employee training and education.

In paragraph (l)(2), OSHA includes additional particular requirements that are needed to protect employees specifically exposed to lead at or above the action level. The training program required under paragraph (l)(2) must be provided prior to the time of initial job assignment or prior to the startup date for this requirement, whichever comes last, and must be repeated at least annually for covered employees unless exposure at or above the action level will no longer occur.

Paragraph (l)(2) requires that the employer assure that each employee who is exposed at or above the action level is trained in the following:

The content of the standard and its appendices: The specific nature of the operations which could result in exposure to lead above the action level; the purpose, proper selection, fitting, use, and limitations of respirators; the purpose and a description of the medical surveillance program, and the medical removal protection program including information concerning the adverse health effects associated with excessive exposure to lead (with particular attention to the adverse reproductive effects on both males and females and hazards to the fetus and additional precautions for employees who are pregnant); the engineering controls and work practices associated with the employee's job assignment including training of employees to follow relevant good work practices

described in Appendix B of this section; the contents of any compliance plan in effect; instructions to employees that chelating agents should not routinely be used to remove lead from their bodies and should not be used at all except under the direction of a licensed physician; and the employee's right of access to records under 29 CFR 1910.20.

In addition, the employer is required to make available to all affected employees a copy of this standard and its appendices and must provide, upon request, all materials relating to the employee information and training program to affected employees and their designated representatives, and to the Assistant Secretary and the Director.

M. Signs: Paragraph (M)

The standard requires warning signs to be posted in each work area where employee lead exposure exceeds the PEL.

In light of the serious nature of the hazard of exposure to lead, OSHA believes that sign posting is needed, as well as periodic training, to adequately inform employees of the presence of high levels of lead and the possible need to utilize respirators and other protective equipment when entering the area. Phrases to be placed on the sign include "Warning", "Lead Work Area," "Poison," and "No Smoking or Eating." Signs are to be illuminated and cleaned as necessary so that the legend is readily visible.

N. Recordkeeping: Paragraph (n)

The HUD Guidelines and OSHA's general industry standard mandate the inclusion of provisions requiring employers to maintain accurate biological and environmental monitoring records of employee exposures to potentially toxic materials. It also provides that employees or their representatives have access to such records.

The interim final standard requires records of all exposure monitoring and other data used in conducting the employee exposure assessment to be established and maintained. The records must include the name and job classification of employees monitored, details of the sampling and analytic techniques, results, and type of respiratory protection worn. These records must be kept for 30 years in accordance with OSHA's standard 29 CFR 1910.20, Access to Exposure and Medical records. The standard also requires employers to establish and maintain records of medical surveillance (biological monitoring and medical examination results). These include names of employees, the physician's written opinion, exposure data provided to the physician, and any employee medical complaints associated with lead exposure. In addition, the employer is required to keep or must assure that the examining physician keeps a record of the results of medical examinations, a description of laboratory procedures and a copy of the results of biological monitoring. These records must be kept for at least duration of employment plus 30 years, except that medical records of employees who have worked for less than one (1) year for the employer need not be retained beyond the term of employment if they are provided to the employee upon termination of employment. These retention requirements are in accordance with § 1910.20

The interim standard contains a limited recordkeeping requirement concerning temporary medical removals effected pursuant to the medical removal protection program. The employer must establish and maintain an accurate record for each employee removed from current exposure to lead. The record is to contain four entries each time an employee is removed. First, the employee must be identified by name and social security number. Second, the date of removal and return must be stated. Third, the employer must briefly explain how each removal was or is being accomplished. This description need be no more detailed than such statements as "Employee X was transferred from position A to position B during the entire period of removal," or "Employee X was laid off for the entire period of removal," or "Employee X is currently working half shifts until a transfer opportunity becomes available." Fourth, the record must indicate whether or not the reason for the removal was an elevated blood lead level. If removal is due to a reason other than an elevated blood lead level, this precise reason should not be stated, so as to prevent disclosure of confidential medical information about the employee. Medical removal records are to be maintained for at least the duration of employment.

The purpose of the foregoing recordkeeping requirement is to enable employees and their authorized representatives, and the Secretary to assess the operation of, and an employer's compliance with the medical removal protection program. The limited but pertinent information contained in these records will, in most cases, enable these assessments to be made without interviewing large numbers of employees or placing undue burdens on employers by requiring further time consuming and burdensome examinations of payroll, production, or confidential medical records—examinations which likely would be necessary in the absence of the standard's limited recordkeeping requirement. Due to the limited purposes to be served by these records, the standard requires an employer to maintain each medical removal record only for so long as the duration of an employee's employment.

A provision for the use of objective data in lieu of initial monitoring for the purpose of assessing employee exposure is included in this standard in paragraph (d)(3)(iv). Objective data are defined in paragraph (n)(4) as information demonstrating that a particular product or material containing lead cannot release dust or fumes in concentrations at or above the action level under any expected conditions of use. Employers might use data from an industry-wide survey to estimate maximum exposure levels that could occur if that survey pertains to workplace conditions that, to the extent relevant and significant, are all very similar to those in the employer's worksite. Employers may also use laboratory product test results to demonstrate that airborne concentrations must be below the action level.

A record documenting the relevance of the objective data in assessing employee exposure is required to be established, and maintained for at least 30 years of the objective data relied on. This retention period is consistent with OSHA's Access standard (29 CFR 1910.20) that requires retention of exposure records for at least 30 years.

The interim final standard requires that records be made available to employees and their authorized representatives, physician or other person designated by an employee or former employee in accordance with 29 CFR 1910.20, and to the Director and Assistant Secretary.

The records described above are to be transferred to a successor employer whenever the employer ceases to do business. When there is no successor employer to receive and retain the records these records must be transmitted to the Director of NIOSH.

Upon expiration of the retention period for required records, the employer must notify the Director of NIOSH at least 3 months prior to disposal of such records and must transmit those records to the Director if so requested.

VOL 58 ISS 84 MY 4 1993 UMI

O. Observation of Monitoring: Paragraph (o)

The lead standard for general industry of the Act requires that employers provide employees or their representatives with the opportunity to observe monitoring of employee exposures to toxic materials or harmful physical agents. In accordance with this section and consistent with other OSHA standards, the standard contains provisions for such observation. To insure that this right is meaningful, observers are entitled to an explanation of the measurement procedure, to observe all steps related to the measurement procedure, and to record the results obtained. Since results will not normally be available at the time of monitoring, the standard entitles the observers to receive the results of the monitoring when returned by the laboratory. The observer, whether an employee or designated representative, must be provided with, and is required to use, any personal protective devices required to be worn by employees working in the area that is being monitored, and must comply with all other applicable safety and health procedures.

P. Effective Dates: Paragraph (p)

The effective date is June 3, 1993. Congress in section 1031 of the Housing and Community Development Act directs that this interim final regulation take effect on issuance, but also expressly authorizes OSHA to reasonably delay the effective date. OSHA, therefore sets the effective date 30 days from publication in the **Federal Register**, which is the shortest time period allowed under the Administrative Procedures Act. Consequently, the regulation becomes effective 30 days after publication in the **Federal Register**. However, implementation of many provisions of the standard does not appear to be feasible so quickly. Thus, OSHA provides a minimal additional time period before the start-up dates for these provisions. OSHA believes that this is consistent with Congress' intent.

Q. Appendices: Paragraph (q)

The appendices included with the regulation are intended to be purely informational and, unless otherwise expressly stated in this section, are not intended to create any additional obligations not otherwise imposed or to detract or reduce any existing obligations. Appendix D provides mandatory procedures for fit testing of respirators.

R. Startup Dates: Paragraph (r)

All requirements of the interim final rule, except for engineering controls specified in paragraph (e)(1) of the standard, must be complied with as soon as possible, but no later than 60 days from the effective date of this section. Feasible engineering controls specified under paragraph (e)(1) shall also be implemented as soon as possible, but no later than 120 days from the effective date of this section.

OSHA believes that expeditious action by employers to achieve compliance with the provisions of this standard is warranted. Construction employees under the current standard are being exposed to lead at concentrations that present significant risk of adverse health impairment.

Employers must install feasible engineering controls as required under this standard within four (4) months from the effective date of this standard. Compliance with all other provisions of the standard must be accomplished within two (2) months of the effective date of the standard.

Employers performing lead operations in construction to some extent have already instituted protective measures voluntarily or in response to existing OSHA or other regulations, regarding training, engineering controls, compliance plans, respirators, exposure monitoring, work practices, recordkeeping, signs, protective clothing, and hygiene facilities. In addition, the Act of 1992 put the industry on notice that protective requirements like those, would be promptly imposed on employers to protect lead exposed employees in the construction industry. Thus, OSHA believes that it is a reasonable and appropriate judgment that compliance with the new burdens imposed under this interim rule in the time-frames specified is achievable.

IV. Regulatory Impact and Regulatory Flexibility Analysis

A. Executive Summary

Industry Profile

Construction projects involving lead or lead-containing materials occur throughout the entire construction industry as well as in several non-construction industries. Eighteen construction industry SICs and five non-construction industry SICs (involving construction activity) are expected to be affected by the Interim Final Standard. OSHA estimates that approximately 936,000 employees in 147,000 establishments are exposed to at least some level of lead during construction work.

Technological Feasibility

Compliance with the PEL and ancillary provisions of the Interim Final Standard is technologically feasible for all affected industries. Existing engineering control types, including mechanical ventilation, local exhaust ventilation, shrouded tools, HEPA vacuums, and wetting agents are already in use in the construction industry. Due to the nature of the activities in which high exposures to lead are generated, OSHA assumes that supplemental respirator use will be necessary for most activities in which engineering controls will be used.

Benefits

Benefits of the Interim Final Standard include decreases in the annual number of expected cases of: reduced nerve conduction velocity; reduced blood ALA-D levels; increased urinary ALA; gastrointestinal disturbances; and blood-lead levels above the medical removal trigger level. Long-term effects avoided over a ten-year period include cases of fatal/non-fatal infarction; fatal/non-fatal stroke; and renal disease.

Costs of Compliance

The annual recurring cost of the Interim Final Standard is expected to range between $365 million to $445 million. Additional start-up costs will be incurred during the first year for worker training, biological monitoring, medical examinations, and medical removal protection benefits.

Economic Impacts

The most impacted SICs, as measured by compliance costs per worker and compliance costs per establishment, are expected to include: SIC 1611, Highway and Street Construction Contractors; SIC 1622, Bridge, Tunnel and Elevated Highway Contractors; SIC 1721, Painting Contractors; SIC 1791, Structural Steel Erection Contractors; SIC 1795, Wrecking and Demolition Contractors; and SIC 3231, Glass Products Manufacturers. OSHA has concluded that it will be economically feasible to achieve compliance for all affected sectors.

B. Industry Profile

This industry profile describes the industries identified as potentially affected by the Interim Final Standard for Lead in Construction. Information is also presented on the twenty-two types of construction projects expected to be affected by the standard. Project type is often a better indicator of the likelihood

of lead exposure than the industry classification of the firm performing the work.

The definition of "construction" includes the categories of new construction (relatively little exposure to lead will be encountered in new construction); additions, alterations, and reconstruction (including remodeling and renovation); installation; demolition; repairs and maintenance. In this profile, the three major divisions of the construction industry are identified by two-digit Standard Industrial Classification (SIC) codes: SIC 15, General Building Contractors; SIC 16, Heavy Construction Contractors, Excluding Building Contractors; and SIC 17, Special Trade Contractors.

Subsectors of each industry division are identified by four-digit SIC codes. Because an establishment's SIC classification is based solely on the primary activities of the firm, contractors from different two-digit and four-digit SIC codes are often identified as working on the same project type. Construction projects involving contact with lead or lead-containing materials occur throughout the entire construction industry as well as in several non-construction SICs. Table 1 shows the eighteen construction industry SICs and five non-construction industry SICs (involving construction activity) expected to be affected by the Interim Final Standard and the affected construction project types associated with each SIC.[1] Table 2 lists the industries affected and shows the estimated total number of affected establishments and estimated total number of workers exposed by industry sector.

TABLE 1.—SICS AFFECTED BY THE INTERIM FINAL STANDARD AND ASSOCIATED PROJECT TYPES

SIC	Industry title	Project type
1521	General Contractors, Single Family Housing	In-Place Management (Private Housing).
		Residential Remodeling.
1522	General Contractors, Other Residential Buildings	Residential Remodeling.
1531	Operative Builders	In-Place Management (Private Housing).
		Residential Remodeling.
1541	General Contractors, Industrial Buildings and Warehouses	Petroleum Tank Repainting.
		Indoor Industrial Facility Maintenance and Renovation.
		Outdoor Industrial Facility Maintenance and Renovation.
		Commercial and Institutional Remodeling.
1542	General Contractors, Other Non-Residential Construction	Commercial and Institutional Remodeling.
1611	Highway and Street Construction Contractors	Highway and Railroad Bridge Repainting.
		Highway and Railroad Bridge Rehabilitation.
1622	Bridge, Tunnel and Elevated Highway Contractors	Highway and Railroad Bridge Repainting.
		Highway and Railroad Bridge Rehabilitation.
1711	Plumbing Contractors	Lead Joint Work on Cast Iron Soil Pipes.
		Repair and Removal of Water Lines.
1721	Painting Contractors	Highway and Railroad Bridge Repainting.
		Water Tank Repainting.
		Petroleum Tank Repainting.
		Housing Lead Abatement (Public Housing).
		Housing Lead Abatement (Private Housing).
		In-Place Management (Public Housing).
		In-Place Management (Private Housing).
		Indoor Industrial Facility Maintenance and Renovation.
		Outdoor Industrial Facility Maintenance and Renovation.
		Commercial and Institutional Remodeling.
		Residential Remodeling.
1731	Electrical Work Contractors	Electric Transmission and Communication Tower Maintenance.
		Commercial and Institutional Remodeling.
		Residential Remodeling.
		Electrical Cable Splicing.
1742	Plastering, Drywall, and Insulation Work Contractors	In-Place Management (Public Housing).
		In-Place Management (Private Housing).
		Commercial and Institutional Remodeling.
		Residential Remodeling.
		Reinsulation over Existing Mineral Wool.
1751	Carpentry Work Contractors	Commercial and Institutional Remodeling.
		Residential Remodeling.
1752	Floor Layers and Other Floor Work Contractors	Commercial and Institutional Remodeling.
		Residential Remodeling.
1761	Roofing and Siding Contractors	Commercial and Institutional Remodeling.
		Residential Remodeling.
		Installation of Terne Roofing.
1791	Structural Steel Erection Contractors	Highway and Railroad Bridge Rehabilitation.
		Indoor Industrial Facility Maintenance and Renovation.
		Outdoor Industrial Facility Maintenance and Renovation.
1795	Wrecking and Demolition Contractors	Underground Storage Tank Demolition.
		Commercial and Industrial Demolition.

[1] Three of the 22 basic project types were split into two sub-categories for costing purposes. These project types are Housing Lead Abatement (Public and Private Housing), In-Place Management (Public and Private Housing) and Industrial Facility Maintenance and Renovation (Indoor and Outdoor Work).

Lead exposure is most common among project types that involve the disturbance of lead or lead-containing materials during additions, alterations, reconstruction, demolition, repairs and maintenance. Some examples of potential sources of exposure in these project types include lead-based paint (LBP) and paint dust, lead pipes, leaded solder, the leaded support rods in stained glass windows, and some mineral wool insulation.

In contrast, project types involving exposure to lead during new construction are comparatively rare. This is in part due to government regulations that have banned specific uses of once common lead-containing construction materials. An example is the Consumer Product Safety Commission's 1977 ban on "lead containing paint" prohibiting the use of such paint on products to which consumers are exposed after sale (42 FR 44199). Another example is the Environmental Protection Agency's 1986 ban on further use of lead pipes and solder in residential plumbing. In most new construction projects involving lead use, lead and lead-containing materials are used in limited quantities for specialized applications. Examples include terne (leaded-steel) roofing and the use of lead foil sheet in the walls of hospital x-ray suites.

Table 3 shows preliminary estimates of the number of lead-exposed projects occurring each year, the estimated total number of workers exposed, and the primary sources of lead exposure by project type. The estimated number of employees differs from those originally reported in the draft CONSAD report of July, 1991; this earlier draft did not include workers involved in commercial and residential remodeling project types. For these and other reasons, the draft CONSAD report of July, 1991 is superseded by CONSAD's final report of April, 1993, which contains more complete and accurate information. The final CONSAD report is consistent with the scope and provisions of OSHA's Interim Final Rule.

TABLE 3.—ESTIMATED TOTAL NUMBER OF CONSTRUCTION PROJECTS INVOLVING LEAD PER YEAR, ESTIMATED TOTAL NUMBER OF WORKERS EXPOSED, AND PRIMARY SOURCE(S) OF LEAD EXPOSURE BY PROJECT TYPE

Project type	Estimated number of projects involving lead per year	Estimated total number of workers exposed	Primary source(s) of lead exposure
Highway and Railroad Bridge Repainting	3,721	18,419	Lead-Based Paint and Paint Debris.
Highway and Railroad Bridge Rehabilitation	2,157	29,958	Lead-Based Paint and Paint Debris.
Water Tank Repainting	1,994	5,113	Lead-Based Paint and Paint Debris.
Petroleum Tank Repainting	3,491	4,364	Lead-Based Paint and Paint Debris.
Underground Storage Tank Demolition	648	288	Lead-Based Paint and Paint Debris.
Housing Lead Abatement (Public Housing)	900	2,893	Lead-Based Paint and Paint Debris.
Housing Lead Abatement (Private Housing)	62,300	9,345	Lead-Based Paint and Paint Debris.
In-place Management (Public Housing)	3,150	188	Lead-Based Paint and Paint Debris.
In-place Management (Private Housing)	631,000	35,056	Lead-Based Paint and Paint Debris.
Commercial and Industrial Demolition	1,240	7,440	Lead-Based Paint and Metallic Lead Residues.
Indoor Industrial Facility Maint./Renovation	280	2,113	Lead-Based Paint and Paint Debris.
Outdoor Industrial Facility Maint./Renovation	1,584	2,981	Lead-Based Paint and Paint Debris.
Lead Joint Work on Cast Iron Soil Pipes	9,438	15,337	Lead-Oakum Pipe Joint Material.
Ind. Process Equipment Mfg./Maint./Repair	982	409	Lead Bricks, Lead Mortar, and Lead Sheets.
Industrial Vacuuming	784	392	Metallic Lead Dust in Metal Processing Plants.
Stained Glass Window Removal	2,500	208	Lead Support Rods.
Installation of Radiation Shielding	100	40	Lead-Containing Construction Materials.
Commercial and Institutional Remodeling	546,000	546,798	Lead-Based Paint and Paint Debris.
Residential Remodeling	2,698,000	178,544	Lead-Based Paint and Paint Debris.
Elevator Cable Babbitting	5,400	4,500	Tin-Base Babbit Containing Lead.
Electrical Cable Splicing	100,000	5,000	Lead Splicing Material.
Reinsulation Over Existing Mineral Wool	22,000	18,333	Mineral Wool Insulation With Lead Contaminants.
Repair and Removal of Water Lines	197,000	41,042	Lead Pipes and Lead Solder.
Transmission and Communication Tower Maint	880	7,333	Lead-Based Paint and Paint Debris.
Installation of Terne Roofing	40	576	Leaded Steel Roofing Materials and Lead Solder.
Total For All Project Types	4,295,589	936,670

C. Technological Feasibility

Compliance with the Interim Final Standard is considered technologically feasible for each of the affected industries. OSHA has identified several categories of engineering controls that are technologically feasible and appropriate for use in the construction industry. Due to the nature of the activities in which high exposures to lead are generated, OSHA assumes that supplemental respirator use will be necessary for most activities in which engineering controls will be used. Based on the currently available evidence in the record, OSHA has not been able to conclude that the PEL is achievable in most of the operations most of the time by engineering and work practice controls alone in the construction industry. Currently available respirators are capable of providing the supplemental protection necessary to achieve the PEL all of the time in all construction activities with the exception of abrasive blasting as described below.

In order to analyze the technological feasibility of the standard, data on lead exposures were examined by the type of activity generating the potential for exposure to lead. The exposure data reviewed by OSHA were obtained from the following sources: OSHA IMIS; various NIOSH Health Hazard Evaluation reports; various Department of Housing and Urban Development (HUD) Lead Abatement Demonstration Projects; Maryland's Department of Occupational Safety and Health; site visits conducted by CONSAD Research for OSHA and other published reports and studies. The exposure data obtained from each of these sources are believed to be representative and reliable exposure estimates for the construction activities being examined.

Table 4 summarizes exposure data by construction activity. The table shows personal TWA(8) exposure levels (in micrograms per cubic meter of air), in the absence of reduction factors from engineering controls and respirators. For several of the activities presented, statistics were calculated for small groups of data. Despite the potential weaknesses of these small samples, the data were used as the best available evidence about exposure levels in these activities.

The wide variations in the exposure data for certain construction activities accurately reflect the nature of construction work. Analogous construction work sites, even where the same types of activities are performed, can produce very different exposure levels. Sources of variability in exposure

VOL 58 ISS 84 MY 4 1993 UMI

levels for the same activity include the concentration of lead in the paint or other materials being removed; the total quantity of lead-containing materials being removed; work practices used and weather conditions on outdoor projects.

Because OSHA was unable to allow the public the opportunity to comment on the data used in this analysis, OSHA is taking a very conservative approach in the use of this data. As shown in Table 4, OSHA calculated a 95 percent confidence level for the mean exposure level in each activity and used this value to assign appropriate engineering controls and respirators.[2] (Where this statistic exceeded the maximum observed level for an activity, the maximum observed level was used to specify controls.) This methodology was used in order to ensure a consistent approach to control assignment across activities. The appropriateness of control assignments was then confirmed by examination of the actual exposure level distributions for each activity. Table 5 shows the controls assigned to each activity.

TABLE 4.—REPRESENTATIVE TWA(8) EXPOSURE LEVELS IN µG/M³ ABSENT ENGINEERING CONTROLS AND RESPIRATORY PROTECTION BY CONSTRUCTION ACTIVITY

Construction activity key	Number of observations	Minimum value	Maximum value	Arithmetic mean	Standard deviation	Exposure level used to specify controls[a]
1.0 Open abrasive blasting	26	1,352	58,700	17,315	19,001	23,680
1.1 Open abrasive blasting in full containment	13	2,188	58,700	26,673	21,502	37,300
1.2 Vacuum blasting	4	2	665	169	331	558
2.1 Welding, cutting, and burning on bridges	90	1	10,320	1,230	1,897	1,564
2.2 Other welding, cutting, and burning	152	1	28,000	615	2,681	973
2.3 Lead burning	19	33	2,557	451	533	[b]663
3.0 Spray painting lead-based paint	37	1	460	74	95	101
4.0 Hand scraping	6	6	167	45	63	96
5.1 Removal and replacement of building components	113	0.4	121	7	15	9
5.2 Manual demolition of building components	15	1	168	50	59	77
6.0 Heat gun use	380	0.4	916	26	71	32
7.0 Chemical stripping	296	0.4	476	11	35	15
8.0 Encapsulation	86	0.4	26	3	4	4
9.1 Power tool use (housing abatement projects)	28	0.2	1,596	185	347	[c]296
9.2 Power tool use (other paint removal projects)	65	1	20,600	735	2,794	1,314

[a] Represents the average exposure level that, statistically, would only be exceeded five percent of the time the activity was monitored.
[b] Control specification level is based on data collected during work performed without ventilation.
[c] Data shown were collected during use of shrouded equipment. Control specification level assumes shrouds are not being used.
[d] Activity 12 exposure levels are assumed to be similar to data from Activity 2.3.
[e] Maximum observed value used as the control specification level.
[f] Activity 16 exposure levels were assumed to be minimal due to nature of activity.

Engineering control key: MV—Mechanical ventilation [50% exposure reduction factor]; LEV—Local exhaust ventilation [75% exposure reduction factor]; ST—Shrouded tools [75% exposure reduction factor]; HV—HEPA vacuums; WA—Wetting agents.

Respirator type key: Type 1: Half mask cartridge respirator; Type 2: Full facepiece cartridge respirator; Type 3: Loose fitting hood or helmet powered air purifying respirator; Type 4: Tight fitting powered air purifying respirator; Type 5: Half mask supplied air respirator; Type 6: Full facepiece supplied air respirator; Type 7: Loose-Fitting supplied air blasting helmet; Type 8: Full facepiece SCBA; Type 9: Supplied air welding helmet; Type 10: Abrasive blasting helmet with tight fitting facepiece.

Associated protection factor: Protection factor=10 x PEL; protection factor=50 x PEL; protection factor=25 x PEL; protection factor=50 x PEL; protection factor=10 x PEL, 50 x PEL, or 1,000 x PEL depending on operating mode; protection factor=50 x PEL or 2,000 x PEL depending on operating mode; protection factor=25 x PEL; protection factor=50 x or 2,000 x PEL depending on operating mode; protection factor=25 x PEL; protection factor=2,000 x PEL.

Source: OSHA, Office of Regulatory Analysis

The hierarchy of controls requires employers to first apply all feasible engineering controls. OSHA concluded that ventilation controls are an appropriate means of exposure reduction in lead-exposed construction activities. The two categories of ventilation controls considered especially appropriate were mechanical ventilation systems used in conjunction with enclosures or containments (MV) and local exhaust ventilation (LEV). Local exhaust ventilation includes both portable ventilation systems and shrouded tools with ventilation (ST).

CONSAD assigned a 30 percent reduction factor to mechanical ventilation systems and a 75 percent reduction factor for portable local exhaust ventilation and shrouded tools. Based upon OSHA's judgement and experience, the 30 percent exposure reduction factor is an underestimate and does not take into account technological advances in construction and design of containment systems. According to John Peart, Director of Research on Bridge Coatings for the Federal Highway Administration, the current state of industry use of mechanical ventilation controls is improving. Industry and establishment experience continues to develop as contractors steadily move towards more use of full containment with ventilation systems. Continuing research into proper containment and ventilation for activities involving steel structures painting is resulting in increased efficiency ratings being attained by these large mechanical ventilation systems. OSHA therefore believes that an exposure reduction factor of 50 percent will be achievable for mechanical ventilation systems.

Two other categories of engineering controls were assumed to be required, where appropriate, in accordance with the hierarchy of controls. These control categories were HEPA vacuums (HV) and wetting agents (WA). HEPA vacuums are used to prevent exposure before it occurs by reducing the amount of lead-contaminated debris in the work environment. HEPA vacuums are also used to clean personal protective equipment and work clothes to limit worker exposure to lead. Wetting agents prevent lead-based paint dust and lead-contaminated debris from becoming airborne. These controls are considered technologically feasible for all affected activities where their use is appropriate.

When all feasible engineering controls have been added and personal exposures have not been reduced below the PEL, respiratory protection, as specified in Table I of the Interim Final Standard, must be used. Currently available respirators provide sufficient levels of protection for all activities except for abrasive blasting. The loose-fitting, continuous-flow abrasive blasting helmet currently used in the construction industry has been assigned a protection factor of 25×PEL (1,250 µg/m³). Because exposures during abrasive blasting inside pollution containment setups often exceed this level, this type of respirator is no longer considered adequate. At present, no manufacturer makes a Type CE abrasive blasting respirator with both a helmet and the tight-fitting facepiece needed to achieve an acceptable protection factor. However, the technology for producing such a respirator is already known to exist and a Type CE respirator with a hood is already available on the market.

OSHA assumes that a type CE abrasive blasting helmet can be designed and be certified for use in environments of up to 2,000×PEL within one to two years following promulgation of the standard. Until such a respirator is developed, workers may have to wear a respirator type that provides an acceptable protection factor but lacks integral head protection.

OSHA has assumed for costing purposes that workers will be supplied with respirators providing at least the minimum protection sufficient to meet the requirements of the interim final standard. (These respirator selections are shown in Table 5.) For most construction activities, the supplied-air respirators were found to be more cost-effective than cartridge respirators

because cartridge replacement would produce ongoing costs outweighing the "up-front" costs of purchasing supplied air respirators.

Other regulatory provisions requiring employer action under OSHA's Interim Final Lead Standard include (depending upon the construction activity):

- Initial determination of the presence of lead.
- Competent persons.
- Exposure monitoring and associated recordkeeping.
- Written compliance programs.
- Warning signs.
- Worker training.
- Notification of other employers.
- Protective work clothing and equipment.
- Hygiene facilities (hand washing, changing and decontamination facilities)
- Eating areas and facilities.
- Biological monitoring, medical examinations, and medical removal protection (including associated recordkeeping)

All of these provisions were deemed technologically feasible for the affected construction activities. These requirements can be satisfied by work practice modifications and/or conventional, off-the-shelf items, most of which have already been implemented or introduced in well-maintained workplaces.

D. Benefits

This section presents an analysis of the potential benefits associated with the reduction of the permissible exposure limit for lead to 50 µg/m³. The avoidable adverse health effects of lead are described in detail in the Preamble and Supplements to OSHA's 1978 Lead Standard. In addition, OSHA relied upon the technical expertise of Meridian Research, Inc. in the development and formulation of the benefit model and estimates presented in this section.

Because exposure to lead causes a number of different adverse health effects, the potential benefits associated with this requirement of the Interim Final Standard are varied and include benefits that will accrue during the first year following the effective date, as well as benefits that accrue over longer time horizons (separately identified). Some of the near-term benefits that are expected to accrue include reductions in the incidence of acute lead poisoning and adverse neurologic and biochemical effects, and reductions in the incidence of blood lead levels above 50 µg/m³. Benefits that accrue over longer time horizons include reductions in the incidence of lead-induced hypertension, which may increase the risk of myocardial infarction or stroke, and renal disease. Other potential benefits that are expected to accrue, but which are not specifically discussed below, are reductions in the incidence of lead-induced male and female reproductive effects.

This analysis estimates benefits associated with reducing exposures to airborne lead. Additional benefits are likely to be realized as a result of reductions in worker blood-lead levels due to improved hygiene practices. The general approach taken to evaluate the quantitative benefits was as follows:

- For each construction project and activity, available exposure data were used to develop a profile of worker exposures to airborne lead;
- The exposure profiles were used as inputs for a compartmentalized kinetic lead model to generate a blood-lead profile for each group of workers engaged in a particular construction activity;
- The resulting blood-lead profiles were used to predict the frequency with which blood-lead values were likely to exceed the medical removal trigger of 50 µg/dl, and to calculate an average blood-lead level for each group of workers; and
- The average and peak blood-lead levels were used along with risk estimates contained in Meridian's Peer-Review Draft Risk Assessment report to estimate the number of lead-related illness cases that might potentially be avoided as a result of reducing the PEL to 50 µg/m³ for construction.

For each construction activity, airborne exposures to lead were characterized using statistics to reflect that worker exposures to lead may vary considerably from one day to the next. For all of the construction activities shown in Table 4, exposure profiles were calculated using the full set of available exposure data. However, for the benefits analysis, additional exposure profiles were created by combining data from different activities to recognize that some construction workers may typically be engaged in more than one activity. For example, the abrasive blasting exposure data were combined with painting exposure data to create an exposure profile for workers performing both tasks on a regular basis. In addition, a supplementary baseline exposure profile was created for project types involving lead abatement, in-place management and remodeling activities, in order to obtain a blood-lead level profile for workers currently using poor work practices. This profile was generated to yield a blood-lead profile consistent with blood-lead levels reported in the state of Massachusetts. (One of the few states with useful construction industry data in their blood lead registry.)

For each construction activity and operation, the exposure profile data were used to generate numerical sets that matched the parametric distributions of the exposure profiles. These figures were used to represent daily air-lead levels to which workers engaged in each activity are believed to be exposed during a one-year period. Blood-lead levels likely to result from these exposures were estimated using the compartmentalized kinetic lead distribution/excretion model contained in Meridian's Peer-Review Draft Risk Assessment Report. Table 6 presents the results of this analysis, and includes the average blood-lead levels expected to result over a year of performing each construction activity under baseline exposure conditions. These conditions are based upon the exposure levels shown in Table 4 and the wearing of respirators with the estimated protection factors specified in column one of Table 6.

A similar analysis was performed to evaluate likely blood-lead levels that would result from complying with the 50 µg/m³ PEL. For this analysis, OSHA's consultant, Meridian, assumed that air lead exposures would be reduced in accordance with the same engineering and respiratory protection assumptions used in the cost analysis. Table 7 presents the blood-lead profiles associated with compliance with the 50 µg/m³ PEL. Given the implementation of the control strategies required by the rule, blood-lead levels are not expected to exceed 25 µg/dl among construction workers.

Source: OSHA, Office of Regulatory Analysis.

Table 8 presents the analysis of the number of potential medical removal protection (MRP) cases expected to occur during the first year that the Interim Final Standard is in effect. The estimates shown are based on the assumptions that initial monitoring is administered to all workers in activities with exposures at or above the 30 µg/m³ action level and that medical surveillance program monitoring is administered to all workers in activities with exposures at or above the 30 µg/m³ action level for more than 30 days per year. These estimates were prepared to support the analysis of potential costs of medical removal protection benefits and increased medical surveillance for workers with detected and confirmed blood leads over 50 µg/dl. Because measurements of blood-lead levels are to be taken at fixed intervals under the Interim Final Standard, and because a worker's blood-lead level changes in response to variations in air lead exposures, there is a determinable probability that a blood-lead level above the 50 µg/dl medical removal trigger will be detected on any particular test. To estimate the number of MRP cases that would likely be identified, two alternative assumptions were made. First, it was assumed that blood-lead levels above the MRP trigger occur irregularly during the year. Under this assumption, the probability of detecting a blood-lead level above the MRP trigger can be described using binomial statistics, and the result represents a minimum estimate of the true probability. Alternatively, it was assumed that all blood-lead levels above the MRP trigger occur on consecutive days (i.e., blood-lead levels are highly autocorrelated), and that blood-lead measurements will be taken at 60-day intervals. Under this assumption, the probability of detecting a blood-lead level above the MRP trigger can be described by the ratio of the number of days that blood-lead levels are above the

VOL 58 ISS 84 MY 4 1993 UMI

MRP trigger divided by 60. This approach was assumed to yield the maximum probability of detecting a blood-lead level above 50 µg/dl. Multiplying the minimum and maximum probabilities of detecting a blood-lead level above the MRP trigger by the estimated number of employees engaged in each construction activity yields estimates of the annual number of employees that will be detected with blood-lead levels above the MRP trigger under baseline exposure conditions.

TABLE 8.—PREVALENCE OF MEDICAL REMOVAL CASES UNDER BASELINE EXPOSURE ASSUMPTIONS BY PROJECT TYPE

Total for all project types	936,670			16,256	23,559

* OSHA's analysis shows that in some activities in these project types, poor work practices can result in blood-lead levels that would require medical removal. However, once the standard is in effect, and good work practices are implemented, none of these workers in these activities will be exposed above the action level.
** Initial monitoring is triggered by a single day of exposure above the action level of 30 µg/m³.
*** Medical surveillance program monitoring is triggered by exposure above the action level for more than 30 days and for all workers with blood-lead levels above 40 µg/dl.
Source: OSHA, Office of Regulatory Analysis.

However, not all of these employees will be medically removed. The interim final standard mandates that employees be removed from exposure only after a follow-up blood-lead test taken two weeks after a periodic test confirms the blood-lead level to be above 50 µg/dl. Of the number of employees found to have a blood-lead level above the MRP trigger, Meridian assumed that two-thirds will require medical removal as a result of a confirming follow-up blood-lead test.

In addition, it can reasonably be expected that blood-lead levels will fall during the first year that the standard is in effect, due to the requirement to reduce employee exposures during that year. Therefore, the number of employees having blood-lead levels above 50 µg/dl will likely decline during the first year. For this analysis, it was assumed that the number of employees requiring medical removal will decline by half after the first four months following the effective date, and should approach zero at the end of the first year following the effective date of the standard. (The number of MRP cases expected to be identified during the first year was reduced, in accordance with this assumption, for purposes of the cost analysis.)

Table 9 contains estimates of the number of illness and MRP cases expected to be avoided following promulgation of the 50 µg/m³ PEL for construction. (About half of these benefits would have been achieved if there had been full compliance with the existing OSHA PEL of 200 µg/m³.) Except for cases of gastrointestinal disturbances, detected blood-leads above the 50 µg/dl medical removal trigger, and medical removal, estimates of the numbers of cases avoided were derived using average baseline blood-lead levels predicted for each group of workers (see Table 6) and corresponding risk estimates contained in Meridian's Peer-Review Draft Risk Assessment. For gastrointestinal disturbances, a minimum estimate of cases avoided was derived by assuming that all workers predicted to have blood-lead levels exceeding 90 µg/dl at least five percent of the time (i.e., about three weeks) were at risk of acute lead poisoning. The maximum estimate was derived by assuming that all workers with blood-lead levels exceeding 70 µg/dl are at risk. The number of cases of detected

blood-leads above the MRP trigger level and number of cases of medical removals comes from the analysis summarized in Table 8.

The number of illness and MRP cases avoided for near-term effects listed in Table 9 are expected to accrue during or shortly after the first year following promulgation of the Interim Final Standard. These near-term effects have generally been found to be reversible upon reduction or cessation of exposure to lead. The number of illness cases avoided for long-term effects are expected to accrue over at least a 10-year period of time.

TABLE 9.—SUMMARY OF POTENTIAL BENEFITS ASSOCIATED WITH A REDUCTION OF THE LEAD PEL TO 50 µG/M³ FOR CONSTRUCTION

Effect avoided	Number of cases	
	Minimum	Maximum
Near-Term Effects Avoided Annually:		
Reduced Nerve Conduction Velocity	16,199	22,831
Reduced Blood ALA–D Levels	130,056	164,044
Increased Urinary ALA	60,389	78,676
Gastrointestinal Disturbances	1,135	4,413
Detected Blood-Lead Levels Above MRP Trigger**	24,262	35,163
Long-Term Effects Avoided Over A Ten-Year Period:		
Fatal/Nonfatal Infarctions	2,164	2,322
Fatal/Nonfatal Stroke	698	644
Renal Disease	1,258	2,157

**Note: The minimum estimate of expected medical removal cases is 16,256. The maximum estimate of expected medical removal cases is 23,559.

E. Costs of Compliance

This section describes the costs of compliance expected to be incurred by the industries affected by the Interim Final Standard for Lead in Construction. The cost estimates presented in this section are based on the preliminary findings of OSHA's research into current compliance, costs and economic impact issues related to lead exposure reduction efforts in the construction industry.

As described in the technological feasibility section above, there are several general approaches for controlling exposure to airborne lead. The existing OSHA lead standard, 29 CFR 1926.55, requires engineering controls, work practices, and respirators to be used to meet a PEL of 200 µg/m³ for lead exposure in the construction industry.[3] The Interim Final Standard reduces the lead PEL to 50 µg/m³ and requires additional safeguards in the form of ancillary provisions intended to prevent overexposure to lead. These ancillary provisions include requirements for competent person supervision, exposure monitoring, protective clothing and equipment, biological monitoring, and recordkeeping. The costs of meeting these additional requirements are attributable to the Interim Final Standard. Table 10 summarizes information on the regulatory provisions of the existing standard, the Interim Final Standard, and the exposure levels at which required controls must be employed.

TABLE 10.—SUMMARY OF CONTROL PRACTICE REQUIREMENTS ASSOCIATED WITH OSHA'S EXISTING AND INTERIM FINAL LEAD STANDARDS

Control practice	Existing standard: 200 µg/m³ PEL		Interim final standard		
	Exposure below PEL	Exposure above PEL	Exposure below 30 µg/m³ AL	Exposure between AL and PEL	Exposure above 50 µg/m³ PEL
Determination of the Presence of Lead[a]			X	X	X
Competent Person					X
Exposure Monitoring and Assoc. Recordkeeping[a]			X	X	X
Mechanical Ventilation		X			X
Local exhaust Ventilation		X			X
Enclosures/Containment Systems[b]		X			X
HEPA Vacumms	X[c]	X[c]	X	X	X
Wetting Agents	X	X	X	X	X
Written Compliance Program					X
Warning Signs					X
Worker Training				X	X
Notification of Other Employers			X	X	X
Respiratory Protection		X			X

[3] Thus the capital costs of mechanical ventilation, local exhaust ventilation, HEPA vacuums, wetting agents, and respiratory protection for projects with exposures over 200 µg/m³ are already required under 29 CFR 1926.55.

VOL 58 ISS 84 MY 4 1993 UMI

TABLE 10.—SUMMARY OF CONTROL PRACTICE REQUIREMENTS ASSOCIATED WITH OSHA'S EXISTING AND INTERIM FINAL LEAD STANDARDS—Continued

Control practice	Existing standard: 200 µg/m³ PEL		Interim final standard		
	Exposure below PEL	Exposure above PEL	Exposure below 30 µg/m³ AL	Exposure between AL and PEL	Exposure above 50 µg/m³ PEL
Protective Clothing/Gloves/Shoe Covers					X
Handwashing Facilities Only [d]			X	X	X
Change Areas with Storage Facilities					X
Decontamination Facilities including Showers					X
Eating Areas and Facilities					X
Biological Monitoring and Assoc. Recordkeeping				X	X
Medical Examinations and Assoc. Recordkeeping				X	X
Medical Removal Protection Requirements [e]			X	X	X

[a] Exemption is possible if objective data shows that exposures are below the action level or if the employer has relevant data from the past 12 months.
[b] Enclosures are only assumed to be needed in conjunction with indoor projects using mechanical ventilation. Outdoor enclosures are required by EPA regulations concerning environmental release of lead.
[c] For this standard, vacuums are only needed for worksite clean-up.
[d] Hand washing facilities for activities below the PEL are required by 29 CFR 1926.51(f).
[e] Medical removal is dependent on worker blood-lead level
Source: OSHA, Office of Regulatory Analysis.

In order to develop the cost estimates associated with achieving full compliance with OSHA's Interim Final Standard, unit cost estimates were obtained for the control practices and ancillary measures required for each of the project types and activities covered by the rule. The appropriate control practices required to achieve compliance were identified for each project type and construction activity in accordance with the exposure data presented in the technological feasibility section above. The unit cost data used in this analysis were obtained from published price lists of equipment suppliers and from other information collected and developed by OSHA's consultant, CONSAD Research.

The control practices costed in the analysis of the Interim Final Standard included: Determination of the presence of lead; exposure monitoring; competent person labor time; written compliance programs; warning signs; worker training; respirators for activities with exposures below the old PEL of 200 µg/m³ but above the new PEL of 50 µg/m³ (including the respirator unit, accessories, fit testing, cleaning, and training); disposable and reusable protective clothing, shoe covers and gloves; handwashing facilities; decontamination facilities; clean change areas with storage facilities; eating facilities; biological monitoring (blood lead and ZPP testing); medical examinations; medical removal protection; recordkeeping; and employee notification of monitoring data, blood lead analysis, and medical exam results.[4]

Estimates of the annual need for or use of each control practice were calculated using the following bases for costing purposes: Establishments, projects,[5] crews, workers, project-days, crew-days, or worker-days. Estimates for the other parameters in the cost analyses were calculated based upon estimates of the types and frequency of construction activities performed within each project type, project and activity durations, average number of crews per construction activity, crew size, hours of exposure per day, the percentage of projects performed per year involving lead, and the number of available work-days per year. These estimates were developed by OSHA's consultant, CONSAD Research, based on data obtained from industry and labor experts, site visits conducted to support this analysis, CONSAD's PELs in Construction Study, and the 1991 Steel Structures Painting Council (SSPC) Survey of Facility Owners.

Annual compliance costs for each project type and associated activities were developed by combining the unit cost data with estimates of the number of units of each type of control practice needed per year to achieve compliance with the Interim Final Standard. Estimated costs for hygiene facilities, respirators and other capital goods were annualized based on assumptions about the expected useful life of the equipment. The resulting gross annual cost estimates were then adjusted to reflect existing use of specific control practices in order to develop net annual compliance cost estimates.

OSHA's preliminary estimates of current compliance with lead exposure control requirements were used to determine current expenditures on control practices for each project type. These compliance estimates were based upon information obtained from industry and labor experts, CONSAD site visits, CONSAD's PELs in Construction Study, and reports from various HUD Lead Abatement Demonstration Projects.

The cost estimates discussed in this section are the estimated incremental costs to the affected industries of achieving full compliance with the requirements of the Interim Final Standard. These incremental costs are those costs which must be expended to achieve full compliance with OSHA's new requirements in excess of amounts currently being spent by industry.

The annual recurring costs of achieving compliance with a 50 µg/m³ PEL and the ancillary requirements of the Interim Final Standard are estimated to range between $365 million to $445 million dollars.[6] During the first year following the standard's implementation, additional "one-time" start-up costs are expected to be incurred for worker training, biological monitoring, medical examinations, and

[4] Costs of complying with the requirement for handwashing facilities are attributed to the existing OSHA construction sanitation standard: 29 CFR 1926.51(f).

[5] Multiple pieces of equipment were costed where firms were assumed to perform more than one project at a time.

[6] Additional costs will be borne by those firms not currently in compliance with the existing 200 µg/m³ PEL.

medical removal protection benefits.[7] These costs are estimated to range between $150 million and $183 million. Start-up costs for worker training and biological monitoring are based on the need to train and monitor all current employees exposed above the trigger levels for these provisions during the first year after the standard becomes effective. Costs for medical examinations and medical removal protection benefits should not persist beyond the first year; compliance with the 50 µg/m³ PEL is expected to reduce worker blood leads below the trigger levels for these provisions.

Tables 11 and 12 present point estimates of the annual recurring cost of the Interim Final Standard to illustrate the relative magnitude of costs by project type and by provision. The figures shown in Tables 11 and 12 suggest the relative importance of each cost element.

TABLE 11.—POINT-ESTIMATE SUMMARY OF ANNUAL RECURRING COMPLIANCE COSTS FOR OSHA'S INTERIM FINAL LEAD STANDARD BY PROJECT TYPE

Project type	Total annual recurring compliance costs	Project cost as a percentage of total
Highway and railroad bridge repainting	56,742,000	13.99
Highway and railroad bridge rehabilitation	109,583,000	27.02
Water tank repainting	14,797,000	3.65
Petroleum tank repainting	16,125,000	3.98
Underground storage tank demolition	443,000	0.11

In-place management (public housing)	[1] 0	0.00
In-place management (private housing)	[1] 0	0.00
Commercial and industrial demolition	16,445,000	4.05
Indoor industrial facility maintenance/renovation	3,739,000	0.92
Outdoor industrial facility maintenance/renovation	10,152,000	2.50
Lead joint work on cast iron soil pipes	[1] 0	0.00
Industrial process equipment manufacturing/maintenance/repair	2,285,000	0.56
Industrial vacuuming	394,000	0.10
Stained glass window removal	1,046,000	0.26
Installation of radiation shielding	[1] 0	0.00
Commercial and institutional remodeling	76,746,000	18.92
Residential remodeling	59,163,000	14.59
Elevator cable babbitting	[1] 0	0.00
Electrical cable splicing	[1] 0	0.00
Reinsulation over existing mineral wool	18,580,000	4.58
Repair/removal of water lines	[1] 0	0.00
Transmission and commercial tower maintenance	13,827,000	3.41
Installation of terne roofing	[1] 0	0.00
Total for all project types	405,550,000	100.000

[1] Lead exposure levels on these projects are not expected to exceed the action level of 30 µg/m.

TABLE 12.—POINT-ESTIMATE SUMMARY OF ANNUAL RECURRING COMPLIANCE COSTS FOR OSHA'S INTERIM FINAL LEAD STANDARD BY CONTROL PRACTICE

Control practice	Total annual recurring compliance costs	Control practice percentage of total
Determination of the presence of lead	1,413,000	0.35
Competent person labor time	18,610,000	4.59
Exposure monitoring and association recordkeeping	121,617,000	29.99
Written compliance program	15,179,000	3.74
Warning signs	7,036,000	1.73
Worker training	11,118,000	2.74
Respiratory protection	4,714,000	1.16
Protective work clothing	89,325,000	22.03
Hand washing facilities only	[1] 0	0.00
Change areas with storage facilities	2,108,000	0.52
Decontamination facilities and shower time labor cost	111,510,000	27.50
Eating facilities	419,000	0.10
Biological monitoring and association recordkeeping	22,500,000	5.55
Total	405,550,000	100.00

[1] Costs of hand washing facilities were attributed to 29 CFR 1926.51(f).

Source: OSHA, Office of Regulatory Analysis.

As shown in Table 11, the project types expected to account for the largest share of annual costs are Highway and Railroad Bridge Rebabilitation (27%); Commercial and Institutional Remodeling (19%); Residential Remodeling (15%); and Highway and Railroad Bridge Repainting (14%). It should be noted that although lead exposures associated with remodeling project types are generally low, and less than 20 percent of commercial and 5 percent of residential remodeling jobs involving lead exposure are expected to be exposed over the PEL, the large number of remodeling projects estimated to occur annually results in significant total costs for these project types. As shown above in Table 3, the annual numbers of lead-exposed projects for Commercial and Institutional Remodeling and

[7] Cost estimates for medical removal benefits were based on an average removal duration of 100 work days and an average medical removal benefit per case of $74 per day. This estimate is based on OSHA's assumptions about the likelihood of removed workers: finding non-lead exposed jobs with a different employer; moving to a job with the same employer at the same wage rate; moving to a lower-paying job with the same employer; receiving worker compensation; or being removed for fewer than 100 work days.

VOL 58 ISS 84 MY 4 1993 UMI

Residential Remodeling are 546,000 and 2,698,000, respectively.

Table 12 shows the annual recurring costs by control practice in order to indicate the relative magnitude of costs associated with specific regulatory provisions. In descending order of importance, the most costly provisions are exposure monitoring and associated recordkeeping (30%); hygiene facilities, including change areas and decontamination facilities with associated showering labor time costs (28%); and protective work clothing and equipment, including both reusable and disposable protective clothing (22%).

F. Economic Impacts

This chapter examines the economic impacts associated with OSHA's Interim Final Standard for Lead in Construction. The economic impact analysis presented below is based on those costs attributable to the Interim Final Standard as described in the cost section above.

The economic impacts in this section are presented on both a "per worker" and a "per establishment" basis. The bases for estimating these impacts were derived from data on each SIC obtained from the 1987 Census of Construction Industries, the 1989 County Business Patterns, and the Dun & Bradstreet Insight Database. The following data were used to construct this analysis:

- The total number of establishments;
- The total number of employees and the total number of construction workers;
- The average number of employees and the average number of construction workers per establishment;
- The annual payroll for all employees and for construction workers;
- The net dollar value of construction work for construction SICs or sales for non-construction SICs; and
- The pre-tax profit ratio.

These data were used to derive the annual payroll and net value of construction work per establishment and per construction worker. To obtain pre-tax profits per establishment, pre-tax profit ratios derived from Dun & Bradstreet data were multiplied by the net value of construction work or sales per establishment.

Across all the affected SICs, the annual payroll per establishment ranges from $48,000 for SIC 1521, Single Family Housing to $3.4 million for SIC 4911, Electric Utilities. The net value of construction work or sales per establishment ranges from $15,300 in sales for SIC 6514, Operators of Other Dwellings to $7 million in sales for SIC 4911, Electric Utilities. Across all the affected SICs, pre-tax profits per establishment range from $1,300 for SIC 6514, Operators of Other Dwellings to $676,000 for SIC 4911, Electric Utilities.

Several different cost-related impact measures were calculated for each of the 18 construction SICs and four of the five non-construction SICs identified as affected by OSHA's Interim Final Standard.[8] These impact measures are:

- The ratio of the average annual compliance costs per affected establishment (or per exposed construction worker) to an estimate of the annual payroll for an average establishment (or per construction worker) in the specific SIC. This measure compares the projected compliance costs to labor costs normally incurred by the establishment. It can be interpreted as the cost of providing a mandated occupational safety and health "benefit" relative to existing payroll expenses.
- A comparison of the average annual compliance costs per affected establishment (or per exposed construction worker) to an estimate of the net dollar value of construction work or sales for an average establishment (or per construction worker) in the specific SIC. This ratio indicates the relationship of the compliance costs to an establishment's output.
- The average annual compliance cost per affected establishment as a percentage of pre-tax profits for an average establishment in the specific SIC. This measure is particularly meaningful when establishments face highly competitive conditions which prevent the pass through of compliance costs to customers.

The impact measures described above were calculated for the annual recurring costs of the Interim Final Standard as shown in Table 11 above. Table 13 presents estimates of the annual recurring compliance costs per exposed worker and per establishment for each affected SIC. These estimates are an average of costs across the mix of different project types assumed to be performed by each construction or non-construction industry SIC.

Table 13 shows these average costs as a percentage of construction payroll and net value of construction work or sales, on both a per worker and per establishment basis for affected industries. The last column of Table 13 presents the compliance costs per establishment as a percentage of pre-tax profits per establishment. These average percentages are shown to illustrate the relative magnitude of impacts on specific SICs; they should not be interpreted as indicative of the cost impacts on specific project types or on firms within an SIC which specialize in only one of the associated project types.

As shown in Table 13, using annual compliance costs per worker as a measure of impact, the most impacted SICs are expected to include SIC 1791, Structural Steel Erection Contractors; SIC 1795, Wrecking and Demolition Contractors; SIC 1622, Bridge, Tunnel and Elevated Highway Contractors; SIC 1611, Highway and Street Construction Contractors; SIC 1721, Painting Contractors; and SIC 3231, Glass Products Manufacturers.

[8] Impact estimates were not made for SIC 9999, State and Municipal Governments since the relevant revenue and profit data are not applicable.

TABLE 13.—SUMMARY ECONOMIC IMPACT MEASURES FOR OSHA'S INTERIM FINAL STANDARD IMPACT MEASURES CALCULATED USING ESTIMATES OF ANNUAL RECURRING COSTS

SIC	Industry title	Compliance cost per worker ($)	Compliance cost per worker as a percentage of—		Compliance cost per establishment ($)	Compliance cost per establishment as a percentage of—		
			Construction payroll per worker (percent)	Net value of construction work/sales per worker (percent)		Construction worker payroll per establishment (percent)	Net value of construction work/sales per establishment (percent)	Pre-tax profits per establishment (percent)
1521	Single family housing	297	2.1	0.3	1,202	2.5	0.4	6.9
1522	Other residential buildings	331	1.8	0.3	1,342	1.0	0.2	3.2
1531	Operative builders	277	1.5	0.1	1,119	1.6	0.1	1.6
1541	Industrial buildings and warehouses.	168	0.7	0.2	3,028	0.9	0.2	4.8
1542	Other non-resident construction.	140	0.7	0.1	2,564	1.0	0.2	5.0
1611	Highway and street contractors	3,398	15.1	2.9	57,735	11.8	2.3	44.4
1622	Bridge, tunnel and el. highway contractors.	3,625	16.0	3.5	77,482	9.9	2.1	47.7
1711	Plumbing contractors	0	0.0	0.0	0	0.0	0.0	0.0
1721	Painting contractors	775	4.7	1.5	7,792	9.8	3.1	42.2
1731	Electrical work contractors	211	0.9	0.2	1,606	0.8	0.2	3.6
1742	Plastering, drywall, and ins. contractors.	229	1.1	0.3	2,023	0.8	0.2	4.8
1751	Carpentry work contractors	167	1.1	0.3	2,046	2.8	0.7	10.8
1752	Floor work contractors	187	1.0	0.2	1,836	2.3	0.4	6.7
1761	Roofing and siding contractors	166	1.0	0.2	2,020	1.7	0.4	7.0
1791	Structural steel erection contractors.	3,607	16.0	4.4	70,485	23.0	6.3	99.6
1795	Wrecking and demolition work contractors.	2,188	13.1	3.0	24,596	15.6	3.6	62.3
1796	Building equipment contractors	0	0.0	0.0	0	0.0	0.0	0.0
1799	Miscellaneous special trade contractors, NEC.	402	2.5	0.6	2,027	2.1	0.5	7.2
3231	Glass products manufacturers	5,019	29.7	1.8	10,038	14.0	0.9	14.6
4911	Electric utilities	0	0.0	0.0	0	0.0	0.0	0.0
6513	Operators of apartment buildings.	0	0.0	0.0	0	0.0	0.0	0.0
6514	Operators of other dwellings	0	0.0	0.0	0	0.0	0.0	0.0

Source: OSHA, Office of Regulatory Analysis.

If compliance costs per establishment are used as a measure of impact, the most impacted SICs during subsequent years are expected to include: SIC 1791, Structural Steel Erection Contractors; SIC 1795, Wrecking and Demolition Contractors; SIC 1622, Bridge, Tunnel and Elevated Highway Contractors; SIC 1611, Highway and Street Construction Contractors; SIC 1721, Painting Contractors; and SIC 3231, Glass Products Manufacturers.

Impact measures calculated on the basis of percent of net value of construction work and sales suggest the magnitude of cost increases that may potentially be passed through to consumers of construction. (The very high impact on pre-tax profits found in SICs 1791 and 1795 would only be realized if no costs were passed through to buyers of construction. Since cost pass through of most costs is likely, the impact shown in Table 13 represents a hypothetical extreme.)

Existing federal, state and local regulations have already established some obligations for owners and contractors concerning abatement practices on construction projects that supplement and reinforce the requirements of OSHA's Interim Final Lead Standard. These regulations, in conjunction with forthcoming lead regulations from the Federal Highway Administration, the Environmental Protection Agency and the Department of Housing and Urban Development, are expected to ensure a level playing field for contractors bidding on work involving lead exposure.

For many project types involving high exposures to lead, and especially those involving abrasive blasting, small contractors have traditionally made up most of the industry. In recent years, construction industry compliance with environmental regulations has resulted in large capital expenditures and additional worker skill training requirements. These requirements are bringing about some restructuring in this industry with a progressively larger share of work involving lead exposure being performed by larger, better capitalized contractors. OSHA does not anticipate that these changes will result in massive dislocations, undue concentration or any threat to the competitive structure of the industry.

Where OSHA compliance costs significantly increase costs to the buyers of construction, some projects may be delayed in order to compensate for the increased cost of existing work. This may occur in the case of infrastructure projects such as bridge repainting and bridge rehabilitation. However, OSHA cannot state with certainty whether or not this will actually occur or whether new levels of infrastructure spending will more than compensate for new costs of the interim final rule.

G. Regulatory Flexibility Analysis

Pursuant to the Regulatory Flexibility Act of 1980 (Pub.L. 96–353, 94 Stat. 1164 (5 U.S.C. et seq.)), OSHA has assessed the impact of the Interim Final Standard on small businesses, defined as establishments with fewer than 20

VOL 58 ISS 84 MY 4 1993 UMI

employees. The impacts were evaluated for potential adverse impacts on small firms and their relative consequences compared with large firms. Of the estimated 147,000 affected establishments, approximately 132,000 (90%), are small businesses. Thus, the impacts shown above for all establishments are also illustrative of the expected impacts on small businesses.

In general, the costs of compliance for any firm will depend on the extent of worker exposures, the extent of current engineering control, work practice and respirator use, and the amount of lead-exposed work being done. For any given lead-exposed activity, work is likely to be done in a similar manner by both large and small firms, with costs proportional to the scale of the project. As noted above, in response to environmental regulations regarding lead removal, larger capital requirements are bringing about some industry rationalization and concentration. However, this development is not threatening the overall competitive structure of the industry. Estimated compliance costs are feasible for both large and small establishments in each affected industry sector.

V. Environmental Impact Analysis

The National Environmental Policy Act (NEPA) of 1969 (42 U.S.C. 4321 at seq.), as implemented by the regulations (40 CFR part 1500) of the Council on Environmental Quality (CEQ), requires that federal agencies assess their regulatory actions to determine if there is a potential for a significant impact on the quality of the human environment and, if necessary, to prepare an environmental impact statement.

In accordance with these requirements and DOL NEPA Compliance Procedures (29 CFR part 11, subpart B, § 11.10(a)(4)), OSHA has determined that this standard will not have any appreciable negative environmental impact. In any event, OSHA also believes that due to the compressed rulemaking schedule imposed by the Congress in issuing the interim regulation, no environmental impact statement will be prepared for this interim rule.

In similar situations, for example, when an emergency temporary standard (ETS) has been issued, the courts have held that NEPA does not require advance preparation of an environmental statement for an ETS (*Dry Color Manufacturing Association* v. *U.S. Department of Labor*, 486 F. 2d 98, 107 [3rd Cir. 1973]). This interim final standard is similar in nature to an ETS, which is issued on an abbreviated schedule and for a relatively brief period. The DOL NEPA regulations set forth in 29 CFR part 11, subpart B, section 11, 10(s)(4), provide that in these situations the regulations set forth in 40 CFR parts 1500 et seq may not be strictly observable.

VI. Federalism and State Plan Applicability

This standard has been reviewed in accordance with Executive Order 12612, 52 FR 41685 (October 30, 1987), regarding Federalism. This Order requires that agencies, to the extent possible, refrain from limiting state policy options, consult with States prior to taking any actions that would restrict State policy options, and take such actions only when there is clear constitutional authority and the presence of a problem of national scope. The Order provides for preemption of State law only if there is a clear Congressional intent for the agency to do so. Any such preemption is to be limited to the extent possible.

Section 18 of the Occupational Safety and Health Act (OSH Act), expresses Congress' clear intent to preempt State laws with respect to which Federal OSHA has promulgated occupational safety or health standards. Under the OSH Act a State can avoid preemption only if it submits, and obtains Federal approval of, a plan for the development of such standards and their enforcement. Occupational safety and health standards developed by such Plan-States must, among other things, be at least as effective as the Federal standards in providing safe and healthful employment and places of employment.

In short, there is a clear national problem related to occupational safety and health for employees exposed to lead in the construction industry. Those States which have elected to participate under section 18 of the OSH Act would not be preempted by this regulation and would be able to deal with special, local conditions within the framework provided by this performance-oriented standard while ensuring that their standards are at least as effective as the Federal standard.

The 25 States with their own OSHA-approved occupational safety and health plans must adopt a comparable standard within six months of publication of a final rule. The States are: Alaska, Arizona, California, Connecticut, Hawaii, Indiana, Iowa, Kentucky, Maryland, Michigan, Minnesota, Nevada, New Mexico, New York, North Carolina, Oregon, Puerto Rico, South Carolina, Tennessee, Utah, Vermont, Virginia, Virgin Islands, Washington, Wyoming. For New York and Connecticut, plans cover only state and local government employees. Until such time as a State standard is promulgated, Federal OSHA will provide interim enforcement assistance, as appropriate, in these States.

VII. Date of Effectiveness and Absence of Notice and Comment

Section 1031 of the Housing and Community Development Act specifically provides that the "not later than 180 days after enactment of this Act, the Secretary of Labor shall issue an interim final regulation regulating occupational exposure to lead."

The express use of the phrase "interim final regulation," which in the rulemaking context commonly describes a rule issued without notice and comment, in connection with the extremely limited time frame provided by this section, makes clear that Congress intended this rule to be issued without the time-consuming process of notice and comment. The Agency, therefore, concludes that neither the notice and comment rulemaking provisions of the OSH Act nor those of the Administrative Procedures Act are applicable to the issuance of this interim final rule. This view is further supported in the Act's Legislative Committee report which states that "• • • the procedural requirements of section 6 of the OSH Act do not apply to the promulgation of the interim final regulation," [n]or • • • do the notice and comment provisions of the Administrative procedures Act apply."

VIII. Clearance of Information Collection Requirements

5 CFR part 1320 sets forth procedures for agencies to follow in obtaining OMB clearances for information collection requirements under the Paperwork Reduction Act of 1980, 44 U.S.C. 3501 et seq. The lead in construction interim rule requires the employer to allow OSHA access to various records including the employers' compliance and training plans; and the employees' exposure monitoring, medical and training records. In accordance with the provisions of the Paperwork Reduction Act and the regulations issued pursuant thereto, OSHA certifies that it has submitted the information collection requirements of this standard to OMB for review under section 3504(h) of that Act.

Public reporting burden for this collection of information is estimated to average 5 minutes to allow OSHA compliance officers access to the employer's records. Send comments regarding this burden estimate, or any other aspect of this collection of information, including suggestions for reducing this burden, to the Office of Information Management, Department of Labor, room N–1301, 200 Constitution Avenue NW., Washington DC, 20210: and to the Office of Management and Budget, Paperwork Reduction Project (Lead Interim Final Rule), Washington, DC, 20503.

IX. Signature

Signed at Washington, DC, this 26 day of April, 1993.

David C. Zeigler,

Acting Assistant Secretary of Labor for Occupational Safety and Health.

Accordingly, 29 CFR part 1926 is amended as follows:

PART 1926—OCCUPATIONAL SAFETY AND HEALTH STANDARDS

1. The authority citation for subpart D of 29 CFR part 1926 is amended by adding the following:

Authority: • • • Section 1926.62 issued under sec. 1031 of the Housing and Community Development Act of 1992 (sec. 1031, title X, 106 Stat. 3924 (42 U.S.C. 4853)).

2. By adding a new § 1926.62, with Appendices A, B, C, and D to subpart D to read as follows:

§ 1926.62 Lead

(a) *Scope.* This section applies to all construction work where an employee may be occupationally exposed to lead. All construction work excluded from coverage in the general industry standard for lead by 29 CFR 1910.1025(a)(2) is covered by this standard. Construction work is defined as work for construction, alteration and/or repair, including painting and decorating. It includes but is not limited to the following:

(1) Demolition or salvage of structures where lead or materials containing lead are present;
(2) Removal or encapsulation of materials containing lead;
(3) New construction, alteration, repair, or renovation of structures, substrates, or portions thereof, that contain lead, or materials containing lead;
(4) Installation of products containing lead;
(5) Lead contamination/emergency cleanup;
(6) Transportation, disposal, storage, or containment of lead or materials containing lead on the site or location at which construction activities are performed, and
(7) Maintenance operations associated with the construction activities described in this paragraph.

(b) *Definitions.*

Action level means employee exposure, without regard to the use of respirators, to an airborne concentration of lead of 30 micrograms per cubic meter of air (30 μg/m³) calculated as an 8-hour time-weighted average (TWA).

Assistant Secretary means the Assistant Secretary of Labor for Occupational Safety and Health, U.S. Department of Labor, or designee.

Competent person means one who is capable of identifying existing and predictable lead hazards in the surroundings or working conditions and who has authorization to take prompt corrective measures to eliminate them.

Director means the Director, National Institute for Occupational Safety and Health (NIOSH), U.S. Department of Health and Human Services, or designee.

Lead means metallic lead, all inorganic lead compounds, and organic lead soaps. Excluded from this definition are all other organic lead compounds.

This section means this standard.

(c) *Permissible exposure limit.* (1) The employer shall assure that no employee is exposed to lead at concentrations greater than fifty micrograms per cubic meter of air (50 μg/m³) averaged over an 8-hour period.

(2) If an employee is exposed to lead for more than 8 hours in any work day the employees' allowable exposure, as a time weighted average (TWA) for that day, shall be reduced according to the following formula:

Allowable employee exposure (in μg/m³)=400 divided by hours worked in the day.

(3) When respirators are used to limit employee exposure as required under paragraph (c) of this section and all the requirements of paragraphs (e)(1) and (f) of this section have been met, employee exposure may be considered to be at the level provided by the protection factor of the respirator for those periods the respirator is worn. Those periods may be averaged with exposure levels during periods when respirators are not worn to determine the employee's daily TWA exposure.

(d) *Exposure assessment—(1) General.* (i) Each employer who has a workplace or operation covered by this standard shall initially determine if any employee may be exposed to lead at or above the action level.

(ii) For the purposes of paragraph (d) of this section, employee exposure is that exposure which would occur if the employee were not using a respirator.

(iii) With the exception of monitoring under paragraph (d)(3), where monitoring is required under this section, the employer shall collect personal samples representative of a full shift including at least one sample for each job classification in each work area either for each shift or for the shift with the highest exposure level.

(iv) Full shift personal samples shall be representative of the monitored employee's regular, daily exposure to lead.

(2) *Protection of employees during assessment of exposure.*

(i) With respect to the lead related tasks listed in paragraph (d)(2)(i) of this section, where lead is present, until the employer performs an employee exposure assessment as required in paragraph (d) of this section and documents that the employee performing any of the listed tasks is not exposed above the PEL, the employer shall treat the employee as if the employee were exposed above the PEL, and not in excess of ten (10) times the PEL, and shall implement employee protective measures prescribed in paragraph (d)(2)(v) of this section. The tasks covered by this requirement are:

(A) Where lead containing coatings or paint are present: Manual demolition of structures (e.g, dry wall), manual scraping, manual sanding, heat gun applications, and power tool cleaning with dust collection systems;

(B) Spray painting with lead paint

(ii) In addition, with regard to tasks not listed in paragraph (d)(2)(i), where the employee has any reason to believe that an employee performing the task may be exposed to lead in excess of the PEL, until the employer performs an employee exposure assessment as required by paragraph (d) of this section and documents that the employee's lead exposure is not above the PEL the employer shall treat the employee as if the employee were exposed above the PEL and shall implement employee protective measures as prescribed in paragraph (d)(2)(v) of this section.

(iii) With respect to the tasks listed in paragraph (d)(2)(iii) of this section, where lead is present, until the employer performs an employee exposure assessment as required in paragraph (d) of this section, and documents that the employee performing any of the listed tasks is not exposed in excess of 500 μg/m³, the employer shall treat the employee as if the employee were exposed to lead in excess of 500 μg/m³ and shall implement employee protective measures as prescribed in paragraph (d)(2)(v) of this section. Where the employer does establish that the employee is exposed to levels of lead below 500 μg/m³, the employer may

VOL 58 ISS 84 MY 4 1993 UMI

provide the exposed employee with the appropriate respirator prescribed for such use at such lower exposures, in accordance with Table 1 of this section. The tasks covered by this requirement are:

(A) Using lead containing mortar; lead burning.

(B) Where lead containing coatings or paint are present: rivet busting; power tool cleaning without dust collection systems; cleanup activities where dry expendable abrasives are used; and abrasive blasting enclosure movement and removal.

(iv) With respect to the tasks listed in paragraph (d)(2)(iv) of this section, where lead is present, until the employer performs an employee exposure assessment as required in paragraph (d) of this section and documents that the employee performing any of the listed tasks is not exposed to lead in excess of 2,500 µg/m³ (50×PEL), the employer shall treat the employee as if the employee were exposed to lead in excess of 2,500 µg/m³ and shall implement employee protective measures as prescribed in paragraph (d)(2)(v) of this section. Where the employer does establish that the employee is exposed to levels of lead below 2,500 µg/m3, the employer may provide the exposed employee with the appropriate respirator prescribed for use at such lower exposures, in accordance with Table I of this section. Interim protection as described in this paragaraph is required where lead containing coatings or paint are present on structures when performing:

(A) Abrasive blasting,

(B) Welding,

(C) Cutting, and

(D) Torch burning.

(v) Until the employer performs an employee exposure assessment as required under paragraph (d) of this section and determines actual employee exposure, the employer shall provide to employees performing the tasks described in paragraphs (d)(2)(i), (d)(2)(ii), (d)(2)(iii), and (d)(2)(iv) of this section with interim protection as follows:

(A) Appropriate respiratory protection in accordance with paragraph (f) of this section.

(B) Appropriate personal protective clothing and equipment in accordance with paragraph (g) of this section.

(C) Change areas in accordance with paragraph (i)(2) of this section.

(D) Hand washing facilities in accordance with paragraph (i)(5) of this section.

(E) Biological monitoring in accordance with paragraph (j)(1)(i) of this section, to consist of blood sampling and analysis for lead and zinc protoporphyrin levels, and

(F) Training as required under paragraph (l)(1)(i) of this section regarding 29 CFR 1926.59, Hazard Communication; training as required under paragraph (l)(2)(ii)(C) of this section, regarding use of respirators; and training in accordance with 29 CFR 1926.21, Safety training and education.

(3) *Basis of initial determination.* (i) Except as provided under paragraphs (d)(3)(iii) and (d)(3)(iv) of this section the employer shall monitor employee exposures and shall base initial determinations on the employee exposure monitoring results and any of the following, relevant considerations:

(A) Any information, observations, or calculations which would indicate employee exposure to lead;

(B) Any previous measurements of airborne lead; and

(C) Any employee complaints of symptoms which may be attributable to exposure to lead.

(ii) Monitoring for the initial determination where performed may be limited to a representative sample of the exposed employees who the employer reasonably believes are exposed to the greatest airborne concentrations of lead in the workplace.

(iii) Where the employer has previously monitored for lead exposures, and the data were obtained within the past 12 months during work operations conducted under workplace conditions closely resembling the processes, type of material, control methods, work practices, and environmental conditions used and prevailing in the employer's current operations, the employer may rely on such earlier monitoring results to satisfy the requirements of paragraphs (d)(3)(i) and (d)(6) of this section if the sampling and analytical methods meet the accuracy and confidence levels of paragraph (d)(10) of this section.

(iv) Where the employer has objective data, demonstrating that a particular product or material containing lead or a specific process, operation or activity involving lead cannot result in employee exposure to lead at or above the action level during processing, use, or handling, the employer may rely upon such data instead of implementing initial monitoring.

(A) The employer shall establish and maintain an accurate record documenting the nature and relevancy of objective data as specified in paragraph (n)(4) of this section, where used in assessing employee exposure in lieu of exposure monitoring.

(B) Objective data, as described in paragraph (d)(3)(iv) of this section, is not permitted to be used for exposure assessment in connection with paragraph (d)(2) of this section.

(4) *Positive initial determination and initial monitoring.*

(i) Where a determination conducted under paragraphs (d) (1), (2) and (3) of this section shows the possibility of any employee exposure at or above the action level the employer shall conduct monitoring which is representative of the exposure for each employee in the workplace who is exposed to lead.

(ii) Where the employer has previously monitored for lead exposure, and the data were obtained within the past 12 months during work operations conducted under workplace conditions closely resembling the processes, type of material, control methods, work practices, and environmental conditions used and prevailing in the employer's current operations, the employer may rely on such earlier monitoring results to satisfy the requirements of paragraph (d)(4)(i) of this section if the sampling and analytical methods meet the accuracy and confidence levels of paragraph (d)(10) of this section.

(5) *Negative initial determination.* Where a determination, conducted under paragraphs (d) (1), (2), and (3) of this section is made that no employee is exposed to airborne concentrations of lead at or above the action level the employer shall make a written record of such determination. The record shall include at least the information specified in paragraph (d)(3)(i) of this section and shall also include the date of determination, location within the worksite, and the name and social security number of each employee monitored.

(6) *Frequency.* (i) If the initial determination reveals employee exposure to be below the action level further exposure determination need not be repeated except as otherwise provided in paragraph (d)(7) of this section.

(ii) If the initial determination or subsequent determination reveals employee exposure to be at or above the action level but at or below the PEL the employer shall perform monitoring in accordance with this paragraph at least every 6 months. The employer shall continue monitoring at the required frequency until at least two consecutive measurements, taken at least 7 days apart, are below the action level at which time the employer may discontinue monitoring for that employee except as otherwise provided in paragraph (d)(7) of this section.

(iii) If the initial determination reveals that employee exposure is above the PEL the employer shall perform

monitoring quarterly. The employer shall continue monitoring at the required frequency until at least two consecutive measurements, taken at least 7 days apart, are at or below the PEL but at or above the action level at which time the employer shall repeat monitoring for that employee at the frequency specified in paragraph (d)(6)(ii) of this section, except as otherwise provided in paragraph (d)(7) of this section. The employer shall continue monitoring at the required frequency until at least two consecutive measurements, taken at least 7 days apart, are below the action level at which time the employer may discontinue monitoring for that employee except as otherwise provided in paragraph (d)(7) of this section.

(7) *Additional exposure assessments.* Whenever there has been a change of equipment, process, control, personnel or a new task has been initiated that may result in additional employees being exposed to lead at or above the action level or may result in employees already exposed at or above the action level being exposed above the PEL, the employer shall conduct additional monitoring in accordance with this paragraph.

(8) *Employee notification.* (i) Within 5 working days after completion of the exposure assessment the employer shall notify each employee in writing of the results which represent that employee's exposure.

(ii) Whenever the results indicate that the representative employee exposure, without regard to respirators, is at or above the PEL the employer shall include in the written notice a statement that the employees exposure was at or above that level and a description of the corrective action taken or to be taken to reduce exposure to below that level.

(9) *Accuracy of measurement.* The employer shall use a method of monitoring and analysis which has an accuracy (to a confidence level of 95%) of not less than plus or minus 25 percent for airborne concentrations of lead equal to or greater than 30µg/m³.

(e) *Methods of compliance* (1) *Engineering and work practice controls.* The employer shall implement engineering and work practice controls, including administrative controls, to reduce and maintain employee exposure to lead to or below the permissible exposure limit to the extent that such controls are feasible. Wherever all feasible engineering and work practices controls that can be instituted are not sufficient to reduce employee exposure to or below the permissible exposure limit prescribed in paragraph (c) of this section, the employer shall nonetheless use them to reduce employee exposure to the lowest feasible level and shall supplement them by the use of respiratory protection that complies with the requirements of paragraph (f) of this section.

(2) *Compliance program.* (i) Prior to commencement of the job each employer shall establish and implement a written compliance program to achieve compliance with paragraph (c) of this section.

(ii) Written plans for these compliance programs shall include at least the following:

(A) A description of each activity in which lead is emitted; e.g. equipment used, material involved, controls in place, crew size, employee job responsibilities, operating procedures and maintenance practices;

(B) A description of the specific means that will be employed to achieve compliance and, where engineering controls are required engineering plans and studies used to determine methods selected for controlling exposure to lead;

(C) A report of the technology considered in meeting the PEL;

(D) Air monitoring data which documents the source of lead emissions;

(E) A detailed schedule for implementation of the program, including documentation such as copies of purchase orders for equipment, construction contracts, etc.;

(F) A work practice program which includes items required under paragraphs (g), (h) and (i) of this section and incorporates other relevant work practices such as those specified in paragraph (e)(5) of this section;

(G) An administrative control schedule required by paragraph (e)(4) of this section, if applicable;

(H) A description of arrangements made among contractors on multi-contractor sites with respect to informing affected employees of potential exposure to lead and with respect to responsibility for compliance with this section as set-forth in § 1926.16.

(I) Other relevant information.

(iii) The compliance program shall provide for frequent and regular inspections of job sites, materials, and equipment to be made by a competent person.

(iv) Written programs shall be submitted upon request to any affected employee or authorized employee representatives, to the Assistant Secretary and the Director, and shall be available at the worksite for examination and copying by the Assistant Secretary and the Director.

(v) Written programs shall be revised and updated at least every 6 months to reflect the current status of the program.

(3) *Mechanical ventilation.* When ventilation is used to control lead exposure, the employer shall evaluate the mechanical performance of the system in controlling exposure as necessary to maintain its effectiveness.

(4) *Administrative controls.* If administrative controls are used as a means of reducing employees TWA exposure to lead, the employer shall establish and implement a job rotation schedule which includes:

(i) Name or identification number of each affected employee;

(ii) Duration and exposure levels at each job or work station where each affected employee is located; and

(iii) Any other information which may be useful in assessing the reliability of administrative controls to reduce exposure to lead.

(5) The employer shall ensure that, to the extent relevant, employees follow good work practices such as described in Appendix B of this section.

(f) *Respiratory protection*—(1) *General.* Where the use of respirators is required under this section the employer shall provide, at no cost to the employee, and assure the use of respirators which comply with the requirements of this paragraph. Respirators shall be used in the following circumstances:

(i) Whenever an employee's exposure to lead exceeds the PEL;

(ii) In work situations in which engineering controls and work practices are not sufficient to reduce exposures to or below the PEL;

(iii) Whenever an employee requests a respirator; and

(iv) An interim protection for employees performing tasks as specified in paragraph (d)(2) of this section.

(2) *Respirator selection.* (i) Where respirators are used under this section the employer shall select the appropriate respirator or combination of respirators from Table 1 below.

(ii) The employer shall provide a powered, air-purifying respirator in lieu of the respirator specified in Table 1 whenever:

(A) An employee chooses to use this type of respirator; and (B) This respirator will provide adequate protection to the employee.

(iii) The employer shall select respirators from among those approved for protection against lead dust, fume, and mist by the Mine Safety and Health Administration and the National Institute for Occupational Safety and Health (NIOSH) under the provisions of 30 CFR part 11.

VOL 58 ISS 84 MY 4 1993 UMI

TABLE I.—RESPIRATORY PROTECTION FOR LEAD AEROSOLS

Airborne concentration of lead or condition of use	Required respirator [1]
Not in excess of 500 µg/m³.	• ½ mask air purifying respirator with high efficiency filters.[2, 3] • ½ mask supplied air respirator operated in demand (negative pressure) mode.
Not in excess of 1,250 µg/m³.	• Loose fitting hood or helmet powered air purifying respirator with high efficiency filters.[3] • Hood or helmet supplied air respirator operated in a continuous-flow mode—e.g., type CE abrasive blasting respirators operated in a continuous-flow mode.
Not in excess of 2,500 µg/m³.	• Full facepiece air purifying respirator with high efficiency filters.[3] • Tight fitting powered air purifying respirator with high efficiency filters.[3] • Full facepiece supplied air respirator operated in demand mode. • ½ mask or full facepiece supplied air respirator operated in a continuous-flow mode. • Full facepiece self-contained breathing apparatus (SCBA) operated in demand mode.
Not in excess of 50,000 µg/m³.	• ½ mask supplied air respirator operated in pressure demand or other positive-pressure mode.
Not in excess of 100,000 µg/m³.	• Full facepiece supplied air respirator operated in pressure demand or other positive-pressure mode—e.g., type CE abrasive blasting respirators operated in a positive-pressure mode.
Greater than 100,000 µg/m³ unknown concentration, or fire fighting.	• Full facepiece SCBA operated in pressure demand or other positive-pressure mode.

[1] Respirators specified for higher concentrations can be used at lower concentrations of lead.
[2] Full facepiece is required if the lead aerosols cause eye or skin irritation at the use concentrations.
[3] A high efficiency particulate filter (HEPA) means a filter that is 99.97 percent efficient against particles of 0.3 micron size or larger.

(3) *Respirator usage.* (i) The employer shall assure that the respirator issued to the employee exhibits minimum facepiece leakage and that the respirator is fitted properly.

(ii) Employers shall perform either quantitative or qualitative face fit tests at the time of initial fitting and at least every six months thereafter for each employee wearing negative pressure respirators. The qualitative fit tests may be used only for testing the fit of half-mask respirators where they are permitted to be worn, and shall be conducted in accordance with appendix D of this section. The tests shall be used to select facepieces that provide the required protection as prescribed in Table I.

(iii) If an employee exhibits difficulty in breathing during the fitting test or during use, the employer shall make available to the employee an examination in accordance with paragraph (j)(3)(i)(B) of this section to determine whether the employee can wear a respirator while performing the required duty.

(4) *Respirator program.* (i) The employer shall institute a respiratory protection program in accordance with 29 CFR 1910.134 (b), (d), (e) and (f).

(ii) The employer shall permit each employee who uses a filter respirator to change the filter elements whenever an increase in breathing resistance is detected and shall maintain an adequate supply of filter elements for this purpose.

(iii) Employees who wear respirators shall be permitted to leave work areas to wash their face and respirator facepiece whenever necessary to prevent skin irritation associated with respirator use.

(g) *Protective work clothing and equipment*—(1) *Provision and use.* Where an employee is exposed to lead above the PEL without regard to the use of respirators, where employees are exposed to lead compounds which may cause skin or eye irritation (e.g. lead arsenate, lead azide), and as interim protection for employees performing tasks as specified in paragraph (d)(2) of this section, the employer shall provide at no cost to the employee and assure that the employee uses appropriate protective work clothing and equipment that prevents contamination of the employee and the employee's garments such as, but not limited to:

(i) Coveralls or similar full-body work clothing;

(ii) Gloves, hats, and shoes or disposable shoe coverlets; and

(iii) Face shields, vented goggles, or other appropriate protective equipment which complies with § 1910.133 of this chapter.

(2) *Cleaning and replacement.* (i) The employer shall provide the protective clothing required in paragraph (g)(1) of this section in a clean and dry condition at least weekly, and daily to employees whose exposure levels without regard to a respirator are over 200 µg/m³ of lead as an 8-hour TWA.

(ii) The employer shall provide for the cleaning, laundering, and disposal of protective clothing and equipment required by paragraph (g)(1) of this section.

(iii) The employer shall repair or replace required protective clothing and equipment as needed to maintain their effectiveness.

(iv) The employer shall assure that all protective clothing is removed at the completion of a work shift only in change areas provided for that purpose as prescribed in paragraph (i)(2) of this section.

(v) The employer shall assure that contaminated protective clothing which is to be cleaned, laundered, or disposed of, is placed in a closed container in the change area which prevents dispersion of lead outside the container.

(vi) The employer shall inform in writing any person who cleans or launders protective clothing or equipment of the potentially harmful effects of exposure to lead.

(vii) The employer shall assure that the containers of contaminated protective clothing and equipment required by paragraph (g)(2)(v) of this section are labelled as follows:

Caution: Clothing contaminated with lead. Do not remove dust by blowing or shaking. Dispose of lead contaminated wash water in accordance with applicable local, state, or federal regulations.

(viii) The employer shall prohibit the removal of lead from protective clothing or equipment by blowing, shaking, or any other means which disperses lead into the air.

(h) *Housekeeping*—(1) All surfaces shall be maintained as free as practicable of accumulations of lead.

(2) Clean-up of floors and other surfaces where lead accumulates shall wherever possible, be cleaned by vacuuming or other methods that minimize the likelihood of lead becoming airborne.

(3) Shoveling, dry or wet sweeping, and brushing may be used only where vacuuming or other equally effective methods have been tried and found not to be effective.

(4) Where vacuuming methods are selected, the vacuums shall be equipped with HEPA filters and used and emptied in a manner which minimizes the reentry of lead into the workplace.

(5) Compressed air shall not be used to remove lead from any surface unless the compressed air is used in conjunction with a ventilation system designed to capture the airborne dust created by the compressed air.

(i) *Hygiene facilities and practices.* (1) The employer shall assure that in areas where employees are exposed to lead above the PEL without regard to the use of respirators, food or beverage is not present or consumed, tobacco products are not present or used, and cosmetics are not applied.

(2) *Change areas.* (i) The employer shall provide clean change areas for employees whose airborne exposure to lead is above the PEL, and as interim protection for employees performing tasks as specified in paragraph (d)(2) of this section, without regard to the use of respirators.

(ii) The employer shall assure that change areas are equipped with separate storage facilities for protective work clothing and equipment and for street clothes which prevent cross-contamination.

(iii) The employer shall assure that employees do not leave the workplace wearing any protective clothing or equipment that is required to be worn during the work shift.

(3) *Showers.* (i) The employer shall provide shower facilities, where feasible, for use by employees whose airborne exposure to lead is above the PEL.

(ii) The employer shall assure, where shower facilities are available, that employees shower at the end of the work shift and shall provide an adequate supply of cleansing agents and towels for use by affected employees.

(4) *Eating facilities.* (i) The employer shall provide lunchroom facilities or eating areas for employees whose airborne exposure to lead is above the PEL, without regard to the use of respirators.

(ii) The employer shall assure that lunchroom facilities or eating areas are as free as practicable from lead contamination and are readily accessible to employees.

(iii) The employer shall assure that employees whose airborne exposure to lead is above the PEL, without regard to the use of a respirator, wash their hands and face prior to eating, drinking, smoking or applying cosmetics.

(iv) The employer shall assure that employees do not enter lunchroom facilities or eating areas with protective work clothing or equipment unless surface lead dust has been removed by vacuuming, downdraft booth, or other cleaning method that limits dispersion of lead dust.

(5) *Hand washing facilities.* (i) The employer shall provide adequate handwashing facilities for use by employees exposed to lead in accordance with 29 CFR 1926.51(f).

(ii) Where showers are not provided the employer shall assure that employees wash their hands and face at the end of the work-shift.

(j) *Medical surveillance*—(1) *General.* (i) The employer shall make available initial medical surveillance to employees occupationally exposed on any day to lead at or above the action level. Initial medical surveillance consists of biological monitoring in the form of blood sampling and analysis for lead and zinc protoporphyrin levels.

(ii) The employer shall institute a medical surveillance program in accordance with paragraphs (j)(2) and (j)(3) of this section for all employees who are or may be exposed by the employer at or above the action level for more than 30 days in any consecutive 12 months;

(iii) The employer shall assure that all medical examinations and procedures are performed by or under the supervision of a licensed physician.

(iv) The employer shall make available the required medical surveillance including multiple physician review under paragraph (j)(3)(iii) without cost to employees and at a reasonable time and place.

(2) *Biological monitoring*—(i) *Blood lead and ZPP level sampling and analysis.* The employer shall make available biological monitoring in the form of blood sampling and analysis for lead and zinc protoporphyrin levels to each employee covered under paragraphs (j)(1)(i) and (ii) of this section on the following schedule:

(A) For each employee covered under paragraph (j)(1)(ii) of this section, at least every 2 months for the first 6 months and every 6 months thereafter;

(B) For each employee covered under paragraphs (j)(1) (i) or (ii) of this section whose last blood sampling and analysis indicated a blood lead level at or above 40 µg/dl, at least every two months. This frequency shall continue until two consecutive blood samples and analyses indicate a blood lead level below 40 µg/dl; and

(C) For each employee who is removed from exposure to lead due to an elevated blood lead level at least monthly during the removal period.

(ii) *Follow-up blood sampling tests.* Whenever the results of a blood lead level test indicate that an employee's blood lead level exceeds the numerical criterion for medical removal under paragraph (k)(1)(i) of this section, the employer shall provide a second (follow-up) blood sampling test within two weeks after the employer receives the results of the first blood sampling test.

(iii) *Accuracy of blood lead level sampling and analysis.* Blood lead level sampling and analysis provided pursuant to this section shall have an accuracy (to a confidence level of 95 percent) within plus or minus 15 percent or 6 µg/dl, whichever is greater, and shall be conducted by a laboratory approved by OSHA.

(iv) *Employee notification.* (A) Within five working days after the receipt of biological monitoring results, the employer shall notify each employee in writing of his or her blood lead level; and

(B) the employer shall notify each employee whose blood lead level exceeds 40 µg/dl that the standard requires temporary medical removal with Medical Removal Protection benefits when an employee's blood lead level exceeds the numerical criterion for medical removal under paragraph (k)(1)(i) of this section.

(3) *Medical examinations and consultations*—(i) *Frequency.* The employer shall make available medical examinations and consultations to each employee covered under paragraph (j)(1)(ii) of this section on the following schedule:

(A) At least annually for each employee for whom a blood sampling test conducted at any time during the preceding 12 months indicated a blood lead level at or above 40 µg/dl;

(B) As soon as possible, upon notification by an employee either that the employee has developed signs or symptoms commonly associated with lead intoxication, that the employee desires medical advice concerning the effects of current or past exposure to

VOL
58
ISS
84
MY
4
1993
UMI

lead on the employee's ability to procreate a healthy child, that the employee is pregnant, or that the employee has demonstrated difficulty in breathing during a respirator fitting test or during use; and

(C) As medically appropriate for each employee either removed from exposure to lead due to a risk of sustaining material impairment to health, or otherwise limited pursuant to a final medical determination.

(ii) *Content.* The content of medical examinations made available pursuant to paragraph (j)(3)(i)(B)–(C) of this section shall be determined by an examining physician and, if requested by an employee, shall include pregnancy testing or laboratory evaluation of male fertility. Medical examinations made available pursuant to paragraph (j)(3)(i)(A) of this section shall include the following elements:

(A) A detailed work history and a medical history, with particular attention to past lead exposure (occupational and non-occupational), personal habits (smoking, hygiene), and past gastrointestinal, hematologic, renal, cardiovascular, reproductive and neurological problems;

(B) A thorough physical examination, with particular attention to teeth, gums, hematologic, gastrointestinal, renal, cardiovascular, and neurological systems. Pulmonary status should be evaluated if respiratory protection will be used;

(C) A blood pressure measurement;

(D) A blood sample and analysis which determines:

(*1*) Blood lead level;

(*2*) Hemoglobin and hematocrit determinations, red cell indices, and examination of peripheral smear morphology;

(*3*) Zinc protoporphyrin;

(*4*) Blood urea nitrogen; and,

(*5*) Serum creatinine;

(E) A routine urinalysis with microscopic examination; and

(F) Any laboratory or other test relevant to lead exposure which the examining physician deems necessary by sound medical practice.

(iii) *Multiple physician review mechanism.* (A) If the employer selects the initial physician who conducts any medical examination or consultation provided to an employee under this section, the employee may designate a second physician:

(*1*) To review any findings, determinations or recommendations of the initial physician; and

(*2*) To conduct such examinations, consultations, and laboratory tests as the second physician deems necessary to facilitate this review.

(B) The employer shall promptly notify an employee of the right to seek a second medical opinion after each occasion that an initial physician conducts a medical examination or consultation pursuant to this section. The employer may condition its participation in, and payment for, the multiple physician review mechanism upon the employee doing the following within fifteen (15) days after receipt of the foregoing notification, or receipt of the initial physician's written opinion, whichever is later:

(*1*) The employee informing the employer that he or she intends to seek a second medical opinion, and

(*2*) The employee initiating steps to make an appointment with a second physician.

(C) If the findings, determinations or recommendations of the second physician differ from those of the initial physician, then the employer and the employee shall assure that efforts are made for the two physicians to resolve any disagreement.

(D) If the two physicians have been unable to quickly resolve their disagreement, then the employer and the employee through their respective physicians shall designate a third physician:

(*1*) To review any findings, determinations or recommendations of the prior physicians; and

(*2*) To conduct such examinations, consultations, laboratory tests and discussions with the prior physicians as the third physician deems necessary to resolve the disagreement of the prior physicians.

(E) The employer shall act consistent with the findings, determinations and recommendations of the third physician, unless the employer and the employee reach an agreement which is otherwise consistent with the recommendations of at least one of the three physicians.

(iv) *Information provided to examining and consulting physicians.* (A) The employer shall provide an initial physician conducting a medical examination or consultation under this section with the following information:

(*1*) A copy of this regulation for lead including all Appendices;

(*2*) A description of the affected employee's duties as they relate to the employee's exposure;

(*3*) The employee's exposure level or anticipated exposure level to lead and to any other toxic substance (if applicable);

(*4*) A description of any personal protective equipment used or to be used;

(*5*) Prior blood lead determinations; and

(*6*) All prior written medical opinions concerning the employee in the employer's possession or control.

(B) The employer shall provide the foregoing information to a second or third physician conducting a medical examination or consultation under this section upon request either by the second or third physician, or by the employee.

(v) *Written medical opinions.* (A) The employer shall obtain and furnish the employee with a copy of a written medical opinion from each examining or consulting physician which contains only the following information:

(*1*) The physician's opinion as to whether the employee has any detected medical condition which would place the employee at increased risk of material impairment of the employee's health from exposure to lead;

(*2*) Any recommended special protective measures to be provided to the employee, or limitations to be placed upon the employee's exposure to lead;

(*3*) Any recommended limitation upon the employee's use of respirators, including a determination of whether the employee can wear a powered air purifying respirator if a physician determines that the employee cannot wear a negative pressure respirator; and

(*4*) The results of the blood lead determinations.

(B) The employer shall instruct each examining and consulting physician to:

(*1*) Not reveal either in the written opinion or orally, or in any other means of communication with the employer, findings, including laboratory results, or diagnoses unrelated to an employee's occupational exposure to lead; and

(*2*) Advise the employee of any medical condition, occupational or nonoccupational, which dictates further medical examination or treatment.

(vi) *Alternate physician determination mechanisms.* The employer and an employee or authorized employee representative may agree upon the use of any alternate physician determination mechanism in lieu of the multiple physician review mechanism provided by paragraph (j)(3)(iii) of this section so long as the alternate mechanism is as expeditious and protective as the requirements contained in this paragraph.

(*4*) *Chelation.* (i) The employer shall assure that any person whom he retains, employs, supervises or controls does not engage in prophylactic chelation of any employee at any time.

(ii) If therapeutic or diagnostic chelation is to be performed by any person in paragraph (j)(4)(i) of this section, the employer shall assure that it be done under the supervision of a licensed physician in a clinical setting with thorough and appropriate medical monitoring and that the employee is notified in writing prior to its occurrence.

(k) *Medical removal protection*—(1) *Temporary medical removal and return of an employee*—(i) *Temporary removal due to elevated blood lead level.* The employer shall remove an employee from work having an exposure to lead at or above the action level on each occasion that a periodic and a follow-up blood sampling test conducted pursuant to this section indicate that the employee's blood lead level is at or above 50 µg/dl; and,

(ii) *Temporary removal due to a final medical determination.* (A) The employer shall remove an employee from work having an exposure to lead at or above the action level on each occasion that a final medical determination results in a medical finding, determination, or opinion that the employee has a detected medical condition which places the employee at increased risk of material impairment to health from exposure to lead.

(B) For the purposes of this section, the phrase "final medical determination" means the written medical opinion on the employees' health status by the examining physician or, where relevant, the outcome of the multiple physician review mechanism or alternate medical determination mechanism used pursuant to the medical surveillance provisions of this section.

(C) Where a final medical determination results in any recommended special protective measures for an employee, or limitations on an employee's exposure to lead, the employer shall implement and act consistent with the recommendation.

(iii) *Return of the employee to former job status.* (A) The employer shall return an employee to his or her former job status:

(*1*) For an employee removed due to a blood lead level at or above 50 µg/dl when two consecutive blood sampling tests indicate that the employee's blood lead level is at or below 40 µg/dl;

(*2*) For an employee removed due to a final medical determination, when a subsequent final medical determination results in a medical finding, determination, or opinion that the employee no longer has a detected medical condition which places the employee at increased risk of material impairment to health from exposure to lead.

(B) For the purposes of this section, the requirement that an employer return an employee to his or her former job status is not intended to expand upon or restrict any rights an employee has or would have had, absent temporary medical removal, to a specific job classification or position under the terms of a collective bargaining agreement.

(iv) *Removal of other employee special protective measure or limitations.* The employer shall remove any limitations placed on an employee or end any special protective measures provided to an employee pursuant to a final medical determination when a subsequent final medical determination indicates that the limitations or special protective measures are no longer necessary.

(v) *Employer options pending a final medical determination.* Where the multiple physician review mechanism, or alternate medical determination mechanism used pursuant to the medical surveillance provisions of this section, has not yet resulted in a final medical determination with respect to an employee, the employer shall act as follows:

(A) *Removal.* The employer may remove the employee from exposure to lead, provide special protective measures to the employee, or place limitations upon the employee, consistent with the medical findings, determinations, or recommendations of any of the physicians who have reviewed the employee's health status.

(B) *Return.* The employer may return the employee to his or her former job status, end any special protective measures provided to the employee, and remove any limitations placed upon the employee, consistent with the medical findings, determinations, or recommendations of any of the physicians who have reviewed the employee's health status, with two exceptions.

If (1) the initial removal, special protection, or limitation of the employee resulted from a final medical determination which differed from the findings, determinations, or recommendations of the initial physician or;

(*2*) If the employee has been on removal status for the preceding eighteen months due to an elevated blood lead level, then the employer shall await a final medical determination.

(2) *Medical removal protection benefits*—(i) *Provision of medical removal protection benefits.* The employer shall provide an employee up to eighteen (18) months of medical removal protection benefits on each occasion that an employee is removed from exposure to lead or otherwise limited pursuant to this section.

(ii) *Definition of medical removal protection benefits.* For the purposes of this section, the requirement that an employer provide medical removal protection benefits means that, as long as the job the employee was removed from continues, the employer shall maintain the total normal earnings, seniority and other employment rights and benefits of an employee, including the employee's right to his or her former job status as though the employee had not been medically removed from the employee's job or otherwise medically limited.

(iii) *Follow-up medical surveillance during the period of employee removal or limitation.* During the period of time that an employee is medically removed from his or her job or otherwise medically limited, the employer may condition the provision of medical removal protection benefits upon the employee's participation in follow-up medical surveillance made available pursuant to this section.

(iv) *Workers' compensation claims.* If a removed employee files a claim for workers' compensation payments for a lead-related disability, then the employer shall continue to provide medical removal protection benefits pending disposition of the claim. To the extent that an award is made to the employee for earnings lost during the period of removal, the employer's medical removal protection obligation shall be reduced by such amount. The employer shall receive no credit for workers' compensation payments received by the employee for treatment-related expenses.

(v) *Other credits.* The employer's obligation to provide medical removal protection benefits to a removed employee shall be reduced to the extent that the employee receives compensation for earnings lost during the period of removal either from a publicly or employer-funded compensation program, or receives income from employment with another employer made possible by virtue of the employee's removal.

(vi) *Voluntary removal or restriction of an employee.* Where an employer, although not required by this section to do so, removes an employee from exposure to lead or otherwise places limitations on an employee due to the effects of lead exposure on the employee's medical condition, the employer shall provide medical removal protection benefits to the employee

VOL

UMI

equal to that required by paragraph (k)(2) (i) and (ii) of this section.

(l) *Employee information and training*—(1) *General* (i) The employer shall communicate information concerning lead hazards according to the requirements of OSHA's Hazard Communication Standard for the construction industry, 29 CFR 1926.59, including but not limited to the requirements concerning warning signs and labels, material safety data sheets (MSDS), and employee information and training. In addition, employers shall comply with the following requirements:

(ii) For all employees who are subject to exposure to lead at or above the action level on any day or who are subject to exposure to lead compounds which may cause skin or eye irritation (e.g. lead arsenate, lead azide), the employer shall provide a training program in accordance with paragraph (l)(2) of this section and assure employee participation.

(iii) The employer shall provide the training program as initial training prior to the time of job assignment or prior to the start up date for this requirement, whichever comes last.

(iv) The employer shall also provide the training program at least annually for each employee who is subject to lead exposure at or above the action level on any day.

(2) *Training program.* The employer shall assure that each employee is trained in the following:

(i) The content of this standard and its appendices;

(ii) The specific nature of the operations which could result in exposure to lead above the action level;

(iii) The purpose, proper selection, fitting, use, and limitations of respirators;

(iv) The purpose and a description of the medical surveillance program, and the medical removal protection program including information concerning the adverse health effects associated with excessive exposure to lead (with particular attention to the adverse reproductive effects on both males and females and hazards to the fetus and additional precautions for employees who are pregnant);

(v) The engineering controls and work practices associated with the employee's job assignment including training of employees to follow relevant good work practices described in Appendix B of this section;

(vi) The contents of any compliance plan in effect;

(vii) Instructions to employees that chelating agents should not routinely be used to remove lead from their bodies and should not be used at all except under the direction of a licensed physician; and

(viii) The employee's right of access to records under 29 CFR 1910.20.

(3) *Access to information and training materials.* (i) The employer shall make readily available to all affected employees a copy of this standard and its appendices.

(ii) The employer shall provide, upon request, all materials relating to the employee information and training program to affected employees and their designated representatives, and to the Assistant Secretary and the Director.

(m) *Signs*—*(1) General.* (i) The employer may use signs required by other statutes, regulations or ordinances in addition to, or in combination with, signs required by this paragraph.

(ii) The employer shall assure that no statement appears on or near any sign required by this paragraph which contradicts or detracts from the meaning of the required sign.

(2) *Signs.* (i) The employer shall post the following warning signs in each work area where an employees exposure to lead is above the PEL.

WARNING
LEAD WORK AREA
POISON
NO SMOKING OR EATING

(ii) The employer shall assure that signs required by this paragraph are illuminated and cleaned as necessary so that the legend is readily visible.

(n) *Recordkeeping*—(1) *Exposure assessment.* (i) The employer shall establish and maintain an accurate record of all monitoring and other data used in conducting employee exposure assessments as required in paragraph (d) of this section.

(ii) Exposure monitoring records shall include:

(A) The date(s), number, duration, location and results of each of the samples taken if any, including a description of the sampling procedure used to determine representative employee exposure where applicable;

(B) A description of the sampling and analytical methods used and evidence of their accuracy;

(C) The type of respiratory protective devices worn, if any;

(D) Name, social security number, and job classification of the employee monitored and of all other employees whose exposure the measurement is intended to represent; and

(E) The environmental variables that could affect the measurement of employee exposure.

(iii) The employer shall maintain monitoring and other exposure assessment records in accordance with the provisions of 29 CFR 1910.20.

(2) *Medical surveillance.* (i) The employer shall establish and maintain an accurate record for each employee subject to medical surveillance as required by paragraph (j) of this section.

(ii) This record shall include:

(A) The name, social security number, and description of the duties of the employee;

(B) A copy of the physician's written opinions;

(C) Results of any airborne exposure monitoring done on or for that employee and provided to the physician; and

(D) Any employee medical complaints related to exposure to lead.

(iii) The employer shall keep, or assure that the examining physician keeps, the following medical records:

(A) A copy of the medical examination results including medical and work history required under paragraph (j) of this section;

(B) A description of the laboratory procedures and a copy of any standards or guidelines used to interpret the test results or references to that information;

(C) A copy of the results of biological monitoring.

(iv) The employer shall maintain or assure that the physician maintains medical records in accordance with the provisions of 29 CFR 1910.20.

(3) *Medical removals.* (i) The employer shall establish and maintain an accurate record for each employee removed from current exposure to lead pursuant to paragraph (k) of this section.

(ii) Each record shall include:

(A) The name and social security number of the employee;

(B) The date of each occasion that the employee was removed from current exposure to lead as well as the corresponding date on which the employee was returned to his or her former job status;

(C) A brief explanation of how each removal was or is being accomplished; and

(D) A statement with respect to each removal indicating whether or not the reason for the removal was an elevated blood lead level.

(iii) The employer shall maintain each medical removal record for at least the duration of an employee's employment.

(4) *Objective data for exemption from requirement for initial monitoring.* (i) For purposes of this section, objective data are information demonstrating that a particular product or material containing lead or a specific process, operation, or activity involving lead cannot release dust or fumes in concentrations at or above the action level under any expected conditions of

use. Objective data can be obtained from an industry-wide study or from laboratory product test results from manufacturers of lead containing products or materials. The data the employer uses from an industry-wide survey must be obtained under workplace conditions closely resembling the processes, types of material, control methods, work practices and environmental conditions in the employer's current operations.

(ii) The employer shall maintain the record of the objective data relied upon for at least 30 years.

(5) *Availability.* The employer shall make available upon request all records required to be maintained by paragraph (n) of this section to affected employees, former employees, and their designated representatives, and to the Assistant Secretary and the Director for examination and copying.

(6) *Transfer of records.* (i) Whenever the employer ceases to do business, the successor employer shall receive and retain all records required to be maintained by paragraph (n) of this section.

(ii) Whenever the employer ceases to do business and there is no successor employer to receive and retain the records required to be maintained by this section for the prescribed period, these records shall be transmitted to the Director.

(iii) At the expiration of the retention period for the records required to be maintained by this section, the employer shall notify the Director at least 3 months prior to the disposal of such records and shall transmit those records to the Director if requested within the period.

(iv) The employer shall also comply with any additional requirements involving transfer of records set forth in 29 CFR 1910.20(h).

(o) *Observation of monitoring.* (1) Employee observation. The employer shall provide affected employees or their designated representatives an opportunity to observe any monitoring of employee exposure to lead conducted pursuant to paragraph (d) of this section.

(2) *Observation procedures.* (i) Whenever observation of the monitoring of employee exposure to lead requires entry into an area where the use of respirators, protective clothing or equipment is required, the employer shall provide the observer with and assure the use of such respirators, clothing and equipment, and shall require the observer to comply with all other applicable safety and health procedures.

(ii) Without interfering with the monitoring, observers shall be entitled to:

(A) Receive an explanation of the measurement procedures;

(B) Observe all steps related to the monitoring of lead performed at the place of exposure; and

(C) Record the results obtained or receive copies of the results when returned by the laboratory.

(p) *Effective date.* This standard (§ 1926.62) shall become effective June 3, 1993.

(q) *Appendices.* The information contained in the appendices to this section is not intended by itself, to create any additional obligations not otherwise imposed by this standard nor detract from any existing obligation.

(r) *Startup dates.* (1) The requirements of paragraphs (c) through (o) of this section, including administrative controls and feasible work practice controls, but not including engineering controls specified in paragraph (e)(1) of this section, shall be complied with as soon as possible, but no later than 60 days from the effective date of this section.

(2) Feasible engineering controls specified by paragraph (e)(1) of this section shall be implemented as soon as possible, but no later than 120 days from the effective date of this section.

Appendix A to § 1926.62—Substance Data Sheet for Occupational Exposure to Lead

I. Substance Identification

A. *Substance*: Pure lead (Pb) is a heavy metal at room temperature and pressure and is a basic chemical element. It can combine with various other substances to form numerous lead compounds.

B. *Compounds covered by the standard*: The word "lead" when used in this interim final standard means elemental lead, all inorganic lead compounds and a class of organic lead compounds called lead soaps. This standard does not apply to other organic lead compounds.

C. *Uses*: Exposure to lead occurs in several different occupations in the construction industry, including demolition or salvage of structures where lead or lead-containing materials are present; removal or encapsulation of lead-containing materials, new construction, alteration, repair, or renovation of structures that contain lead or materials containing lead; installation of products containing lead. In addition, there are construction related activities where exposure to lead may occur, including transportation, disposal, storage, or containment of lead or materials containing lead on construction sites, and maintenance operations associated with construction activities.

D. *Permissible exposure*: The permissible exposure limit (PEL) set by the standard is 50 micrograms of lead per cubic meter of air (50 $\mu g/m^3$), averaged over an 8-hour workday.

E. *Action level*: The interim final standard establishes an action level of 30 micrograms of lead per cubic meter of air (30 $\mu g/m^3$), averaged over an 8-hour workday. The action level triggers several ancillary provisions of the standard such as exposure monitoring, medical surveillance, and training.

II. Health Hazard Data

A. *Ways in which lead enters your body.* When absorbed into your body in certain doses, lead is a toxic substance. The object of the lead standard is to prevent absorption of harmful quantities of lead. The standard is intended to protect you not only from the immediate toxic effects of lead, but also from the serious toxic effects that may not become apparent until years of exposure have passed. Lead can be absorbed into your body by inhalation (breathing) and ingestion (eating). Lead (except for certain organic lead compounds not covered by the standard, such as tetraethyl lead) is not absorbed through your skin. When lead is scattered in the air as a dust, fume respiratory tract. Inhalation of airborne lead is generally the most important source of occupational lead absorption. You can also absorb lead through your digestive system if lead gets into your mouth and is swallowed. If you handle food, cigarettes, chewing tobacco, or make-up which have lead on them or handle them with hands contaminated with lead, this will contribute to ingestion. A significant portion of the lead that you inhale or ingest gets into your blood stream. Once in your blood stream, lead is circulated throughout your body and stored in various organs and body tissues. Some of this lead is quickly filtered out of your body and excreted, but some remains in the blood and other tissues. As exposure to lead continues, the amount stored in your body will increase if you are absorbing more lead than your body is excreting. Even though you may not be aware of any immediate symptoms of disease, this lead stored in your tissues can be slowly causing irreversible damage, first to individual cells, then to your organs and whole body systems.

B. *Effects of overexposure to lead*—(1) *Short term (acute) overexposure.* Lead is a potent, systemic poison that serves no known useful function once absorbed by your body. Taken in large enough doses, lead can kill you in a matter of days. A condition affecting the brain called acute encephalopathy may arise which develops quickly to seizures, coma, and death from cardiorespiratory arrest. A short term dose of lead can lead to acute encephalopathy. Short term occupational exposures of this magnitude are highly unusual, but not impossible. Similar forms of encephalopathy may, however, arise from extended, chronic exposure to lower doses of lead. There is no sharp dividing line between rapidly developing acute effects of lead, and chronic effects which take longer to acquire. Lead adversely affects numerous body systems, and causes forms of health impairment and disease which arise after periods of exposure as short as days or as long as several years.

(2) *Long-term (chronic) overexposure.* Chronic overexposure to lead may result in severe damage to your blood-forming.

VOL 58 ISS 84 MY 4 1993 UMI

nervous, urinary and reproductive systems. Some common symptoms of chronic overexposure include loss of appetite, metallic taste in the mouth, anxiety, constipation, nausea, pallor, excessive tiredness, weakness, insomnia, headache, nervous irritability, muscle and joint pain or soreness, fine tremors, numbness, dizziness, hyperactivity and colic. In lead colic there may be severe abdominal pain. Damage to the central nervous system in general and the brain (encephalopathy) in particular is one of the most severe forms of lead poisoning. The most severe, often fatal, form of encephalopathy may be preceded by vomiting, a feeling of dullness progressing to drowsiness and stupor, poor memory, restlessness, irritability, tremor, and convulsions. It may arise suddenly with the onset of seizures, followed by coma, and death. There is a tendency for muscular weakness to develop at the same time. This weakness may progress to paralysis often observed as a characteristic "wrist drop" or "foot drop" and is a manifestation of a disease to the nervous system called peripheral neuropathy. Chronic overexposure to lead also results in kidney disease with few, if any, symptoms appearing until extensive and most likely permanent kidney damage has occurred. Routine laboratory tests reveal the presence of this kidney disease only after about two-thirds of kidney function is lost. When overt symptoms of urinary dysfunction arise, it is often too late to correct or prevent worsening conditions, and progression to kidney dialysis or death is possible. Chronic overexposure to lead impairs the reproductive systems of both men and women. Overexposure to lead may result in decreased sex drive, impotence and sterility in men. Lead can alter the structure of sperm cells raising the risk of birth defects. There is evidence of miscarriage and stillbirth in women whose husbands were exposed to lead or who were exposed to lead themselves. Lead exposure also may result in decreased fertility, and abnormal menstrual cycles in women. The course of pregnancy may be adversely affected by exposure to lead since lead crosses the placental barrier and poses risks to developing fetuses. Children born of parents either one of whom were exposed to excess lead levels are more likely to have birth defects, mental retardation, behavioral disorders or die during the first year of childhood. Overexposure to lead also disrupts the blood-forming system resulting in decreased hemoglobin (the substance in the blood that carries oxygen to the cells) and ultimately anemia. Anemia is characterized by weakness, pallor and fatigability as a result of decreased oxygen carrying capacity in the blood.

(3) *Health protection goals of the standard.* Prevention of adverse health effects for most workers from exposure to lead throughout a working lifetime requires that a worker's blood lead level (BLL, also expressed as PbB) be maintained at or below forty micrograms per deciliter of whole blood (40 μg/dl). The blood lead levels of workers (both male and female workers) who intend to have children should be maintained below 30 μg/dl to minimize adverse reproductive health effects to the parents and to the developing fetus. The measurement of your blood lead level (BLL) is the most useful indicator of the amount of lead being absorbed by your body. Blood lead levels are most often reported in units of milligrams (mg) or micrograms (μg) of lead (1 mg=1000 μg) per 100 grams (100g), 100 milliliters (100 ml) or deciliter (dl) of blood. These three units are essentially the same. Sometime BLLs are expressed in the form of mg% or μg%. This is a shorthand notation for 100g, 100 ml, or dl. (References to BLL measurements in this standard are expressed in the form of μg/dL)

BLL measurements show the amount of lead circulating in your blood stream, but do not give any information about the amount of lead stored in your various tissues. BLL measurements merely show current absorption of lead, not the effect that lead is having on your body or the effects that past lead exposure may have already caused. Past research into lead-related diseases, however, has focused heavily on associations between BLLs and various diseases. As a result, your BLL is an important indicator of the likelihood that you will gradually acquire a lead-related health impairment or disease.

Once your blood lead level climbs above 40 μg/dl, your risk of disease increases. There is a wide variability of individual response to lead, thus it is difficult to say that a particular BLL in a given person will cause a particular effect. Studies have associated fatal encephalopathy with BLLs as low as 150 μg/dl. Other studies have shown other forms of diseases in some workers with BLLs well below 60 μg/dl. Your BLL is a crucial indicator of the risks to your health, but one other factor is also extremely important. This factor is the length of time you have had elevated BLLs. The longer you have an elevated BLL, the greater the risk that large quantities of lead are being gradually stored in your organs and tissues (body burden). The greater your overall body burden, the greater the chances of substantial permanent damage. The best way to prevent all forms of lead-related impairments and diseases—both short term and long term—is to maintain your BLL below 40 μg/dl. The provisions of the standard are designed with this end in mind.

Your employer has prime responsibility to assure that the provisions of the standard are complied with both by the company and by individual workers. You, as a worker, however, also have a responsibility to assist your employer in complying with the standard. You can play a key role in protecting your own health by learning about the lead hazards and their control, learning what the standard requires, following the standard where it governs your own actions, and seeing that your employer complies with provisions governing his or her actions.

(4) *Reporting signs and symptoms of health problems.* You should immediately notify your employer if you develop signs or symptoms associated with lead poisoning or if you desire medical advice concerning the effects of current or past exposure to lead or your ability to have a healthy child. You should also notify your employer if you have difficulty breathing during a respirator fit test or while wearing a respirator. In each of these cases, your employer must make available to you appropriate medical examinations or consultations. These must be provided at no cost to you and at a reasonable time and place. The standard contains a procedure whereby you can obtain a second opinion by a physician of your choice if your employer selected the initial physician.

Appendix B to §1926.62—Employee Standard Summary

This appendix summarizes key provisions of the interim final standard for lead in construction that you as a worker should become familiar with.

I. Permissible Exposure Limit (PEL)—Paragraph (C)

The standard sets a permissible exposure limit (PEL) of 50 micrograms of lead per cubic meter of air (50 μg/m³), averaged over an 8-hour workday which is referred to as a time-weighted average (TWA). This is the highest level of lead in air to which you may be permissibly exposed over an 8-hour workday. However, since this is an 8-hour average, short exposures above the PEL are permitted so long as for each 8-hour work day your average exposure does not exceed this level. This interim final standard, however, takes into account the fact that your daily exposure to lead can extend beyond a typical 8-hour workday as the result of overtime or other alterations in your work schedule. To deal with this situation, the standard contains a formula which reduces your permissible exposure when you are exposed more than 8 hours. For example, if you are exposed to lead for 10 hours a day, the maximum permitted average exposure would be 40 μg/m³.

II. Exposure Assessment—Paragraph (D)

If lead is present in your workplace in any quantity, your employer is required to make an initial determination of whether any employee's exposure to lead exceeds the action level (30 μg/m³ averaged over an 8-hour day). Employee exposure is that exposure which would occur if the employee were not using a respirator. This initial determination requires your employer to monitor workers' exposures unless he or she has objective data which can demonstrate conclusively that no employee will be exposed to lead in excess of the action level. Where objective data is used in lieu of actual monitoring the employer must establish and maintain an accurate record, documenting its relevancy in assessing exposure levels for current job conditions. If such objective data is available, the employer need proceed no further on employee exposure assessment until such time that conditions have changed and the determination is no longer valid.

Objective data may be compiled from various sources, e.g., insurance companies and trade associations and information from suppliers or exposure data collected from similar operations. Objective data may also comprise previously-collected sampling data including area monitoring. If it cannot be determined through using objective data that worker exposure is less than the action level, your employer must conduct monitoring or must rely on relevant previous personal sampling, if available. Where monitoring is required for the initial determination, it may be limited to a representative number of employees who are reasonably expected to have the highest exposure levels. If your employer has conducted appropriate air sampling for lead in the past 12 months, he or she may use these results, provided they are applicable to the same employee tasks and exposure conditions and meet the requirements for accuracy as specified in the standard. As with objective data, if such results are relied upon for the initial determination, your employer must establish and maintain a record as to the relevancy of such data to current job conditions.

If there have been any employee complaints of symptoms which may be attributable to exposure to lead or if there is any other information or observations which would indicate employee exposure to lead, this must also be considered as part of the initial determination.

If this initial determination shows that a reasonable possibility exists that any employee may be exposed, without regard to respirators, over the action level, your employer must set up an air monitoring program to determine the exposure level representative of each employee exposed to lead at your workplace. In carrying out this air monitoring program, your employer is not required to monitor the exposure of every employee, but he or she must monitor a representative number of employees and job types. Enough sampling must be done to enable each employee's exposure level to be reasonably represent full shift exposure. In addition, these air samples must be taken under conditions which represent each employee's regular, daily exposure to lead. Sampling performed in the past 12 months may be used to determine exposures above the action level if such sampling was conducted during work activities essentially similar to present work conditions.

The standard lists certain tasks which may likely result in exposures to lead in excess of the PEL and, in some cases, exposures in excess of 50 times the PEL. If you are performing any of these tasks, your employer must provide you with appropriate respiratory protection, protective clothing and equipment, change areas, hand washing facilities, biological monitoring, and training until such time that an exposure assessment is conducted which demonstrates that your exposure level is below the PEL.

If you are exposed to lead and air sampling is performed, your employer is required to notify you in writing within 5 working days of the air monitoring results which represent your exposure. If the results indicate that your exposure exceeds the PEL (without regard to your use of a respirator), then your employer must also notify you of this in writing, and provide you with a description of the corrective action that has been taken or will be taken to reduce your exposure.

Your exposure must be rechecked by monitoring, at least every six months if your exposure is at or over the action level but below the PEL. Your employer may discontinue monitoring for you if 2 consecutive measurements, taken at least 7 days apart, are at or below the action level. Air monitoring must be repeated every 3 months if you are exposed over the PEL. Your employer must continue monitoring for you at this frequency until 2 consecutive measurements, taken at least 7 days apart, are below the PEL but above the action level, at which time your employer must repeat monitoring of your exposure every six months and may discontinue monitoring only after your exposure drops to or below the action level. However, whenever there is a change of equipment, process, control, or personnel or a new type of job is added at your workplace which may result in new or additional exposure to lead, your employer must perform additional monitoring.

III. Methods of Compliance—Paragraph (E)

Your employer is required to assure that no employee is exposed to lead in excess of the PEL as an 8-hour TWA. The interim final standard for lead in construction requires employers to institute engineering and work practice controls including administrative controls to the extent feasible to reduce employee exposure to lead. Where such controls are feasible but not adequate to reduce exposures below the PEL they must be used nonetheless to reduce exposures to the lowest level that can be accomplished by these means and then supplemented with appropriate respiratory protection.

Your employer is required to develop and implement a written compliance program prior to the commencement of any job where employee exposures may reach the PEL as an 8-hour TWA. The interim final standard identifies the various elements that must be included in the plan. For example, employers are required to include a description of operations in which lead is emitted, detailing other relevant information about the operation such as the type of equipment used, the type of material involved, employee job responsibilities, operating procedures and maintenance practices. In addition, your employer's compliance plan must specify the means that will be used to achieve compliance and, where engineering controls are required, include any engineering plans or studies that have been used to select the control methods. If administrative controls involving job rotation are used to reduce employee exposure to lead, the job rotation schedule must be included in the compliance plan. The plan must also detail the type of protective clothing and equipment, including respirators, housekeeping and hygiene practices that will be used to protect you from the adverse effects of exposure to lead.

The written compliance program must be made available, upon request, to affected employees and their designated representatives, the Assistant Secretary and the Director.

Finally, the plan must be reviewed and updated at least every 6 months to assure it reflects the current status in exposure control.

IV. Respiratory Protection—Paragraph (F)

Your employer is required to provide and assure your use of respirators when your exposure to lead is not controlled below the PEL by other means. The employer must pay the cost of the respirator. Whenever you request one, your employer is also required to provide you a respirator even if your air exposure level is not above the PEL. You might desire a respirator when, for example, you have received medical advice that your lead absorption should be decreased. Or, you may intend to have children in the near future, and want to reduce the level of lead in your body to minimize adverse reproductive effects. While respirators are the least satisfactory means of controlling your exposure, they are capable of providing significant protection if properly chosen, fitted, worn, cleaned, maintained, and replaced when they stop providing adequate protection.

Your employer is required to select respirators from the types listed in Table I of the Respiratory Protection section of the standard. Any respirator chosen must be approved by the Mine Safety and Health Administration (MSHA) or the National Institute for Occupational Safety and Health (NIOSH). This respirator selection table will enable your employer to choose a type of respirator which will give you a proper amount of protection based on your airborne lead exposure. Your employer may select a type of respirator that provides greater protection than that required by the standard; that is, one recommended for a higher concentration of lead than is present in your workplace. For example, a powered air purifying respirator (PAPR) is much more protective than a typical negative pressure respirator, and may also be more comfortable to wear. A PAPR has a filter, cartridge or canister to clean the air, and a power source which continuously blows filtered air into your breathing zone. Your employer might make a PAPR available to you to ease the burden of having to wear a respirator for long periods of time. The standard provides that you can obtain a PAPR upon request.

Your employer must also start a Respiratory Protection Program. This program must include written procedures for the proper selection, use, cleaning, storage, and maintenance of respirators.

Your employer must assure that your respirator facepiece fits properly. Proper fit of a respirator facepiece is critical. Obtaining a proper fit on each employee may require your employer to make available two or three different mask types. In order to assure that your respirator fits properly and that facepiece leakage is minimized, your employer must give you either a qualitative fit test or a quantitative fit test (if you use a negative pressure respirator) in accordance with appendix D. Any respirator which has a filter, cartridge or canister which cleans the work room air before you breathe it and which requires the force of your inhalation to draw air through the filtering element is a negative pressure respirator. A positive pressure respirator supplies air to you directly. A quantitative fit test uses a sophisticated machine to measure the amount, if any, of test material that leaks into the facepiece of your respirator.

You must also receive from your employer proper training in the use of respirators. Your employer is required to teach you how to wear a respirator, to know why it is needed, and to understand its limitations.

Your employer must test the effectiveness of your negative pressure respirator initially

VOL 58 ISS 84 MY 4 1993 UMI

and at least every six months thereafter with a "qualitative fit test." In this test, the fit of the facepiece is checked by seeing if you can smell a substance placed outside the respirator. If you can, there is appreciable leakage where the facepiece meets your face.

The standard provides that if your respirator uses filter elements, you must be given an opportunity to change the filter elements whenever an increase in breathing resistance is detected. You also must be permitted to periodically leave your work area to wash your face and respirator facepiece whenever necessary to prevent skin irritation. If you ever have difficulty in breathing during a fit test or while using a respirator, your employer must make a medical examination available to you to determine whether you can safely wear a respirator. The result of this examination may be to give you a positive pressure respirator (which reduces breathing resistance) or to provide alternative means of protection.

V. Protective Work Clothing and Equipment—Paragraph (G)

If you are exposed to lead above the PEL as an 8-hour TWA, without regard to your use of a respirator, or if you are exposed to lead compounds such as lead arsenate or lead azide which can cause skin and eye irritation, your employer must provide you with protective work clothing and equipment appropriate for the hazard. If work clothing is provided, it must be provided in a clean and dry condition at least weekly, and daily if your airborne exposure to lead is greater than 200 $\mu g/m^3$. Appropriate protective work clothing and equipment can include coveralls or similar full-body work clothing, gloves, hats, shoes or disposable shoe coverlets, and face shields or vented goggles. Your employer is required to provide all such equipment at no cost to you. In addition, your employer is responsible for providing repairs and replacement as necessary, and also is responsible for the cleaning, laundering or disposal of protective clothing and equipment.

The interim final standard requires that your employer assure that you follow good work practices when you are working in areas where your exposure to lead may exceed the PEL. With respect to protective clothing and equipment, where appropriate, the following procedures should be observed prior to beginning work:

1. Change into work clothing and shoe covers in the clean section of the designated changing areas;
2. Use work garments of appropriate protective gear, including respirators before entering the work area; and
3. Store any clothing not worn under protective clothing in the designated changing area.

Workers should follow these procedures upon leaving the work area:

1. HEPA vacuum heavily contaminated protective work clothing while it is still being worn. At no time may lead be removed from protective clothing by any means which result in uncontrolled dispersal of lead into the air;
2. Remove shoe covers and leave them in the work area;
3. Remove protective clothing and gear in the dirty area of the designated changing area. Remove protective coveralls by carefully rolling down the garment to reduce exposure to dust.
4. Remove respirators last; and
5. Wash hands and face.

Workers should follow these procedures upon finishing work for the day (in addition to procedures described above):

1. Where applicable, place disposal coveralls and shoe covers with the abatement waste;
2. Contaminated clothing which is to be cleaned, laundered or disposed of must be placed in closed containers in the change room.
3. Clean protective gear, including respirators, according to standard procedures;
4. Wash hands and face again. If showers are available, take a shower and wash hair. If shower facilities are not available at the work site, shower immediately at home and wash hair.

VI. Housekeeping—Paragraph (H)

Your employer must establish a housekeeping program sufficient to maintain all surfaces as free as practicable of accumulations of lead dust. Vacuuming is the preferred method of meeting this requirement, and the use of compressed air to clean floors and other surfaces is generally prohibited unless removal with compressed air is done in conjunction with ventilation systems designed to contain dispersal of the lead dust. Dry or wet sweeping, shoveling, or brushing may not be used except where vacuuming or other equally effective methods have been tried and do not work. Vacuums must be used equipped with a special filter called a high-efficiency particulate air (HEPA) filter and emptied in a manner which minimizes the reentry of lead into the workplace.

VII. Hygiene Facilities and Practices—Paragraph (I)

The standard requires that hand washing facilities be provided where occupational exposure to lead occurs. In addition, change areas, showers (where feasible), and lunchrooms or eating areas are to be made available to workers exposed to lead above the PEL. Your employer must assure that except in these facilities, food and beverage is not present or consumed, tobacco products are not present or used, and cosmetics are not applied, where airborne exposures are above the PEL. Change rooms provided by your employer must be equipped with separate storage facilities for your protective clothing and equipment and street clothes to avoid cross-contamination. After showering, no required protective clothing or equipment worn during the shift may be worn home. It is important that contaminated clothing or equipment be removed in change areas and not be worn home or you will extend your exposure and expose your family since lead from your clothing can accumulate in your house, car, etc.

Lunchrooms or eating areas may not be entered with protective clothing or equipment unless surface dust has been removed by vacuuming, downdraft booth, or other cleaning method. Finally, workers exposed above the PEL must wash both their hands and faces prior to eating, drinking, smoking or applying cosmetics.

All of the facilities and hygiene practices just discussed are essential to minimize additional sources of lead absorption from inhalation or ingestion of lead that may accumulate on you, your clothes, or your possessions. Strict compliance with these provisions can virtually eliminate several sources of lead exposure which significantly contribute to excessive lead absorption.

VIII. Medical Surveillance—Paragraph (J)

The medical surveillance program is part of the standard's comprehensive approach to the prevention of lead-related disease. Its purpose is to supplement the main thrust of the standard which is aimed at minimizing airborne concentrations of lead and sources of ingestion. Only medical surveillance can determine if the other provisions of the standard have affectively protected you as an individual. Compliance with the standard's provision will protect most workers from the adverse effects of lead exposure, but may not be satisfactory to protect individual workers (1) who have high body burdens of lead acquired over past years, (2) who have additional uncontrolled sources of non-occupational lead exposure, (3) who exhibit unusual variations in lead absorption rates, or (4) who have specific non-work related medical conditions which could be aggravated by lead exposure (e.g., renal disease, anemia). In addition, control systems may fail, or hygiene and respirator programs may be inadequate. Periodic medical surveillance of individual workers will help detect those failures. Medical surveillance will also be important to protect your reproductive ability-regardless of whether you are a man or woman.

All medical surveillance required by the interim final standard must be performed by or under the supervision of a licensed physician. The employer must provide required medical surveillance without cost to employees and at a reasonable time and place. The standard's medical surveillance program has two parts—periodic biological monitoring and medical examinations. Your employer's obligation to offer you medical surveillance is triggered by the results of the air monitoring program. Full medical surveillance must be made available to all employees who are or may be exposed to lead in excess of the action level for more than 30 days a year and whose blood lead level exceeds 40 $\mu g/dl$. Initial medical surveillance consisting of blood sampling and analysis for lead and zinc protoporphyrin must be provided to all employees exposed at any time (1 day) above the action level.

Biological monitoring under the standard must be provided at least every 2 months for the first 6 months and every 6 months thereafter until your blood lead level is below 40 $\mu g/dl$. A zinc protoporphyrin (ZPP) test is a very useful blood test which measures an adverse metabolic effect of lead on your body and is therefore an indicator of lead toxicity.

If your BLL exceeds 40 $\mu g/dl$ the monitoring frequency must be increased from every 6 months to at least every 2 months and not reduced until two consecutive BLLs indicate a blood lead level below 40 $\mu g/dl$. Each time your BLL is determined to be over 40 $\mu g/dl$, your employer must notify you of this in writing within five working days of his or her receipt of the test results. The employer must also inform you that the standard requires temporary medical removal with economic protection when your BLL exceeds 50 $\mu g/dl$. (See Discussion of Medical Removal Protection-Paragraph (k).) Anytime your BLL exceeds 50 $\mu g/dl$ your employer must make available to you within two weeks of receipt of these test results a second follow-up BLL test to confirm your BLL. If the two tests both exceed 50 $\mu g/dl$, and you are temporarily removed, then your employer must make successive BLL tests available to you on a monthly basis during the period of your removal.

Medical examinations beyond the initial one must be made available on an annual basis if your blood lead level exceeds 40 $\mu g/dl$ at any time during the preceding year and you are being exposed above the airborne action level of 30 $\mu g/m^3$ for 30 or more days per year. The initial examination will provide information to establish a baseline to which subsequent data can be compared.

An initial medical examination to consist of blood sampling and analysis for lead and zinc protoporphyrin must also be made available (prior to assignment) for each employee being assigned for the first time to an area where the airborne concentration of lead equals or exceeds the action level at any time. In addition, a medical examination or consultation must be made available as soon as possible if you notify your employer that you are experiencing signs or symptoms commonly associated with lead poisoning or that you have difficulty breathing while wearing a respirator or during a respirator fit test. You must also be provided a medical examination or consultation if you notify your employer that you desire medical advice concerning the effects of current or past exposure to lead on your ability to procreate a healthy child.

Finally, appropriate follow-up medical examinations or consultations may also be provided for employees who have been temporarily removed from exposure under the medical removal protection provisions of the standard. (See Part IX, below.)

The standard specifies the minimum content of pre-assignment and annual medical examinations. The content of other types of medical examinations and consultations is left up to the sound discretion of the examining physician. Pre-assignment and annual medical examinations must include (1) a detailed work history and medical history; (2) a thorough physical examination, including an evaluation of your pulmonary status if you will be required to use a respirator; (3) a blood pressure measurement; and (4) a series of laboratory tests designed to check your blood chemistry and your kidney function. In addition, at any time upon your request, a laboratory evaluation of male fertility will be made (microscopic examination of a sperm sample), or a pregnancy test will be given.

The standard does not require that you participate in any of the medical procedures, tests, etc. which your employer is required to make available to you. Medical surveillance can, however, play a very important role in protecting your health. You are strongly encouraged, therefore, to participate in a meaningful fashion. The standard contains a multiple physician review mechanism which will give you a chance to have a physician of your choice directly participate in the medical surveillance program. If you are dissatisfied with an examination by a physician chosen by your employer, you can select a second physician to conduct an independent analysis. The two doctors would attempt to resolve any differences of opinion, and select a third physician to resolve any firm dispute. Generally your employer will choose the physician who conducts medical surveillance under the lead standard-unless you and your employer can agree on the choice of a physician or physicians. Some companies and unions have agreed in advance, for example, to use certain independent medical laboratories or panels of physicians. Any of these arrangements are acceptable so long as required medical surveillance is made available to workers.

The standard requires your employer to provide certain information to a physician to aid in his or her examination of you. This information includes (1) the standard and its appendices, (2) a description of your duties as they relate to occupational lead exposure, (3) your exposure level or anticipated exposure level, (4) a description of any personal protective equipment you wear, (5) prior blood lead level results, and (6) prior written medical opinions concerning you that the employer has. After a medical examination or consultation the physician must prepare a written report which must contain (1) the physician's opinion as to whether you have any medical condition which places you at increased risk of material impairment to health from exposure to lead, (2) any recommended special protective measures to be provided to you, (3) any blood lead level determinations, and (4) any recommended limitation on your use of respirators. This last element must include a determination of whether you can wear a powered air purifying respirator (PAPR) if you are found unable to wear a negative pressure respirator.

The medical surveillance program of the interim lead standard may at some point in time serve to notify certain workers that they have acquired a disease or other adverse medical condition as a result of occupational lead exposure. If this is true, these workers might have legal rights to compensation from public agencies, their employers, firms that supply hazardous products to their employers, or other persons. Some states have laws, including worker compensation laws, that disallow a worker who learns of a job-related health impairment to sue, unless the worker sues within a short period of time after learning of the impairment. (This period of time may be a matter of months or years.) An attorney can be consulted about these possibilities. It should be stressed that OSHA is in no way trying to either encourage or discourage claims or lawsuits. However, since results of the standard's medical surveillance program can significantly affect the legal remedies of a worker who has acquired a job-related disease or impairment, it is proper for OSHA to make you aware of this.

The medical surveillance section of the standard also contains provisions dealing with chelation. Chelation is the use of certain drugs (administered in pill form or injected into the body) to reduce the amount of lead absorbed in body tissues. Experience accumulated by the medical and scientific communities has largely confirmed the effectiveness of this type of therapy for the treatment of very severe lead poisoning. On the other hand, it has also been established that there can be a long list of extremely harmful side effects associated with the use of chelating agents. The medical community has balanced the advantages and disadvantages resulting from the use of chelating agents in various circumstances and has established when the use of these agents is acceptable. The standard includes these accepted limitations due to a history of abuse of chelation therapy by some lead companies. The most widely used chelating agents are calcium disodium EDTA, (Ca Na2 EDTA), Calcium Disodium Versenate (Versenate), and d-penicillamine (pencillamine or Cupramine).

The standard prohibits "prophylactic chelation" of any employee by any person the employer retains, supervises or controls. "Prophylactic chelation" is the routine use of chelating or similarly acting drugs to prevent elevated blood levels in workers who are occupationally exposed to lead, or the use of these drugs to routinely lower blood lead levels to predesignated concentrations believed to be "safe". It should be emphasized that where an employer takes a worker who has no symptoms of lead poisoning and has chelation carried out by a physician (either inside or outside of a hospital) solely to reduce the worker's blood lead level, that will generally be considered prophylactic chelation. The use of a hospital and a physician does not mean that prophylactic chelation is not being performed. Routine chelation to prevent increased or reduce current blood lead levels is unacceptable whatever the setting.

The standard allows the use of "therapeutic" or "diagnostic" chelation if administered under the supervision of a licensed physician in a clinical setting with thorough and appropriate medical monitoring. Therapeutic chelation responds to severe lead poisoning where there are marked symptoms. Diagnostic chelation involved giving a patient a dose of the drug then collecting all urine excreted for some period of time as an aid to the diagnosis of lead poisoning.

In cases where the examining physician determines that chelation is appropriate, you must be notified in writing of this fact before such treatment. This will inform you of a potentially harmful treatment, and allow you to obtain a second opinion.

IX. Medical Removal Protection—Paragraph (K)

Excessive lead absorption subjects you to increased risk of disease. Medical removal

VOL
58
ISS
84
MY
4
19 93
UMI

protection (MRP) is a means of protecting you when, for whatever reasons, other methods, such as engineering controls, work practices, and respirators, have failed to provide the protection you need. MRP involves the temporary removal of a worker from his or her regular job to a place of significantly lower exposure without any loss of earnings, seniority, or other employment rights or benefits. The purpose of this program is to cease further lead absorption and allow your body to naturally excrete lead which has previously been absorbed. Temporary medical removal can result from an elevated blood lead level, or a medical opinion. For up to 18 months, or for as long as the job the employee was removed from lasts, protection is provided as a result of either form of removal. The vast majority of removed workers, however, will return to their former jobs long before this eighteen month period expires.

You may also be removed from exposure even if your blood lead level is below 50 µg/dl if a final medical determination indicates that you temporarily need reduced lead exposure for medical reasons. If the physician who is implementing your employers medical program makes a final written opinion recommending your removal or other special protective measures, your employer must implement the physician's recommendation. If you are removed in this manner, you may only be returned when the doctor indicates that it is safe for you to do so.

The standard does not give specific instructions dealing with what an employer must do with a removed worker. Your job assignment upon removal is a matter for you, your employer and your union (if any) to work out consistent with existing procedures for job assignments. Each removal must be accomplished in a manner consistent with existing collective bargaining relationships. Your employer is given broad discretion to implement temporary removals so long as no attempt is made to override existing agreements. Similarly, a removed worker is provided no right to veto an employer's choice which satisfies the standard.

In most cases, employers will likely transfer removed employees to other jobs with sufficiently low lead exposure. Alternatively, a worker's hours may be reduced so that the time weighted average exposure is reduced, or he or she may be temporarily laid off if no other alternative is feasible.

In all of these situation, MRP benefits must be provided during the period of removal—i.e., you continue to receive the same earnings, seniority, and other rights and benefits you would have had if you had not been removed. Earnings includes more than just your base wage; it includes overtime, shift differentials, incentives, and other compensation you would have earned if you had not been removed. During the period of removal you must also be provided with appropriate follow-up medical surveillance. If you were removed because your blood lead level was too high, you must be provided with a monthly blood test. If a medical opinion caused your removal, you must be provided medical tests or examinations that the doctor believes to be appropriate. If you do not participate in this follow up medical surveillance, you may lose your eligibility for MRP benefits.

When you are medically eligible to return to your former job, your employer must return you to your "former job status." This means that you are entitled to the position, wages, benefits, etc., you would have had if you had not been removed. If you would still be in your old job if no removal had occurred that is where you go back. If not, you are returned consistent with whatever job assignment discretion your employer would have had if no removal had occurred. MRP only seeks to maintain your rights, not expand them or diminish them.

If you are removed under MRP and you are also eligible for worker compensation or other compensation for lost wages, your employer's MRP benefits obligation is reduced by the amount that you actually receive from these other sources. This is also true if you obtain other employment during the time you are laid off with MRP benefits.

The standard also covers situations where an employer voluntarily removes a worker from exposure to lead due to the effects of lead on the employee's medical condition, even though the standard does not require removal. In these situations MRP benefits must still be provided as though the standard required removal. Finally, it is important to note that in all cases where removal is required, respirators cannot be used as a substitute. Respirators may be used before removal becomes necessary, but not as an alternative to a transfer to a low exposure job, or to a lay-off with MRP benefits.

X. Employee Information and Training—Paragraph (L)

Your employer is required to provide an information and training program for all employees exposed to lead above the action level or who may suffer skin or eye irritation from lead compounds such as lead arsenate or lead azide. The program must train these employees regarding the specific hazards associated with their work environment, protective measures which can be taken, including the contents of any compliance plan in effect, the danger of lead to their bodies (including their reproductive systems), and their rights under the standard. All employees must be trained prior to initial assignment to areas where there is a possibility of exposure over the action level.

This training program must also be provided at least annually thereafter unless further exposure above the action level will not occur.

XI. Signs—Paragraph (M)

The standard requires that the following warning sign be posted in work areas where the exposure to lead exceeds the PEL:

WARNING
LEAD WORK AREA
POISON
NO SMOKING OR EATING

These signs are to be posted and maintained in a manner which assures that the legend is readily visible.

XII. Recordkeeping—Paragraph (N)

Your employer is required to keep all records of exposure monitoring for airborne lead. These records must include the name and job classification of employees measured, details of the sampling and analytical techniques, the results of this sampling, and the type of respiratory protection being worn by the person sampled. Such records are to be retained for at least 30 years. Your employer is also required to keep all records of biological monitoring and medical examination results. These records must include the names of the employees, the physician's written opinion, and a copy of the results of the examination. Medical records must be preserved and maintained for the duration of employment plus 30 years. However, if the employee's duration of employment is less than one year, the employer need not retain that employee's medical records beyond the period of employment if they are provided to the employee upon termination of employment.

Recordkeeping is also required if you are temporarily removed from your job under the medical removal protection program. This record must include your name and social security number, the date of your removal and return, how the removal was or is being accomplished, and whether or not the reason for the removal was an elevated blood lead level. Your employer is required to keep each medical removal record only for as long as the duration of an employee's employment.

The standard requires that if you request to see or copy environmental monitoring, blood lead level monitoring, or medical removal records, they must be made available to you or to a representative that you authorize. Your union also has access to these records. Medical records other than BLL's must also be provided upon request to you, to your physician or to any other person whom you may specifically designate. Your union does not have access to your personal medical records unless you authorize their access.

XIII. Observation of Monitoring—Paragraph (O)

When air monitoring for lead is performed at your workplace as required by this standard, your employer must allow you or someone you designate to act as an observer of the monitoring. Observers are entitled to an explanation of the measurement procedure, and to record the results obtained. Since results will not normally be available at the time of the monitoring, observers are entitled to record or receive the results of the monitoring when returned by the laboratory. Your employer is required to provide the observer with any personal protective devices required to be worn by employees working in the area that is being monitored. The employer must require the observer to wear all such equipment and to comply with all other applicable safety and health procedures.

XIV. Effective Date—Paragraph (P)

The standard's effective date is June 3, 1993. Employer obligations under the standard begin as of that date with full implementation of engineering controls as soon as possible but no later than within 4 months, and all other provisions completed as soon as possible, but no later than within 2 months from the effective date.

XV. For Additional Information

A. A copy of the interim standard for lead in construction can be obtained free of charge by calling or writing the OSHA Office of Publications, room N–3101, United States Department of Labor, Washington, DC 20210: Telephone (202) 219–4667.

B. Additional information about the standard, its enforcement, and your employer's compliance can be obtained from the nearest OSHA Area Office listed in your telephone directory under United States Government/Department of Labor.

Appendix C to § 1926.62—Medical Surveillance Guidelines

Introduction

The primary purpose of the Occupational Safety and Health Act of 1970 is to assure, so far as possible, safe and healthful working conditions for every working man and woman. The interim final occupational health standard for lead in construction is designed to protect workers exposed to inorganic lead including metallic lead, all inorganic lead compounds and organic lead soaps.

Under this interim final standard occupational exposure to inorganic lead is to be limited to 50 µg/m³ (micrograms per cubic meter) based on an 8 hour time-weighted average (TWA). This permissible exposure limit (PEL) must be achieved through a combination of engineering, work practice and administrative controls to the extent feasible. Where these controls are in place but are found not to reduce employee exposures to or below the PEL, they must be used nonetheless, and supplemented with respirators to meet the 50 µg/m³ exposure limit.

The standard also provides for a program of biological monitoring for employees exposed to lead above the action level at any time, and additional medical surveillance for all employees exposed to levels of inorganic lead above 30 µg/m³ (TWA) for more than 30 days per year and whose BLL exceeds 40 µg/dl.

The purpose of this document is to outline the medical surveillance provisions of the interim standard for inorganic lead in construction, and to provide further information to the physician regarding the examination and evaluation of workers exposed to inorganic lead.

Section 1 provides a detailed description of the monitoring procedure including the required frequency of blood testing for exposed workers, provisions for medical removal protection (MRP), the recommended right of the employee to a second medical opinion, and notification and recordkeeping requirements of the employer. A discussion of the requirements for respirator use and respirator monitoring and OSHA's position on prophylactic chelation therapy are also included in this section.

Section 2 discusses the toxic effects and clinical manifestations of lead poisoning and effects of lead intoxication on enzymatic pathways in heme synthesis. The adverse effects on both male and female reproductive capacity and on the fetus are also discussed.

Section 3 outlines the recommended medical evaluation of the worker exposed to inorganic lead, including details of the medical history, physical examination, and recommended laboratory tests, which are based on the toxic effects of lead as discussed in Section 2.

Section 4 provides detailed information concerning the laboratory tests available for the monitoring of exposed workers. Included also is a discussion of the relative value of each test and the limitations and precautions which are necessary in the interpretation of the laboratory results.

I. Medical Surveillance and Monitoring Requirements for Workers Exposed to Inorganic Lead

Under the interim final standard for inorganic lead in the construction industry, initial medical surveillance consisting of biological monitoring to include blood lead and ZPP level determination shall be provided to employees exposed to lead at or above the action level on any one day. In addition, a program of biological monitoring is to be made available to all employees exposed above the action level at any time and additional medical surveillance is to be made available to all employees exposed to lead above 30 µg/m³ TWA for more than 30 days each year and whose BLL exceeds 40 µg/dl. This program consists of periodic blood sampling and medical evaluation to be performed on a schedule which is defined by previous laboratory results, worker complaints or concerns, and the clinical assessment of the examining physician.

Under this program, the blood lead level (BLL) of all employees who are exposed to lead above 30 µg/m³ for more than 30 days per year or whose blood lead is above 40 µg/dl but exposed for no more than 30 days per year is to be determined at least every two months for the first six months of exposure and every six months thereafter. The frequency is increased to every two months for employees whose last blood lead level was 40 µg/dl or above. For employees who are removed from exposure to lead due to an elevated blood lead, a new blood lead level must be measured monthly. A zinc protoporphyrin (ZPP) measurement is strongly recommended on each occasion that a blood lead level measurement is made.

An annual medical examination and consultation performed under the guidelines discussed in Section 3 is to be made available to each employee exposed above 30 µg/m³ for more than 30 days per year for whom a blood test conducted at any time during the preceding 12 months indicated a blood lead level at or above 40 µg/dl. Also, an examination is to be given to all employees prior to their assignment to an area in which airborne lead concentrations reach or exceed the 30 µg/m³ for more than 30 days per year. In addition, a medical examination must be provided as soon as possible after notification by an employee that the employee has developed signs or symptoms commonly associated with lead intoxication, that the employee desires medical advice regarding lead exposure and the ability to procreate a healthy child, or that the employee has demonstrated difficulty in breathing during a respirator fitting test or during respirator use. An examination is also to be made available to each employee removed from exposure to lead due to a risk of sustaining material impairment to health, or otherwise limited or specially protected pursuant to medical recommendations.

Results of biological monitoring or the recommendations of an examining physician may necessitate removal of an employee from further lead exposure pursuant to the standard's medical removal protection (MRP) program. The object of the MRP program is to provide temporary medical removal to workers either with substantially elevated blood lead levels or otherwise at risk of sustaining material health impairment from continued substantial exposure to lead.

Under the standard's ultimate worker removal criteria, a worker is to be removed from any work having an eight hour TWA exposure to lead of 30 µg/m³ when his or her blood lead level reaches 50 µg/dl and is confirmed by a second follow-up blood lead level performed within two weeks after the employer receives the results of the first blood sampling test. Return of the employee to his or her job status depends on a worker's blood lead level declining to 40 µg/dl.

As part of the interim standard, the employer is required to notify in writing each employee whose blood lead level exceeds 40 µg/dl. In addition each such employee is to be informed that the standard requires medical removal with MRP benefits, discussed below, when an employee's blood lead level exceeds the above defined limit.

In addition to the above blood lead level criterion, temporary worker removal may also take place as a result of medical determinations and recommendations. Written medical opinions must be prepared after each examination pursuant to the standard. If the examining physician includes a medical finding, determination or opinion that the employee has a medical condition which places the employee at increased risk of material health impairment from exposure to lead, then the employee must be removed from exposure to lead at or above 30 µg/m³. Alternatively, if the examining physician recommends special protective measures for an employee (e.g., use of a powered air purifying respirator) or recommends limitations on an employee's exposure to lead, then the employer must implement these recommendations.

Recommendations may be more stringent than the specific provisions of the standard. The examining physician, therefore, is given broad flexibility to tailor special protective procedures to the needs of individual employees. This flexibility extends to the evaluation and management of pregnant workers and male and female workers who are planning to raise children. Based on the history, physical examination, and laboratory studies, the physician might recommend special protective measures or medical removal for an employee who is pregnant or who is planning to conceive a child when, in the physician's judgment, continued exposure to lead at the current job would pose a significant risk. The return of the

VOL 58 ISS 84 MY 4 1993 UMI

employee to his or her former job status, or the removal of special protections or limitations, depends upon the examining physician determining that the employee is no longer at increased risk of material impairment or that special measures are no longer needed.

During the period of any form of special protection or removal, the employer must maintain the worker's earnings, seniority, and other employment rights and benefits (as though the worker had not been removed) for a period of up to 18 months or for as long as the job the employee was removed from lasts if less than 18 months. This economic protection will maximize meaningful worker participation in the medical surveillance program, and is appropriate as part of the employer's overall obligation to provide a safe and healthful workplace. The provisions of MRP benefits during the employee's removal period may, however, be conditioned upon participation in medical surveillance.

The lead standard provides for a multiple physician review in cases where the employee wishes a second opinion concerning potential lead poisoning or toxicity. If an employee wishes a second opinion, he or she can make an appointment with a physician of his or her choice. This second physician will review the findings, recommendations or determinations of the first physician and conduct any examinations, consultations or tests deemed necessary in an attempt to make a final medical determination. If the first and second physicians do not agree in their assessment they must try to resolve their differences. If they cannot reach an agreement then they must designate a third physician to resolve the dispute.

The employer must provide examining and consulting physicians with the following specific information: A copy of the lead regulations and all appendices, a description of the employee's duties as related to exposure, the exposure level or anticipated level to lead and any other toxic substances (if applicable), a description of personal protective equipment used, blood lead levels, and all prior written medical opinions regarding the employee in the employer's possession or control. The employer must also obtain from the physician and provide the employee with a written medical opinion containing blood lead levels, the physicians's opinion as to whether the employee is at risk of material impairment to health, any recommended protective measures for the employee if further exposure is permitted, as well as any recommended limitations upon an employee's use of respirators.

Employers must instruct each physician not to reveal to the employer in writing or in any other way his or her findings, laboratory results, or diagnoses which are felt to be unrelated to occupational lead exposure. They must also instruct each physician to advise the employee of any occupationally or non-occupationally related medical condition requiring further treatment or evaluation.

The standard provides for the use of respirators where engineering and other primary controls are not effective. However, the use of respirator protection shall not be used in lieu of temporary medical removal due to elevated blood lead levels or findings that an employee is at risk of material health impairment. This is based on the numerous inadequacies of respirators including skin rash where the facepiece makes contact with the skin, unacceptable stress to breathing in some workers with underlying cardiopulmonary impairment, difficulty in providing adequate fit, the tendency for respirators to create additional hazards by interfering with vision, hearing, and mobility, and the difficulties of assuring the maximum effectiveness of a complicated work practice program involving respirators. Respirators do, however, serve a useful function where engineering and work practice controls are inadequate by providing supplementary, interim, or short-term protection, provided they are properly selected for the environment in which the employee will be working, properly fitted to the employee, maintained and cleaned periodically, and worn by the employee when required.

In its interim final standard on occupational exposure to inorganic lead in the construction industry, OSHA has prohibited prophylectic chelation. Diagnostic and therapeutic chelation are permitted only under the supervision of a licensed physician with appropriate medical monitoring in an acceptable clinical setting. The decision to initiate chelation therapy must be made on an individual basis and take into account the severity of symptoms felt to be a result of lead toxicity along with blood lead levels, ZPP levels, and other laboratory tests as appropriate. EDTA and penicillamine which are the primary chelating agents used in the therapy of occupational lead poisoning have significant potential side effects and their use must be justified on the basis of expected benefits to the worker. Unless frank and severe symptoms are present, therapeutic chelation is not recommended, given the opportunity to remove a worker from exposure and allow the body to naturally excrete accumulated lead. As a diagnostic aid, the chelation mobilization test using CA-EDTA has limited applicability. According to some investigators, the test can differentiate between lead-induced and other nephropathies. The test may also provide an estimation of the mobile fraction of the total body lead burden.

Employers are required to assure that accurate records are maintained on exposure assessment, including environmental monitoring, medical surveillance, and medical removal for each employee. Exposure assessment records must be kept for at least 30 years. Medical surveillance records must be kept for the duration of employment plus 30 years except in cases where the employment was less than one year. If duration of employment is less than one year, the employer need not retain this record beyond the term of employment if the record is provided to the employee upon termination of employment. Medical removal records also must be maintained for the duration of employment. All records required under the standard must be made available upon request to the Assistant Secretary of Labor for Occupational Safety and Health and the Director of the National Institute for Occupational Safety and Health. Employers must also make environmental and biological monitoring and medical removal records available to affected employees and to former employees or their authorized employee representatives. Employees or their specifically designated representatives have access to their entire medical surveillance records.

In addition, the standard requires that the employer inform all workers exposed to lead at or above 30 $\mu g/m^3$ of the provisions of the standard and all its appendices, the purpose and description of medical surveillance and provisions for medical removal protection if temporary removal is required. An understanding of the potential health effects of lead exposure by all exposed employees along with full understanding of their rights under the lead standard is essential for an effective monitoring program.

II. Adverse Health Effects of Inorganic Lead

Although the toxicity of lead has been known for 2,000 years, the knowledge of the complex relationship between lead exposure and human response is still being refined. Significant research into the toxic properties of lead continues throughout the world, and it should be anticipated that our understanding of thresholds of effects and margins of safety will be improved in future years. The provisions of the lead standard are founded on two prime medical judgments: First, the prevention of adverse health effects from exposure to lead throughout a working lifetime requires that worker blood lead levels be maintained at or below 40 µg/dl and second, the blood lead levels of workers, male or female, who intend to parent in the near future should be maintained below 30 µg/dl to minimize adverse reproductive health effects to the parents and developing fetus. The adverse effects of lead on reproduction are being actively researched and OSHA encourages the physician to remain abreast of recent developments in the area to best advise pregnant workers or workers planning to conceive children.

The spectrum of health effects caused by lead exposure can be subdivided into five developmental stages: Normal, physiological changes of uncertain significance, pathophysiological changes, overt symptoms (morbidity), and mortality. Within this process there are no sharp distinctions, but rather a continuum of effects. Boundaries between categories overlap due to the wide variation of individual responses and exposures in the working population. OSHA's development of the lead standard focused on pathophysiological changes as well as later stages of disease.

1. Heme Synthesis Inhibition. The earliest demonstrated effect of lead involves its ability to inhibit at least two enzymes of the heme synthesis pathway at very low blood levels. Inhibition of delta aminolevulinic acid dehydrase (ALA-D) which catalyzes the conversion of delta-aminolevulinic acid (ALA) to protoporphyrin is observed at a blood lead level below 20 µg/dl. At a blood lead level of 40 µg/dl, more than 20% of the population would have 70% inhibition of

ALA-D. There is an exponential increase in ALA excretion at blood lead levels greater than 40 µg/dl.

Another enzyme, ferrochelatase, is also inhibited at low blood lead levels. Inhibition of ferrochelatase leads to increased free erythrocyte protoporphyrin (FEP) in the blood which can then bind to zinc to yield zinc protoporphyrin. At a blood lead level of 50 µg/dl or greater, nearly 100% of the population will have an increase in FEP. There is also an exponential relationship between blood lead levels greater than 40 µg/dl and the associated ZPP level, which has led to the development of the ZPP screening test for lead exposure.

While the significance of these effects is subject to debate, it is OSHA's position that these enzyme disturbances are early stages of a disease process which may eventually result in the clinical symptoms of lead poisoning. Whether or not the effects do progress to the later stages of clinical disease, disruption of these enzyme processes over a working lifetime is considered to be a material impairment of health.

One of the eventual results of lead-induced inhibition of enzymes in the heme synthesis pathway is anemia which can be asymptomatic if mild but associated with a wide array of symptoms including dizziness, fatigue, and tachycardia when more severe. Studies have indicated that lead levels as low as 50 µg/dl can be associated with a definite decreased hemoglobin, although most cases of lead-induced anemia, as well as shortened red-cell survival times, occur at lead levels exceeding 80 µg/dl. Inhibited hemoglobin synthesis is more common in chronic cases whereas shortened erythrocyte life span is more common in acute cases.

In lead-induced anemias, there is usually a reticulocytosis along with the presence of basophilic stippling, and ringed sideroblasts, although none of the above are pathognomonic for lead-induced anemia.

2. Neurological Effects. Inorganic lead has been found to have toxic effects on both the central and peripheral nervous systems. The earliest stages of lead-induced central nervous system effects first manifest themselves in the form of behavioral disturbances and central nervous system symptoms including irritability, restlessness, insomnia and other sleep disturbances, fatigue, vertigo, headache, poor memory, tremor, depression, and apathy. With more severe exposure, symptoms can progress to drowsiness, stupor, hallucinations, delirium, convulsions and coma.

The most severe and acute form of lead poisoning which usually follows ingestion or inhalation of large amounts of lead is acute encephalopathy which may arise precipitously with the onset of intractable seizures, coma, cardiorespiratory arrest, and death within 48 hours.

While there is disagreement about what exposure levels are needed to produce the earliest symptoms, most experts agree that symptoms definitely can occur at blood lead levels of 60 µg/dl whole blood and therefore recommend a 40 µg/dl maximum. The central nervous system effects frequently are not reversible following discontinued exposure or chelation therapy and when improvement does occur, it is almost always only partial.

The peripheral neuropathy resulting from lead exposure characteristically involves only motor function with minimal sensory damage and has a marked predilection for the extensor muscles of the most active extremity. The peripheral neuropathy can occur with varying degrees of severity. The earliest and mildest form which can be detected in workers with blood lead levels as low as 50 µg/dl is manifested by slowing of motor nerve conduction velocity often without clinical symptoms. With progression of the neuropathy there is development of painless extensor muscle weakness usually involving the extensor muscles of the fingers and hand in the most active upper extremity, followed in severe cases by wrist drop or, much less commonly, foot drop.

In addition to slowing of nerve conduction, electromyographical studies in patients with blood lead levels greater than 50 µg/dl have demonstrated a decrease in the number of acting motor unit potentials, an increase in the duration of motor unit potentials, and spontaneous pathological activity including fibrillations and fasciculations. Whether these effects occur at levels of 40 µg/dl is undetermined.

While the peripheral neuropathies can occasionally be reversed with therapy, again such recovery is not assured particularly in the more severe neuropathies and often improvement is only partial. The lack of reversibility is felt to be due in part to segmental demyelination.

3. Gastrointestinal. Lead may also affect the gastrointestinal system producing abdominal colic or diffuse abdominal pain, constipation, obstipation, diarrhea, anorexia, nausea and vomiting. Lead colic rarely develops at blood lead levels below 80 µg/dl.

4. Renal. Renal toxicity represents one of the most serious health effects of lead poisoning. In the early stages of disease nuclear inclusion bodies can frequently be identified in proximal renal tubular cells. Renal function remains normal and the changes in this stage are probably reversible. With more advanced disease there is progressive interstitial fibrosis and impaired renal function. Eventually extensive interstitial fibrosis ensues with sclerotic glomeruli and dilated and atrophied proximal tubules; all represent end stage kidney disease. Azotemia can be progressive, eventually resulting in frank uremia necessitating dialysis. There is occasionally associated hypertension and hyperuricemia with or without gout.

Early kidney disease is difficult to detect. The urinalysis is normal in early lead nephropathy and the blood urea nitrogen and serum creatinine increase only when two-thirds of kidney function is lost. Measurement of creatinine clearance can often detect earlier disease as can other methods of measurement of glomerular filtration rate. An abnormal Ca-EDTA mobilization test has been used to differentiate between lead-induced and other nephropathies, but this procedure is not widely accepted. A form of Fanconi syndrome with aminoaciduria, glycosuria, and hyperphosphaturia indicating severe injury to the proximal renal tubules is occasionally seen in children.

5. Reproductive effects. Exposure to lead can have serious effects on reproductive function in both males and females. In male workers exposed to lead there can be a decrease in sexual drive, impotence, decreased ability to produce healthy sperm, and sterility. Malformed sperm (teratospermia), decreased number of sperm (hypospermia), and sperm with decreased motility (asthenospermia) can all occur. Teratospermia has been noted at mean blood lead levels of 53 µg/dl and hypospermia and asthenospermia at 41 µg/dl. Furthermore, there appears to be a dose-response relationship for teratospermia in lead exposed workers.

Women exposed to lead may experience menstrual disturbances including dysmenorrhea, menorrhagia and amenorrhea. Following exposure to lead, women have a higher frequency of sterility, premature births, spontaneous miscarriages, and stillbirths.

Germ cells can be effected by lead and cause genetic damage in the egg or sperm cells before conception and result in failure to implant, miscarriage, stillbirth, or birth defects.

Infants of mothers with lead poisoning have a higher mortality during the first year and suffer from lowered birth weights, slower growth, and nervous system disorders.

Lead can pass through the placental barrier and lead levels in the mother's blood are comparable to concentrations of lead in the umbilical cord at birth. Transplacental passage becomes detectable at 12–14 weeks of gestation and increases until birth.

There is little direct data on damage to the fetus from exposure to lead but it is generally assumed that the fetus and newborn would be at least as susceptible to neurological damage as young children. Blood lead levels of 50–60 µg/dl in children can cause significant neurobehavioral impairments and there is evidence of hyperactivity at blood levels as low as 25 µg/dl. Given the overall body of literature concerning the adverse health effects of lead in children, OSHA feels that the blood lead level in children should be maintained below 30 µg/dl with a population mean of 15 µg/dl. Blood lead levels in the fetus and newborn likewise should not exceed 30 µg/dl.

Because of lead's ability to pass through the placental barrier and also because of the demonstrated adverse effects of lead on reproductive function in both the male and female as well as the risk of genetic damage of lead on both the ovum and sperm, OSHA recommends a 30 µg/dl maximum permissible blood lead level in both males and females who wish to bear children.

6. Other toxic effects. Debate and research continue on the effects of lead on the human body. Hypertension has frequently been noted in occupationally exposed individuals although it is difficult to assess whether this is due to lead's adverse effects on the kidney or if some other mechanism is involved. Vascular and electrocardiographic changes have been detected but have not been well characterized. Lead is thought to impair thyroid function and interfere with the pituitary-adrenal axis, but again these effects have not been well defined.

III. Medical Evaluation

The most important principle in evaluating a worker for any occupational disease including lead poisoning is a high index of suspicion on the part of the examining physician. As discussed in Section 2, lead can affect numerous organ systems and produce a wide array of signs and symptoms, most of which are non-specific and subtle in nature at least in the early stages of disease. Unless serious concern for lead toxicity is present, many of the early clues to diagnosis may easily be overlooked.

The crucial initial step in the medical evaluation is recognizing that a worker's employment can result in exposure to lead. The worker will frequently be able to define exposures to lead and lead containing materials but often will not volunteer this information unless specifically asked. In other situations the worker may not know of any exposures to lead but the suspicion might be raised on the part of the physician because of the industry or occupation of the worker. Potential occupational exposure to lead and its compounds occur in many occupations in the construction industry, including demolition and salvaging operations, removal or encapsulation of materials containing lead, construction, alteration, repair or renovation of structures containing lead, transportation, disposal, storage or containment of lead or lead-containing materials on construction sites, and maintenance operations associated with construction activities.

Once the possibility for lead exposure is raised, the focus can then be directed toward eliciting information from the medical history, physical exam, and finally from laboratory data to evaluate the worker for potential lead toxicity.

A complete and detailed work history is important in the initial evaluation. A listing of all previous employment with information on job description, exposure to fumes or dust, known exposures to lead or other toxic substances, a description of any personal protective equipment used, and previous medical surveillance should all be included in the worker's record. Where exposure to lead is suspected, information concerning on-the-job personal hygiene, smoking or eating habits in work areas, laundry procedures, and use of any protective clothing or respiratory protection equipment should be noted. A complete work history is essential in the medical evaluation of a worker with suspected lead toxicity, especially when long term effects such as neurotoxicity and nephrotoxicity are considered.

The medical history is also of fundamental importance and should include a listing of all past and current medical conditions, current medications including proprietary drug intake, previous surgeries and hospitalizations, allergies, smoking history, alcohol consumption, and also non-occupational lead exposures such as hobbies (hunting, riflery). Also known childhood exposures should be elicited. Any previous history of hematological, neurological, gastrointestinal, renal, psychological, gynecological, genetic, or reproductive problems should be specifically noted.

A careful and complete review of systems must be performed to assess both recognized complaints and subtle or slowly acquired symptoms which the worker might not appreciate as being significant. The review of symptoms should include the following:

1. General—weight loss, fatigue, decreased appetite.
2. Head, Eyes, Ears, Nose, Throat (HEENT)—headaches, visual disturbances or decreased visual acuity, hearing deficits or tinnitus, pigmentation of the oral mucosa, or metallic taste in mouth.
3. Cardio-pulmonary—shortness of breath, cough, chest pains, palpitations, or orthopnea.
4. Gastrointestinal—nausea, vomiting, heartburn, abdominal pain, constipation or diarrhea.
5. Neurologic—irritability, insomnia, weakness (fatigue), dizziness, loss of memory, confusion, hallucinations, incoordination, ataxia, decreased strength in hands or feet, disturbances in gait, difficulty in climbing stairs, or seizures.
6. Hematologic—pallor, easy fatigability, abnormal blood loss, melena.
7. Reproductive (male and female and spouse where relevant)—history of infertility, impotence, loss of libido, abnormal menstrual periods, history of miscarriages, stillbirths, or children with birth defects.
8. Musculo-skeletal—muscle and joint pains.

The physical examination should emphasize the neurological, gastrointestinal, and cardiovascular systems. The worker's weight and blood pressure should be recorded and the oral mucosa checked for pigmentation characteristic of a possible Burtonian or lead line on the gingiva. It should be noted, however, that the lead line may not be present even in severe lead poisoning if good oral hygiene is practiced.

The presence of pallor on skin examination may indicate an anemia which, if severe, might also be associated with a tachycardia. If an anemia is suspected, an active search for blood loss should be undertaken including potential blood loss through the gastrointestinal tract.

A complete neurological examination should include an adequate mental status evaluation including a search for behavioral and psychological disturbances, memory testing, evaluation for irritability, insomnia, hallucinations, and mental clouding. Gait and coordination should be examined along with close observation for tremor. A detailed evaluation of peripheral nerve function including careful sensory and motor function testing is warranted. Strength testing particularly of extensor muscle groups of all extremities is of fundamental importance.

Cranial nerve evaluation should also be included in the routine examination.

The abdominal examination should include auscultation for bowel sounds and abdominal bruits and palpation for organomegaly, masses, and diffuse abdominal tenderness.

Cardiovascular examination should evaluate possible early signs of congestive heart failure. Pulmonary status should be addressed particularly if respirator protection is contemplated.

As part of the medical evaluation, the interim lead standard requires the following laboratory studies:

1. Blood lead level
2. Hemoglobin and hematocrit determinations, red cell indices, and examination of the peripheral blood smear to evaluate red blood cell morphology
3. Blood urea nitrogen
4. Serum creatinine
5. Routine urinalysis with microscopic examination.
6. A zinc protoporphyrin level.

In addition to the above, the physician is authorized to order any further laboratory or other tests which he or she deems necessary in accordance with sound medical practice. The evaluation must also include pregnancy testing or laboratory evaluation of male fertility if requested by the employee. Additional tests which are probably not warranted on a routine basis but may be appropriate when blood lead and ZPP levels are equivocal include delta aminolevulinic acid and coproporphyrin concentrations in the urine, and dark-field illumination for detection of basophilic stippling in red blood cells.

If an anemia is detected further studies including a careful examination of the peripheral smear, reticulocyte count, stool for occult blood, serum iron, total iron binding capacity, bilirubin, and, if appropriate, vitamin B12 and folate may be of value in attempting to identify the cause of the anemia.

If a peripheral neuropathy is suspected, nerve conduction studies are warranted both for diagnosis and as a basis to monitor any therapy.

If renal disease is questioned, a 24 hour urine collection for creatinine clearance, protein, and electrolytes may be indicated. Elevated uric acid levels may result from lead-induced renal disease and a serum uric acid level might be performed.

An electrocardiogram and chest x-ray may be obtained as deemed appropriate.

Sophisticated and highly specialized testing should not be done routinely and where indicated should be under the direction of a specialist.

IV. Laboratory Evaluation

The blood lead level at present remains the single most important test to monitor lead exposure and is the test used in the medical surveillance program under the lead standard to guide employee medical removal. The ZPP has several advantages over the blood lead level. Because of its relatively recent development and the lack of extensive data concerning its interpretation, the ZPP currently remains an ancillary test.

This section will discuss the blood lead level and ZPP in detail and will outline their relative advantages and disadvantages. Other blood tests currently available to evaluate lead exposure will also be reviewed.

The blood lead level is a good index of current or recent lead absorption when there is no anemia present and when the worker has not taken any chelating agents. However, blood lead levels along with urinary lead levels do not necessarily indicate the total body burden of lead and are not adequate measures of past exposure. One reason for this is that lead has a high affinity for bone and up to 90% of the body's total lead is

deposited there. A very important component of the total lead body burden is lead in soft tissue (liver, kidney, and brain). This fraction of the lead body burden, the biologically active lead, is not entirely reflected by blood lead levels since it is a function of the dynamics of lead absorption, distribution, deposition in bone and excretion. Following discontinuation of exposure to lead, the excess body burden is only slowly mobilized from bone and other relatively stable body stores and excreted. Consequently, a high blood lead level may only represent recent heavy exposure to lead without a significant total body excess and likewise a low blood lead level does not exclude an elevated total body burden of lead.

Also due to its correlation with recent exposures, the blood lead level may vary considerably over short time intervals.

To minimize laboratory error and erroneous results due to contamination, blood specimens must be carefully collected after thorough cleaning of the skin with appropriate methods using lead-free blood containers and analyzed by a reliable laboratory. Under the standard, samples must be analyzed in laboratories which are approved by OSHA. Analysis is to be made using atomic absorption spectrophotometry, anodic stripping voltammetry or any method which meets the accuracy requirements set forth by the standard.

The determination of lead in urine is generally considered a less reliable monitoring technique than analysis of whole blood primarily due to individual variability in urinary excretion capacity as well as the technical difficulty of obtaining accurate 24 hour urine collections. In addition, workers with renal insufficiency, whether due to lead or some other cause, may have decreased lead clearance and consequently urine lead levels may underestimate the true lead burden. Therefore, urine lead levels should not be used as a routine test.

The zinc protoporphyrin test, unlike the blood lead determination, measures an adverse metabolic effect of lead and as such is a better indicator of lead toxicity than the level of blood lead itself. The level of ZPP reflects lead absorption over the preceding 3 to 4 months, and therefore is a better indicator of lead body burden. The ZPP requires more time than the blood lead to read significantly elevated levels; the return to normal after discontinuing lead exposure is also slower. Furthermore, the ZPP test is simpler, faster, and less expensive to perform and no contamination is possible. Many investigators believe it is the most reliable means of monitoring chronic lead absorption.

Zinc protoporphyrin results from the inhibition of the enzyme ferrochelatase which catalyzes the insertion of an iron molecule into the protoporphyrin molecule, which then becomes heme. If iron is not inserted into the molecule then zinc, having a greater affinity for protoporphyrin, takes the place of the iron, forming ZPP.

An elevation in the level of circulating ZPP may occur at blood lead levels as low as 20–30 μg/dl in some workers. Once the blood lead level has reached 40 μg/dl there is more marked rise in the ZPP value from its normal range of less than 100 μg/dl100 ml. Increases in blood lead levels beyond 40 μg/100 g are associated with exponential increases in ZPP.

Whereas blood lead levels fluctuate over short time spans, ZPP levels remain relatively stable. ZPP is measured directly in red blood cells and is present for the cell's entire 120 day life-span. Therefore, the ZPP level in blood reflects the average ZPP production over the previous 3–4 months and consequently the average lead exposure during that time interval.

It is recommended that a hematocrit be determined whenever a confirmed ZPP of 50 μg/100 ml whole blood is obtained to rule out a significant underlying anemia. If the ZPP is in excess of 100 μg/100 ml and not associated with abnormal elevations in blood lead levels, the laboratory should be checked to be sure that blood leads were determined using atomic absorption spectrophotometry anodic stripping voltammetry, or any method which meets the accuracy requirements set forth by the standard by an OSHA approved laboratory which is experienced in lead level determinations. Repeat periodic blood lead studies should be obtained in all individuals with elevated ZPP levels to be certain that an associated elevated blood lead level has not been missed due to transient fluctuations in blood leads.

ZPP has a characteristic fluorescence spectrum with a peak at 594 nm which is detectable with a hematofluorimeter. The hematofluorimetor is accurate and portable and can provide on-site, instantaneous results for workers who can be frequently tested via a finger prick.

However, careful attention must be given to calibration and quality control procedures. Limited data on blood lead-ZPP correlations and the ZPP levels which are associated with the adverse health effects discussed in Section 2 are the major limitations of the test. Also it is difficult to correlate ZPP levels with environmental exposure and there is some variation of response with age and sex. Nevertheless, the ZPP promises to be an important diagnostic test for the early detection of lead toxicity and its value will increase as more data is collected regarding its relationship to other manifestations of lead poisoning.

Levels of delta-aminolevulinic acid (ALA) in the urine are also used as a measure of lead exposure. Increasing concentrations of ALA are believed to result from the inhibition of the enzyme delta-aminolevulinic acid dehydrase (ALA-D). Although the test is relatively easy to perform, inexpensive, and rapid, the disadvantages include variability in results, the necessity to collect a complete 24 hour urine sample which has a specific gravity greater than 1.010, and also the fact that ALA decomposes in the presence of light.

The pattern of porphyrin excretion in the urine can also be helpful in identifying lead intoxication. With lead poisoning, the urine concentrations of coproporphyrins I and II, porphobilinogen and uroporphyrin I rise. The most important increase, however, is that of coproporphyrin III; levels may exceed 5,000 μg/l in the urine in lead poisoned individuals, but its correlation with blood lead levels and ZPP are not as good as those of ALA. Increases in urinary porphyrins are not diagnostic of lead toxicity and may be seen in porphyria, some liver diseases, and in patients with high reticulocyte counts.

Summary. The Occupational Safety and Health Administration's interim standard for inorganic lead in the construction industry places significant emphasis on the medical surveillance of all workers exposed to levels of inorganic lead above 30 μg/m³ TWA. The physician has a fundamental role in this surveillance program, and in the operation of the medical removal protection program.

Even with adequate worker education on the adverse health effects of lead and appropriate training in work practices, personal hygiene and other control measures, the physician has a primary responsibility for evaluating potential lead toxicity in the worker. It is only through a careful and detailed medical and work history, a complete physical examination and appropriate laboratory testing that an accurate assessment can be made. Many of the adverse health effects of lead toxicity are either irreversible or only partially reversible and therefore early detection of disease is very important.

This document outlines the medical monitoring program as defined by the occupational safety and health standard for inorganic lead. It reviews the adverse health effects of lead poisoning and describes the important elements of the history and physical examinations as they relate to these adverse effects. Finally, the appropriate laboratory testing for evaluating lead exposure and toxicity is presented.

It is hoped that this review and discussion will give the physician a better understanding of the OSHA standard with the ultimate goal of protecting the health and well-being of the worker exposed to lead under his or her care.

Appendix D to § 1926.62— Qualitative and Quantitative Fit Test Protocols

I. Fit Test Protocols

A. General: The employer shall include the following provisions in the fit test procedures. These provisions apply to both qualitative fit testing (QLFT) and quantitative fit testing (QNFT) permissible for compliance with paragraph (f)(3)(ii) of § 1926.62. All testing is to be conducted annually.

1. The test subject shall be allowed to pick the most comfortable respirator from a selection including respirators of various sizes from different manufacturers. The selection shall include at least three sizes of elastomeric facepieces of the type of respirator that is to be tested, i.e., three sizes of half mask; or three sizes of full facepiece. Respirators of each size must be provided from at least two manufacturers.

2. Prior to the selection process, the test subject shall be shown how to put on a respirator, how it should be positioned on the face, how to set strap tension and how to determine a comfortable fit. A mirror shall be available to assist the subject in evaluating the fit and positioning the respirator. This instruction may not constitute the subject's formal training on respirator use, as it is only a review.

3. The test subject shall be informed that he/she is being asked to select the respirator

VOL 58 ISS 84 MY 4 1993 UMI

which provides the most comfortable fit. Each respirator represents a different size and shape, and if fitted, maintained and used properly, will provide adequate protection.

4. The test subject shall be instructed to hold each facepiece up to the face and eliminate those which obviously do not give a comfortable fit.

5. The more comfortable facepieces are noted; the most comfortable mask is donned and worn at least five minutes to assess comfort. Assistance in assessing comfort can be given by discussing the points in item 6 below. If the test subject is not familiar with using a particular respirator, the test subject shall be directed to don the mask several times and to adjust the straps each time to become adept at setting proper tension on the straps.

6. Assessment of comfort shall include reviewing the following points with the test subject and allowing the test subject adequate time to determine the comfort of the respirator:

(a) position of the mask on the nose;
(b) room for eye protection;
(c) room to talk; and
(d) position of mask on face and cheeks.

7. The following criteria shall be used to help determine the adequacy of the respirator fit:

(a) chin properly placed;
(b) adequate strap tension, not overly tightened;
(c) fit across nose bridge;
(d) respirator of proper size to span distance from nose to chin;
(e) tendency of respirator to slip; and
(f) self-observation in mirror to evaluate fit and respirator position.

8. The test subject shall conduct the negative and positive pressure fit checks as described below or in ANSI Z88.2–1980. Before conducting the negative or positive pressure test, the subject shall be told to seat the mask on the face by moving the head from side-to-side and up and down slowly while taking in a few slow deep breaths. Another facepiece shall be selected and retested if the test subject fails the fit check tests.

(a) *Positive pressure check.* Close off the exhalation valve and exhale gently into the facepiece. The face fit is considered satisfactory if a slight positive pressure can be built up inside the facepiece without any evidence of outward leakage of air at the seal. For most respirators this method of leak testing requires the wearer to first remove the exhalation valve cover before closing off the exhalation valve and then carefully replacing it after the test.

(b) *Negative pressure check.* Close off the inlet opening of the canister or cartridge(s) by covering with the palm of the hand(s) or by replacing the filter seal(s), inhale gently so that the facepiece collapses slightly, and hold the breath for ten seconds. If the facepiece remains in its slightly collapsed condition and no inward leakage of air is detected, the tightness of the respirator is considered satisfactory.

9. The test shall not be conducted if there is any hair growth between the skin and the facepiece sealing surface, such as stubble beard growth, beard, or long sideburns which cross the respirator sealing surface. Any type of apparel which interferes with a satisfactory fit shall be altered or removed.

10. If a test subject exhibits difficulty in breathing during the tests, she or he shall be referred to a physician to determine whether the test subject can wear a respirator while performing her or his duties.

11. If at any time within the first two week of use the respirator becomes uncomfortable, the test subject shall be given the opportunity to select a different facepiece and to be retested.

12. The employer shall maintain a record of the fit test administered to an employee. The record shall contain at least the following information:

(a) name of employee;
(b) type of respirator;
(c) brand, size of respirator;
(d) date of test;
(e) where QNFT is used: the fit factor, strip chart recording or other recording of the results of the test. The record shall be maintained until the next fit test is administered.

13. Exercise regimen. Prior to the commencement of the fit test, the test subject shall be given a description of the fit test and the test subject's responsibilities during the test procedure. The description of the process shall include a description of the test exercises that the subject will be performing. The respirator to be tested shall be worn for at least 5 minutes before the start of the fit test.

14. Test Exercises. The test subject shall perform exercises, in the test environment, in the manner described below:

(a) Normal breathing. In a normal standing position, without talking, the subject shall breathe normally.

(b) Deep breathing. In a normal standing position, the subject shall breathe slowly and deeply, taking caution so as to not hyperventilate.

(c) Turning head side to side. Standing in place, the subject shall slowly turn his/her head from side to side between the extreme positions on each side. The head shall be held at each extreme momentarily so the subject can inhale at each side.

(d) Moving head up and down. Standing in place, the subject shall slowly move his/her head up and down. The subject shall be instructed to inhale in the up position (i.e., when looking toward the ceiling).

(e) Talking. The subject shall talk out loud slowly and loud enough so as to be heard clearly by the test conductor. The subject can read from a prepared text such as the Rainbow Passage (see below), count backward from 100, or recite a memorized poem or song.

Rainbow Passage

When the sunlight strikes raindrops in the air, they act like a prism and form a rainbow. The rainbow is a division of white light into many beautiful colors. These take the shape of a long round arch, with its path high above, and its two ends apparently beyond the horizon. There is, according to legend, a boiling pot of gold at one end. People look, but no one ever finds it. When a man looks for something beyond reach, his friends say he is looking for the pot of gold at the end of the rainbow.

(f) Grimace. The test subject shall grimace by smiling or frowning.

(g) Bending over. The test subject shall bend at the waist as if he/she were to touch his/her toes. Jogging in place shall be substituted for this exercise in those test environments such as shroud type QNFT units which prohibit bending at the waist.

(h) Normal breathing. Same as exercise 1.

Each test exercise shall be performed for one minute except for the grimace exercise which shall be performed for 15 seconds. The test subject shall be questioned by the test conductor regarding the comfort of the respirator upon completion of the protocol. If it has become uncomfortable, another model of respirator shall be tried.

B. Qualitative Fit Test (QLFT) Protocols. 1. *General.* (a) The employer shall assign specific individuals who shall assume full responsibility for implementing the respirator qualitative fit test program.

(b) The employer shall ensure that persons administering QLFT are able to prepare test solutions, calibrate equipment and perform tests properly, recognize invalid tests, and assure that test equipment is in proper working order.

(c) The employer shall assure that QLFT equipment is kept clean and well maintained so as to operate at the parameters for which it was designed.

2. *Isoamyl Acetate Protocol.* (a) Odor threshold screening. The odor threshold screening test, performed without wearing a respirator, is intended to determine if the individual tested can detect the odor of isoamyl acetate.

(1) Three 1 liter glass jars with metal lids are required.

(2) Odor free water (e.g. distilled or spring water) at approximately 25 degrees C shall be used for the solutions.

(3) The isoamyl acetate (IAA) (also known at isopentyl acetate) stock solution is prepared by adding 1 cc of pure IAA to 800 cc of odor free water in a 1 liter jar and shaking for 30 seconds. A new solution shall be prepared at least weekly.

(4) The screening test shall be conducted in a room separate from the room used for actual fit testing. The two rooms shall be well ventilated but shall not be connected to the same recirculating ventilation system.

(5) The odor test solution is prepared in a second jar by placing 0.4 cc of the stock solution into 500 cc of odor free water using a clean dropper or pipette. The solution shall be shaken for 30 seconds and allowed to stand for two to three minutes so that the IAA concentration above the liquid may reach equilibrium. This solution shall be used for only one day.

(6) A test blank shall be prepared in a third jar by adding 500 cc of odor free water.

(7) The odor test and test blank jars shall be labeled 1 and 2 for jar identification. Labels shall be placed on the lids so they can be periodically peeled, dried off and switched to maintain the integrity of the test.

(8) The following instruction shall be typed on a card and placed on the table in front of the two test jars (i.e., 1 and 2): "The purpose of this test is to determine if you can smell

banana oil at a low concentration. The two bottles in front of you contain water. One of these bottles also contains a small amount of banana oil. Be sure the covers are on tight, then shake each bottle for two seconds. Unscrew the lid of each bottle, one at a time, and sniff at the mouth of the bottle. Indicate to the test conductor which bottle contains banana oil."

(9) The mixtures used in the IAA odor detection test shall be prepared in an area separate from where the test is performed, in order to prevent olfactory fatigue in the subject.

(10) If the test subject is unable to correctly identify the jar containing the odor test solution, the IAA qualitative fit test shall not be performed.

(11) If the test subject correctly identifies the jar containing the odor test solution, the test subject may proceed to respirator selection and fit testing.

(b) Isoamyl acetate fit test.

(1) The fit test chamber shall be similar to a clear 55-gallon drum liner suspended inverted over a 2-foot diameter frame so that the top of the chamber is about 6 inches above the test subject's head. The inside top center of the chamber shall have a small hook attached.

(2) Each respirator used for the fitting and fit testing shall be equipped with organic vapor cartridges or offer protection against organic vapors. The cartridges or masks shall be changed at least weekly.

(3) After selecting, donning, and properly adjusting a respirator, the test subject shall wear it to the fit testing room. This room shall be separate from the room used for odor threshold screening and respirator selection, and shall be well ventilated, as by an exhaust fan or lab hood, to prevent general room contamination.

(4) A copy of the test exercises and any prepared text from which the subject is to read shall be taped to the inside of the test chamber.

(5) Upon entering the test chamber, the test subject shall be given a 6-inch by 5-inch piece of paper towel, or other porous, absorbent, single-ply material, folded in half and wetted with 0.75 cc of pure IAA. The test subject shall hang the wet towel on the hook at the top of the chamber.

(6) Allow two minutes for the IAA test concentration to stabilize before starting the fit test exercises. This would be an appropriate time to talk with the test subject; to explain the fit test, the importance of his/her cooperation, and the purpose for the head exercises; or to demonstrate some of the exercises.

(7) If at any time during the test, the subject detects the banana like odor of IAA, the test has failed. The subject shall quickly exit from the test chamber and leave the test area to avoid olfactory fatigue.

(8) If the test has failed, the subject shall return to the selection room and remove the respirator, repeat the odor sensitivity test, select and put on another respirator, return to the test chamber and again begin the procedure described in (I)(B)(2)(b) (1) through (7) of this appendix. The process continues until a respirator that fits well has been found. Should the odor sensitivity test be failed, the subject shall wait about 5 minutes before retesting. Odor sensitivity will usually have returned by this time.

(9) When a respirator is found that passes the test, its efficiency shall be demonstrated for the subject by having the subject break the face seal and take a breath before exiting the chamber.

(10) When the test subject leaves the chamber, the subject shall remove the saturated towel and return it to the person conducting the test. To keep the test area from becoming contaminated, the used towels shall be kept in a self sealing bag so there is no significant IAA concentration build-up in the test chamber during subsequent tests.

3. *Saccharin Solution Aerosol Protocol.* The entire screening and testing procedure shall be explained to the test subject prior to the conduct of the screening test.

(a) Taste threshold screening. The saccharin taste threshold screening, performed without wearing a respirator, is intended to determine whether the individual being tested can detect the taste of saccharin.

(1) During threshold screening as well as during fit testing, subjects shall wear an enclosure about the head and shoulders that is approximately 12 inches in diameter by 14 inches tall with at least the front portion clear and that allows free movements of the head when a respirator is worn. An enclosure substantially similar to the 3M hood assembly, parts # FT 14 and # FT 15 combined, is adequate.

(2) The test enclosure shall have a ¾ inch hole in front of the test subject's nose and mouth area to accommodate the nebulizer nozzle.

(3) The test subject shall don the test enclosure. Throughout the threshold screening test, the test subject shall breathe through his/her wide open mouth with tongue extended.

(4) Using a DeVilbiss Model 40 Inhalation Medication Nebulizer the test conductor shall spray the threshold check solution into the enclosure. This nebulizer shall be clearly marked to distinguish it from the fit test solution nebulizer.

(5) The threshold check solution consists of 0.83 grams of sodium saccharin USP in 1 cc of warm water. It can be prepared by putting 1 cc of the fit test solution (see (b)(5) below) in 100 cc of distilled water.

(6) To produce the aerosol, the nebulizer bulb is firmly squeezed so that it collapses completely, then released and allowed to fully expand.

(7) Ten squeezes are repeated rapidly and then the test subject is asked whether the saccharin can be tasted.

(8) If the first response is negative, ten more squeezes are repeated rapidly and the test subject is again asked whether the saccharin is tasted.

(9) If the second response is negative, ten more squeezes are repeated rapidly and the test subject is again asked whether the saccharin is tasted.

(10) The test conductor will take note of the number of squeezes required to solicit a taste response.

(11) If the saccharin is not tasted after 30 squeezes (step 10), the test subject may not perform the saccharin fit test.

(12) If a taste response is elicited, the test subject shall be asked to take note of the taste for reference in the fit test.

(13) Correct use of the nebulizer means that approximately 1 cc of liquid is used at a time in the nebulizer body.

(14) The nebulizer shall be thoroughly rinsed in water, shaken dry, and refilled at least each morning and afternoon or at least every four hours.

(b) Saccharin solution aerosol fit test procedure

(1) The test subject may not eat, drink (except plain water), or chew gum for 15 minutes before the test.

(2) The fit test uses the same enclosure described in I. B. 3. (a) of this appendix.

(3) The test subject shall don the enclosure while wearing the respirator selected in section I. B. 3. (a) of this appendix. The respirator shall be properly adjusted and equipped with a particulate filter(s).

(4) A second DeVilbiss Model 40 Inhalation Medication Nebulizer is used to spray the fit test solution into the enclosure. This nebulizer shall be clearly marked to distinguish it from the screening test solution nebulizer.

(5) The fit test solution is prepared by adding 83 grams of sodium saccharin to 100 cc of warm water.

(6) As before, the test subject shall breathe through the wide open mouth with tongue extended.

(7) The nebulizer is inserted into the hole in the front of the enclosure and the fit test solution is sprayed into the enclosure using the same number of squeezes required to elicit a taste response in the screening test.

(8) After generating the aerosol the test subject shall be instructed to perform the exercises in section I. A. 14 above.

(9) Every 30 seconds the aerosol concentration shall be replenished using one half the number of squeezes as initially.

(10) The test subject shall indicate to the test conductor if at any time during the fit test the taste of saccharin is detected.

(11) If the taste of saccharin is detected, the fit is deemed unsatisfactory and a different respirator shall be tried.

(12) Successful completion of the test protocol shall allow the use of the tested respirator in contaminated atmospheres up to 10 times the PEL. In other words, this protocol may be used for assigned protection factors no higher than 10.

4. *Irritant Fume Protocol.* (a) The respirator to be tested shall be equipped with high-efficiency particulate air (HEPA) filters.

(b) The test subject shall be allowed to smell a weak concentration of the irritant smoke before the respirator is donned to become familiar with its characteristic odor.

(c) Break both ends of a ventilation smoke tube containing stannic oxychloride, such as the MSA part No. 5645, or equivalent. Attach one end of the smoke tube to a low flow air pump set to deliver 200 milliliters per minute.

(d) Advise the test subject that the smoke can be irritating to the eyes and instruct the subject to keep his/her eyes closed while the test is performed.

VOL
58
ISS
84
MY
4
1993
UMI

(e) The test conductor shall direct the stream of irritant smoke from the smoke tube towards the face seal area of the test subject. He/She shall begin at least 12 inches from the facepiece and gradually move to within one inch, moving around the whole perimeter of the mask.

(f) The exercises identified in section I. A. 14 above shall be performed by the test subject while the respirator seal is being challenged by the smoke.

(g) Each test subject passing the smoke test without evidence of a response shall be given a sensitivity check of the smoke from the same tube once the respirator has been removed to determine whether he/she reacts to the smoke. Failure to evoke a response shall void the fit test.

(h) The fit test shall be performed in a location with exhaust ventilation sufficient to prevent general contamination of the testing area by the test agent.

C. Quantitative Fit Test (QNFT) Protocol. 1. General. (a) The employer shall assign specific individuals who shall assume full responsibility for implementing the respirator quantitative fit test program.

(b) The employer shall ensure that persons administering QNFT are able to calibrate equipment and perform tests properly, recognize invalid tests, calculate fit factors properly and assure that test equipment is in proper working order.

(c) The employer shall assure that QNFT equipment is kept clean and well maintained so as to operate at the parameters for which it was designed.

2. Definitions. (a) Quantitative fit test. The test is performed in a test chamber. The normal air-purifying element of the respirator is replaced by a high-efficiency particulate air (HEPA) filter in the case of particulate QNFT aerosols or a sorbent offering contaminant penetration protection equivalent to high-efficiency filters where the QNFT test agent is a gas or vapor.

(b) Challenge agent means the aerosol, gas or vapor introduced into a test chamber so that its concentration inside and outside the respirator may be measured.

(c) Test subject means the person wearing the respirator for quantitative fit testing.

(d) Normal standing position means standing erect and straight with arms down along the sides and looking straight ahead.

(e) Maximum peak penetration method means the method of determining test agent penetration in the respirator as determined by strip chart recordings of the test. The highest peak penetration for a given exercise is taken to be representative of average penetration into the respirator for that exercise.

(f) Average peak penetration method means the method of determining test agent penetration into the respirator utilizing a strip chart recorder, integrator, or computer. The agent penetration is determined by an average of the peak heights on the graph or by computer integration, for each exercise except the grimace exercise. Integrators or computers which calculate the actual test agent penetration into the respirator for each exercise will also be considered to meet the requirements of the average peak penetration method.

(g) "Fit Factor" means the ration of challenge agent concentration outside with respect to the inside of a respirator inlet covering (facepiece or enclosure).

3. Apparatus. (a) Instrumentation. Aerosol generation, dilution, and measurement systems using corn oil or sodium chloride as test aerosols shall be used for quantitative fit testing.

(b) Test chamber. The test chamber shall be large enough to permit all test subjects to perform freely all required exercises without disturbing the challenge agent concentration or the measurement apparatus. The test chamber shall be equipped and constructed so that the challenge agent is effectively isolated from the ambient air, yet uniform in concentration throughout the chamber.

(c) When testing air-purifying respirators, the normal filter or cartridge element shall be replaced with a high-efficiency particulate filter supplied by the same manufacturer.

(d) The sampling instrument shall be selected so that a strip chart record may be made of the test showing the rise and fall of the challenge agent concentration with each inspiration and expiration at fit factors of at least 2,000. Integrators or computers which integrate the amount of test agent penetration leakage into the respirator for each exercise may be used provided a record of the readings is made.

(e) The combination of substitute air-purifying elements, challenge agent and challenge agent concentration in the test chamber shall be such that the test subject is not exposed in excess of an established exposure limit for the challenge agent at any time during the testing process.

(f) The sampling port on the test specimen respirator shall be placed and constructed so that no leakage occurs around the port (e.g. where the respirator is probed), a free air flow is allowed into the sampling line at all times and so that there is no interference with the fit or performance of the respirator.

(g) The test chamber and test set up shall permit the person administering the test to observe the test subject inside the chamber during the test.

(h) The equipment generating the challenge atmosphere shall maintain the concentration of challenge agent inside the test chamber constant to within a 10 percent variation for the duration of the test.

(i) The time lag (interval between an event and the recording of the event on the strip chart or computer or integrator) shall be kept to a minimum. There shall be a clear association between the occurrence of an event inside the test chamber and its being recorded.

(j) The sampling line tubing for the test chamber atmosphere and for the respirator sampling port shall be of equal diameter and of the same material. The length of the two lines shall be equal.

(k) The exhaust flow from the test chamber shall pass through a high-efficiency filter before release.

(l) When sodium chloride aerosol is used, the relative humidity inside the test chamber shall not exceed 50 percent.

(m) The limitations of instrument detection shall be taken into account when determining the fit factor.

(n) Test respirators shall be maintained in proper working order and inspected for deficiencies such as cracks, missing valves and gaskets, etc.

4. Procedural Requirements. (a) When performing the initial positive or negative pressure test the sampling line shall be crimped closed in order to avoid air pressure leakage during either of these tests.

(b) An abbreviated screening isoamyl acetate test or irritant fume test may be utilized in order to quickly identify poor fitting respirators which passed the positive and/or negative pressure test and thus reduce the amount of QNFT time. When performing a screening isoamyl acetate test, combination high-efficiency organic vapor cartridges/canisters shall be used.

(c) A reasonably stable challenge agent concentration shall be measured in the test chamber prior to testing. For canopy or shower curtain type of test units the determination of the challenge agent stability may be established after the test subject has entered the test environment.

(d) Immediately after the subject enters the test chamber, the challenge agent concentration inside the respirator shall be measured to ensure that the peak penetration does not exceed 5 percent for a half mask or. 1 percent for a full facepiece respirator.

(e) A stable challenge concentration shall be obtained prior to the actual start of testing.

(f) Respirator restraining straps shall not be overtightened for testing. The straps shall be adjusted by the wearer without assistance from other persons to give a reasonable comfortable fit typical of normal use.

(g) The test shall be terminated whenever any single peak penetration exceeds 5 percent for half masks and 1 percent for full facepiece respirators. The test subject shall be refitted and retested. If two of the three required tests are terminated, the fit shall be deemed inadequate.

(h) In order to successfully complete a QNFT, three successful fit tests are required. The results of each of the three independent fit tests must exceed the minimum fit factor needed for the class of respirator (e.g. half mask respirator, full facepiece respirator).

(i) Calculation of fit factors.

(1) The fit factor shall be determined for the quantitative fit test by taking the ratio of the average chamber concentration to the concentration inside the respirator.

(2) The average test chamber concentration is the arithmetic average of the test chamber concentration at the beginning and of the end of the test.

(3) The concentration of the challenge agent inside the respirator shall be determined by one of the following methods:

(i) Average peak concentration

(ii) Maximum peak concentration

(iii) Integration by calculation of the area under the individual peak for each exercise. This includes computerized integration.

(j) Interpretation of test results. The fit factor established by the quantitative fit testing shall be the lowest of the three fit factor values calculated from the three required fit tests.

(k) The test subject shall not be permitted to wear a half mask, or full facepiece respirator unless a minimum fit factor equivalent to at least 10 times the hazardous exposure level is obtained.

(l) Filters used for quantitative fit testing shall be replaced at least weekly, or whenever increased breathing resistance is encountered, or when the test agent has altered the integrity of the filter media. Organic vapor cartridges/canisters shall be replaced daily (when used) or sooner if there is any indication of breakthrough by a test agent.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Parts 430, 436, and 452

[Docket No. 91N-0458]

Antibiotic Drugs; Clarithromycin, Clarithromycin Tablets

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending the antibiotic drug regulations to provide for the inclusion of accepted standards for a new antibiotic drug, clarithromycin, and the use of the antibiotic drug in a dosage form, clarithromycin tablets. The manufacturer has supplied sufficient data and information to establish its safety and efficacy.

DATES: Effective June 3, 1993; written comments, notice of participation, and request for hearing by June 3, 1993; data, information, and analyses to justify a hearing by July 6, 1993.

ADDRESSES: Submit written comments to the Dockets Management Branch (HFA-305), Food and Drug Administration, rm. 1-23, 12420 Parklawn Dr., Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Peter A. Dionne, Center for Drug Evaluation and Research (HFD-520), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301-443-0335.

SUPPLEMENTARY INFORMATION: FDA has evaluated data submitted in accordance with regulations promulgated under section 507 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 357), as amended, with respect to a request for approval of a new antibiotic drug, clarithromycin, and its use in a dosage form, clarithromycin tablets. The agency has concluded that the data supplied by the manufacturer concerning these antibiotic drugs are adequate to establish their safety and efficacy when used as directed in the labeling and that the regulations should be amended in 21 CFR parts 430, 436, and 452 to provide for the inclusion of accepted standards for these products.

Environmental Impact

The agency has determined under 21 CFR 25.24(c)(6) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

Submitting Comments and Filing Objections

This final rule announces standards that FDA has accepted in a request for approval of an antibiotic drug. Because this final rule is not controversial and because when effective it provides notice of accepted standards, FDA finds that notice and comment procedure is unnecessary and not in the public interest. This final rule, therefore, becomes effective June 3, 1993. However, interested persons may, on or before June 3, 1993, submit comments to the Dockets Management Branch (address above). Two copies of any comments are to be submitted, except that individuals may submit one copy. Comments are to be identified with the docket number found in brackets in the heading of this document. Received comments may be seen in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

Any person who will be adversely affected by this final rule may file objections to it and request a hearing. Reasonable grounds for the hearing must be shown. Any person who decides to seek a hearing must file (1) on or before June 3, 1993, a written notice of participation and request for a hearing, and (2) on or before July 6, 1993, the data, information, and analyses on which the person relies to justify a hearing, as specified in 21 CFR 314.300. A request for a hearing may not rest upon mere allegations or denials, but must set forth specific facts showing that there is a genuine and substantial issue of fact that requires a hearing. If it conclusively appears from the face of the data, information, and factual analyses in the request for hearing that no genuine and substantial issue of fact precludes the action taken by this order, or if a request for a hearing is not made in the required format or with the required analyses, the Commissioner of Food and Drugs will enter summary judgment against the person(s) who request(s) the hearing, making findings and conclusions and denying a hearing. All submissions must be filed in three copies, identified with the docket number appearing in the heading of this document and filed with the Dockets Management Branch.

The procedures and requirements governing this order, a notice of participation and request for hearing, a submission of data, information, and analyses to justify a hearing, other comments, and grant or denial of a hearing are contained in 21 CFR 314.300.

All submissions under this order, except for data and information prohibited from public disclosure under 21 U.S.C. 331(j) or 18 U.S.C. 1905, may be seen in the Dockets Management Branch (address above) between 9 a.m. and 4 p.m., Monday through Friday.

List of Subjects

21 CFR Part 430

Administrative practice and procedure, Antibiotics.

21 CFR Part 436

Antibiotics.

21 CFR Part 452

Antibiotics.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, 21 CFR parts 430, 436, and 452 are amended as follows:

PART 430—ANTIBIOTIC DRUGS; GENERAL

1. The authority citation for 21 CFR part 430 continues to read as follows:

Authority: Secs. 201, 501, 502, 503, 505, 507, 701 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 321, 351, 352, 353, 355, 357, 371); secs. 215, 301, 351 of the Public Health Service Act (42 U.S.C. 216, 241, 262).

2. Section 430.4 is amended by adding new paragraph (a)(64) to read as follows:

§ 430.4 Definitions of antibiotic substances.

(a) * * *

(64) *Clarithromycin.* Clarithromycin is 6-O-methylerythromycin A.

* * * * * *

3. Section 430.5 is amended by adding new paragraphs (a)(99) and (b)(101) to read as follows:

§ 430.5 Definitions of master and working standards.

(a) * * *

(99) *Clarithromycin.* The term "clarithromycin master standard" means a specific lot of clarithromycin that is designated by the Commissioner as the standard of comparison in determining the potency of the clarithromycin working standard.

(b) * * *

(101) *Clarithromycin.* The term "clarithromycin working standard" means a specific lot of a homogeneous preparation of clarithromycin.

4. Section 430.6 is amended by adding new paragraph (b)(101) to read as follows:

§ 430.6 Definitions of the terms "unit" and "microgram" as applied to antibiotic substances.

* * * * * *

(b) * * *

(101) *Clarithromycin.* The term "microgram" applied to clarithromycin means the clarithromycin (potency) contained in 1.010 micrograms of the clarithromycin master standard.

PART 436—TESTS AND METHODS OF ASSAY OF ANTIBIOTIC AND ANTIBIOTIC-CONTAINING DRUGS

5. The authority citation for 21 CFR part 436 continues to read as follows:

Authority: Sec. 507 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 357).

6. Section 436.215 is amended by alphabetically adding a new entry to the table in paragraph (b) and by adding new paragraph (c)(13) to read as follows:

§ 436.215 Dissolution test.

* * * * * *

(b) * * *

Dosage form	Dissolution medium	Rotation rate[1]	Sampling time(s)	Apparatus
*	*	*	*	*
Clarithromycin tablets	900 mL 0.10 *M* sodium acetate buffer, pH 5.0.	50	30 min	2
*	*	*	*	*

[1] Rotation rate of basket or paddle stirring element (revolutions per minute).

(c) * * *

(13) *Clarithromycin.* Proceed as directed in § 452.50(b)(1) of this chapter except:

(i) *Dissolution medium.* Instead of the mobile phase described in § 452.50(b)(1)(i) of this chapter, use 0.10 *M* sodium acetate buffer prepared as follows: Weigh 13.6 grams of sodium acetate trihyrate into a container sufficient to hold 1 liter of solution. Dissolve the salt in 750 milliliters of distilled water. Adjust the pH of the solution to 5.0±0.05 with glacial acetic acid. Dilute to 1,000 milliliters with distilled water.

(ii) *Preparation of the standard and sample solutions*—(a) *Standard solution.* Dissolve (with shaking or sonication) an accurately weighed portion of the clarithromycin working standard, in sufficient methanol to obtain a solution having a known concentration of approximately 625 micrograms per milliliter of clarithromycin. Quantitatively transfer and dilute an aliquot of this solution with mobile phase (described in § 452.50(b)(1)(i) of this chapter) and mix to obtain a solution of known concentration of approximately 125 micrograms per milliliter of clarithromycin.

(b) *Sample solution.* Use the sample solution as it is removed from the dissolution vessel after diluting and mixing with mobile phase (described in § 452.50(b)(1)(i) of this chapter) 1:2 for the 250-milligram tablet and 1:4 for the 500-milligram tablet.

(c) *Calculations.* Determine the total amount of clarithromycin activity dissolved as follows:

$$T = \frac{A_U \times c \times d \times 900}{A_S}$$

where:
T = Total milligrams of clarithromycin activity dissolved;
A_U = Area of the clarithromycin peak (at a retention time equal to that observed for the standard) in the chromatogram of the sample;
A_S = Area of the clarithromycin peak in the chromatogram of the clarithromycin standard;
c = Clarithromycin activity in the clarithromycin working standard solution in milligrams per milliliter; and
d = Dilution factor of sample filtrate.

* * * * * *

PART 452—MACROLIDE ANTIBIOTIC DRUGS

7. The authority citation for 21 CFR part 452 continues to read as follows:

Authority: Soc. 507 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 357).

8. New § 452.50 is added to subpart A to read as follows:

§ 452.50 Clarithromycin.

(a) *Requirements for certification*—(1) *Standards of identity, strength, quality, and purity.* Clarithromycin is 6-O-methylerythromycin A. It is so purified and dried that:

(i) Its potency is not less than 960 micrograms of clarithromycin activity per milligram, on an anhydrous basis.

(ii) Its moisture content is not more than 2.0 percent.

(iii) The pH of a 0.2 percent (weight per volume) slurry in aqueous methanol (95:5) is not less than 7.5 and not more than 10.0.

(iv) Its residue on ignition is not more than 0.3 percent.

(v) Its heavy metals content is not more than 20 parts per million.

(vi) Its specific rotation in chloroform containing 10 milligrams of clarithromycin per milliliter at 20 °C is between -89° and -95°, calculated on an anhydrous basis.

(vii) It gives a positive identity test.

(viii) It is crystalline.

(2) *Labeling.* It shall be labeled in accordance with the requirements of § 432.5 of this chapter.

(3) *Requests for certification; samples.* In addition to complying with the requirements of § 431.1 of this chapter, each such request shall contain:

(i) Results of tests and assays on the batch for clarithromycin potency, moisture, pH, residue on ignition, heavy metals, specific rotation, identity, and crystallinity.

(ii) Samples, if required by the Director, Center for Drug Evaluation and Research: 10 packages, each containing approximately 500 milligrams.

(b) *Tests and methods of assay*—(1) *Potency.* Proceed as directed in § 436.216 of this chapter, using a constant column temperature of 50 °C, a suitable ultraviolet detection system operating at 210 nanometers, an analytical column 3 to 30 centimeters long packed with a reversed phase packing material such as octadecyl hydrocarbon bonded silicas (3 to 10 micrometers in diameter), the inlet of this column is connected to a guard column 1 to 5 centimeters in length packed with the same material of 5- to 30-micrometer particle size, a constant flow rate of 0.7 to 1.0 milliliters per minute, and a known injection volume of between 10 and 20 microliters. The retention time for clarithromycin is between 5 and 6 minutes and the retention time for 6,11-Di-O-

VOL 58 ISS 84 MY 4 1993 UMI

methylerythromycin A (resolution compound) is between 7 and 8 minutes. Mobile phase, system suitability solution, working standard and sample solutions, system suitability requirements, and calculations are as follows:

(i) *Mobile phase.* Add 650 milliliters of methanol and 350 milliliters of 0.067 *M* potassium phosphate (monobasic) to a suitable container, mix well, and adjust the pH to 4.0 with phosphoric acid. Filter through a suitable filter capable of removing particulate matter to 0.5 micron in diameter. Degas the mobile phase just prior to its introduction into the chromatograph.

(ii) *Preparation of system suitability solution.* Prepare a methanol solution containing approximately 625 micrograms per milliliter each of clarithromycin and 6,11-Di-O-methylerythromycin A. Quantitatively transfer an aliquot of this solution to a suitable volumetric flask and dilute it to volume with mobile phase to obtain a solution containing approximately 125 micrograms each of clarithromycin and 6,11-Di-O-methylerythromycin A.

(iii) *Preparation of working standard solution.* Dissolve (by shaking or sonication) an accurately weighed portion of clarithromycin working standard in sufficient methanol to obtain a known solution containing about 625 micrograms of clarithromycin activity per milliliter. Quantitatively transfer an aliquot of this solution to a suitable volumetric flask and dilute to volume with mobile phase and mix to obtain a known solution containing approximately 125 micrograms of clarithromycin activity per milliliter. Filter through a suitable filter capable of removing particulate matter to 0.5 micron in diameter.

(iv) *Sample solution.* Dissolve (by shaking or sonication) an accurately weighed portion of the sample in sufficient methanol to obtain a solution containing 625 micrograms of clarithromycin activity per milliliter (estimated). Quantitatively transfer an aliquot of this solution to a suitable volumetric flask and dilute to volume with mobile phase and mix to obtain a known solution containing approximately 125 micrograms of clarithromycin activity per milliliter (estimated). Filter through a suitable filter capable of removing particulate matter to 0.5 micron in diameter.

(v) *System suitability requirements*—(A) *Asymmetry factor.* The asymmetry factor (A_s) is satisfactory if it is not less than 0.9 and not more than 1.5 for the clarithromycin peak.

(B) *Efficiency of the column.* The absolute efficiency (h_r) is satisfactory if it is not more than 40.0 for the clarithromycin peak.

(C) *Resolution factor.* The resolution factor (R) between the peak for clarithromycin and the peak for 6,11-Di-O-methylerythromycin A is satisfactory if it is not less than 2.0.

(D) *Coefficient of variation (relative standard deviation).* The coefficient of variation (S_R in percent of 5 replicate injections) is satisfactory if it is not more than 2.0 percent.

(E) *Capacity factor.* Calculate the clarithromycin capacity factor (k') as follows:

$$k' = (t_r/t_0)-1$$

where:

t_r = Retention time of the clarithromycin peak; and

t_0 = Void volume time.

The capacity factor is satisfactory if it is not less than 1.3 and not more than 4.0. If the system suitability parameters have been met, then proceed as described in § 436.216(b) of this chapter.

(vi) *Calculations.* Calculate the micrograms of clarithromycin per milligram of sample on an anhydrous basis as follows:

$$\text{Micrograms of clarithromycin per milligram} = \frac{A_U \times P_S \times 100}{A_S \times C_U \times (100-m)}$$

where:

A_U = Area of the clarithromycin peak (at a retention time equal to that observed for the clarithromycin standard) in the chromatogram of the sample;

A_S = Area of the clarithromycin peak in the chromatogram of the clarithromycin working standard;

P_S = Clarithromycin activity in the clarithromycin working standard solution in micrograms per milliliter;

C_U = Milligrams of sample per milliliter of sample solution; and

m = Percent moisture content of the sample.

(2) *Moisture.* Proceed as directed in § 436.201 of this chapter, using the sample preparation described in paragraph (d)(1) of that section and the titration procedure described in paragraph (e)(3) of that section, except that instead of adding 20 millliliters of solvent A before starting the titration, add a sufficient volume of solvent C to cover the electrodes in the dry titrating vessel.

(3) *pH.* Proceed as directed in § 436.202 of this chapter, except standardize the pH meter with pH 7.0 and pH 10.0 buffers and prepare the sample as follows: Transfer 200 milligrams of the sample to a 150-milliliter beaker. Add 5 milliliters of methanol and then 95 milliliters of distilled water. Place the pH electrodes in the slurry and stir at the slowest speed possible to ensure mixing but no vortex. After 10 minutes, while still stirring, determine the pH.

(4) *Residue on ignition.* Proceed as directed in § 436.207(a) of this chapter.

(5) *Heavy metals.* Proceed as directed in § 436.208 of this chapter.

(6) *Specific rotation.* Dilute an accurately weighed sample with sufficient chloroform to give a concentration of approximately 10 milligrams of clarithromycin per milliliter. Proceed as directed in § 436.210 of this chapter, using a 1.0-decimeter polarimeter tube, maintaining the solution at 20 °C, and calculate the specific rotation on an anhydrous basis.

(7) *Identity.* Proceed as directed in § 436.211 of this chapter, preparing the sample as follows: Prepare a 5-percent solution of the sample in chloroform and use 0.1 millimeter matched absorption cells.

(8) *Crystallinity.* Proceed as directed in § 436.203(a) of this chapter.

9. New § 452.150 is added to subpart B to read as follows:

§ 452.150 Clarithromycin tablets.

(a) *Requirements for certification*—(1) *Standards of identity, strength, quality, and purity.* Clarithromycin tablets are composed of clarithromycin and one or more suitable and harmless diluents, binders, lubricants, colorings, and flavorings. Each tablet contains 250 milligrams or 500 milligrams of clarithromycin activity. Its clarithromycin content is satisfactory if it is not less than 90 percent and not more than 110 percent of the number of milligrams of clarithromycin that it is represented to contain. The loss on drying is not more than 6.0 percent. It passes the dissolution test. It passes the identity test. The clarithromycin used conforms to the standards prescribed by § 452.50(a)(1).

(2) *Labeling.* It shall be labeled in accordance with the requirements of § 432.5 of this chapter.

(3) *Requests for certification samples.* In addition to complying with the requirements of § 431.1 of this chapter, each such request shall contain:

(i) Results of tests and assays on:

(A) The clarithromycin used in making the batch for potency, moisture, pH, residue on ignition, heavy metals, specific rotation, identity, and crystallinity.

(B) The batch for content, loss on drying, dissolution, and identity.

(ii) Samples, if required by the Director, Center for Drug Evaluation and Research:

(A) The clarithromycin used in making the batch: 10 packages, each containing approximately 500 milligrams.

(B) The batch: A minimum of 100 tablets.

(b) *Tests and methods of assay*—(1) *Clarithromycin content.* Proceed as directed in § 452.50(b)(1), preparing the sample solution and calculating the clarithromycin content as follows:

(i) *Preparation of sample solution.* Grind and composite five whole tablets in a glass mortar and pestle and quantitatively transfer the powder to a 500-milliliter volumetric flask with 50 milliliters of distilled water and shake mechanically until the tablets are well dispersed (approximately 5 to 10 minutes). Add 300 milliliters of methanol and shake mechanically for 30 minutes. Dilute with methanol to volume and mix. Allow the excipients to settle. Quantitatively transfer and dilute a convenient aliquot of the supernatant with mobile phase (described in § 452.50(b)(1)(i)) to obtain a solution containing 125 micrograms of clarithromycin per milliliter (estimated). Filter through a suitable filter capable of removing particulate matter 0.5 micron in diameter.

(ii) *Calculations.* Calculate the clarithromycin content as follows:

$$\text{Milligrams of clarithromycin per tablet} = \frac{A_U \times P_S \times d}{A_S \times 1{,}000 \times n}$$

where:

A_U = Area of the clarithromycin peak (at a retention time equal to that observed for the clarithromycin standard) in the chromatogram of the sample;

A_S = Area of the clarithromycin peak in the chromatogram of the clarithromycin working standard;

P_S = Clarithromycin activity in the clarithromycin working standard solution in micrograms per milliliter;

d = Dilution factor of the sample; and

n = Number of tablets in the sample.

(2) *Loss on drying.* Proceed as directed in § 436.200(c) of this chapter, using a sample weight of 1 to 2 grams.

(3) *Dissolution.* Proceed as directed in § 436.215 of this chapter. The quantity Q (the amount of clarithromycin dissolved) is 80 percent at 30 minutes.

(4) *Identity.* Using the high-performance liquid chromatographic procedure described in paragraph (b)(1) of this section, the retention time for the peak of the active ingredient must be within 2 percent of the retention time for the peak of the corresponding reference standard.

Dated: March 26, 1993.

Paul F. Vogel,

Acting Director, Office of Compliance, Center for Drug Evaluation and Research.

BILLING CODE 4160-01-F

Food and Drug Administration

21 CFR Parts 430, 436, and 452

[Docket No. 92N-0112]

Antibiotic Drugs; Azithromycin, Azithromycin Capsules

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending the antibiotic drug regulations to provide for the inclusion of accepted standards for a new antibiotic drug, azithromycin, and the use of the antibiotic drug in a dosage form, azithromycin capsules. The manufacturer has supplied sufficient data and information to establish its safety and efficacy.

DATES: Effective June 3, 1993; written comments, notice of participation, and request for hearing by June 3, 1993; data, information, and analyses to justify a hearing by July 6, 1993.

ADDRESSES: Submit written comments to the Dockets Management Branch (HFA-305), Food and Drug Administration, rm. 1-23, 12420 Parklawn Dr., Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Peter A. Dionne, Center for Drug Evaluation and Research (HFD-520), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301-443-0335.

SUPPLEMENTARY INFORMATION: FDA has evaluated data submitted in accordance with regulations promulgated under section 507 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 357), as amended, with respect to a request for approval of a new antibiotic drug, azithromycin, and its use in a dosage form, azithromycin capsules. The agency has concluded that the data supplied by the manufacturer concerning these antibiotic drugs are adequate to establish their safety and efficacy when used as directed in the labeling and that the regulations should be amended in 21 CFR parts 430, 436, and 452 to provide for the inclusion of accepted standards for these products.

Environmental Impact

The agency has determined under 21 CFR 25.24(c)(6) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

Submitting Comments and Filing Objections

This final rule announces standards that FDA has accepted in a request for approval of an antibiotic drug. Because this final rule is not controversial and because when effective it provides notice of accepted standards, FDA finds that notice and comment procedure is unnecessary and not in the public interest. This final rule, therefore, becomes effective June 3, 1993. However, interested persons may, on or before June 3, 1993, submit comments to the Dockets Management Branch (address above). Two copies of any comments are to be submitted, except that individuals may submit one copy. Comments are to be identified with the docket number found in brackets in the heading of this document. Received comments may be seen in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

Any person who will be adversely affected by this final rule may file objections to it and request a hearing. Reasonable grounds for the hearing must be shown. Any person who decides to seek a hearing must file (1) on or before June 3, 1993, a written notice of participation and request for hearing, and (2) on or before July 6, 1993, the data, information, and analyses on which the person relies to justify a hearing, as specified in 21 CFR 314.300. A request for a hearing may not rest upon mere allegations or denials, but must set forth specific facts showing that there is a genuine and substantial issue of fact that requires a hearing. If it conclusively appears from the face of the data, information, and factual analyses in the request for hearing that no genuine and substantial issue of fact precludes the action taken by this order, or if a request for hearing is not made in the required format or with the required analyses, the Commissioner of Food and Drugs will enter summary judgment against the person(s) who request(s) the hearing, making findings and conclusions and denying a hearing. All submissions must be filed in three copies, identified with the docket number appearing in the heading of this document and filed with the Dockets Management Branch.

The procedures and requirements governing this order, a notice of participation and request for hearing, a submission of data, information, and analyses to justify a hearing, other comments, and grant or denial of a hearing are contained in 21 CFR 314.300.

All submissions under this order, except for data and information

VOL 58 ISS 84 MY 4 1993 UMI

prohibited from public disclosure under 21 U.S.C. 331(j) or 18 U.S.C. 1905, may be seen in the Dockets Management Branch (address above) between 9 a.m. and 4 p.m., Monday through Friday.

List of Subjects

21 CFR Part 430

Administrative practice and procedure, Antibiotics.

21 CFR Parts 436 and 452

Antibiotics.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, 21 CFR parts 430, 436, and 452 are amended as follows:

PART 430—ANTIBIOTIC DRUGS; GENERAL

1. The authority citation for 21 CFR part 430 continues to read as follows:

Authority: Secs. 201, 501, 502, 503, 505, 507, 701 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 321, 351, 352, 353, 355, 357, 371); secs. 215, 301, 351 of the Public Health Service Act (42 U.S.C. 216, 241, 262).

2. Section 430.4 is amended by adding new paragraph (a)(65) to read as follows:

§ 430.4 Definitions of antibiotic substances.

(a) • • •

(65) *Azithromycin.* Azithromycin is an antibiotic substance having the chemical structure described by the following name: (2*R*,3*S*,4*R*,5*R*,8*R*,10*R*,11*R*,12*S*,13*S*,14*R*)-13-[(2,6-dideoxy-3-*C*-methyl-3-*O*-methyl-α-*L*-*ribo*-hexopyranosyl)oxy]-2-ethyl-3,4,10-trihydroxy-3,5,6,8,10,12,14-heptamethyl-11-[[3,4,6-trideoxy-3-(dimethylamino)-β-*D*-*xylo*-hexopyranosyl]oxy]-1-oxa-6-azacyclopentadecan-15-one.

• • • • •

3. Section 430.5 is amended by adding new paragraphs (a)(100) and (b)(102) to read as follows:

§ 430.5 Definitions of master and working standards.

(a) • • •

(100) *Azithromycin.* The term "azithromycin master standard" means a specific lot of azithromycin that is designated by the Commissioner as the standard of comparison in determining the potency of the azithromycin working standard.

(b) • • •

(102) *Azithromycin.* The term "azithromycin working standard" means a specific lot of a homogeneous preparation of azithromycin.

4. Section 430.6 is amended by adding new paragraph (b)(102) to read as follows:

§ 430.6 Definitions of the terms "unit" and "microgram" as applied to antibiotic substances.

• • • • •

(b) • • •

(102) *Azithromycin.* The term "microgram" applied to azithromycin means the azithromycin (potency) contained in 1.063 micrograms of the azithromycin master standard.

PART 436—TESTS AND METHODS OF ASSAY OF ANTIBIOTIC AND ANTIBIOTIC-CONTAINING DRUGS

5. The authority citation for 21 CFR part 436 continues to read as follows:

Authority: Sec. 507 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 357).

6. Section 436.215 is amended by alphabetically adding a new entry to the table in paragraph (b) and by adding new paragraph (c)(14) to read as follows:

§ 436.215 Dissolution test.

• • • • •

(b) • • •

Dosage form	Dissolution medium	Rotation rate[1]	Sampling time(s)	Apparatus
•	•	•	•	•
Azithromycin capsules.	900 mL 0.10 *M* sodium phosphate buffer, pH 6.0, 0.1 mg/mL trypsin..	100	45 min	2
•	•	•	•	•

[1] Rotation rate of basket or paddle stirring element (revolutions per minute).

(c) • • •

(14) *Azithromycin.* Proceed as directed in § 452.60(b)(1) of this chapter, except:

(i) *Dissolution medium.* Dissolve 85.2 grams of sodium phosphate dibasic and dilute to volume with ultrapure deionized or high-performance liquid chromatographic-grade water in a stoppered 2-liter graduated cylinder. Dilute this entire solution in an appropriate, suitably sized container with 4 liters of ultrapure deionized or high-performance liquid chromatographic-grade water. Adjust the pH to 6.0±0.05 with concentrated hydrochloric acid (about 40.5 milliliters). Add 600 milligrams of trypsin and mix well.

(ii) *Preparation of the standard and sample solutions*—(a) *Standard solution.* Accurately weigh approximately 15 milligrams of the azithromycin working standard into a 50-milliliter volumetric flask. Add 25 milliliters of the dissolution medium and sonicate briefly. Dilute to volume with dissolution medium and mix well. Pipet 2.0 milliliters of this solution into a 25-milliliter volumetric flask and dilute to volume with the mobile phase described in § 452.60(b)(1)(i) of this chapter. Pipet 4.0 milliliters of this solution into a 25-milliliter volumetric flask and bring to volume with the mobile phase.

(*b*) *Sample solution.* Filter the sample solutions through a 0.45-micron filter before use. Pipet 2.0 milliliters of the filtered aliquot into a 25-milliliter volumetric flask and dilute to volume with the mobile phase described in § 452.60(b)(1)(i) of this chapter. Pipet 4.0 milliliters of this solution into another 25-milliliter volumetric flask and bring to volume with the mobile phase. The solution is stable at room temperature for 24 hours.

(c) *Calculations.* Determine the percent of azithromycin dissolved as follows:

$$\text{Percent azithromycin dissolved} = \frac{A_U \times P_S \times D_F \times 100}{A_S \times W_U}$$

where:

A_U = Area of the azithromycin peak (at a retention time equal to that observed for the standard) in the chromatogram of the sample;

A_S = Area of the azithromycin peak in the chromatogram of the azithromycin standard;

P_S = Azithromycin activity in the azithromycin working standard solution in micrograms per milliliter;

$$DF = \text{Dilution factor} = \frac{900^1 \times 25 \times 25}{2 \times 4}$$

[1] If more than 15 milliliters of dissolution medium are removed, correct for the volume removed; and

W_U = Theoretical azithromycin content (mg) of capsule.

• • • • •

PART 452—MACROLIDE ANTIBIOTIC DRUGS

7. The authority citation for 21 CFR part 452 continues to read as follows:

Authority: Sec. 507 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 357).

8. New § 452.60 is added to subpart A to read as follows:

§ 452.60 Azithromycin.

(a) *Requirements for certificotion*—(1) *Standards of identity, strength, quality, and purity.* Azithromycin is the dihydrate form of (2*R*,3*S*,4*R*,5*R*,8*R*,10*R*,11*R*,12*S*,13*S*,14*R*)-13-[(2,6-dideoxy-3-*C*-methyl-3-*O*-methyl-α-*L*-*ribo*-hexopyranosyl)oxy]-2-ethyl-3,4,10-trihydroxy-3,5,6,8,10,12,14-heptamethyl-11-[[3,4,6-trideoxy-3-(dimethylamino)-β-*D*-*xylo*-hexopyranosyl]oxy]-1-oxa-6-azacyclopentadecan-15-one. It is so purified and dried that:

(i) Its potency is not less than 945 micrograms and not more than 1,030 micrograms of azithromycin activity per milligram, on the anhydrous basis.

(ii) Its moisture content is not less than 4.0 percent and not more than 5.0 percent.

(iii) The pH of an aqueous methanol (1:1) solution containing 2 milligrams per milliliter is not less than 9 and not more than 11.

(iv) Its residue on ignition is not more than 0.3 percent.

(v) Its heavy metals content is not more than 25 parts per million.

(vi) The specific rotation in absolute ethanol containing 20 milligrams of azithromycin per milliliter at 20 °C is between -45° to -49°, calculated on an anhydrous basis.

(vii) It is crystalline.

(viii) It gives a positive identity test.

(2) *Labeling.* It shall be labeled in accordance with the requirements of § 432.5 of this chapter.

(3) *Requests for certification; samples.* In addition to complying with the requirements of § 431.1 of this chapter, each such request shall contain:

(i) Results of tests and assays on the batch for azithromycin potency, moisture, pH, residue on ignition, heavy metals, specific rotation, crystallinity, and identity.

(ii) Samples, if required by the Director, Center for Drug Evaluation and Research: 10 packages, each containing approximately 500 milligrams.

(b) *Tests and methods of assay*—(1) *Potency.* Proceed as directed in § 436.216 of this chapter, using ambient temperature, an amperometric electrochemical detection system with dual glassy carbon electrodes operated in the oxidative screen mode with electrode 1 set at +0.70 volt±0.05 volt and electrode 2 at +0.82 volt±0.05 volt. (The ±0.05-volt variance allows for optimization of the background current to 70 to 100 nanoamperes.) Detection of azithromycin occurs at electrode 2 where the voltage is sufficiently high to oxidize the amine functional groups on the molecules. Use a 15-centimeters by 4.6-millimeters (inside diameter) column packed with alumina-based polybutadiene 5 micrometer spherical particles with 80-angstrom pore size (e.g., ES Industries γRP1/p). The inlet of this column is connected to a guard column 5 centimeters by 4.6 millimeters (inside diameter) packed with the same material. The flow rate is 1.5 milliliters per minute. Use a fixed volume loop injector or equivalent device to inject a volume of 50 microliters into the system. The retention time for azithromycin is between 10 and 13 minutes. Mobile phase, working standard, sample, and resolution solutions, system suitability requirements, and calculations are as follows:

(i) *Mobile phase.* Dissolve 5.8 grams of potassium phosphate monobasic in 2,130 milliliters of ultrapure deionized or high-performance liquid chromatographic-grade water. Add 870 milliliters of acetonitrile and mix. The mobile phase is 0.02 *M* potassium phosphate monobasic: acetonitrile (71:29). Adjust the pH of the mobile phase to pH 11.0±0.1 with 10 *M* potassium hydroxide (about 6 milliliters). Filter the mobile phase through a suitable filter capable of removing particulate matter 0.5 micron in diameter and degas it just prior to its introduction into the chromatograph.

(ii) *Preparation of working standard solution.* Accurately weigh approximately 16.5 milligrams of the azithromycin working standard into a 100-milliliter volumetric flask. Dissolve the material, aided by brief sonication, in 10 milliliters of acetonitrile and dilute to volume with acetonitrile. Pipet 2.0 milliliters of this solution into a 100-milliliter volumetric flask and dilute to volume with mobile phase. This solution contains approximately 0.003 milligram per milliliter of azithromycin.

(iii) *Sample solution.* Accurately weigh approximately 16.5 milligrams of sample into a 100-milliliter volumetric flask. Dissolve the sample, aided by brief sonication, in 10 milliliters of acetonitrile and dilute to volume with acetonitrile. Pipet 2.0 milliliters of this solution into a 100-milliliter volumetric flask and dilute to volume with mobile phase.

(iv) *Resolution test solution.* Weigh approximately 16.5 milligrams each of azithromycin working standard and azaerythromycin A reference standard into a 100-milliliter volumetric flask. Dissolve the materials aided by brief sonication in 10 milliliters of acetonitrile and dilute to volume with acetonitrile. Pipet 2.0 milliliters of this solution into a 100-milliliter volumetric flask and dilute to volume with mobile phase.

(v) *System suitability requirements.* Using the resolution test solution, determine the:

(A) *Asymmetry factor.* The asymmetry factor (A_S) is satisfactory if it is not less than 0.9 and not more than 1.5 for the azithromycin peak.

(B) *Efficiency of the column.* The absolute efficiency (h_r) is satisfactory if it is not more than 40.0 for the azithromycin peak.

(C) *Resolution factor.* The resolution factor (R) between the peak from azithromycin and the peak for azaerythromycin A is satisfactory if it is not less than 2.5.

(D) *Coefficient of variation (relative standard deviation).* The coefficient of variation (S_R in percent of 5 replicate injections) is satisfactory if it is not more than 2.0 percent. If the system suitability parameters have been met, then proceed as described in § 436.216(b) of this chapter.

(vi) *Calculations.* Calculate the micrograms of azithromycin per milligram of sample on an anhydrous basis as follows:

$$\text{Micrograms of azithromycin per milligram} = \frac{A_U \times P_S \times 100}{A_S \times C_U \times (100 - m)}$$

where:

A_U = Area of the azithromcin peak (at a retention time equal to that observed for the azithromycin standard) in the chromatogram of the sample;

A_S = Area of the azithromcin peak in the chromatogram of the azithromycin working standard;

P_S = Azithromycin activity in the azithromycin working standard solution in micrograms per milliliter;

C_U = Milligrams of sample per milliliter of sample solution; and

m = Percent moisture content of the sample.

VOL 58 ISS 84 MY 4 1993 UMI

(2) *Moisture.* Proceed as directed in § 436.201 of this chapter.

(3) *pH.* Proceed as directed in § 436.202 of this chapter, using an aqueous methanol (1:1) solution containing 2 milligrams per milliliter, prepared by diluting a methanol solution containing 4 milligrams of azithromycin dihydrate 1:1 with distilled water.

(4) *Residue on ignition.* Proceed as directed in § 436.207(b) of this chapter, except use a temperature of 800 °C instead of a temperature range of 500 to 600 °C.

(5) *Heavy metals.* Proceed as directed in § 436.208 of this chapter.

(6) *Specific rotation.* Dissolve an accurately weighed sample with sufficient absolute ethanol to give a concentration of approximately 20 milligrams per milliliter. Proceed as directed in § 436.210 of this chapter, except dilute and maintain the test solution at 20 °C instead of 25 °C. Use a 1.0-decimeter polarimeter tube and calculate the specific rotation on an anhydrous basis.

(7) *Crystallinity.* Proceed as directed in § 436.203(a) of this chapter.

(8) *Identity.* Proceed as directed in § 436.211 of this chapter, using a 0.5 percent potassium bromide disc prepared as described in paragraph (b)(1) of that section.

9. New § 452.160 is added to subpart B to read as follows:

§ 452.160 Azithromycin capsules.

(a) *Requirements for certification*—(1) *Standards of identity, strength, quality, and purity.* Azithromycin capsules are composed of azithromycin and one or more suitable and harmless diluents, disintegrants, lubricants, and wetting agents enclosed in a gelatin capsule. Each capsule contains azithromycin equivalent to 250 milligrams of azithromycin. The azithromycin content is satisfactory if it is not less than 90 percent and not more than 110 percent of the number of milligrams of azithromycin that it is represented to contain. The moisture content of the capsules is not more than 5.0 percent. The capsules pass the dissolution test. The capsules pass the identity test. The azithromycin used conforms to the standards prescribed by § 452.60(a)(1) of this part.

(2) *Labeling.* It shall be labeled in accordance with the requirements of § 432.5 of this chapter.

(3) *Requests for certification; samples.* In addition to complying with the requirements of § 431.1 of this chapter, each such request shall contain:

(i) Results of tests and assays on:

(A) The azithromycin used in making the batch for potency, moisture, pH, residue on ignition, heavy metals, specific rotation, crystallinity, and identity.

(B) The batch for content, moisture, dissolution, and identity.

(ii) Samples, if required by the Director, Center for Drug Evaluation and Research:

(A) The azithromycin used in making the batch: 10 packages, each containing approximately 500 milligrams.

(B) The batch: A minimum of 100 capsules.

(b) *Tests and methods of assay*—(1) *Azithromycin content.* Proceed as directed in § 452.60(b)(1), preparing the sample solution and calculating the azithromycin content as follows:

(i) *Preparation of sample solution.* Quantitatively transfer the contents of one capsule into a 250-milliliter volumetric flask. Add about 175 milliliters of acetonitrile and shake on a reciprocating shaker for 30 minutes. Dilute to volume with acetonitrile, stopper the flask and mix well. Place 40 milliliters of the resulting suspension into a suitably sized centrifuge tube. Stopper the tube and centrifuge the suspension (about 10 minutes at 1,000 rpm). Pipet 2.0 milliliters of the supernatant into a 50-milliliter volumetric flask and dilute to volume with the mobile phase. Pipet 2.0 milliliters of this solution into a 25-milliliter volumetric flask and dilute to volume with mobile phase. The final dilution of the sample and standard must be identical. The final concentration of azithromycin in the sample solution is 0.003 milligram per milliliter (estimated).

(ii) *Calculations.* Calculate the azithromycin content as follows:

$$\text{Milligrams of azithromycin per capsule} = \frac{A_U \times P_S \times d}{A_S \times 1{,}000}$$

where:

A_U = Area of the azithromycin peak (at a retention time equal to that observed for the azithromycin standard) in the chromatogram of the sample;

A_S = Area of the azithromycin peak of the azithromycin working standard;

P_S = Azithromycin activity in the azithromycin working standard solution in micrograms per milliliter; and

d = Dilution factor of the sample = 250×50×25/2×2.

(2) *Moisture.* Proceed as directed in § 436.201 of this chapter.

(3) *Dissolution test.* Proceed as directed in § 436.215 of this chapter. The quantity Q (the percentage of azithromycin activity dissolved) is 75 percent within 45 minutes.

(4) *Identity.* Using the high-performance liquid chromatographic procedure described in paragraph (b)(1) of this section the retention time for the peak of the active ingredient must be with 2 percent of the retention time for the peak of the corresponding reference standard.

Dated: March 26, 1993.

Paul F. Vogel,

Acting Director, Office of Compliance, Center for Drug Evaluation and Reasearch.

BILLING CODE 4160-01-F

---

21 CFR Parts 430, 436, and 442

[Docket No. 92N-0041]

Antibiotics Drugs; Cefprozil, Cefprozil Tablets, and Cefprozil for Oral Suspension

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending the antibiotic drug regulations to provide for the inclusion of accepted standards for a new antibiotic drug, cefprozil, and the use of the antibiotic drug in two dosage forms, cefprozil tablets and cefprozil for oral suspension. The manufacturer has supplied sufficient data and information to establish its safety and efficacy.

DATES: Effective June 3, 1993; written comments, notice of participation, and request for hearing by June 3, 1993; data, information, and analyses to justify a hearing by July 6, 1993.

ADDRESSES: Submit written comments to the Dockets Management Branch (HFA-305), Food and Drug Administration, rm. 1-23, 12420 Parklawn Dr., Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Peter A. Dionne, Center for Drug Evaluation and Research (HFD-520), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301-443-0335.

SUPPLEMENTARY INFORMATION: FDA has evaluated data submitted in accordance with regulations promulgated under section 507 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 357), as amended, with respect to a request for approval of a new antibiotic drug, cefprozil, and its use in two dosage forms, cefprozil tablets and cefprozil for oral suspension. The agency has concluded that the data supplied by the manufacturer concerning these antibiotic drugs are adequate to establish their safety and efficacy when

used as directed in the labeling and that the regulations should be amended in 21 CFR parts 430, 436, and 442 to provide for the inclusion of accepted standards for these products.

Environmental Impact

The agency has determined under 21 CFR 25.24(c)(6) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

Submitting Comments and Filing Objections

This final rule announces standards that FDA has accepted in a request for approval of an antibiotic drug. Because this final rule is not controversial and because when effective it provides notice of accepted standards, FDA finds that notice and comment procedure is unnecessary and not in the public interest. This final rule, therefore, becomes effective June 3, 1993. However, interested persons may, on or before June 3, 1993, submit comments to the Dockets Management Branch (address above). Two copies of any comments are to be submitted, except that individuals may submit one copy. Comments are to be identified with the docket number found in brackets in the heading of this document. Received comments may be seen in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

Any person who will be adversely affected by this final rule may file objections to it and request a hearing. Reasonable grounds for the hearing must be shown. Any person who decides to seek a hearing must file (1) on or before June 3, 1993, a written notice of participation and request for hearing, and (2) on or before July 6, 1993, the data, information, and analyses on which the person relies to justify a hearing, as specified in 21 CFR 314.300. A request for a hearing may not rest upon mere allegations or denials, but must set forth specific facts showing that there is a genuine and substantial issue of fact that requires a hearing. If it conclusively appears from the face of the data, information, and factual analyses in the request for hearing that no genuine and substantial issue of fact precludes the action taken by this order, or if a request for hearing is not made in the required format or with the required analyses, the Commissioner of Food and Drugs will enter summary judgment against the person(s) who request(s) the hearing, making findings and conclusions and denying a hearing. All submissions must be filed in three copies, identified with the docket number appearing in the heading of this order and filed with the Dockets Management Branch.

The procedures and requirements governing this order, a notice of participation and request for hearing, a submission of data, information, and analyses to justify a hearing, other comments, and grant or denial of a hearing are contained in 21 CFR 314.300.

All submissions under this order, except for data and information prohibited from public disclosure under 21 U.S.C. 331(j) or 18 U.S.C. 1905, may be seen in the Dockets Management Branch (address above) between 9 a.m. and 4 p.m., Monday through Friday.

List of Subjects

21 CFR Part 430

Administrative practice and procedure, Antibiotics.

21 CFR Part 436

Antibiotics.

21 CFR Part 442

Antibiotics.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, 21 CFR parts 430, 436, and 442 are amended as follows:

PART 430—ANTIBIOTIC DRUGS; GENERAL

1. The authority citation for 21 CFR part 430 continues to read as follows:

Authority: Secs. 201, 501, 502, 503, 505, 507, 701 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 321, 351, 352, 353, 355, 357, 371); secs. 215, 301, 351 of the Public Health Service Act (42 U.S.C. 216, 241, 262).

2. Section 430.4 is amended by adding new paragraph (a)(66) to read as follows:

§ 430.4 Definitions of antibiotic substances.

(a) * * *

(66) *Cefprozil.* Cefprozil is an antibiotic substance having the chemical structure described by the following name: (6*R*,7*R*)-7-[(*R*)-2-amino-2-(*p*-hydroxyphenyl)acetamido]8-oxo-3-propenyl-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid. It is a mixture of the Z (cis) and E (trans) isomers in an approximate ratio of 9:1, respectively.

* * * * *

3. Section 430.5 is amended by adding new paragraphs (a)(101) and (b)(103) to read as follows:

§ 430.5 Definitions of master and working standards.

(a) * * *

(101) *Cefprozil.* The term "cefprozil master standard" means a specific lot of the (Z) isomer of cefprozil and a specific lot of the (E) isomer of cefprozil that are designated by the Commissioner as the standard of comparison in determining the potency of the cefprozil working standard.

(b) * * *

(103) *Cefprozil.* The term "cefprozil (Z) working standard" means a specific lot of a homogeneous preparation of cefprozil (Z). The term "cefprozil (E) working standard" means a specific lot of a homogeneous preparation of cefprozil (E).

4. Section 430.6 is amended by adding new paragraph (b)(103) to read as follows:

§ 430.6 Definitions of the terms "unit" and "microgram" as applied to antibiotic substances.

* * * * *

(b) * * *

(103) *Cefprozil.* The term "microgram" applied to cefprozil (Z) means the cefprozil (Z) potency contained in 1.060 micrograms of the cefprozil (Z) master standard. The term "microgram" applied to cefprozil (E) means the cefprozil (E) potency contained in 1.106 micrograms of the cefprozil (E) master standard.

PART 436—TESTS AND METHODS OF ASSAY OF ANTIBIOTIC AND ANTIBIOTIC-CONTAINING DRUGS

5. The authority citation for 21 CFR part 436 continues to read as follows:

Authority: Sec. 507 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 357).

6. Section 436.215 is amended by alphabetically adding a new entry to the table in paragraph (b) and by adding a new paragraph (c)(15) to read as follows:

§ 436.215 Dissolution test.

* * * * *

(b) * * *

VOL 58 ISS 84 MY 4 1993 UMI

Dosage form	Dissolution medium	Rotation rate [1]	Sampling time(s)	Apparatus
•	•	•	•	•
Cefprozil tablets	900 mL purified water	100	45 min	1
•	•	•	•	•

[1] Rotation rate of basket or paddle stirring element (revolutions per minute)

(c) • • •

(15) *Cefprozil.* Proceed as directed in § 442.80(b)(1) of this chapter except:

(i) *Sample solutions.* Filter the sample solutions through a 0.45-micron filter before use. Use the sample solution as it is removed from the dissolution vessel without further dilution for the 250-milligram tablet; prepare the sample solution for the 500-milligram tablet by diluting a 5-milliliter aliquot of the filtered solution to volume in a 10-milliliter volumetric flask with distilled water.

(ii) *Calculations.* Determine the total percent of cefprozil dissolved as follows:

$$\text{Total percentage dissolved} = \text{(mg cefprozil (Z) dissolved + mg cefprozil (E) dissolved)/label claim}$$

$$\text{Milligrams of cefprozil (Z) or cefprozil (E) dissolved} = \frac{A_U \times c \times d \times 900}{A_S}$$

where:

A_U = Area of the cefprozil (Z) or cefprozil (E) response in the chromatogram of the sample (at a retention time equal to that observed for the standard);

A_S = Area of the cefprozil (Z) or cefprozil (E) response in the chromatogram of the cefprozil (Z) or cefprozil (E) standard;

c = Concentration of the cefprozil (Z) or cefprozil (E) working standard solution in milligrams per milliliter; and

d = Dilution factor of the sample filtrate.

• • • • •

7. New § 436.368 is added to subpart F to read as follows:

§ 436.368 Thin layer chromatographic identity test for cefprozil.

(a) *Equipment*—(1) *Chromatography tank.* Use a glass rectangular tank approximately 23 x 23 x 9 centimeters lined with filter paper and equipped with a tight-fitting cover.

(2) *Plates.* Use 20 x 20 centimeter thin layer chromatography plates coated with silica gel GF to a thickness of 250 microns.

(b) *Reagents*—(1) *Diluent.* Mix 0.1N HCl and acetone in volumetric proportions of 1:4.

(2) *Developing solvent.* Mix n-butanol, glacial acetic acid and water in volumetric proportions of 60:20:20.

(3) *Detection reagent.* Iodine vapor.

(c) *Assay solutions*—(1) *Reference standard solution.* Dissolve 50 milligrams of cefprozil (Z) reference standard in 10 milliliters of diluent.

(2) *Sample solution.* Place an amount of sample containing approximately 50 milligrams of cefprozil in a 20-milliliter glass stoppered vial. Add 10 milliliters of diluent. Shake for 5 minutes and allow the solids to settle.

(d) *Procedure.* Pour a suitable quantity of the developing solvent into a glass, chromatographic tank lined with filter paper and allow to equilibrate for 1 hour. On a line 2 centimeters from the bottom edge of the plate, spot 10 microliters each of the reference solution and sample solution. Draw a line indicating the distance to which the developing solvent must travel at a point 12 centimeters from the bottom edge of the plate. Place the plate in the tank and allow the solvent to migrate to the finishing line. Remove the plate and air dry in a fume hood. Place the dried plate in a chamber containing iodine vapors.

(e) *Evaluation.* Measure the distance the solvent front traveled from the starting line, and the distance the spots are from the starting line. Divide the latter by the former to calculate the R_f value. The identity test is positive if the sample solution produces a yellow spot at the same R_f value and has the same appearance as the spot obtained for the reference solution. The R_f value for cefprozil (Z) is approximately 0.45. Cefprozil (E), has an R_f value of approximately 0.47.Cefprozil (Z) is "absent" if the above test is performed and no spots, which correspond to those from the reference solution, are obtained for the sample.

PART 442—CEPHA ANTIBIOTIC DRUGS

8. The authority citation for 21 CFR part 442 continues to read as follows:

Authority: Sec. 507 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 357).

9. New § 442.80 is added to subpart A to read as follows:

§ 442.80 Cefprozil.

(a) *Requirements for certification*—(1) *Standards of identity, strength, quality, and purity.* Cefprozil is an approximate 9:1 mixture of the Z (cis) and the E (trans) isomers, respectively, of (6*R*,7*R*)-7-[(*R*)-2-amino-2-(*p*-hydroxyphenyl)acetamido]8-oxo-3-propenyl-5-thia-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid. It is so purified and dried that:

(i) Its potency is not less than 900 micrograms nor more than 1,050 micrograms of cefprozil activity per milligram, on an anhydrous basis.

(ii) The ratio of its (E) isomer to total cefprozil is not less than 0.06 nor more than 0.11.

(iii) Its moisture content is not less than 3.5 percent nor more than 6.5 percent.

(iv) The pH of an aqueous solution containing 5 milligrams per milliliter is not less than 3.5 nor more than 6.5.

(v) It is crystalline.

(vi) It gives positive identity tests.

(2) *Labeling.* It shall be labeled in accordance with the requirements of § 432.5 of this chapter.

(3) *Requests for certification; samples.* In addition to complying with the requirements of § 431.1 of this chapter, each such request shall contain:

(i) Results of tests and assays on the batch for cefprozil potency, E isomer to total cefprozil ratio, moisture, pH, crystallinity, and identity.

(ii) Samples, if required by the Director, Center for Drug Evaluation and Research: 10 packages, each containing approximately 500 milligrams.

(b) *Tests and methods of assay*—(1) *Potency.* Proceed as directed in § 436.216 of this chapter, using ambient temperature, an ultraviolet detection system operating at a wavelength of 280 nanometers, a 25 centimeter × 3.9 to 4.6 millimeter (id) column packed with microparticulate (5 to 10 micrometers in diameter) reversed phase packing material such as octadecyl silane bonded to silicas, a flow rate of 1.0 milliliter per minute, and a known injection volume of 10 microliters. The retention time for cefprozil (Z) is between 4 and 6 minutes and the retention time for cefprozil (E) is between 6 and 8 minutes. Mobile phase, working standard and sample solutions, system suitability requirements, and calculations are as follows:

(i) *Mobile phase.* Dissolve 20.7 grams of ammonium phosphate, monobasic in 1,800 milliliters of water and adjust the pH to 4.4 with phosphoric acid, if necessary. Add 200 milliliters of acetonitrile and mix. Filter the mobile phase through a suitable filter capable of removing particulate matter 0.5 micron in diameter and degas it just prior to its introduction into the chromatograph. The proportion of acetonitrile may be modified in the range of 6 to 14 percent to obtain the desired retention times. Increasing the amount of acetonitrile will decrease both the retention times and the separation between the isomers, whereas, decreasing the amount of acetonitrile will increase retention times and the separation between the isomers.

(ii) *Preparation of working standard solutions*—(A) *Cefprozil (Z) working standard solution.* Accurately weigh approximately 12.5 milligrams of the cefprozil (Z) working standard into a 50-milliliter volumetric flask. Dilute to volume with water and shake the flask vigorously until the solute dissolves completely. Use this solution within 6 hours.

(B) *Cefprozil (E) working standard solution.* Accurately weigh approximately 12.5 milligrams of the cefprozil (E) working standard into a 50-milliliter volumetric flask. Dilute to volume with water and shake the flask vigorously until the solute dissolves completely. Pipet 5 milliliters into a 50-milliliter volumetric flask, dilute to volume with water and mix thoroughly. Use this solution within 6 hours.

(iii) *Sample solution.* Accurately weigh approximately 15 milligrams of sample into a 50-milliliter volumetric flask. Dilute to volume with water and shake the flask vigorously until the solute dissolves completely. Use this solution within 6 hours.

(iv) *System suitability requirements*—(A) *Asymmetry factor.* The asymmetry factor (A_S) is satisfactory if it is not less than 0.9 and not more than 1.1 for the cefprozil (Z) response.

(B) *Efficiency of the column.* The absolute efficiency (h_r) is satisfactory if it is not more than 10 for the cefprozil (Z) response.

(C) *Resolution factor.* The resolution factor (R) between the response for cefprozil (Z) and the response for cefprozil (E) is satisfactory if it is not less than 2.5.

(D) *Coefficient of variation (Relative standard deviation).* The coefficient of variation (S_R of 5 replicate injections of the cefprozil (Z) reference solution response) is satisfactory if it is not more than 2.0 percent.

(E) *Capacity factor (k').* The capacity factor (k') for cefprozil (Z) is satisfactory if it is not less than 0.7 and not more than 1.1. If the system suitability parameters have been met, then proceed as described in § 436.216(b) of this chapter.

(v) *Calculations.* Calculate the micrograms of cefprozil per milligram of sample on an anhydrous basis as follows:

$$\text{Micrograms of cefprozil (Z) or cefprozil (E) per milligram (as is)} = \frac{A_U \times P_S}{A_S \times C_U}$$

$$\text{Micrograms of cefprozil per milligram (as is)} = \text{cefprozil (Z) + cefprozil (E)}$$

$$\text{Micrograms of cefprozil per milligram (Anhydrous)} = \frac{\text{cefprozil potency (as is)} \times 100}{(100 - m)}$$

where:

A_U = Area of the cefprozil (Z) or cefprozil (E) response in the chromatogram of the sample (at a retention time equal to that observed for the standard);

A_S = Area of the cefprozil (Z) or cefprozil (E) response in the chromatogram of the cefprozil (Z) or the cefprozil (E) working standard;

P_S = Cefprozil (Z) or cefprozil (E) activity in the cefprozil (Z) or the cefprozil (E) working standard solution in micrograms per milliliter;

C_U = Milligrams of sample per milliliter of sample solution; and

m = Percent moisture content of the sample.

(2) *Cefprozil (E)/cefprozil ratio.* Using the procedure described in paragraph (b)(1) of this section calculate the cefprozil (E)/cefprozil ratio as follows:

$$\text{Trans ratio} = \frac{\text{cefprozil (E) (mcg/mg, as is)}}{\text{cefprozil (mcg/mg, as is) Total}}$$

(3) *Moisture.* Proceed as directed in § 436.201 of this chapter.

(4) *pH.* Proceed as directed in § 436.202 of this chapter, using a carbon dioxide free aqueous solution containing 5 milligrams of cefprozil per milliliter.

(5) *Crystallinity.* Proceed as directed in § 436.203(a) of this chapter.

(6) *Identity*—(i) *Infrared.* Proceed as directed in § 436.211 of this chapter, using a 1.0 percent potassium bromide disc prepared as described in paragraph (b)(1) of that section.

(ii) *High performance liquid chromatography (HPLC).* The HPLC retention times for the responses of the cefprozil isomers in the assay preparation of the sample must be within 2 percent of the HPLC retention times of the responses of the corresponding cefprozil working standards.

10. New §§ 442.180, 442.180a, and 442.180b are added to subpart B to read as follows:

§ 442.180 Cefprozil oral dosage forms.

§ 442.180a Cefprozil tablets.

(a) *Requirements for certification*—(1) *Standards of identity, strength, quality, and purity.* Cefprozil tablets are composed of cefprozil and one or more suitable and harmless diluents, binders, lubricants, colorings, and coating substances. Each tablet contains cefprozil equivalent to either 250 milligrams or 500 milligrams of anhydrous cefprozil. The cefprozil content of the tablets is satisfactory if it is not less than 90 percent nor more than 120 percent of the number of milligrams of anhydrous cefprozil that it is represented to contain. The moisture content of the tablets is not more than 7 percent. The tablets pass the dissolution test. The tablets pass the identity tests. The cefprozil used conforms to the standards prescribed by § 442.80(a)(1) of this part.

(2) *Labeling.* It shall be labeled in accordance with the requirements of § 432.5 of this chapter.

(3) *Requests for certification; samples.* In addition to complying with the requirements of § 431.1 of this chapter, each such request shall contain:

(i) Results of tests and assays on:

(A) The cefprozil used in making the batch for potency, E-isomer ratio, moisture, pH, crystallinity, and identity.

(B) The batch for content, moisture, dissolution, and identity.

(ii) Samples, if required by the Director, Center for Drug Evaluation and Research:

(A) The cefprozil used in making the batch: 10 packages, each containing approximately 500 milligrams.

(B) The batch: A minimum of 100 tablets.

(b) *Tests and methods of assay*—(1) *Cefprozil content.* Proceed as directed in § 442.80(b)(1) of this part, preparing the sample solution and calculating the cefprozil content as follows:

(i) *Preparation of sample solution.* Place one or a known number of intact tablets into a 250-milliliter volumetric flask containing about 180 milliliters of

VOL 58 ISS 84 MY 4 1993 UMI

distilled water. Allow the tablet(s) to disintegrate as aided by swirling and brief ultrasonication. Dilute the contents to volume with distilled water and mix thoroughly. Transfer an aliquot of this solution to a volumetric flask of suitable size to obtain a solution containing 0.3 milligram per milliliter of cefprozil (estimated) when diluted to volume with water. Filter through a 0.45 micron filter prior to injection into the chromatographic system.

(ii) *Calculations.* Calculate the cefprozil content as follows:

$$\text{Milligrams of cefprozil (Z) or cefprozil (E) per tablet} = \frac{A_U \times P_S \times d}{A_S \times 1000 \times n}$$

$$\text{Milligrams of cefprozil per tablet} = \text{Milligrams of cefprozil (Z) per tablet} + \text{Milligrams of cefprozil (E) per tablet}$$

where:

A_U = Area of the cefprozil (Z) or cefprozil (E) response in the chromatogram of the sample (at a retention time equal to that observed for the standard);

A_S = Area of the cefprozil (Z) or cefprozil (E) response in the chromatogram of the cefprozil (Z) or the cefprozil (E) working standard;

P_S = Cefprozil (Z) or cefprozil (E) activity in the cefprozil (Z) or the cefprozil (E) working standard solution in micrograms per milliliter;

d = Dilution factor of the sample; and

n = Number of tablets taken in the sample.

(2) *Moisture.* Proceed as directed in § 436.201 of this chapter.

(3) *Dissolution test.* Proceed as directed in § 436.215 of this chapter. The quantity Q (the amount of cefprozil activity dissolved) is 75 percent at 45 minutes.

(4) *Identity*—(i) *High performance liquid chromatography.* Using the high performance liquid chromatographic procedure described in paragraph (b)(1) of this section, the retention times for the responses of the active ingredients must be within 2 percent of the retention times for the responses of the corresponding reference standards.

(ii) *Thin layer chromatography.* Proceed as directed in § 436.368 of this chapter.

§ 442.180b Cefprozil for oral suspension.

(a) *Requirements for certification*—(1) *Standards of identity, strength, quality, and purity.* Cefprozil for oral suspension is cefprozil with one or more suitable and harmless preservatives, sweeteners, suspending agents, buffers, and flavorings. The cefprozil content of the oral suspension is satisfactory if it is not less than 90 percent nor more than 120 percent of the number of milligrams of anhydrous cefprozil that it is represented to contain. When constituted as directed in the labeling, each milliliter contains the equivalent of either 25 or 50 milligrams anhydrous cefprozil activity. Its moisture content is not more than 3 percent. When constituted as described in the labeling, the pH of the suspension is not less than 4.0 nor more than 6.0. It passes the identity tests. The cefprozil used conforms to the standards prescribed by § 442.80(a)(1) of this part.

(2) *Labeling.* It shall be labeled in accordance with the requirements of § 432.5 of this chapter.

(3) *Requests for certification samples.* In addition to complying with the requirements of § 431.1 of this chapter, each such request shall contain:

(i) Results of tests and assays on:

(A) The cefprozil used in making the batch for potency, E-isomer ratio, moisture, pH, crystallinity, and identity.

(B) The batch for content, moisture, pH, and identity.

(ii) Samples, if required by the Director, Center for Drug Evaluation and Research:

(A) The cefprozil used in making the batch: 10 packages, each containing approximately 500 milligrams.

(B) The batch: A minimum of 10 intermediate containers.

(b) *Tests and methods of assay*—(1) *Cefprozil content.* Proceed as directed in § 442.80(b)(1), preparing the sample solution and calculating the cefprozil content as follows:

(i) *Preparation of sample solution.* Constitute as directed in the labeling. Transfer a portion of the suspension containing 250 milligrams (estimated) of cefprozil into a 250-milliliter volumetric flask using a glass syringe and a 13-gauge needle. Dilute to volume with water, ultrasonicate briefly to dissolve and mix well. Transfer a 15-milliliter aliquot of this solution to a 50-milliliter volumetric flask and dilute to volume with water to obtain a solution containing 0.3 milligram per milliliter of cefprozil (estimated). Filter through a 0.45 micron filter prior to injection into the chromatographic system.

(ii) *Calculations.* Calculate the cefprozil content as follows:

$$\text{Milligrams of cefprozil (Z) or cefprozil (E) per 5 milliliters of sample} = \frac{A_U \times P_S \times d \times 5}{A_S \times 1000 \times V}$$

$$\text{Milligrams of cefprozil per 5 mL of sample} = \text{Milligrams of cefprozil (Z)/5 mL sample} + \text{Milligrams of cefprozil (E)/5 mL sample}$$

where:

A_U = Area of the cefprozil (Z) or cefprozil (E) response in the chromatogram of the sample (at a retention time equal to that observed for the standard);

A_S = Area of the cefprozil (Z) or cefprozil (E) response in the chromatogram of the cefprozil (Z) or the cefprozil (E) working standard;

P_S = Cefprozil (Z) or cefprozil (E) activity in the cefprozil (Z) or the cefprozil (E) working standard solution in micrograms per milliliter;

d = Dilution factor of the sample; and

V = Volume of sample taken in milliliters.

(2) *Moisture.* Proceed as directed in § 436.201 of this chapter.

(3) *pH.* Proceed as directed in § 436.202 of this chapter, using the drug constituted as directed in the labeling.

(4) *Identity*—(i) *High Performance liquid chromatography.* Using the high-performance liquid chromatographic procedure described in paragraph (b)(1) of this section, the retention times for the responses of the active ingredients must be within 2 percent of the retention times for the responses of the corresponding reference standards.

(ii) *Thin layer chromatography.* Proceed as directed in § 436.368 of this chapter.

Dated: March 26, 1993.

Paul F. Vogel,

Acting Director, Office of Compliance, Center for Drug Evaluation and Research.

[FR Doc. 93–10313 Filed 5–3–93; 8:45 am]

BILLING CODE 4160–01–F

---

21 CFR Parts 430 and 450

[Docket No. 92N–0042]

Antibiotic Drugs; Idarubicin Hydrochloride for Injection

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending the antibiotic drug regulations to provide for inclusion of accepted standards for a new antibiotic drug idarubicin hydrochloride, and use of the antibiotic drug in a dosage form, idarubicin hydrochloride for injection. The manufacturer has supplied sufficient

data and information to establish its safety and efficacy.

DATES: Effective June 3, 1993; written comments, notice of participation, and request for a hearing by June 3, 1993; data, information, and analyses to justify a hearing by July 6, 1993.

ADDRESSES: Submit written comments to the Dockets Management Branch (HFA–305), Food and Drug Administration, rm. 1–23, 12420 Parklawn Dr., Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Peter A. Dionne, Center for Drug Evaluation and Research (HFD–520), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301–443–0335.

SUPPLEMENTARY INFORMATION: FDA has evaluated data submitted in accordance with regulations promulgated under section 507 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 357), as amended, with respect to a request for approval of a new antibiotic drug, idarubicin hydrochloride and its use in a dosage form, idarubicin hydrochloride for injection. The agency has concluded that the data supplied by the manufacturer concerning this antibiotic drug are adequate to establish its safety and efficacy when used as directed in the labeling and that the regulations should be amended in parts 430 and 450 (21 CFR parts 430 and 450) to provide for the inclusion of accepted standards for this product.

I. Environmental Impact

The agency has determined under 21 CFR 25.24(c)(6) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

II. Submitting Comments and Filing Objections

This final rule announces standards that FDA has accepted in a request for approval of an antibiotic drug. Because this final rule is not controversial and because when effective it provides notice of accepted standards, FDA finds that notice and comment procedure is unnecessary and not in the public interest. This final rule, therefore, becomes effective June 3, 1993. However, interested persons may, on or before June 3, 1993, submit comments to the Dockets Management Branch (address above). Two copies of any comments are to be submitted, except that individuals may submit one copy. Comments are to be identified with the docket number found in brackets in the heading of this document. Received comments may be seen in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

Any person who will be adversely affected by this final rule may file objections to it and request a hearing. Reasonable grounds for the hearing must be shown. Any person who decides to seek a hearing must file (1) on or before June 3, 1993, a written notice of participation and request for hearing, and (2) on or before July 6, 1993, the data, information, and analyses on which the person relies to justify a hearing, as specified in 21 CFR 314.300. A request for a hearing may not rest upon mere allegations or denials, but must set forth specific facts showing that there is a genuine and substantial issue of fact that requires a hearing. If it conclusively appears from the face of the data, information, and factual analyses in the request for hearing that no genuine and substantial issue of fact precludes the action taken by this order, or if a request for hearing is not made in the required format or with the required analyses, the Commissioner of Food and Drugs will enter summary judgment against the person(s) who request(s) the hearing, making findings and conclusions and denying a hearing. All submissions must be filed in three copies, identified with the docket number found in brackets in the heading of this document and filed with the Dockets Management Branch.

The procedures and requirements governing this order, a notice of participation and request for hearing, a submission of data, information, and analyses to justify a hearing, other comments, and grant or denial of a hearing are contained in 21 CFR 314.300.

All submissions under this order, except for data and information prohibited from public disclosure under 21 U.S.C. 331(j) or 18 U.S.C. 1905, may be seen in the Dockets Management Branch (address above) between 9 a.m. and 4 p.m., Monday through Friday.

List of Subjects

21 CFR Part 430

Administrative practice and procedure, Antibiotics.

21 CFR Part 450

Antibiotics.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, 21 CFR parts 430 and 450 are amended as follows:

PART 430—ANTIBIOTIC DRUGS; GENERAL

1. The authority citation for 21 CFR part 430 continues to read as follows:

Authority: Secs. 201, 501, 502, 503, 505, 507, 701 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 321, 351, 352, 353, 355, 357, 371); secs. 215, 301, 351 of the Public Health Service Act (42 U.S.C. 216, 241, 262).

2. Section 430.4 is amended by adding new paragraph (a)(67) to read as follows:

§ 430.4 Definitions of antibiotic substances.

(a) * * *

(67) *Idarubicin.* Idarubicin is an anthracycline antibiotic substance having the chemical structure described by the following name: 5,12-Naphthacenedione, 9-acetyl-7-[(3-amino-2,3,6-trideoxy-α-*L-lyxo*-hexopyranosyl)oxy]-7,8,9,10-tetrahydro-6,9,11-trihydroxy-(7*S-cis*).

* * * * *

3. Section 430.5 is amended by adding new paragraphs (a)(102) and (b)(104) to read as follows:

§ 430.5 Definitions of master and working standards.

(a) * * *

(102) *Idarubicin.* The term "idarubicin master standard" means a specific lot of idarubicin that is designated by the Commissioner as the standard of comparison in determining the potency of the idarubicin working standard.

(b) * * *

(104) *Idarubicin.* The term "idarubicin working standard" means a specific lot of a homogeneous preparation of idarubicin.

4. Section 430.6 is amended by adding new paragraph (b)(104) to read as follows:

§ 430.6 Definitions of the terms "unit" and "microgram" as applied to antibiotic substances.

* * * * *

(b) * * *

(104) *Idarubicin.* The term "microgram" applied to idarubicin means the idarubicin activity (potency) calculated as idarubicin hydrochloride contained in 1.036 micrograms of the idarubicin master standard.

PART 450—ANTITUMOR ANTIBIOTIC DRUGS

3. The authority citation for 21 CFR part 450 continues to read as follows:

Authority: Sec. 507 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 357).

VOL 58 ISS 84 MY 4 1993 UMI

4. Section 450.30 is added to subpart A to read as follows:

§ 450.30 Idarubicin hydrochloride.

(a) *Requirements for certification*—(1) *Standards of identity, strength, quality, and purity.* Idarubicin hydrochloride is the monohydrochloride salt of 5,12-Naphthacenedione,9-acetyl-7-[(3-amino-2,3,6-trideoxy-α-*L-lyxo*-hexopyranosyl)oxy]-7,8,9,10-tetrahydro-6,9,11-trihydroxy-(7*S-cis*). It is an orange-red powder. It is so purified and dried that:

(i) Its idarubicin hydrochloride content is not less than 960 micrograms and not more than 1,030 micrograms of idarubicin hydrochloride per milligram on the anhydrous basis.

(ii) Its moisture content is not more than 5.0 percent.

(iii) The pH of an aqueous solution containing 5 milligrams per milliliter is not less than 5.0 and not more than 6.5.

(iv) It is crystalline.

(v) The level of any individual impurity detected by high-performance liquid chromatography (HPLC) assay is not more than 1.0 percent.

(vi) The total of all detected impurities is not more than 3.0 percent.

(vii) It passes the identity test for idarubicin.

(2) *Labeling.* It shall be labeled in accordance with the requirements of § 432.5 of this chapter.

(3) *Requests for certification; samples.* In addition to complying with the requirements of § 431.1 of this chapter, each such request shall contain:

(i) Results of tests and assays on the batch for idarubicin hydrochloride content, solvent residues, moisture, pH, crystallinity, related individual thin-layer chromatography and HPLC impurities, total impurities, and identity.

(ii) Samples, if required by the Director, Center for Drug Evaluation and Research: 14 packages, each containing approximately 40 milligrams.

(b) *Tests and methods of assay.* Idarubicin hydrochloride is toxic. It must be handled with care in the laboratory. Transfer all dry powders into a suitable hood while wearing rubber gloves. Avoid inhaling fine particles of powder. Solutions should not be pipetted by mouth. If the substance contacts the skin, wash with soap and water. Dispose of all waste material by dilution with large volumes of dilute sodium hypochlorite (bleach) solution.

(1) *Potency (HPLC).* Proceed as directed in § 436.216 of this chapter, using ambient temperature, an ultraviolet detection system operating at a wavelength of 254 nanometers, a 4.6-millimeter by 25-centimeter column packed with microparticulate (5 to 10 micrometers in diameter) packing material such as trimethylsilane chemically bonded to porous silica, a flow rate of not more than 2.0 milliliters per minute, and a known injection volume of between 10 and 20 microliters. The retention time for idarubicin hydrochloride is between 14 and 16 minutes. The retention time for the resolution compound 4-demethoxydaunorubicinone (generated in situ) is between 6 and 9 minutes. Mobile phase, diluent, working standard and sample solutions, resolution test solution, system suitability requirements, and calculations are as follows:

(i) *Mobile phase.* Prepare a suitably sized quantity of a mixture of water, acetonitrile, and methanol (540:290:170). Dissolve 1 gram of sodium lauryl sulfate and 2 milliliters of 85 percent phosphoric acid per liter of this solution. Adjust with 2 *N* sodium hydroxide to a pH of 3.6±0.1. Filter through a suitable filter capable of removing particulate matter to 0.5 micron in diameter. Degas the mobile phase just prior to its introduction into the chromatograph.

(ii) *Diluent.* Prepare as mobile phase, excluding the sodium lauryl sulfate.

(iii) *Preparation of working standard solution.* Dissolve an accurately weighed quantity of idarubicin hydrochloride working standard in diluent to obtain a solution having a known concentration of 0.5 milligram of idarubicin hydrochloride per milliliter.

(iv) *Sample solution.* Transfer approximately 50 milligrams of sample, accurately weighed, to a 100-milliliter volumetric flask, add diluent to volume, and mix. This yields a solution containing 0.5 milligram of idarubicin hydrochloride per milliliter (estimated).

(v) *Resolution test solution.* To 2 milliliters of a 1.0 milligram per milliliter aqueous solution of idarubicin hydrochloride, add 20 microliters of 1 *N* hydrochloric acid. Hold for 30 minutes at 95 C in an oil bath. This procedure generates the aglycone of idarubicin, 4-demethoxydaunorubicinone. Transfer 1.0 milliliter of this solution to a 10-milliliter volumetric flask, add diluent to volume, and mix. Use this solution to determine the resolution requirement for the chromatographic system.

(vi) *System suitability requirements*—(A) *Asymmetry factor.* The asymmetry factor (A_S), measured at a point 5 percent of the peak height from the baseline, is satisfactory if it is not less than 0.85 and not more than 1.1.

(B) *Efficiency of the column.* The absolute efficiency (h_r) is satisfactory if it is not more than 10.0 for the idarubicin hydrochloride peak, equivalent to 4,500 theoretical plates for a 25-centimeter column of 6-micrometer particles.

(C) *Resolution factor.* The resolution factor (R_S) between the peak for idarubicin and 4-demethoxydaunorubicinone (generated in situ) is satisfactory if it is not less than 9.5.

(D) *Coefficient of variation (relative standard deviation).* The coefficient of variation (S_R in percent of 5 replicate injections) is satisfactory if it is not more than 2.0 percent.

(E) *Capacity factor.* The capacity factor (k') for idarubicin hydrochloride is satisfactory if it is not less than 5 and not more than 15. If the system suitability parameters have been met, proceed as described in § 436.216(b) of this chapter.

(vii) *Calculations.* Calculate the micrograms of idarubicin hydrochloride per milligram of sample as follows:

$$\text{Micrograms of idarubicin hydrochloride per milligram} = \frac{A_U \times P_S \times 100}{A_S \times C_U \times (100 - m)}$$

where:

A_U=Area of the idarubicin hydrochloride peak in the chromatogram of the sample (at a retention time equal to that observed for the standard);

A_S=Area of the idarubicin hydrochloride peak in the chromatogram of the idarubicin hydrochloride working standard;

P_S=Idarubicin hydrochloride activity in the idarubicin hydrochloride working standard solution in micrograms per milliliter;

C_U=Milligrams of idarubicin hydrochloride sample per milliliter of sample solution;

m=Percent moisture content of the sample.

(2) *Moisture.* Proceed as directed in § 436.201 of this chapter.

(3) *pH.* Proceed as directed in § 436.202 of this chapter, using an aqueous solution containing 5 milligrams per milliliter.

(4) *Crystallinity.* Proceed as directed in § 436.203(a) of this chapter.

(5) *HPLC impurities.* Proceed as directed in paragraph (b)(1) of this section. Calculate the percentage of impurities as follows:

$$\text{Percent individual impurity} = \frac{A_i \times 100}{A_r}$$

$$\text{Percent total HPLC impurities} = \frac{A \times 100}{A_r}$$

where:

A_i=Area of the individual impurity peak;

A=The sum of areas of all peaks minus the area due to the idarubicin hydrochloride peak and solvent peak; and

A_r=The sum of areas of all peaks in the chromatogram excluding the solvent peak.

(6) *Identity.* Proceed as directed in § 436.211 of this chapter, using a 1.0 percent potassium bromide disc prepared as directed in § 436.211(b)(1).

5. Section 450.230 is added to subpart C to read as follows:

§ 450.230 Idarubicin hydrochloride for injection.

(a) *Requirements for certification*—(1) *Standards of identity, strength, quality, and purity.* Idarubicin hydrochloride for injection is a lyophilized mixture of idarubicin hydrochloride and lactose. Its idarubicin hydrochloride content is satisfactory if it is not less than 90 percent and not more than 110 percent of the number of milligrams of idarubicin hydrochloride that it is represented to contain. It is sterile. It contains not more than 8.93 U.S.P. endotoxin units per milligram of idarubicin hydrochloride. Its moisture content is not more than 4.0 percent. When reconstituted as directed in the labeling, its pH is not less than 5.0 and not more than 7.0. It passes the identity test. The idarubicin hydrochloride used conforms to the standards prescribed by § 450.30(a)(1).

(2) *Labeling.* It shall be labeled in accordance with the requirements of § 432.5 of this chapter.

(3) *Requests for certification; samples.* In addition to complying with the requirements of § 431.1 of this chapter, each such request shall contain:

(i) Results of tests and assays on:

(A) The idarubicin hydrochloride used in making the batch for idarubicin hydrochloride content, solvent residues, moisture, pH, crystallinity, related individual thin layer chromatography and high-performance liquid chromatography (HPLC) impurities, total impurities, and identity.

(B) The batch for idarubicin hydrochloride content, sterility, bacterial endotoxins, moisture, pH, and identity.

(ii) Samples required if requested by the Director, Center for Drug Evaluation and Research:

(A) The idarubicin hydrochloride used in making the batch: 14 packages, each containing approximately 40 milligrams.

(B) The batch:

(*1*) For all tests except sterility: A minimum of 34 immediate containers.

(*2*) For sterility testing: 20 immediate containers, collected at regular intervals throughout each filling operation.

(b) *Tests and methods of assay.* Idarubicin hydrochloride is toxic. It must be handled with care in the laboratory. Transfer all dry powders into a suitable hood while wearing rubber gloves. Avoid inhaling fine particles of powder. Solutions should not be pipetted by mouth. If the substance contacts the skin, wash with soap and water. Dispose of all waste material by dilution with large volumes of dilute sodium hypochlorite (bleach) solution.

(1) *Idarubicin hydrochloride content (HPLC).* Proceed as directed in § 450.30(b)(1), preparing the sample solution and calculating the idarubicin hydrochloride as follows:

(i) *Sample solution.* Prepare the sample solution by rinsing the contents of the vial into an appropriate-sized volumetric flask with sufficient diluent to obtain a concentration of 0.5 milligram of idarubicin hydrochloride per milliliter (estimated).

(ii) *Calculations.* Calculate the idarubicin hydrochloride content per vial as follows:

$$\text{Micrograms of idarubicin hydrochloride per vial} = \frac{A_U \times P_S \times d}{A_s \times 1{,}000}$$

where:

A_U=Area of the idarubicin hydrochloride peak in the chromatogram of the sample (at a retention time equal to that observed for the standard);

A_S=Area of the idarubicin hydrochloride peak in the chromatogram of the idarubicin hydrochloride working standard;

P_S=Idarubicin hydrochloride activity in the idarubicin hydrochloride working standard solution in micrograms per milliliter; and

d=Dilution factor of the sample.

(2) *Sterility.* Proceed as directed in § 436.20 of this chapter, using the method described in § 436.20(e)(1).

(3) *Bacterial endotoxins.* Proceed as directed in the U.S.P. Bacteria endotoxin test. The specimen under test contains not more than 8.93 U.S.P. endotoxin units per milligram of idarubicin hydrochloride.

(4) *Moisture.* Proceed as directed in § 436.201 of this chapter, using the sample preparation method described in § 436.201(d)(4).

(5) *pH.* Proceed as directed in § 436.202 of this chapter, using the sample obtained after reconstituting the drug as directed in the labeling, except use distilled water instead of saline.

(6) *Identity.* The high-performance liquid chromatogram of the sample determined as directed in paragraph (b)(1) of this section compares qualitatively to that of the idarubicin hydrochloride working standard.

Dated: March 23, 1993.

Paul F. Vogel,

Acting Director, Office of Compliance, Center for Drug Evaluation and Research.

[FR Doc. 93-10314 Filed 5-3-93; 8:45 am]

BILLING CODE 4160-01-P

21 CFR Parts 430, 436, and 443

[Docket No. 92N-0113]

Antibiotic Drugs; Loracarbef, Loracarbef Capsules, and Loracarbef for Oral Suspension

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending the antibiotic drug regulations to provide for inclusion of accepted standards for a new antibiotic drug, loracarbef, and use of the antibiotic drug in two dosage forms, loracarbef capsules and loracarbef for oral suspension. The manufacturer has supplied sufficient data and information to establish its safety and efficacy.

DATES: Effective June 3, 1993; written comments, notice of participation, and request for hearing by June 3, 1993; data, information, and analyses to justify a hearing by July 6, 1993.

ADDRESSES: Submit written comments to the Dockets Management Branch (HFA-305), Food and Drug

VOL 58 ISS 84 MY 4 1993 UMI

Administration, rm. 1-23, 12420 Parklawn Dr., Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Peter A. Dionne, Center for Drug Evaluation and Research (HFD-520), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301-443-0335.

SUPPLEMENTARY INFORMATION: FDA has evaluated data submitted in accordance with regulations promulgated under section 507 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 357), as amended, with respect to a request for approval of a new antibiotic drug, loracarbef, and its use in two dosage forms, loracarbef capsules and loracarbef for oral suspension. The agency has concluded that the data supplied by the manufacturer concerning these antibiotic drugs are adequate to establish their safety and efficacy when used as directed in the labeling and that the regulations should be amended in 21 CFR parts 430, 436, and 443 to provide for the inclusion of accepted standards for these products.

Environmental Impact

The agency has determined under 21 CFR 25.24(c)(6) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

Submitting Comments and Filing Objections

This final rule announces standards that FDA has accepted in a request for approval of an antibiotic drug. Because this final rule is not controversial and because when effective it provides notice of accepted standards, FDA finds that notice and comment procedure is unnecessary and not in the public interest. This final rule, therefore, becomes effective June 3, 1993. However, interested persons may, on or before June 3, 1993, submit comments to the Dockets Management Branch (address above). Two copies of any comments are to be submitted, except that individuals may submit one copy. Comments are to be identified with the docket number found in brackets in the heading of this document. Received comments may be seen in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

Any person who will be adversely affected by this final rule may file objections to it and request a hearing. Reasonable grounds for the hearing must be shown. Any person who decides to seek a hearing must file (1) on or before June 3, 1993, a written notice of participation and request for hearing, and (2) on or before July 6, 1993, the data, information, and analyses on which the person relies to justify a hearing, as specified in § 314.300 (21 CFR 314.300). A request for a hearing may not rest upon mere allegations or denials, but must set forth specific facts showing that there is a genuine and substantial issue of fact that requires a hearing. If it conclusively appears from the face of the data, information, and factual analyses in the request for hearing that no genuine and substantial issue of fact precludes the action taken by this order, or if a request for hearing is not made in the required format or with the required analyses, the Commissioner of Food and Drugs will enter summary judgment against the person(s) who request(s) the hearing, making findings and conclusions and denying a hearing. All submissions must be filed in three copies, identified with the docket number appearing in the heading of this document and filed with the Dockets Management Branch.

The procedures and requirements governing this order, a notice of participation and request for hearing, a submission of data, information, and analyses to justify a hearing, other comments, and grant or denial of a hearing are contained in § 314.300.

All submissions under this order, except for data and information prohibited from public disclosure under 21 U.S.C. 331(j) or 18 U.S.C. 1905, may be seen in the Dockets Management Branch (address above) between 9 a.m. and 4 p.m., Monday through Friday.

List of Subjects

21 CFR Part 430

Administrative practice and procedure, Antibiotics.

21 CFR Parts 436 and 443

Antibiotics.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, 21 CFR parts 430 and 436 are amended and new part 443 is added as follows:

PART 430—ANTIBIOTIC DRUGS; GENERAL

1. The authority citation for 21 CFR part 430 continues to read as follows:

Authority: Secs. 201, 501, 502, 503, 505, 507, 701 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 321, 351, 352, 353, 355, 357, 371); secs. 215, 301, 351 of the Public Health Service Act (42 U.S.C. 216, 241, 262).

2. Section 430.4 is amended by adding new paragraph (a)(68) to read as follows:

§ 430.4 Definitions of antibiotic substances.

(a) • • •

(68) *Loracarbef.* Loracarbef is an antibiotic substance having the chemical structure described by the following name: (6*R*,7*S*)-7-[(*R*)-2-amino-2-phenylacetamido]-3-chloro-8-oxo-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid.

• • • • • •

3. Section 430.5 is amended by adding new paragraphs (a)(103) and (b)(105) to read as follows:

§ 430.5 Definitions of master and working standards.

(a) • • •

(103) *Loracarbef.* The term "loracarbef master standard" means a specific lot of loracarbef that is designated by the Commissioner as the standard of comparison in determining the potency of the loracarbef working standard.

(b) • • •

(105) *Loracarbef.* The term "loracarbef working standard" means a specific lot of a homogeneous preparation of loracarbef.

4. Section 430.6 is amended by adding new paragraph (b)(105) to reads as follows:

§ 430.6 Definitions of the terms "unit" and "microgram" as applied to antibiotic substances.

• • • • • •

(b) • • •

(105) *Loracarbef.* The term "microgram" applied to loracarbef means the loracarbef (potency) contained in 1.059 micrograms of the loracarbef master standard.

PART 436—TESTS AND METHODS OF ASSAY OF ANTIBIOTIC AND ANTIBIOTIC-CONTAINING DRUGS

5. The authority citation for 21 CFR part 436 continues to read as follows:

Authority: Sec. 507 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 357).

6. Section 436.215 is amended by alphabetically adding a new entry to the table in paragraph (b) and by adding a new paragraph (c)(16) to read as follows:

§ 436.215 Dissolution test.

• • • • • •

(b) • • •

Dosage form	Dissolution medium	Rotation rate[1]	Sampling time(s)	Apparatus
•	•	•	•	•
Loracarbef capsules.	900 mL distilled water.	50	30 min	2
•	•	•	•	•

[1] Rotation rate of basket or paddle stirring element (revolutions per minute).

(c) • • •

(16) *Loracarbef*—(i) *Preparation of the working standard solution.* Accurately weigh approximately 110 milligrams of the loracarbef working standard into a suitable-sized volumetric flask. Dissolve and dilute to volume with water. Further dilute an accurately measured portion with distilled water to obtain a known concentration of 0.02 milligram of loracarbef activity per milliliter.

(ii) *Preparation of sample solutions.* Dilute an accurately measured portion of the sample with sufficient distilled water to obtain a concentration of 0.02 milligram of loracarbef activity per milliliter (estimated).

(iii) *Procedure.* Using a suitable spectrophotometer and water as the blank, determine the absorbance of each standard and sample solution at the absorbance maximum at approximately 260 nanometers. Determine the exact position of the absorbance maximum for the particular instrument used.

(iv) *Calculations.* Determine the total amount of loracarbef dissolved as follows:

$$T = \frac{A_U \times c \times d \times 900}{A_S}$$

where:

T = Total milligrams of loracarbef activity dissolved;
A_U = Absorbance of sample;
A_S = Absorbance of the standard;
c = Concentration of the working standard solution in milligrams per milliliter; and
d = Dilution factor of the sample filtrate.

• • • • • •

7. Part 443 is added to read as follows:

PART 443—CARBACEPHEM ANTIBIOTIC DRUGS

Subpart A—Bulk Drugs

Sec.
443.20 Loracarbef.

Subpart B—Oral Dosage Forms

443.120 Loracarbef oral dosage forms.
443.120a Loracarbef capsules.
443.120b Loracarbef for oral suspension.

Authority: Sec. 507 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 357).

Subpart A—Bulk Drugs

§ 443.20 Loracarbef.

(a) *Requirements for certification*—(1) *Standards of identity, strength, quality, and purity.* Loracarbef is the monohydrate form of (6*R*,7*S*)-7-[(*R*)-2-amino-2-phenylacetamido]-3-chloro-8-oxo-1-azabicyclo[4.2.0]oct-2-ene-2-carboxylic acid. It is so purified and dried that:

(i) Its potency is not less than 960 micrograms and not more than 1,020 micrograms of loracarbef activity per milligram, on an anhydrous basis.

(ii) Its moisture content is not less than 3.5 percent and not more than 6.0 percent.

(iii) The pH of an aqueous slurry containing 100 milligrams per milliliter is not less than 3.5 and not more than 5.5.

(iv) Its specific rotation in an 0.1 *N* HCl solution containing 10 milligrams of loracarbef per milliliter at 25 °C is +27° to +33° on an anhydrous basis.

(v) It is crystalline.

(vi) It gives a positive identity test.

(2) *Labeling.* It shall be labeled in accordance with the requirements of § 432.5 of this chapter.

(3) *Requests for certification; samples.* In addition to complying with the requirements of § 431.1 of this chapter, each such request shall contain:

(i) Results of tests and assays on the batch for loracarbef potency, moisture, pH, specific rotation, crystallinity, and identity.

(ii) Samples, if required by the Director, Center for Drug Evaluation and Research: 10 packages, each containing approximately 500 milligrams.

(b) *Tests and methods of assay*—(1) *Potency.* Proceed as directed in § 436.216 of this chapter, using ambient temperature, an ultraviolet detection system operating at a wavelength of 265 nanometers, a 25-centimeter by 4.6-millimeter (inside diameter) column packed with microparticulate (5 micrometers in diameter) reversed phase packing material such as octadecyl silane bonded to silicas, a flow rate of 1.5 milliliters per minute, and a known injection volume between 10 and 20 microliters. The retention time for loracarbef is between 10 and 13 minutes. Mobile phase, working standard, sample and resolution test solutions, system suitability requirements, and calculations are as follows:

(i) *Mobile phase.* Dissolve 2.0 grams of pentanesulfonic acid sodium salt monohydrate in 1,560 milliliters of water. Add 20 milliliters of triethylamine. Adjust the pH to 2.5 with phosphoric acid. Add 440 milliliters of methanol and mix. Filter the mobile phase through a suitable filter capable of removing particulate matter 0.5 micron in diameter and degas it just prior to its introduction into the chromatograph.

(ii) *Preparation of working standard, sample, and resolution test solutions*—(A) *Working standard solution.* Accurately weigh approximately 10 milligrams of the loracarbef working reference standard into a 50-milliliter volumetric flask. Dissolve and dilute to volume with mobile phase. Brief sonication may be required to obtain complete dissolution of the material.

(B) *Sample solution.* Accurately weigh approximately 10 milligrams of sample into a 50-milliliter volumetric flask. Dissolve and dilute to volume with mobile phase. Brief sonication may be required to obtain complete dissolution of the material.

(C) *Resolution test solution.* Prepare a resolution test solution containing approximately 0.2 milligram per milliliter each of loracarbef and loracarbef *L*-isomer in the mobile phase.

(iii) *System suitability requirements*—(A) *Asymmetry factor.* The asymmetry factor (A_S) at 5 percent peak height is satisfactory if it is not less than 0.8 and not more than 1.3 for the loracarbef peak.

(B) *Efficiency of the column.* The absolute efficiency (h_r) is satisfactory if it is not more than 20 for the loracarbef peak.

(C) *Resolution factor.* The resolution factor (R) between the peak for loracarbef and the peak for the resolution standard loracarbef *L*-isomer in the resolution test solution is satisfactory if it is not less than 6.0.

(D) *Coefficient of variation (relative standard deviation).* The coefficient of variation (S_R in percent of 5 replicate injections) is satisfactory if it is not more than 2.0 percent.

VOL 58 ISS 84 MY 4 1993 UMI

(E) *Capacity factor (k')*. The capacity factor (k') for loracarbef is satisfactory if it is not less than 5 and not more than 8.

If the system suitability parameters have been met, then proceed as described in § 436.216(b) of this chapter.

(iv) *Calculations*. Calculate the micrograms of loracarbef per milligram of sample on an anhydrous basis as follows:

$$\text{Micrograms of loracarbef per milligram} = \frac{A_U \times P_S \times 100}{A_S \times C_U \times (100-m)}$$

where:

A_U = Area of the loracarbef peak in the chromatogram of the sample (at a retention time equal to that observed for the standard);

A_S = Area of the loracarbef peak in the chromatogram of the loracarbef working standard;

P_S = Loracarbef activity in the loracarbef working standard solution in micrograms per milliliter;

C_U = Milligrams of sample per milliliter of sample solution; and

m = Percent moisture content of the sample.

(2) *Moisture*. Proceed as directed in § 436.201 of this chapter.

(3) *pH*. Proceed as directed in § 436.202 of this chapter, using an aqueous suspension containing 100 milligrams per milliliter.

(4) *Specific rotation*. Dissolve and dilute an accurately weighed sample with sufficient 0.1 *N* HCl to obtain a concentration of approximately 10 milligrams of loracarbef activity per milliliter. Proceed as directed in § 436.210 of this chapter, using a 1.0-decimeter polarimeter tube. Calculate the specific rotation on the anhydrous basis.

(5) *Crystallinity*. Proceed as directed in § 436.203(a) of this chapter.

(6) *Identity*. Proceed as directed in § 436.211 of this chapter, using the 1.0 percent potassium bromide disc prepared as described in § 436.211(b)(1).

Subpart B—Oral Dosage Forms

§ 443.120 Loracarbef oral dosage forms.

§ 443.120a Loracarbef capsules.

(a) *Requirements for certification*—(1) *Standards of identity, strength, quality, and purity*. Loracarbef capsules are composed of loracarbef and one or more suitable and harmless lubricants and diluents enclosed in a gelatin capsule. Each capsule contains loracarbef equivalent to either 200 milligrams or 400 milligrams of loracarbef. Its loracarbef content is satisfactory if it is not less than 90 percent and not more than 110 percent of the number of milligrams of loracarbef that it is represented to contain. Its moisture content is not more than 8.5 percent. It passes the dissolution test. It passes the identity test. The loracarbef used conforms to the standards prescribed by § 443.20(a)(1).

(2) *Labeling*. It shall be labeled in accordance with the requirements of § 432.5 of this chapter.

(3) *Requests for certification; samples*. In addition to complying with the requirements of § 431.1 of this chapter, each such request shall contain:

(i) Results of tests and assays on:

(A) The loracarbef used in making the batch for potency, moisture, pH, specific rotation, crystallinity, and identity.

(B) The batch for content, moisture, dissolution, and identity.

(ii) Samples, if required by the Director, Center for Drug Evaluation and Research:

(A) The loracarbef used in making the batch: 10 packages, each containing approximately 500 milligrams.

(B) The batch: A minimum of 100 capsules.

(b) *Tests and methods of assay*—(1) *Loracarbef content*. Proceed as directed in § 443.20(b)(1), preparing the sample solution and calculating the loracarbef content as follows:

(i) *Preparation of sample solution*. Place one intact capsule in a 200-milliliter volumetric flask containing 150 milliliters of distilled water. Shake the mixture vigorously to aid disruption of the capsule. Sonicate the mixture briefly (5 minutes). Dilute the contents to volume with distilled water. Mix well and immediately transfer a suitable aliquot to a volumetric flask of appropriate size to obtain a solution contalning 0.2 milligram per milliliter (estimated) of loracarbef when diluted to volume with mobile phase (described in § 443.20(b)(1)(i)). Filter this solution through a 0.45-micron membrane filter before injecting it into the chromatograph.

(ii) *Calculations*. Calculate the loracarbef content as follows:

$$\text{Milligrams of loracarbef per capsule} = \frac{A_U \times P_S \times d}{A_S \times 1{,}000}$$

where:

A_U = Area of the loracarbef peak in the chromatogram of the sample (at a retention time equal to that observed for the standard);

A_S = Area of the loracarbef peak in the chromatogram of the loracarbef working standard;

P_S = Loracarbef activity in the loracarbef working standard solution in micrograms per milliliter; and

d = Dilution factor of the sample.

(2) *Moisture*. Proceed as directed in § 436.201 of this chapter.

(3) *Dissolution test*. Proceed as directed in § 436.215 of this chapter. The quantity Q, the amount of loracarbef activity dissolved, is 75 percent within 30 minutes.

(4) *Identity*. The retention time of the loracarbef response in the high-performance liquid chromatographic procedure described in paragraph (b)(1) of this section as applied to the sample solution compares qualitatively to that of the loracarbef reference standard.

§ 443.120b Loracarbef for oral suspension.

(a) *Requirements for certification*—(1) *Standards of identity, strength, quality, and purity*. Loracarbef for oral suspension is loracarbef with one or more suitable and harmless preservatives, sweeteners, suspending agents, colorings, antifoaming agents, and flavorings. When constituted as directed in the labeling, each milliliter contains the equivalent of either 20 or 40 milligrams loracarbef activity. Its loracarbef content is satisfactory if it is not less than 90 percent and not more than 115 percent of the number of milligrams of loracarbef that it is represented to contain. Its moisture content is not more than 2.0 percent. When constituted as described in the labeling, the pH of the suspension is not less than 3.5 and not more than 6.0. It passes the identity test. The loracarbef used conforms to the standards prescribed by § 443.20(a)(1).

(2) *Labeling*. It shall be labeled in accordance with the requirements of § 432.5 of this chapter.

(3) *Requests for certification; samples*. In addition to complying with the requirements of § 431.1 of this chapter, each such request shall contain:

(i) Results of tests and assays on:

(A) The loracarbef used in making the batch for potency, moisture, pH, specific rotation, crystallinity, and identity.

(B) The batch for content, moisture, pH, and identity.

(ii) Samples, if required by the Director, Center for Drug Evaluation and Research:

(A) The loracarbef used in making the batch: 10 packages, each containing approximately 500 milligrams.

(B) The batch: A minimum of 10 immediate containers.

(b) *Tests and methods of assay*—(1) *Loracarbef content*. Proceed as directed in § 443.20(b)(1), preparing the sample solution and calculating the loracarbef content as follows:

(i) *Preparation of sample solution*. Constitute as directed in the labeling. Transfer a 5.0-milliliter portion of the suspension into an appropriately sized volumetric flask and quantitatively dilute stepwise with mobile phase (described in § 443.20(b)(1)(i)) to obtain a concentration of 0.2 milligram of loracarbef activity per milliliter (estimated).

(ii) *Calculations*. Calculate the loracarbef content as follows:

$$\text{Milligrams of loracarbef per 5 milliliters of sample} = \frac{A_U \times P_S \times d}{A_S \times 1{,}000}$$

where:

A_U = Area of the loracarbef peak in the chromatogram of the sample (at a retention time equal to that observed for the standard);

A_S = Area of the loracarbef peak in the chromatogram of the loracarbef working standard;

P_S = Loracarbef activity in the loracarbef working standard solution in micrograms per milliliter; and

d = Dilution factor of the sample.

(2) *Moisture*. Proceed as directed in § 436.201 of this chapter.

(3) *pH*. Proceed as directed in § 436.202 of this chapter, using the drug constituted as directed in the labeling.

(4) *Identity*. The retention time of the loracarbef response in the high-performance liquid chromatographic procedure described in paragraph (b)(1) of this section as applied to the sample solution compares qualitatively to that of the loracarbef reference standard.

Dated: April 14, 1993.

Paul F. Vogel,

Acting Director, Office of Compliance, Center for Drug Evaluation and Research.

[FR Doc. 93-10315 Filed 5-3-93; 8:45 am]

BILLING CODE 4160-01-F

21 CFR Part 441

[Docket No. 91N-0147]

Antibiotic Drugs; Sterile Imipenem Monohydrate-Cilastatin Sodium

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending the antibiotic drug regulations to provide for the inclusion of accepted standards for a new dosage form of imipenem monohydrate-cilastatin sodium, sterile imipenem monohydrate-cilastatin sodium. The manufacturer has supplied sufficient data and information to establish its safety and efficacy.

DATES: Effective June 3, 1993; written comments, notice of participation, and requests for a hearing by June 3, 1993; data, information, and analyses to justify a hearing by July 6, 1993.

ADDRESSES: Submit written comments to the Dockets Management Branch (HFA-305), Food and Drug Administration, rm. 1-23, 12420 Parklawn Dr., Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Peter A. Dionne, Center for Drug Evaluation and Research (HFD-520), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301-443-0335.

SUPPLEMENTARY INFORMATION: FDA has evaluated data submitted in accordance with regulations promulgated under section 507 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 357), as amended, with respect to a request for approval of a new dosage form of imipenem monohydrate-cilastatin sodium, sterile imipenem monohydrate-cilastatin sodium. The agency has concluded that the data supplied by the manufacturer concerning this antibiotic drug are adequate to establish its safety and efficacy when used as directed in the labeling end that the regulations should be amended in part 441 (21 CFR part 441) to provide for the inclusion of accepted standards for this product.

I. Environmental Impact

The agency has determined under 21 CFR 25.24(c)(6) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

II. Submitting Comments and Filing Objections

This final rule announces standards that FDA has accepted in a request for approval of an antibiotic drug. Because this final rule is not controversial and because when effective it provides notice of accepted standards, FDA finds that notice and comment procedure is unnecessary and not in the public interest. This final rule, therefore, becomes effective June 3, 1993. However, interested persons may, on or before June 3, 1993, submit comments to the Dockets Management Branch (address above). Two copies of any comments are to be submitted, except that individuals may submit one copy. Comments are to be identified with the docket number found in brackets in the heading of this document. Received comments may be seen in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

Any person who will be adversely affected by this final rule may file objections to it and request a hearing. Reasonable grounds for the hearing must be shown. Any person who decides to seek a hearing must file (1) on or before June 3, 1993, a written notice of participation and request for hearing, and (2) on or before July 6, 1993, the data, information, and analyses on which the person relies to justify a hearing, as specified in 21 CFR 314.300. A request for a hearing may not rest upon mere allegations or denials, but must set forth specific facts showing that there is a genuine and substantial issue of fact that requires a hearing. If it conclusively appears from the face of the data, information, and factual analyses in the request for hearing that no genuine and substantial issue of fact precludes the action taken by this final rule, or if a request for hearing is not made in the required format or with the required analyses, the Commissioner of Food and Drugs will enter summary judgment against the person(s) who request(s) the hearing, making findings and conclusions, and denying a hearing.

All submissions must be filed in three copies, identified with the docket number appearing in the heading of this final rule and filed with the Dockets Management Branch.

The procedures and requirements governing this order, a notice of participation and request for hearing, a submission of data, information, and analyses to justify a hearing, other comments, and grant or denial of a hearing are contained in 21 CFR 314.300.

All submissions under this order, except for data and information prohibited from public disclosure under 21 U.S.C. 331(j) or 18 U.S.C. 1905, may be seen in the Dockets Management Branch (address above) between 9 a.m. and 4 p.m., Monday through Friday.

List of Subjects in 21 CFR Part 441

Antibiotics.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, 21 CFR part 441 is amended as follows:

PART 441—PENEM ANTIBIOTIC DRUGS

1. The authority citation for 21 CFR part 441 continues to read as follows:

Authority: Sec. 507 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 357).

§ 441.220b [Redesignated from § 441.220]

2. Section 441.220 is redesignated as § 441.220b and new §§ 441.220 and 441.220a are added to subpart C to read as follows:

VOL 58 ISS 84 MY 4 1993 UMI

§ 441.220 Imipenem monohydrate-cilastatin sodium injectable dosage forms.

§ 441.220a Sterile imipenem monohydrate-cilastatin sodium.

(a) *Requirements for certification*—(1) *Standards of identity, strength, quality, and purity.* Imipenem monohydrate-cilastatin sodium is a dry mixture of imipenem monohydrate and cilastatin sodium packaged for dispensing. Its potency is satisfactory if it contains not less than 400 micrograms of imipenem and not less than 400 micrograms of cilastatin per milligram. Its imipenem content is satisfactory if it is not less than 90 percent and not more than 115 percent of the number of milligrams of imipenem that it is represented to contain. Its cilastatin content is satisfactory if it is not less than 90 percent and not more than 115 percent of the number of milligrams of cilastatin that it is represented to contain. It is sterile. It is nonpyrogenic. Its loss on drying is not more than 3.5 percent. When reconstituted as directed in the labeling, its pH is not less than 6.0 and not more than 7.5. The imipenem monohydrate used conforms to the standards prescribed by § 441.20a(a)(1).

(2) *Labeling.* It shall be labeled in accordance with the requirements of § 432.5 of this chapter.

(3) *Requests for certification; samples.* In addition to complying with the requirements of § 431.1 of this chapter, each such request shall contain:

(i) Results of tests and assays on:

(A) The imipenem monohydrate used in making the batch for potency, sterility, pyrogens, loss on drying, specific rotation, identity, and crystallinity.

(B) The batch for imipenem potency, cilastatin potency, imipenem content, cilastatin content, sterility, pyrogens, loss on drying, and pH.

(ii) Samples, if required by the Director, Center for Drug Evaluation and Research:

(A) The imipenem monohydrate used in making the batch: 10 packages, each containing approximately 500 milligrams.

(B) The batch:

(*1*) For all tests except sterility: A minimum of 20 immediate containers.

(*2*) For sterility testing: 20 immediate containers collected at regular intervals throughout each filling operation.

(b) *Tests and methods of assay*—(1) *Imipenem and cilastatin potency and content.* Determine the potency of the sample in micrograms per milligram of both imipenem and cilastatin and the milligrams of both imipenem and cilastatin per container. Proceed as directed in § 441.20a(b)(1), preparing the cilastatin reference standard solution, the sample solution and calculating the imipenem and cilastatin potency and content as follows:

(i) *Cilastatin reference standard.* Accurately weigh approximately 25 milligrams of the cilastatin reference standard into a 50-milliliter volumetric flask. Immediately prior to analysis, add 10 milliliters of a 0.9 percent saline solution and 1.0 milliliter of a 0.1 percent bicarbonate solution. Add phosphate buffer, 0.001*M*, and shake until dissolved. Sonicate, if necessary, but no longer than 1 minute. Dilute to volume with phosphate buffer, 0.001*M*, to obtain a solution containing approximately 500 micrograms of cilastatin per milliliter. Mix well and inject immediately.

(ii) *Preparation of sample solutions*—(A) *Imipenem and cilastatin potency (micrograms of imipenem and cilastatin per milligram).* Remove the metal seal from each of 10 containers and determine the gross weight in grams. Dissolve and wash out the entire contents of each container with a 0.9 percent saline solution into an appropriate size volumetric flask to give a concentration of 5 milligrams per milliliter each of imipenem and cilastatin. Further dilute with phosphate buffer, 0.001*M*, to obtain a solution containing 500 micrograms each of imipenem and cilastatin per milliliter (estimated). Wash each stopper and container with small quantities of acetone or methanol three times being careful not to wet the container labeling. Allow the containers to air dry about 3 hours or to constant weight. Weigh each container and stopper to determine tare weight in grams.

(B) *Imipenem and cilastatin content (milligrams of imipenem and cilastatin per container).* Reconstitute the sample as directed in the labeling, except use a 0.9 percent saline solution as the reconstituting fluid. Then, using a suitable hypodermic needle and syringe, remove all of the withdrawable contents if it is represented as a single-dose container; or, if the labeling specifies the amount of potency in a given volume of the resultant preparation, remove an accurately measured representative portion from each container. Accurately dilute the solution thus obtained in a suitable volumetric flask with sufficient 0.9 percent saline solution to obtain a stock solution containing about 2,500 micrograms of imipenem and 2,500 micrograms of cilastatin per milliliter. Transfer a 10-milliliter aliquot of this solution to a 50-milliliter volumetric flask and dilute to volume with phosphate buffer, 0.001*M*, to obtain a solution containing 500 micrograms of imipenem and 500 micrograms of cilastatin per milliliter (estimated).

(iii) *Calculations*—(A) *Imipenem and cilastatin potency.* Calculate the micrograms of imipenem and cilastatin per milligram as follows:

$$\text{Milligrams of imipenem or cilastatin per milligram} = \frac{A_U \times P_S \times d}{A_S \times 1{,}000 \times W_S}$$

where:

A_U = Area of the imipenem or cilastatin peak in the chromatogram of the sample (at a retention time equal to that observed for the standard);

A_S = Area of the imipenem or cilastatin peak in the chromatogram of the imipenem or cilastatin working standard;

P_S = Anhydrous imipenem or cilastatin activity in the respective working standard solution in micrograms per milliliter;

d = Dilution factor of the 10 samples; and

W_S = Net contents of 10 containers in grams (gross weight of 10 containers in grams--tare weight of 10 containers in grams).

(B) *Imipenem and cilastatin content.* Calculate the imipenem or cilastatin content of the container as follows:

$$\text{Milligrams of imipenem or cilastatin per milligram} = \frac{A_U \times P_S \times d}{A_S \times 1{,}000}$$

where:

A_U = Area of the imipenem or cilastatin peak in the chromatogram of the sample (at a retention time equal to that observed for the standard);

A_S = Area of the imipenem or cilastatin peak in the chromatogram of the imipenem or cilastatin working standard;

P_S = Anhydrous imipenem or cilastatin activity in the imipenem or cilastatin working standard solution in micrograms per milliliter; and

d = Dilution factor of the sample.

(2) *Sterility.* Proceed as directed in § 436.20 of this chapter, using the method described in § 436.20(e)(1).

(3) *Pyrogens.* Proceed as directed in § 436.32(a) of this chapter, using a solution containing 5.0 milligrams of imipenem per milliliter except inject 10 milliliters per kilogram of rabbit weight.

(4) *Loss on drying.* Proceed as directed in § 436.200(a) of this chapter.

(5) *pH.* Proceed as directed in § 436.202 of this chapter.

Dated: March 26, 1993.

Paul F. Vogel,

Acting Director, Office of Compliance, Center for Drug Evaluation and Research.

[FR Doc. 93-10316 Filed 5-3-93; 8:45 am]

BILLING CODE 4160-01-F

21 CFR Part 444

[Docket No. 91N-0265]

Antibiotic Drugs; Tobramycin-Fluorometholone Acetate Ophthalmic Suspension

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending the antibiotic drug regulations to provide for the inclusion of accepted standards for a new ophthalmic dosage form of tobramycin, tobramycin-fluorometholone acetate ophthalmic suspension. The manufacturer has supplied sufficient data and information to establish its safety and efficacy.

DATES: Effective June 3, 1993; written comments, notice of participation, and requests for a hearing by June 3, 1993; data, information, and analyses to justify a hearing by July 6, 1993.

ADDRESSES: Submit written comments to the Dockets Management Branch (HFA-305), Food and Drug Administration, rm. 1-23, 12420 Parklawn Dr., Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Peter A. Dionne, Center for Drug Evaluation and Research (HFD-520), Food and Drug Administration, 5600 Fishers Lane, Rockville, MD 20857, 301-443-0335.

SUPPLEMENTARY INFORMATION: FDA has evaluated data submitted in accordance with regulations promulgated under section 507 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 357) as amended, with respect to a request for approval of a new ophthalmic dosage form of tobramycin, tobramycin-fluorometholone acetate ophthalmic suspension. The agency has concluded that the data supplied by the manufacturer concerning this antibiotic drug are adequate to establish its safety and efficacy when used as directed in the labeling and that the regulations should be amended in part 444 (21 CFR part 444) by adding new § 444.380e to subpart D to provide for the inclusion of accepted standards for this product.

I. Environmental Impact

The agency has determined under 21 CFR 25.24(c)(6) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

II. Submitting Comments and Filing Objections

This final rule announces standards that FDA has accepted in a request for approval of an antibiotic drug. Because this final rule is not controversial and because when effective it provides notice of accepted standards, FDA finds that notice and comment procedure is unnecessary and not in the public interest. This final rule, therefore, becomes effective June 3, 1993. However, interested persons may, on or before June 3, 1993, submit comments to the Dockets Management Branch (address above). Two copies of any comments are to be submitted, except that individuals may submit one copy. Comments are to be identified with the docket number found in brackets in the heading of this document. Received comments may be seen in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

Any person who will be adversely affected by this final rule may file objections to it and request a hearing. Reasonable grounds for the hearing must be shown. Any person who decides to seek a hearing must file (1) on or before June 3, 1993, a written notice of participation and request for hearing, and (2) on or before July 6, 1993, the data, information, and analyses on which the person relies to justify a hearing, as specified in 21 CFR 314.300. A request for a hearing may not rest upon mere allegations or denials, but must set forth specific facts showing that there is a genuine and substantial issue of fact that requires a hearing. If it conclusively appears from the face of the data, information, and factual analyses in the request for hearing that no genuine and substantial issue of fact precludes the action taken by this order, or if a request for hearing is not made in the required format or with the required analyses, the Commissioner of Food and Drugs will enter summary judgment against the person(s) who request(s) the hearing, making findings and conclusions and denying a hearing. All submissions must be filed in three copies, identified with the docket number appearing in the heading of this order, and filed with the Dockets Management Branch.

The procedures and requirements governing this order, a notice of participation and request for hearing, a submission of data, information, and analyses to justify a hearing, other comments, and grant or denial of a hearing are contained in 21 CFR 314.300.

All submissions under this order, except for data and information prohibited from public disclosure under 21 U.S.C. 331(j) or 18 U.S.C. 1905, may be seen in the Dockets Management Branch (address above) between 9 a.m. and 4 p.m., Monday through Friday.

List of Subjects in 21 CFR Part 444

Antibiotics.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, 21 CFR part 444 is amended as follows:

PART 444—OLIGOSACCHARIDE ANTIBIOTIC DRUGS

1. The authority citation for 21 CFR part 444 continues to read as follows:

Authority: Sec. 507 of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 357).

2. New § 444.380e is added to subpart D to read as follows:

§ 444.380e Tobramycin-fluorometholone acetate ophthalmic suspension.

(a) *Requirements for certification*—(1) *Standards of identity, strength, quality, and purity.* Tobramycin-fluorometholone acetate ophthalmic suspension is an aqueous suspension containing, in each milliliter, 3.0 milligrams of tobramycin and 1.0 milligram of fluorometholone acetate in a suitable and harmless aqueous vehicle. It contains one or more suitable and harmless dispersants, preservatives, buffers, and tonicity agents. Its tobramycin potency is satisfactory if it is not less than 90 percent and not more than 120 percent of the number of milligrams of tobramycin that it is represented to contain. Its fluorometholone acetate content is satisfactory if it is not less than 90 percent and not more than 115 percent of the number of milligrams of fluorometholone acetate than it is represented to contain. It is sterile. Its pH is not less than 6.0 and not more than 7.0. It passes the identity tests for tobramycin and fluorometholone acetate. The tobramycin used conforms to the standards prescribed by § 440.80(a)(1) of this chapter, except heavy metals. The fluorometholone acetate used conforms to the standards prescribed in the U.S. Pharmacopeia XXII.

(2) *Labeling.* It shall be labeled in accordance with the requirements of § 432.5 of this chapter.

(3) *Requests for certification; samples.* In addition to complying with the requirements of § 431.1 of this chapter, each such request shall contain:

(i) Results of tests and assays on:

(A) The tobramycin used in making the batch for potency, moisture, pH, identity, and residue on ignition.

VOL
58
ISS
84
MY
4
1993
UMI

(B) The fluorometholone acetate used in making the batch for all requirements in U.S. Pharmacopeia XXII.

(C) The batch for tobramycin potency, fluorometholone acetate content, sterility, pH, tobramycin identity, and fluorometholone acetate identity.

(ii) Samples, if required by the Director, Center for Drug Evaluation and Research:

(A) The tobramycin used in making the batch: 10 packages, each containing approximately 500 milligrams.

(B) The batch:

(*1*) For all tests except sterility: A minimum of 10 immediate containers.

(*2*) For sterility testing: 20 immediate containers, collected at regular intervals throughout each filling operation.

(b) *Tests and methods of assay*—(1) *Tobramycin potency.* Proceed as directed in § 436.106 of this chapter, preparing the sample for assay as follows: Dilute an accurately measured representative portion of the sample with sufficient distilled water to obtain a stock solution of convenient concentration. Further dilute an aliquot of the stock solution with distilled water to the reference concentration of 2.5 micrograms of tobramycin per milliliter (estimated).

(2) *Fluorometholone acetate content.* Proceed as directed in § 436.216 of this chapter, using ambient temperature, an ultraviolet detection system operating at a wavelength of 254 nanometers, a column or cartridge packed with microparticulate (3 to 10 micrometers in diameter) reversed phase packing material such as octadecyl hydrocarbon bonded silicas, a flow rate not to exceed 2.0 milliliters per minute, and an injection volume of 10 or 20 microliters. Mobile phase, working standard and sample solutions, resolution test solution, system suitability requirements, and calculations are as follows:

(i) *Mobile phase.* Mix acetonitrile:water (50:50) and adjust if necessary by reducing the amount of acetonitrile to increase retention, or by increasing the amount of acetonitrile to decrease the retention of the solute. Filter the mobile phase through a suitable glass fiber filter or equivalent that is capable of removing particulate contamination to 1 micron in diameter. Degas the mobile phase just prior to its introduction into the chromatograph pumping system.

(ii) *Preparation of working standard and sample solutions, and resolution test solution*—(A) *Working standard solution.* Accurately weigh approximately 25 milligrams of the fluorometholone acetate working standard into a 10-milliliter volumetric flask and add about 5 milliliters of acetonitrile. Shake until dissolved. Dilute to volume with acetonitrile. Further dilute 1.0 milliliter of this solution in a volumetric flask to 10 milliliters with acetonitrile to obtain a solution of known concentration containing approximately 250 micrograms of fluorometholone acetate per milliliter. Mix well.

(B) *Sample solution.* Shake vial thoroughly, to homogenize its contents, and immediately remove an accurately measured representative portion from it. Quantitatively dilute the suspension thus obtained with sufficient acetonitrile to obtain a solution containing 250 micrograms of fluorometholone acetate per milliliter (estimated). For instance, dilute a 1.0 milliliter aliquot of suspension with 3.0 milliliters of acetonitrile and filter.

(C) *Resolution test solution.* Prepare as directed in paragraph (b)(2)(ii)(A) of this section, except use 10 milligrams of fluorometholone in addition to the 25 milligrams of fluorometholone acetate working standard.

(iii) *System suitability requirements*—(A) *Asymmetry.* The asymmetry (A_S) is satisfactory if it is not more than 1.35 at 10 percent of peak height.

(B) *Efficiency of the column.* The efficiency of the column (h_c) is satisfactory if it is not greater than 20, equivalent to 1,000 plates for a 10-centimeter column of 5 microns or 2,500 plates for a 25-centimeter column of 5 micron size particles.

(C) *Resolution.* The resolution (R_S) between the peaks of fluorometholone acetate and fluorometholone is satisfactory if it is not less than 2.0.

(D) *Capacity factor.* The capacity factor (k) for fluorometholone acetate is satisfactory if it is in the range between 1.0 and 5.0.

(E) *Coefficient of variation.* The coefficient of variation (*RSD* in percent) of 5 replicate injections is satisfactory if it is not more than 2.0 percent. If the system suitability requirements have been met, then proceed as described in § 436.216(b) of this chapter.

(iv) *Calculations.* Calculate the fluorometholone acetate content of the container as follows:

$$\text{Milligrams of fluorometholone acetate per container} = \frac{A_U \times P_S \times d}{A_S \times 1{,}000}$$

where:

A_U = Area of the fluorometholone acetate peak in the chromatogram of the sample (at a retention time equal to that observed for the standard);

A_S = Area of the fluorometholone acetate peak in the chromatogram of the fluorometholone acetate working standard;

P_S = Fluorometholone acetate content in the fluorometholone acetate working standard solution in micrograms per milliliter; and

d = Dilution factor of the sample.

(3) *Sterility.* Proceed as directed in § 436.20 of this chapter, using the method described in § 436.20(e)(1).

(4) *pH.* Proceed as directed in § 436.202 of this chapter, using the undiluted suspension.

(5) *Tobramycin identity.* Proceed as directed in § 436.318 of this chapter, except prepare the sample for assay as follows: Decant 1.0 milliliter of the unshaken sample into a test tube. Add 100 milligrams of sodium sulfate to the test tube and shake until the sodium sulfate has been dispersed. Centrifuge to obtain a clear supernatant. Use the supernatant as the sample solution.

(6) *Fluorometholone acetate identity.* The high performance liquid chromatogram of the sample determined as directed in paragraph (b)(2) of this section, compares qualitatively to that of the fluorometholone acetate working standard.

Dated: March 26, 1993.

Paul F. Vogel,

Acting Director, Office of Compliance, Center for Drug Evaluation and Research.

DEPARTMENT OF EDUCATION

34 CFR Part 668

RIN 1840–AB30

Student Assistance General Provisions

AGENCY: Department of Education.

ACTION: Final regulations.

SUMMARY: The Secretary amends the regulations for the Student Assistance General Provisions to add the Office of Management and Budget (OMB) control numbers to certain sections of the regulations. Those sections contain information collection requirements approved by OMB. The Secretary takes this action to inform the public that these requirements have been approved.

EFFECTIVE DATE: These regulations are effective on May 4, 1993.

FOR FURTHER INFORMATION CONTACT: Claude Denton, General Provisions Branch, Division of Policy Development, U.S. Department of Education, 400 Maryland Avenue, SW., (Regional Office Building 3, room 4318), Washington, DC 20202–5444. Telephone (202) 708–7888. Individuals who are hearing impaired may call the Federal Dual Party Relay Service at 1–800–877–8339 (in the Washington, DC 202 area code, telephone 708–9300) between 8 a.m. and 7 p.m. Eastern time.

SUPPLEMENTARY INFORMATION: On January 7, 1993, final regulations for the Student Assistance General Provisions were published in the **Federal Register** at 58 FR 3180. The effective date of certain sections of these regulations was delayed until information collection requirements contained in those sections were approved by OMB under the Paperwork Reduction Act of 1980, as amended. OMB has approved the information collection requirements, and those sections of the regulations are now effective.

Waiver of Proposed Rulemaking

In accordance with section 431(b)(2)(A) of the General Education Provisions Act (20 U.S.C. 1232(b)(2)(A)) and the Administrative Procedure Act (5 U.S.C. 553), it is the practice of the Secretary to offer interested parties the opportunity to comment on proposed regulations. However, the publication of OMB control numbers is purely technical and does not establish substantive policy. Therefore, the Secretary has determined under 5 U.S.C. 553(b)(B), that proposed rulemaking is unnecessary and contrary to the public interest and that a delayed effective date is not required under 5 U.S.C. 553(d)(3).

List of Subjects in 34 CFR Part 668

Administrative practice and procedure, Colleges and universities, Consumer protection, Education, Grant programs—education, Loan programs—education, Reporting and recordkeeping requirements, Student aid.

Dated: April 28, 1993.

Richard W. Riley,

Secretary of Education.

The Secretary amends part 668 of title 34 of the Code of Federal Regulations as follows:

PART 668—STUDENT ASSISTANCE GENERAL PROVISIONS

1. The authority citation for part 668 continues to read as follows:

Authority: 20 U.S.C. 1091, 1092, and 1094, unless otherwise noted.

§§ 668.133, 668.134, 668.135 [Amended]

2. Sections 668.133, 668.134, and 668.135 are amended by adding the OMB control number at the end of these sections to read as follows:

(Approved by the Office of Management and Budget under control number 1840–0650)

[FR Doc. 93–10438 Filed 5–3–93; 8:45 am]

National Institutes of Health

Recombinant DNA Advisory Committee Meeting; Recombinant DNA Research; Proposed Actions Under the Guidelines; Notices

VOL 58 ISS 84 MY 4 1993 UMI

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Recombinant DNA Advisory Committee; Meeting

Pursuant to Public Law 92–463, notice is hereby given of a meeting of the Recombinant DNA Advisory Committee on June 7–8, 1993. The meeting will be held at the National Institutes of Health, Building 31C, Conference Room 6, 9000 Rockville Pike, Bethesda, Maryland 20892, starting at approximately 9 a.m. on June 7, 1993, to adjournment at approximately 5 p.m. on June 8, 1993. The meeting will be open to the public to discuss the following proposed actions under the *NIH Guidelines for Research Involving Recombinant DNA Molecules* (51 FR 16958):

Proposed Major Actions to the NIH Guidelines

Additions to Appendix D of the *NIH Guidelines* regarding thirteen (13) Human Gene Therapy/Gene Transfer Protocols;

Additions to Appendix D of the *NIH Guidelines* Regarding Semliki Forest Virus; Poxvirus Vectors-NYVAC, ALVAC, TROVAC, and Reickettsia prowazeki;

Amendment to Section IV–C–3–c of the *NIH Guidelines* Regarding the *Recombinant DNA Technical Bulletin* and the Data Management of the NIH-Approved Human Gene Transfer Protocols;

Amendments to the *Points to Consider in the Design and Submission of Protocols for the Transfer of Recombinant DNA into the Genome of Human Subjects* Regarding Reporting Requirements for Human Gene Transfer/Gene Therapy Protocols; the term "Subject(s);" Satellite Institutions; Categorization of Protocols; and Protocol Format.

Other Matters To Be Considered by the Committee

Attendance by the public will be limited to space available. Members of the public wishing to speak at this meeting may be given such opportunity at the discretion of the Chair.

Dr. Nelson A. Wivel, Director, Office of Recombinant DNA Activities, National Institutes of Health, Building 31, room 4B11, Bethesda, Maryland 20892, Phone (301) 496–9838, FAX (301) 496–9839, will provide materials to be discussed at this meeting, roster of committee members, and substantive program information. Individuals who plan to attend and need special assistance, such as sign language interpretation or other reasonable accommodations, should contact Dr. Wivel in advance of the meeting. A summary of the meeting will be available at a later date.

OMB's "Mandatory Information Requirements for Federal Assistance Program Announcements" (45 FR 39592, June 11, 1980) requires a statement concerning the official government programs contained in the *Catalog of Federal Domestic Assistance*. Normally NIH lists in its announcements the number and title of affected individual programs for the guidance of the public. Because the guidance in this notice covers not only virtually every NIH program but also essentially every Federal research program in which DNA recombinant molecule techniques could be used, it has been determined not to be cost effective or in the public interest to attempt to list these programs. Such a list would likely require several additional pages. In addition, NIH could not be certain that every Federal program would be included as many Federal agencies, as well as private organizations, both national and international, have elected to follow the *NIH Guidelines*. In lieu of the individual program listing, NIH invites readers to direct questions to the information address above about whether individual programs listed in the *Catalog of Federal Domestic Assistance* are affected.

Dated: April 26, 1993.

Susan K. Feldman,

Committee Management Officer, NIH.

[FR Doc. 93–10487 Filed 5–3–93; 8:45 am]

BILLING CODE 4140–01–M

Recombinant DNA Research: Proposed Actions Under the Guidelines

AGENCY: National Institutes of Health, PHS, DHHS.

ACTION: Notice of proposed actions under the NIH Guidelines for Research Involving Recombinant DNA Molecules (51 FR 16958).

SUMMARY: This notice sets forth proposed actions to be taken under the National Institutes of Health (NIH) Guidelines for Research Involving Recombinant DNA Molecules (51 FR 16958). Interested parties are invited to submit comments concerning these proposals. These proposals will be considered by the Recombinant DNA Advisory Committee (RAC) at its meeting on June 7–8, 1993. After consideration of these proposals and comments by the RAC, the Director of the National Institutes of Health will issue decisions in accordance with the NIH Guidelines.

DATES: Comments received by May 25, 1993, will be reproduced and distributed to the RAC for consideration at its June 7–8, 1993, meeting.

ADDRESSES: Written comments and recommendations should be submitted to Dr. Nelson A. Wivel, Director, Office of Recombinant DNA Activities (ORDA), Building 31, room 4B11, National Institutes of Health, Bethesda, Maryland 20892, or sent by FAX to 301–496–9839.

All comments received in timely response to this notice will be considered and will be available for public inspection in the above office on weekdays between the hours of 8:30 a.m. and 5 p.m.

FOR FURTHER INFORMATION CONTACT: Background documentation and additional information can be obtained from the Office of Recombinant DNA Activities, Building 31, room 4B11, National Institutes of Health, Bethesda, Maryland 20892, (301) 496–9838.

SUPPLEMENTARY INFORMATION: The NIH will consider the following actions under the NIH Guidelines for Research Involving Recombinant DNA Molecules:

I. Addition to Appendix D of the NIH Guidelines Regarding a Human Gene Therapy Protocol/Drs. Deisseroth, Kavanagh, Champlin

In a letter dated March 4, 1993, Drs. Albert B. Deisseroth, John Kavanagh, and Richard Champlin of the University of Texas MD Anderson Cancer Center, Houston, Texas, indicated their intention to resubmit a human gene therapy protocol to the Recombinant DNA Advisory Committee for formal review and approval. The title of this protocol is: Use of Safety-Modified Retroviruses to Introduce Chemotherapy Resistance Sequences into Normal Hematopoietic Stem Cells for Chemoprotection During the Therapy of Ovarian Cancer: A Pilot Trial.

II. Addition to Appendix D of the NIH Guidelines Regarding a Human Gene Therapy Protocol/Drs. Das Gupta, Cohen, Richards

In a letter dated February 26, 1993, Drs. Tapas K. Das Gupta and Edward P. Cohen of the University of Illinois College of Medicine, Chicago, Illinois, and Dr. Jon M. Richards of the University of Chicago, Chicago, Illinois, submitted a human gene therapy protocol to the Recombinant DNA Advisory Committee for formal review and approval. The title of this protocol is: Immunization of Malignant Melanoma Patients with Interleukin-2-Secreting Melanoma Cells Expressing Defined Allogeneic Histocompatibility Antigens.

III. Addition to Appendix D of the NIH Guidelines Regarding a Human Gene Therapy Protocol/Drs. Galpin, Casciato

On April 9, 1993, a human gene therapy protocol was submitted for Drs. Jeffrey E. Galpin of the University of Southern California, Los Angeles, California, and Dr. Dennis A. Casciato of the University of California, Los Angeles, California, by Dr. Bruce Merchant, Viagene, Inc., San Diego, California (sponsor of the protocol), to the Recombinant DNA Advisory Committee for formal review and approval. The title of this protocol is: *A Preliminary Study to Evaluate the Safety and Biologic Effects of Murine Retroviral Vector Encoding HIV–1 Genes [HIV–IT(V)] in Asymptomatic Subjects Infected with HIV–1.*

IV. Addition to Appendix D of the NIH Guidelines Regarding a Human Gene Therapy Protocol/Drs. Karlsson, Dunbar, Kohn

In a letter dated April 10, 1993, Drs. Stefan Karlsson and Cynthia Dunbar of the National Institutes of Health, Bethesda, Maryland, and Dr. Donald B. Kohn of Childrens Hospital Los Angeles, Los Angeles, California, submitted a human gene therapy protocol to the Recombinant DNA Advisory Committee for formal review and approval. The title of this protocol is: *Retroviral Mediated Transfer of the cDNA for Human Glucocerebrosidase into Hematopoietic Stem Cells of Patients with Gaucher Disease.*

V. Addition to Appendix D of the NIH Guidelines Regarding a Human Gene Therapy Protocol/Dr. Barranger

In a letter dated March 26, 1993, Dr. John A. Barranger of the University of Pittsburgh, Pittsburgh, Pennsylvania, indicated his intention to submit a human gene therapy protocol to the Recombinant DNA Advisory Committee for formal review and approval. The title of this protocol is: *Gene Therapy for Gaucher Disease: Ex Vivo Gene Transfer and Autologous Transplantation of CD34(+) Cells.*

VI. Addition to Appendix D of the NIH Guidelines Regarding a Human Gene Therapy Protocol/Drs. Raffel, Culver

In a letter dated April 5, 1993, Dr. Corey Raffel of the Childrens Hospital Los Angeles, Los Angeles, California, and Dr. Kenneth Culver of Iowa Methodist Medical Center, Des Moines, Iowa, submitted a human gene therapy protocol to the Recombinant DNA Advisory Committee for formal review and approval. The title of this protocol is: *Gene Therapy for the Treatment of Recurrent Pediatric Malignant Astrocytomas with In Vivo Tumor Transduction with the Herpes Simplex Thymidine Kinase Gene.*

VII. Addition to Appendix D of the NIH Guidelines Regarding a Human Gene Therapy Protocol/Drs. Hesdorffer, Antman

In a letter dated March 8, 1993, Dr. Arthur Bank of Columbia University, New York, New York, indicated the intention of Drs. Charles Hesdorffer and Karen Antman of the Columbia University, College of Physicians and Surgeons, New York, New York, to submit a human gene therapy protocol to the Recombinant DNA Advisory Committee for formal review and approval. The title of this protocol is: *Human MDR Gene Transfer in Patients with Advanced Cancer.*

VIII. Addition to Appendix D of the NIH Guidelines Regarding a Human Gene Transfer Protocol/Dr. Freedman

In a letter dated March 22, 1993, Dr. Ralph S. Freedman of the University of Texas MD Anderson Cancer Center, Houston, Texas, indicated the intention to submit a human gene transfer protocol to the Recombinant DNA Advisory Committee for formal review and approval. The title of this protocol is: *Use of a Retroviral Vector to Study the Trafficking Patterns of Purified Ovarian TIL Populations Used in Intraperitoneal Adoptive Immunotherapy of Ovarian Cancer Patients—A Pilot Study.*

IX. Addition to Appendix D of the NIH Guidelines Regarding a Human Gene Therapy Protocol/Dr. Ilan

In a letter dated April 10, 1993, Dr. Joseph Ilan of the Case Western Reserve University School of Medicine and University Hospitals of Cleveland, Cleveland, Ohio, submitted a human gene therapy protocol to the Recombinant DNA Advisory Committee for formal review and approval. The title of this protocol is: *Gene Therapy for Human Brain Tumors Using Episome-Based Antisense cDNA Transcription of Insulin-Like Growth Factor I.*

X. Addition to Appendix D of the NIH Guidelines Regarding a Human Gene Therapy Protocol/Dr. Nabel

In a letter dated April 9, 1993, Dr. Gary J. Nabel of the University of Michigan Medical Center, Ann Arbor, Michigan, submitted e human gene therapy protocol to the Recombinant DNA Advisory Committee for formal review and approval. The title of this protocol is: *Immunutherapy for Concer by Direct Gene Transfer into Tumors.*

XI. Addition to Appendix D of the NIH Guidelines Regarding a Human Gene Therapy Protocol/Dr. Nabel

In a letter dated April 9, 1993, Dr. Gary J. Nabel of the University of Michigan Medical Center, Ann Arbor, Michigan, submitted a human gene therapy protocol to the Recombinant DNA Advisory Committee for formal review and approval. The title of this protocol is: *A Molecular Genetic Intervention for AIDS—Effects of a Transdominant Negative Form of Rev.*

XII. Addition to Appendix D of the NIH Guidelines Regarding a Human Gene Therapy Protocol/Dr. Seigler

In a letter dated April 9, 1993, Dr. Hilliard F. Seigler of the Duke University Medical Center, Durham, North Carolina, resubmitted a human gene therapy protocol to the Recombinant DNA Advisory Committee for formal review and approval. The title of this protocol is: A Phase I Trial of Human Gamma Interferon-Transduced Autologous Tumor Cells in Patients With Disseminated Malignant Melanoma.

XIII. Amendment to Appendix D–XV of the NIH Guidelines Regarding a Human Gene Therapy Protocol/Dr. Blaese

On April 8, 1993, an amendment to the human gene therapy protocol was submitted for Dr. R. Michael Blaese of the National Institutes of Health, Bethesda, Maryland, by Dr. Craig A. Mullen of the National Institutes of Health, Bethesda, Maryland, to the Recombinant DNA Advisory Committee for formal review and approval. The title of this protocol is: Treatment of Severe Combined Immune Deficiency (SCID) due to Adenosine Deaminase (ADA) Deficiency with CD34(+) Selected Autologous Hematopoietic Stem Cells.

XIV. Addition to Appendix D of the NIH Guidelines Regarding Semliki Forest Virus/Dr. Temple

In a letter dated February 8, 1993, Dr. Gary F. Temple of Life Technologies, Inc., Gaithersburg, Maryland, submitted a request for a reduction in physical containment from Biosafety Level 3 to Biosafety Level 2 for a Semliki Forest Virus vector expression system.

VOL
58
ISS
84
MY
4
1993
UMI

XV. Addition to Appendix D of the NIH Guidelines Regarding Poxvirus Vectors-NYVAC, ALVAC, TROVAC/Dr. Trag

In a letter dated January 8, 1993, Dr. Arvilla L. Trag of Virogenetics Corporation, Troy, New York, submitted a request for reduction in physical containment from Biosafety Level 2 to Biosafety Level 1 for three poxvirus vectors: NYVAC, ALVAC, TROVAC.

XVI. Addition to Appendix D of the NIH Guidelines Regarding Rickettsia prowazeki/Dr. Policastro

In a letter dated March 23, 1993, Dr. Paul Policastro of the National Institutes of Health, Bethesda, Maryland, submitted a request to transfer a chloramphenicol resistance marker to an avirulent strain of Rickettsia prowazeki.

XVII. Amendment to Section IV–C–3–c of the NIH Guidelines Regarding the Recombinant DNA Technical Bulletin and the Data Management of the NIH-Approved Human Gene Transfer Protocols/Ms. Wilson

In a letter dated April 5, 1993, Debra Wilson of the National Institutes of Health submitted a request that Section IV–C–3–c be amended to delete the requirement that the Office of Recombinant DNA Activities (ORDA) publish the *Recombinant DNA Technical Bulletin*, and to add the requirement that ORDA will serve as the focal point for data management of the NIH-approved human gene transfer protocols.

XVIII. Amendment to the Points to Consider in the Design and Submission of Protocols for the Transfer of Recombinant DNA Into the Genome of Human Subjects Regarding Reporting Requirements for Human Gene Transfer/Gene Therapy Protocols

The *Points to Consider* (March 1, 1990, 55 FR 7447) under *Part IV—Reporting Requirements* states that:

"B. Reports regarding the general progress of patients should be filed with both your local IRB and ORDA within six-months of the commencement of the experiments and at six-month intervals thereafter. These twice-yearly reports should continue for a sufficient period of time to allow observation of all major effects. In the event of a patient's death, a summary of the special port-mortem studies and statements of the cause of death should be submitted to the IRB and ORDA, if available."

Dr. Brigid Leventhal, Chair of Working Group on Data Management, will provide a summary of the reports submitted to ORDA by the principal investigators of NIH-approved protocols, and make recommendations regarding actions to be taken in the event of non-reporting.

XIX. Amendment to Section III–A–4 of the NIH Guidelines and the Points to Consider in the Design and Submission of Protocols for the Transfer of Recombinant DNA Into the Genome of Human Subjects Regarding the Term Subject(s)

During the March 1–2, 1993, Recombinant DNA Advisory Committee meeting, Dr. Robertson Parkman requested that the terms *subject* and *subjects* be amended to read *subject(s)*. Section III–A–4 currently reads:

"III–A–4. Deliberate transfer of recombinant DNA or DNA or RNA derived from recombinant DNA into human subjects [21] • • •

Throughout the *Points to Consider* document the terms *subject* and *subjects* are used.

This amendment will clarify Section III–A–4 and the *Points to Consider*.

XX. Amendment to the Points to Consider in the Design and Submission of Protocols for the Transfer of Recombinant DNA Into the Genome of Human Subjects Regarding Satellite Institutions

On April 19, 1993, Dr. Nelson A. Wivel made a request that NIH-approved human gene therapy/gene transfer protocols may be conducted at satellite institutions with approval from the Chair of the Recombinant DNA Advisory Committee. The amendment would read:

"Protocols can be conducted at satellite institutions with approval from the Chair of the Recombinant DNA Advisory Committee. The Chair may consult others as necessary. The principal investigators must submit to the Office of the Recombinant DNA Activities the following: (1) Curricula vitae of new principal investigators, (2) Institutional Biosafety Committee approval, (3) Institutional Review Board approval, and (4) new Informed Consent document."

XXI. Amendment to the Points to Consider in the Design and Submission of Protocols for the Transfer of Recombinant DNA Into the Genome of Human Subjects Regarding Categorization of Protocols

The Working Group on Categorization of Protocols will make a report on decentralizing review for gene marking protocols utilizing vectors that have been previously approved by the Recombinant DNA Advisory Committee.

XXII. Amendment to the Points to Consider in the Design and Submission of Protocols for the Transfer of Recombinant DNA Into the Genome of Human Subjects Regarding Protocol Format

The Working Group on Protocol Format will present its report on condensing materials required for the submission of human gene therapy/gene transfer protocols for review and approval by the Recombinant DNA Advisory Committee.

OMB's "Mandatory Information Requirements for Federal Assistance Program Announcements" (45 FR 39592, June 11, 1980) requires a statement concerning the official government programs contained in the *Catalog of Federal Domestic Assistance*. Normally, NIH lists in its announcements the number and title of affected individual programs for the guidance of the public. Because the guidance in this notice covers not only virtually every NIH program but also essentially every Federal research program in which DNA recombinant molecule techniques could be used, it has been determined not to be cost effective or in the public interest to attempt to list these programs. Such a list would likely require several additional pages. In addition, NIH could not be certain that every Federal program would be included as many Federal agencies, as well as private organizations, both national and international, have elected to follow the *NIH Guidelines*. In lieu of the individual program listing, NIH invites readers to direct questions to the information address above about whether individual programs listed in the *Catalog of Federal Domestic Assistance* are affected.

Dated: April 26, 1993.

Jay Moskowitz,

Deputy Director for Science Policy and Technology Transfer, NIH.

Would you like to know...

if any changes have been made to the Code of Federal Regulations or what documents have been published in the Federal Register without reading the Federal Register every day? If so, you may wish to subscribe to the *LSA (List of CFR Sections Affected)*, the *Federal Register Index*, or both.

LSA • List of CFR Sections Affected

The LSA (List of CFR Sections Affected) is designed to lead users of the Code of Federal Regulations to amendatory actions published in the Federal Register. The LSA is issued monthly in cumulative form. Entries indicate the nature of the changes—such as revised, removed, or corrected. $21.00 per year.

Federal Register Index

The index, covering the contents of the daily Federal Register, is issued monthly in cumulative form. Entries are carried primarily under the names of the issuing agencies. Significant subjects are carried as cross-references. $19.00 per year.

A finding aid is included in each publication which lists Federal Register page numbers with the date of publication in the Federal Register.

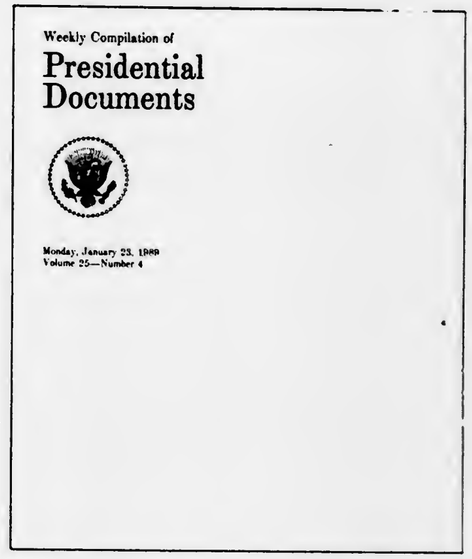
The authentic text behind the news . . .

The Weekly Compilation of **Presidential Documents**



This unique service provides up-to-date information on Presidential policies and announcements. It contains the full text of the President's public speeches, statements, messages to Congress, news conferences, personnel appointments and nominations, and other Presidential materials released by the White House.

The Weekly Compilation carries a Monday dateline and covers materials released during the preceding week. Each issue contains an Index of Contents and a Cumulative Index to Prior Issues.

Separate indexes are published periodically. Other features include lists of acts approved by the President, nominations submitted to the Senate, a checklist of White House press releases, and a digest of other Presidential activities and White House announcements.

Published by the Office of the Federal Register, National Archives and Records Administration.

FEDERAL REGISTER Published daily, Monday through Friday, (not published on Saturdays, Sundays, or on official holidays), by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (49 Stat. 500, as amended; 44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). Distribution is made only by the Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402.

The **Federal Register** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders and Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress and other Federal agency documents of public interest. Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless earlier filing is requested by the issuing agency.

The seal of the National Archives and Records Administration authenticates this issue of the **Federal Register** as the official serial publication established under the Federal Register Act. 44 U.S.C. 1507 provides that the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper, 24x microfiche format and magnetic tape. The annual subscription price for the **Federal Register** paper edition is $375, or $415 for a combined **Federal Register**, Federal Register Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the Federal Register Index and LSA is $353; and magnetic tape is $37,500. Six month subscriptions are available for one-half the annual rate. The charge for individual copies in paper form is $4.50 for each issue, or $4.50 for each group of pages as actually bound; or $1.50 for each issue in microfiche form; or $175.00 per magnetic tape. All prices include regular domestic postage and handling. International customers please add 25% for foreign handling. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA or MasterCard. Mail to: New Orders, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250-7954.

There are no restrictions on the republication of material appearing in the **Federal Register**.

How To Cite This Publication: Use the volume number and the page number. Example: 58 FR 12345.

THE FEDERAL REGISTER
WHAT IT IS AND HOW TO USE IT

FOR: Any person who uses the Federal Register and Code of Federal Regulations.

WHO: The Office of the Federal Register.

WHAT: Free public briefings (approximately 3 hours) to present:
1. The regulatory process, with a focus on the Federal Register system and the public's role in the development of regulations.
2. The relationship between the Federal Register and Code of Federal Regulations.
3. The important elements of typical Federal Register documents.
4. An introduction to the finding aids of the FR/CFR system.

WHY: To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.

WASHINGTON, DC

WHEN: May 12 and June 15 at 9:00 am
WHERE: Office of the Federal Register, 7th Floor Conference Room, 800 North Capitol Street NW, Washington, DC (3 blocks north of Union Station Metro)
RESERVATIONS: 202-523-4538

PHILADELPHIA, PA

WHEN: May 25, at 1:00 pm
WHERE: William J. Green, Jr. Federal Building, Conference Room 6306-10, 600 Arch St. Philadelphia, PA
RESERVATIONS: Federal Information Center 1-800-347-1997

Vol. 58, No. 85
Wednesday, May 5, 1993

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

DEPARTMENT OF AGRICULTURE

Office of the Secretary

7 CFR Part 2

Revision of Delegations of Authority

AGENCY: Department of Agriculture.

ACTION: Final rule.

SUMMARY: This document amends the delegations of authority from the Secretary of Agriculture and General Officers of the Department to delegate to the Alternative Agricultural Research and Commercialization Board (Board) the authority to enter into contracts, grants, and cooperative agreements to further agricultural research activities of the Board pursuant to 7 U.S.C. 3318.

EFFECTIVE DATE: May 5, 1993.

FOR FURTHER INFORMATION CONTACT:
Marcus F. Gross, Jr., Office of the General Counsel, United States Department of Agriculture, Washington, DC, (202) 720–4076.

SUPPLEMENTARY INFORMATION: This rule relates to internal agency management. Therefore, pursuant to 5 U.S.C. 553, notice of proposed rule making and opportunity for comment are not required, and this rule may be effective less than 30 days after publication in the **Federal Register**.

Further, since this rule relates to internal agency management, it is exempt from the provisions of Executive Order Nos. 12291 and 12778. This action is not a rule as defined by Pub. L. 96–354, the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) and thus is exempt from its provisions. This rule also is exempt from the requirements of the National Environmental Policy Act, as amended (42 U.S.C. 4321 *et seq.*) and the requirements of the Paperwork Reduction Act (44 U.S.C. chapter 35).

List of Subjects in 7 CFR Part 2

Authority delegations (government agencies).

Accordingly, part 2, subtitle A, title 7, Code of Federal Regulations is amended as follows:

PART 2—DELEGATIONS OF AUTHORITY BY THE SECRETARY OF AGRICULTURE AND GENERAL OFFICERS OF THE DEPARTMENT

1. The authority citation for part 2 continues to read as follows:

Authority: 5 U.S.C. 301 and Reorganization Plan No. 2 of 1953.

Subpart D—Delegations of Authority to Other General Officers and Agency Heads

2. Section 2.32 is added to read as follows:

§ 2.32 Delegations of Authority to the Alternative Agricultural Research and Commercialization Board.

The following delegations of authority are made by the Secretary of Agriculture to the Alternative Agricultural Research and Commercialization Board:

(a) Enter into contracts, grants, or cooperative agreements to further research programs in the agricultural sciences (7 U.S.C. 3318).

(b) [Reserved]

Dated: April 28, 1993.

Mike Espy,
Secretary of Agriculture.

BILLING CODE 3410–28–M

Farmers Home Administration

7 CFR Parts 1924, 1941, 1943, 1945, and 1965

Real Estate Appraisals, Title Clearance, Insurance Requirements and Real Estate Subordination Policy for Insured Farmer Program Loans

AGENCY: Farmers Home Administration, USDA.

ACTION: Final rule.

SUMMARY: The Farmers Home Administration (FmHA) amends its regulations to clarify real estate appraisal, title clearance, property insurance requirements and subordination policy when real estate is taken as additional security for certain FmHA insured loans. This action will eliminate unnecessary paperwork in processing requests for insured operating (OL), emergency (EM), farm ownership (FO), and soil and water (SW) loans. The intended effect is to reduce application processing times and government costs.

EFFECTIVE DATE: May 5, 1993.

FOR FURTHER INFORMATION CONTACT:
Richard K. Boyles, Loan Officer, Farmer Programs Loan Making Division, Farmers Home Administration, U.S. Department of Agriculture, South Building, 14th and Independence Avenue, SW., Washington, DC 20250, Telephone (202) 720–1360.

SUPPLEMENTARY INFORMATION:

Classification

This action has been reviewed under USDA procedures established in Departmental Regulation 1512–1, which implements Executive Order 12291, and has been determined to be exempt from those requirements because it has no adverse impact on FmHA borrowers or other members of the public and it involves only internal Agency management. It is the policy of this Department that rules relating to public property, loans, grants, benefits, or contracts shall be published for comments notwithstanding the exemption in 5 U.S.C. 553 with respect to such rules. This action, however, is not published for proposed rulemaking since it involves only internal Agency management and publication for comment is unnecessary.

Discussion

A final rule requiring applicants to pledge all assets as collateral for insured Farmer Program Loans was published in the **Federal Register** (57 FR 18674–18681) on April 30, 1992. The intent of the rule was to require additional security (security beyond that which is required to fully secure the loan), for these loans. The Agency overlooked the fact that, when applicants pledge real estate as additional security, real estate appraisals, title work and property insurance coverage are required. Since the agency requires additional security be taken without regard to lien position or equity value, the increased loan processing time, additional paperwork and costs involved would outweigh any benefit derived by requiring real estate appraisals, title clearance and property insurance on real estate taken as additional security. Therefore, the

VOL 58 ISS 85 MY 5 1993 UMI

Agency is changing its regulations to remove the administrative requirement of real estate appraisals, title clearance and property insurance on additional security.

The amended regulations require real estate appraisals, title clearance and adequate property insurance coverage only when real estate is taken as primary security (security that is needed to fully secure the loan). The amended regulations will also eliminate the redundancy in 1965–A, between § 1965.12(a)(5) and § 1965.12(a)(6) by removing the first sentence of the latter paragraph. The former paragraph conditions subordination on the FmHA debt being adequately secured or not adversely affected by the subordination. The first sentence of the latter paragraph conditions subordination on the amount of any prior lien and the FmHA debt not exceeding the present market value of the real estate security. FmHA will be adequately secured under § 1965.12(a)(5) if the amount of any prior lien and the FmHA debt do not exceed the value of the security, so the first sentence of § 1965.12(a)(6) is not needed.

The title clearance procedures for Emergency loans also have been moved from subpart B of part 1941 to subpart D of part 1945.

Programs Affected

This action affects the following FmHA programs listed in the Catalog of Federal Domestic Assistance:

10.404 Emergency Loans
10.406 Operating Loans
10.407 Farm Ownership Loans
10.416 Soil and Water Loans

This program/activity is not subject to the provisions of Executive Order 12372, which require intergovernmental consultation with State and local officials.

Environmental Impact Statement

This document has been reviewed in accordance with FmHA Instruction 1940–G, "Environmental Program." FmHA has determined that this final action does not constitute a major Federal action significantly affecting the quality of the human environment and, in accordance with the National Environment Policy Act of 1969, Public Law 91–190, an Environmental Impact Statement is not required.

List of Subjects in 7 CFR Parts 1924, 1941, 1943, 1945, and 1965

Agriculture, Construction management, Construction repair, Energy conservation, Housing, Loan programs—Housing and community development, Low and moderate income housing, Crops, Livestock, Loan programs—Agriculture, Rural areas, Youth, Credit, Loan programs—Agriculture, Recreation and recreation areas, Water resources, Disaster assistance, Intergovernmental relations, Foreclosure.

Therefore, chapter XVIII, title 7, Code of Federal Regulations is amended as follows:

PART 1924—CONSTRUCTION AND REPAIR

1. The authority citation for part 1924 continues to read as follows:

Authority: 7 U.S.C. 1989; 42 U.S.C. 1480; 5 U.S.C. 301; 7 CFR 2.23; 7 CFR 2.70.

Subpart B—Management Advice to Individual Borrowers and Applicants

§ 1924.57 [Amended]

2. Section 1924.57(d)(1)(iv) is amended in the first sentence by changing the reference from "§ 1945.154(a)(31)" to "§ 1945.154(a)".

PART 1941—OPERATING LOANS

3. The authority citation for part 1941 continues to read as follows:

Authority: 7 U.S.C. 1989; 5 U.S.C. 301; 7 CFR 2.23; 7 CFR 2.70.

Subpart A—Operating Loan Policies, Procedures, and Authorizations

4. Section 1941.4 is amended by adding the definitions for "Additional security" and "Primary security" in alphabetical order to read as follows:

§ 1941.4 Definitions.

* * * * *

Additional security. Any security beyond that which is required to adequately secure the loan.

* * * * *

Primary security. Any real estate and/or chattel security which is required to adequately secure the loan. This is not to be confused with "basic security," as defined in § 1962.4 of subpart A of part 1962 of this chapter.

* * * * *

5. Section 1941.25 is amended by revising and redesignating paragraph (a)(3) as paragraph (a)(5), and adding new paragraphs (a)(3) and (a)(4) to read as follows:

§ 1941.25 Appraisals.

(a) * * *

(3) A chattel appraisal is required when the borrower is being serviced in accordance with subpart S of part 1951 of this chapter.

(4) A real estate appraisal is not required when real estate is taken as additional security, as defined in § 1941.4 of this subpart. However, the County Supervisor will document in the running record the estimated market value of the additional security and the basis for the estimate.

(5) A real estate appraisal is required when:

(i) Real estate is taken as primary security, as defined in § 1941.4 of this subpart.

(ii) Refinancing debt, if real estate was used as security for the debt being refinanced.

(iii) The borrower is being serviced in accordance with subpart S of part 1951 of this chapter.

* * * * *

Subpart B—Closing Loans Secured by Chattels

6. Section 1941.84 is amended by adding the word "primary" between the words "as" and "security" in the first sentence of paragraph (a), and in the first sentence of paragraph (b); by adding the word "the" between the words "by" and "applicant" in the second sentence of paragraph (b); by redesignating paragraphs (c) through (g) as paragraphs (d) through (h); by removing in the first sentence of paragraph (a) the phrase "(or EM loans over $25,000)", by removing in the first sentence of (b) the phrase "(or EM loans over $25,000 or less)"; by adding new paragraph (c); and by revising newly redesignated paragraphs (d) and (g) to read as follows:

§ 1941.84 Title clearance and closing requirements.

* * * * *

(c) Title clearance is not required when real estate is taken as additional security, as defined in § 1941.4 of this subpart.

(d) When real estate is taken as primary security, as defined in § 1941.4 of this subpart, title clearance and loan closing requirements will be carried out in accordance with subpart B of part 1927 of this chapter.

* * * * *

(g) Each real estate lien will be taken on Form FmHA 1927–1 (State), "Real Estate Mortgage or Deed of Trust for _____," unless a state supplement requires the use of another form.

7. Section 1941.88(c) is amended by adding a sentence between the second and third sentences to read as follows:

§ 1941.88 Insurance.

* * * * *

(c) * * * Property insurance coverage will not be required when real estate is

taken as additional security, as defined in § 1941.4 of this subpart. * * *

* * * * *

8. Section 1941.92 is amended by revising the last sentence to read as follows:

§ 1941.92 Check delivery.

* * * Loan funds will be disbursed in accordance with subpart A of part 1902 of this chapter.

PART 1943—FARM OWNERSHIP, SOIL AND WATER AND RECREATION

9. The authority citation for part 1943 continues to read as follows:

Authority: 7 U.S.C. 1989; 5 U.S.C. 301; 7 CFR 2.23 and 2.70.

Subpart A—Insured Farm Ownership Loan Policies, Procedures, and Authorizations

10. Section 1943.4 is amended by adding the definitions for "Additional security" and "Primary security" in alphabetical order to read as follows:

§ 1943.4 Definitions.

* * * * *

Additional security. Any security beyond that which is required to adequately secure the loan.

* * * * *

Primary security. Any real estate and/or chattel security which is required to adequately secure the loan. This is not to be confused with "basic security," as defined in § 1962.4 of subpart A of part 1962 of this chapter.

* * * * *

11. Section 1943.24(d)(1) and (d)(2) are revised to read as follows:

§ 1943.24 Special requirements.

* * * * *

(d) * * *

(1) Insurance will be obtained on buildings and other property as provided in subpart A of part 1806 of this chapter (FmHA Instruction 426.1) on real estate taken as primary security, as defined in § 1943.4 of this subpart. Property insurance will not be required when real estate is taken as additional security, as defined in § 1943.4 of this subpart.

(2) See § 1943.23(a) of this subpart for information about flood or mudslide hazard areas.

* * * * *

12. Section 1943.25 is amended by revising the introductory text of paragraph (c)(1) to read as follows:

§ 1943.25 Options, planning and appraisals.

* * * * *

(c) * * *

(1) Real estate appraisals will be completed by an FmHA employee or contractor authorized to make farm appraisals when real estate is taken as primary security, as defined in § 1943.4 of this subpart, and when loans are serviced in accordance with subpart S of part 1951 of this chapter. The contractor, when he/she is not the appraiser, is responsible for substantiating the appraiser's qualifications. The contractor will obtain FmHA's concurrence that the appraiser has the necessary qualifications and experience before the contractor will utilize the appraiser in any appraisal work. Real estate appraisals are not required when real estate is taken as additional security, as defined in § 1943.4 of this subpart. However, the County Supervisor will document in the running record the estimated market value of the additional security and the basis for the estimate. The contractor/appraiser completing the report must meet at least one of the following qualifications:

* * * * *

Subpart B—Insured Soil and Water Loan Policies, Procedures, and Authorizations.

13. Section 1943.54 is amended by adding the definitions for "Additional security" and "Primary security" in alphabetical order to read as follows:

§ 1943.54 Definitions.

Additional security. Any security beyond that which is required to adequately secure the loan.

* * * * *

Primary security. Any real estate and/or chattel security which is required to adequately secure the loan. This is not to be confused with "basic security," as defined in § 1962.4 of subpart A of part 1962 of this chapter.

* * * * *

14. Section 1943.74 (d)(1) and (d)(2) are revised to read as follows:

§ 1943.74 Special requirements.

* * * * *

(d) *Insurance.*

(1) Insurance will be obtained on buildings and other property as provided in subpart A of part 1806 of this chapter (FmHA Instruction 426.1) on real estate taken as primary security, as defined in § 1943.54 of this subpart. Property insurance will not be required when real estate is taken as additional security, as defined in § 1943.54 of this subpart.

(2) See § 1943.73(a) of this subpart for information about flood and mudslide hazard areas.

* * * * *

15. Section 1943.75 is amended by revising the introductory text of paragraph (c)(1) to read as follows:

§ 1943.75 Options, planning, and appraisals.

* * * * *

(c) * * *

(1) Real estate appraisals will be completed by an FmHA employee or contractor authorized to make farm appraisals when real estate is taken as primary security, as defined in § 1943.54 of this subpart, and when loans are serviced in accordance with subpart S of part 1951 of this chapter. The contractor, when he/she is not the appraiser, is responsible for substantiating the appraiser's qualifications. The contractor will obtain FmHA's concurrence that the appraiser has the necessary qualifications and experience before the contractor will utilize the appraiser in any appraisal work. Real estate appraisals are not required when real estate is taken as additional security, as defined in § 1943.54 of this subpart. However, the County Supervisor will document in the running record the estimated market value of the additional security and the basis for the estimate. The contractor/appraiser completing the report must meet at least one of the following qualifications:

* * * * *

PART 1945—EMERGENCY

16. The authority for part 1945 continues to read as follows:

Authority: 7 U.S.C. 1989; 42 U.S.C. 1480; 5 U.S.C. 301; 7 CFR 2.23; 7 CFR 2.70.

Subpart A—Disaster Assistance—General

§ 1945.6 [Amended]

17. Section 1945.6(c)(3)(iii)(B) is amended by changing the reference from "§ 1945.154(a)(13)(i)" to "§ 1945.154(a)".

Subpart D—Emergency Loan Policies, Procedures, and Authorizations

18. Section 1945.154 is amended by removing paragraph designations (a)(1) through (a)(36); by redesignating, in the definition of *Farming enterprise,* paragraphs (i) and (ii) as paragraphs (1) and (2) and paragraphs (A) through (K) as paragraphs (1) (i) through (xi); by moving the text of the definition of *Feasible plan* so that it appears immediately before the definition of

VOL 58 ISS 85 MY 5 1993 UMI

Fixture; by redesignating, in the definition of *Partnership*, paragraphs (i) through (iii) as paragraphs (1) through (3); by removing the paragraph designations for paragraphs (b)(1) through (14); by adding the definitions for *Additional security* and *Primary security* in alphabetical order; and by revising the first two sentences of the definition of *Farm* to read as follows:

§ 1945.154 Definitions and abbreviations

(a) *Definitions.*

Additional security. Any security beyond that which is required to adequately secure the loan.

* * * * *

Farm. A tract or tracts of land, improvements, and other appurtenances considered to be a farm property which are used or will be used in production of crops or livestock and meet the requirements of the definition for "family farm" of this section. This includes aquaculture operations which meet the requirements set forth in the definition for "Aquaculture" of this section and includes nonfarm operations which meet the requirements set forth in the definition for "Nonfarm enterprise" of this section.* * *

* * * * *

Primary security. Any real estate and/or chattel security which is required to adequately secure the loan. This is not to be confused with "basic security," as defined in § 1962.4 of subpart A of part 1962 of this chapter.

* * * * *

§ 1945.163 [Amended]

19. In section 1945.163, paragraph (a)(2)(ii) is amended by changing the reference from "§ 1945.154(a)(13)(i)" to "§ 1945.154(a)", and in paragraphs (a)(2)(v) and (viii) by changing the reference from "§ 1945.154(a)(13)" to "§ 1945.154(a)".

20. Section 1945.175(c)(1) is revised to read as follows:

§ 1945.175 Options, planning, and appraisals.

* * * * *

(c) * * *

(1) Real estate appraisals will be completed, on Form FmHA 422–1, "Appraisal Report—Farmer Tract", or Form FmHA 1922–8, "Residential Appraisal Report," for farm real estate or residential farm real estate, respectively, by a designated FmHA real property appraiser or FmHA approved contract real property appraiser, when real estate is taken as primary security, as defined in § 1945.154(a) of this subpart, for the EM loan and when loans are serviced in accordance with subpart S of part 1951 of this chapter. The rights to mining products, gravel, oil, gas, coal, or other minerals will be considered a portion of the security and will be specifically included as a part of the appraised value of the real estate securing the loans using Form FmHA 1922–11, "Appraisal for Mineral Rights." Real estate appraisals are not required when real estate is taken as additional security, as defined in § 1945.154(a) of this subpart. However, the County Supervisor will document in the running record the estimated market value of the additional security and the basis for the estimate.

* * * * *

21 and 22. Section 1945.189 is amended by adding the words "or Deed of Trust" between the words "mortgage" and "for" in paragraph (a)(2)(i), and by adding subparagraphs (a)(1)(i) and (a)(1)(ii) to read as follows:

§ 1945.189 Loan closing.

(a) * * *

(1) * * *

(i) For EM loans over $25,000, title clearance is required when real estate is taken as primary security, as defined in § 1945.154(a) of this subpart.

(ii) For EM loans of $25,000 or less, and loans for which real estate is taken as primary security, as defined in § 1945.154(a) of this subpart, a certification of ownership and verification of equity in real estate is required. Certification of ownership may be in the form of a notarized affidavit which is signed by the applicant, names the record owner of the real estate in question and lists the balances due on all known debts against the real estate. Whenever the County Supervisor is uncertain of the record owner or debts against the real estate security, a title search will be required.

* * * * *

PART 1965—REAL PROPERTY

23. The authority citation for part 1965 continues to read as follows:

Authority: 7 U.S.C. 1989; 42 U.S.C. 1480; 5 U.S.C. 301; 7 CFR 2.23; 7 CFR 2.70.

Subpart A—Servicing of Real Estate Security for Farmer Program Loans and Certain Note-Only Cases

§ 1965.12 [Amended]

24. Section 1965.12 is amended by removing the first sentence in paragraph (a)(6).

Dated: April 2, 1993.

Robert Peters,

Acting Under Secretary for Small Community and Rural Development.

[FR Doc. 93–10519 Filed 5–4–93; 8:45 am]

BILLING CODE 3410–07–M

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. 91–CE–37–AD; Amendment 39–8571; AD 93–09–05]

Airworthiness Directives; Fairchild Aircraft (Formerly Swearingen Aircraft Corporation) SA226 and SA227 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Final rule.

SUMMARY: This amendment supersedes Airworthiness Directive (AD) 81–22–04, which currently requires repetitively inspecting the elevator return spring on certain Fairchild Aircraft SA226 and SA227 series airplanes, and replacing any damaged part. The Federal Aviation Administration's policy on aging commuter-class aircraft is to eliminate or, in certain instances, reduce the number of certain repetitive inspections when improved parts are available. This final rule action requires relocating the elevator return spring as terminating action for the repetitive inspections currently required by AD 81–22–04. The actions specified by this AD are intended to prevent a jammed elevator control caused by elevator return spring failure.

DATES: Effective June 18, 1993.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the Federal Register as of June 18, 1993.

ADDRESSES: Service information that applies to this AD may be obtained from Fairchild Aircraft, P.O. Box 790490, San Antonio, Texas 78279–0490; Telephone (512) 824–9421. This information may also be examined at the Federal Aviation Administration (FAA), Central Region, Office of the Assistant Chief Counsel, room 1558, 601 E. 12th Street, Kansas City, Missouri 64106; or at the Office of the Federal Register, 800 North Capitol Street NW., suite 700, Washington, DC.

FOR FURTHER INFORMATION CONTACT: Mr. Bob D. May, Aerospace Engineer, Airplane Certification Office, FAA, Southwest Region, 4400 Blue Mound Road, Fort Worth, Texas 76193–0150; Telephone (817) 624–5156.

SUPPLEMENTARY INFORMATION: A proposal to amend part 39 of the Federal Aviation Regulations to include an AD that would apply to certain Fairchild SA226 and SA227 series airplanes was published in the **Federal Register** on December 29, 1992 (57 FR 61840). The action proposed to supersede AD 81–22–04, Amendment 39–4238, with a new AD that would (1) initially retain the requirement of repetitively inspecting the elevator return spring, and replacing and relocating any damaged elevator return spring; and (2) require relocating the elevator return spring as terminating action for the repetitive inspections currently required by AD 81–22–04. The proposed actions would be accomplished in accordance with Fairchild Aircraft Service Bulletin (SB) 226–27–032, Issued: September 14, 1981, Revised: January 19, 1983; or Fairchild Aircraft SB 227–27–002, Issued: September 14, 1981, Revised: October 25, 1985, as applicable.

Interested persons have been afforded an opportunity to participate in the making of this amendment. One comment was received in favor of the proposed rule and no comments were received on the FAA's determination of the cost to the public.

After careful review, the FAA has determined that air safety and the public interest require the adoption of the rule as proposed except for minor editorial corrections. The FAA has determined that these minor corrections will not change the meaning of the AD nor add any additional burden upon the public than was already proposed.

The FAA estimates that 322 airplanes in the U.S. registry will be affected by this AD, that it will take approximately 20 hours per airplane to accomplish the required action, and that the average labor rate is approximately $55 an hour. Parts will be provided by the manufacturer at no cost to the operator. Based on these figures, the total cost impact of the AD on U.S. operators is estimated to be $354,200. These figures take into account that none of the affected airplanes have accomplished the required action.

The intent of the FAA's aging commuter airplane program is to ensure safe operation of commuter-class airplanes that are in commercial service without adversely impacting private operators. Of the approximately 322 airplanes in the U.S. registry that are effected by the required AD, the FAA has determined that approximately 30 percent are operated in scheduled passenger service by 19 different operators. A significant number of the remaining 70 percent are operated in other forms of air transportation such as air cargo and air taxi.

The required AD allows 2,200 hours time-in-service (TIS) before mandatory accomplishment of the design modification. The average utilization of the fleet for those airplanes in commercial commuter service is approximately 25 to 50 hours TIS per week. Based on these figures, operators of commuter-class airplanes involved in commercial operation will have to accomplish the required modification within 5 to 11 calendar months after the required AD becomes effective. For private owners, who typically operate between 100 to 200 hours TIS per year, this will allow 11 to 22 calendar years before the required modification is mandatory.

The regulations adopted herein will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. Therefore, in accordance with Executive Order 12612, it is determined that this final rule does not have sufficient federalism implications to warrant the preparation of a Federalism Assessment.

For the reasons discussed above, I certify that this action (1) is not a "major rule" under Executive Order 12291; (2) is not a "significant rule" under DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979); and (3) will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act. A copy of the final evaluation prepared for this action is contained in the Rules Docket. A copy of it may be obtained by contacting the Rules Docket at the location provided under the caption "**ADDRESSES**".

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me by the Administrator, the Federal Aviation Administration amends 14 CFR part 39 of the Federal Aviation Regulations as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. App. 1354(a), 1421 and 1423; 49 U.S.C. 106(g); and 14 CFR 11.89.

§ 39.13 [Amended]

2. Section 39.13 is amended by removing AD 81–22–04, Amendment 39–4238, and adding the following new AD:

93–09–05 Fairchild Aircraft: Amendment 39–8571; Docket No. 91–CE–37–AD. Supersedes AD 81–22–04, Amendment 39–4238.

Applicability: The following model and serial number airplanes, certificated in any category:

Model	Serial Nos.
SA226–AT	All serial numbers.
SA226–TC	All serial numbers.
SA227–AC	406, 415, 416, and 420 through 473.
SA227–AT	423 through 469.

Compliance: Required as indicated after the effective date of this AD, unless already accomplished.

To prevent a jammed elevator control caused by elevator return spring failure, accomplish the following:

(a) Within the next 25 hours time-in-service (TIS), unless already accomplished within the last 275 hours TIS, and thereafter at intervals not to exceed 300 hours TIS until the modification specified in paragraph (c) of this AD is accomplished, visually inspect the elevator return spring, the attachment bolts, the spacers, and the clevis for damage such as deterioration, wear, or breakage.

(b) If any damaged part is found, prior to further flight, replace with a new part and relocate the elevator return spring in accordance with the Accomplishment Instructions section of Fairchild Service Bulletin (SB) No. 226–27–032, Issued: September 14, 1981, Revised: January 19, 1983; or Fairchild SB No. 227–27–002, Issued: September 14, 1981, Revised: October 25, 1985, as applicable.

(c) Within the next 2,200 hours TIS, unless already accomplished as required by paragraph (b) of this AD, relocate the elevator return spring in accordance with the Accomplishment Instructions section of Fairchild Service Bulletin (SB) No. 226–27–032, Issued: September 14, 1981, Revised: January 19, 1983; or Fairchild SB No. 227–27–002, Issued: September 14, 1981, Revised: October 25, 1985, as applicable.

(d) The accomplishment of the modification required by paragraph (c) of this AD is considered terminating action for the repetitive inspection requirement of this AD.

(e) Special flight permits may be issued in accordance with FAR 21.197 and 21.199 to operate the airplane to a location where the requirements of this AD can be accomplished.

(f) An alternative method of compliance or adjustment of the initial or repetitive compliance times that provides an equivalent level of safety may be approved by the Manager, Airplane Certification Office, FAA, Fort Worth, Texas 76193–0150. The request shall be forwarded through an appropriate FAA Maintenance Inspector, who may add comments and then send it to the Manager, Fort Worth Airplane Aircraft Certification Office.

Note: Information concerning the existence of approved alternative methods of

VOL 58 ISS 85 MY 5 1993 UMI

compliance with this AD, if any, may be obtained from the Fort Worth Airplane Certification Office.

(g) The inspections and modification required by this AD shall be done in accordance with Fairchild Service Bulletin No. 226–27–032, Issued: September 14, 1981, Revised: January 19, 1983; or Fairchild Service Bulletin No. 227–27–002, Issued: September 14, 1981, Revised: October 25, 1985, as applicable. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. Copies may be obtained from Fairchild Aircraft, P.O. Box 790490, San Antonio, Texas 78279–0490. Copies may be inspected at the FAA, Central Region, Office of the Assistant Chief Counsel, room 1558, 601 E. 12th Street, Kansas City, Missouri, or at the Office of the Federal Register, 800 North Capitol Street NW., suite 700, Washington, DC.

(h) This amendment (39–8571) supersedes AD 81–22–04, Amendment 39–4238.

(i) This amendment (39–8571) becomes effective on June 18, 1993.

Issued in Kansas City, Missouri, on April 29, 1993.

Gerald W. Pierce,

Acting Manager, Small Airplane Directorate, Aircraft Certification Service.

BILLING CODE 4910–13–U

FEDERAL TRADE COMMISSION

16 CFR Part 305

RIN 3084–AA26

Rules for Using Energy Cost and Consumption Information Used in Labeling and Advertising of Consumer Appliances Under the Energy Policy and Conservation Act; Ranges of Comparability for Clothes Washers

AGENCY: Federal Trade Commission.

ACTION: Final rule.

SUMMARY: The Federal Trade Commission announces that the present ranges of comparability for clothes washers will remain in effect until new ranges are published.

Under the Appliance Labeling Rule, each required label on a covered appliance must show a range or scale, indicating the range of energy costs or efficiencies for all models of a size or capacity comparable to the labeled model. The Commission publishes the ranges annually in the **Federal Register** if the upper or lower limits of the range change by 15% or more from the previously published range. If the Commission does not publish a revised range, it must publish a notice that the prior range will be applicable until new ranges are published. The Commission is today announcing that the ranges published on April 16, 1991, will remain in effect until new ranges are published.

EFFECTIVE DATE: May 5, 1993.

FOR FURTHER INFORMATION CONTACT: James Mills, Attorney, 202–326–3035, Division of Enforcement, Federal Trade Commission, Washington, DC 20580.

SUPPLEMENTARY INFORMATION: On November 19, 1979, the Commission issued a final rule,[1] pursuant to section 324 of the Energy Policy and Conservation Act of 1975,[2] covering certain appliance categories, including clothes washers. The rule requires that energy costs and related information be disclosed on labels and in retail sales catalogs for all clothes washers presently manufactured. Certain point-of-sale promotional materials must disclose the availability of energy usage information. If a clothes washer is advertised in a catalog from which it may be purchased by cash, charge account or credit terms, then the range of estimated annual energy costs for the product must be included on each page of the catalog that lists the product. The required disclosures and all claims concerning energy consumption made in writing or in broadcast advertisements must be based on the results of test procedures developed by the Department of Energy, which are referenced in the rule.

Section 305.8(b) of the rule requires manufacturers to report the energy usage of their models annually by specified dates for each product type.[3] Because the costs for the various types of energy change yearly, and because manufacturers regularly add new models to their lines, improve existing models and drop others, the data base from which the ranges of comparability are calculated is constantly changing.

To keep the required information in line with these changes, under § 305.10 of the rule, the Commission publishes new ranges (but not more often than annually) if an analysis of the new data indicates that the upper or lower limits of the ranges have changed by more than 15%. Otherwise, the Commission publishes a statement that the prior range or ranges remain in effect for the next year.

The annual reports for clothes washers have been received and analyzed and it has been determined to retain the ranges that were published on April 16, 1991.[4] In consideration of the foregoing, the present ranges for clothes washers, which were based on a national average electric rate of 8.24 cents per kilowatt hour and a national average natural gas rate of 60.54 cents per therm, will remain in effect until the Commission publishes new ranges for these products.

List of Subjects in 16 CFR Part 305

Advertising, Energy conservation, Household appliances, Labeling, Reporting and recordkeeping requirements.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Part 178

[Docket No. 89F–0038]

Indirect Food Additives: Adjuvants, Production Aids, and Sanitizers

AGENCY: Food and Drug Administration, HHS.

ACTION: Final rule.

SUMMARY: The Food and Drug Administration (FDA) is amending the food additive regulations to provide for the safe use of sulfosuccinic acid 4-ester with polyethylene glycol dodecyl ether, disodium salt, as an emulsifier in polyvinyl acetate, acrylic, and vinyl/acrylic polymers intended for use as coatings for paper and paperboard. This action is in response to a food additive petition filed by American Cyanamid Co.

DATES: Effective May 5, 1993; written objections and requests for a hearing by June 4, 1993.

ADDRESSES: Submit written objections to the Dockets Management Branch (HFA–305), Food and Drug Administration, rm. 1–23, 12420 Parklawn Dr., Rockville, MD 20857.

FOR FURTHER INFORMATION CONTACT: Marvin D. Mack, Center for Food Safety and Applied Nutrition (HFS–216), Food and Drug Administration, 200 C St. SW., Washington, DC 20204, 202–254–9511.

SUPPLEMENTARY INFORMATION: In a notice published in the **Federal Register** of February 27, 1989 (54 FR 8239), FDA announced that a food additive petition

(FAP 9B4120) had been filed by American Cyanamid Co., One Cyanamid Plaza, Wayne, NJ 07470, proposing that § 178.3400 *Emulsifiers and/or surface-active agents* (21 CFR 178.3400) be amended to provide for the safe use of sulfosuccinic acid 4-ester with polyethylene glycol dodecyl ether, disodium salt, as an emulsifier in polyvinyl acetate, acrylic, and vinyl/acrylic polymers for food-contact coatings.

FDA has reviewed the safety of both the additive and the starting materials used to manufacture the additive. The additive has not been found to cause cancer. However, the additive may contain minute amounts of ethylene oxide and 1,4-dioxane as impurities from a reactant used in the manufacture of the additive; these chemicals have been shown to cause cancer in test animals. Residual amounts of chemicals, such as ethylene oxide and 1,4-dioxane, are commonly found as impurities in chemical products, including food additives.

I. Determination of Safety

Under section 409(c)(3)(A) of the Federal Food, Drug, and Cosmetic Act (the act) (21 U.S.C. 348(c)(3)(A)), the so-called "general safety clause" of the statute, a food additive cannot be approved for a particular use unless a fair evaluation of the data available to FDA establishes that the additive is safe for that use. The concept of safety embodied in the 1958 amendment is explained in the legislative history of the provision: "Safety requires proof of a reasonable certainty that no harm will result from the proposed use of the additive. It does not—and cannot—require proof beyond any possible doubt that no harm will result under any conceivable circumstance" (H. Rept. 2284, 85th Cong., 2d sess. 4 (1958)). This definition of safety has been incorporated into FDA's food additive regulations (21 CFR 170.3(i)). The anticancer or Delaney clause (section 409(c)(3)(A) of the act) provides further that no food additive shall be deemed to be safe if it is found to induce cancer when ingested by man or animal.

In the past, FDA has refused to approve the use of an additive that contained or was suspected of containing even minor amounts of a carcinogenic chemical, even though the additive as a whole had not been shown to cause cancer. The agency now believes, however, that developments in scientific technology and experience with risk assessment procedures make it possible for FDA to establish the safety of additives that contain carcinogenic chemicals but that have not themselves been shown to cause cancer.

In the preamble to the final rule permanently listing D&C Green No. 6, published in the **Federal Register** of April 2, 1982 (47 FR 14138), FDA explained the basis for approving the use of a color additive that has not been shown to cause cancer, even though the additive contains a carcinogenic impurity. Since that decision, FDA has approved the use of other color additives and food additives on the same basis.

An additive that has not itself been shown to cause cancer, but that contains a carcinogenic impurity, may properly be evaluated under the general safety clause of the statute using risk assessment procedures to determine whether there is a reasonable certainty that no harm will result from the proposed use of the additive.

The agency's position is supported by *Scott* v. *FDA*, 728 F.2d 322 (6th Cir. 1984). That case involved a challenge to FDA's decision to approve the use of D&C Green No. 5, which contains a carcinogenic chemical but has itself not been shown to cause cancer. Relying heavily on the reasoning in the agency's decision to list this color additive, the United States Court of Appeals for the Sixth Circuit rejected the challenge to FDA's action and affirmed the listing regulation.

II. Safety of Petitioned Use of the Additive

FDA estimates that the petitioned use of the additive, sulfosuccinic acid 4-ester with polyethylene glycol dodecyl ether, disodium salt, will result in levels of exposure to the additive of no greater than 0.25 part per million in the daily diet.

FDA does not ordinarily consider chronic testing to be necessary to determine the safety of an additive whose use will result in such low exposure levels (Refs. 1 and 2), and the agency has not required such testing here. However, the agency has reviewed the available toxicological data from acute toxicity studies, subchronic studies, and reproduction teratological studies on the additive and related compounds. On the basis of the agency's review of these data and the low level of exposure to the additive, the agency concludes that there is an adequate margin of safety for the proposed use of the additive.

Because sulfosuccinic acid 4-ester with polyethylene glycol dodecyl ether, disodium salt has not been shown to cause cancer, the Delaney clause (section 409(c)(3)(A) of the act) does not apply to it.

FDA has evaluated the safety of this additive under the general safety clause, considering all available data and using risk assessment procedures to estimate the upper-bound limit of risk presented by the carcinogenic chemicals, ethylene oxide and 1,4-dioxane, that may be present as impurities in the additive.

The risk assessment procedures that FDA used in this evaluation are similar to the methods that the agency has used to examine the risk associated with the presence of minor carcinogenic impurities in various other food and color additives that contain carcinogenic impurities (see, e.g., 49 FR 13018 and 13019, April 2, 1984). The risk evaluation of the carcinogenic impurities, ethylene oxide and 1,4-dioxane, has two aspects: (1) Assessment of the exposure to the impurities from the proposed use of the additive, and (2) extrapolation of the risk observed in the animal bioassays to the conditions of probable exposure to humans.

A. Ethylene Oxide

Based on the fraction of the daily diet that may be in contact with surfaces containing the sulfosuccinic acid 4-ester with polyethylene glycol dodecyl ether, disodium salt and on the level of ethylene oxide that may be present in the additive, FDA estimated that the hypothetical worst-case exposure to ethylene oxide from the use of the additive in food-contact coatings to be 0.5 nanogram (ng) per person per day (Ref. 3).

The agency used data in a carcinogenesis bioassay on ethylene oxide conducted by the Institute of Hygiene, University of Mainz, Germany (Ref. 4), to estimate the upper-bound limit of lifetime human risk from exposure to this chemical stemming from the proposed use of sulfosuccinic acid 4-ester with polyethylene glycol dodecyl ether, disodium salt. The results of the bioassay on ethylene oxide demonstrated that this material was carcinogenic for female rats under the conditions of the study. The test material caused a significantly increased incidence of squamous cell carcinoma of the forestomach and carcinoma, in situ, of the glandular stomach.

The Center for Food Safety and Applied Nutrition's Cancer Assessment Committee (CAC) reviewed this bioassay and other relevant data available in the literature and concluded that this information on ethylene oxide supported the finding of carcinogenicity. The Quantitative Risk Assessment Committee (QRAC) concluded that an estimate of the upper-bound limit of lifetime human risk from

VOL 58 ISS 85 MY 5 1993 UMI

potential exposure to ethylene oxide could be calculated from the bioassay.

The agency used a quantitative risk assessment procedure (linear proportional model) to extrapolate from the dose used in the study with female rats to potential human exposure from the very low doses encountered under the proposed conditions of use. This procedure is not likely to underestimate the actual risk from very low exposures and may, in fact, exaggerate it because the extrapolation models used are designed to estimate the maximum risk consistent with the data. For this reason, the estimate can be used with confidence to determine to a reasonable certainty whether any harm will result from the proposed conditions and levels of use of this food additive.

Based on a worst case exposure of 0.5 ng per person per day, FDA estimates that the upper-bound limit of individual lifetime risk from potential exposure to ethylene oxide from the use of sulfosuccinic acid 4-ester with polyethylene glycol dodecyl ether, disodium salt, is 9.3×10^{-10} or 9.3 in 10 billion (Ref. 5). Because of numerous conservatisms in the exposure estimate, actual lifetime-averaged individual exposure to ethylene oxide is expected to be substantially less than the estimated daily intake, therefore, the actual risk would be less than the calculated upper-bound limit. Thus, the agency concludes that there is a reasonable certainty of no harm from the exposure to ethylene oxide that might result from the use of sulfosuccinic acid 4-ester with polyethylene glycol dodecyl ether, disodium salt.

B. 1,4-Dioxane

Based on the fraction of the daily diet that may be in contact with surfaces containing sulfosuccinic acid 4-ester with polyethylene glycol dodecyl ether, disodium salt and on the level of 1,4-dioxane that may be present in the additive, FDA estimated that the hypothetical worst-case exposure to 1,4-dioxane from the use of the additive in food-contact coatings to be 0.5 ng per person per day (Ref. 3).

The agency used data in a carcinogenesis bioassay on 1,4-dioxane conducted for the National Cancer Institute (Ref. 6) to estimate the upper-bound level of lifetime human risk from exposure to this chemical stemming from the proposed use of the additive. The results of the bioassay on 1,4-dioxane demonstrated that the material was carcinogenic for female rats under the conditions of the study. The test material caused significantly increased incidence of squamous cell carcinomas and hepatocellular tumors in female rats.

CAC reviewed this bioassay and other relevant data available in the literature and concluded that the findings of carcinogenicity were supported by this information on 1,4-dioxane. QRAC concluded that an estimate of the upper-bound level of lifetime human risk from potential exposure to 1,4-dioxane stemming from the proposed use of these additives could be calculated from the bioassay (Ref. 6).

Based on a worst-case exposure of 0.5 ng per person per day, FDA estimates that the upper-bound limit of individual lifetime risk from potential exposure to 1,4-dioxane (Ref. 5) from the use of the additive is 1.7×10^{-11} or 1.7 in 100 billion. Because of numerous conservatisms in the exposure estimate, lifetime-averaged individual exposure to 1,4-dioxane is expected to be substantially less than the estimated daily intake and, therefore, the calculated upper-bound risk would be less. Thus, the agency concludes that there is a reasonable certainty of no harm from exposure to 1,4-dioxane that may result from the proposed use of sulfosuccinic acid 4-ester with polyethylene glycol dodecyl ether, disodium salt.

C. Need for Specifications

The agency has also considered whether a specification is necessary to control the amount of ethylene oxide and 1,4-dioxane impurities in the food additive. The agency finds that specifications are not necessary for the following reasons: (1) Because of the low levels at which ethylene oxide and 1,4-dioxane may be expected to remain as impurities following production of the additive, the agency would not expect these impurities to become components of food at other than extremely low levels; and (2) the upper-bound limit of lifetime risk from exposure to these impurities, even under worst-case assumptions, is very low, less than 9.3 in 10 billion and 1.7 in 100 billion for ethylene oxide and 1,4-dioxane, respectively.

D. Conclusion on Safety

FDA has evaluated the data in the petition and other relevant material and concludes that the proposed uses for the additive in polyvinyl acetate, acrylic, and vinyl/acrylic polymers intended for use as coatings for paper and paperboard are safe. Therefore, 21 CFR 178.3400 should be amended as set forth below.

In accordance with § 171.1(h) (21 CFR 171.1(h)), the petition and the documents that FDA considered and relied upon in reaching its decision to approve the petition are available for inspection at the Center for Food Safety and Applied Nutrition by appointment with the information contact person listed above. As provided in 21 CFR 171.1(h), the agency will delete from the documents any materials that are not available for public disclosure before making the documents available for inspection.

III. Environmental Impact

The agency has carefully considered the potential environmental effects of this action. FDA has concluded that the action will not have a significant impact on the human environment, and that an environmental impact statement is not required. The agency's finding of no significant impact and the evidence supporting that finding, contained in an environmental assessment, may be seen in the Dockets Management Branch (address above) between 9 a.m. and 4 p.m., Monday through Friday.

IV. Objections

Any person who will be adversely affected by this regulation may at any time on or before June 4, 1993, file with the Dockets Management Branch (address above) written objections thereto. Each objection shall be separately numbered, and each numbered objection shall specify with particularity the provisions of the regulation to which objection is made and the grounds for the objection. Each numbered objection on which a hearing is requested shall specifically so state. Failure to request a hearing for any particular objection shall constitute a waiver of the right to a hearing on that objection. Each numbered objection for which a hearing is requested shall include a detailed description and analysis of the specific factual information intended to be presented in support of the objection in the event that a hearing is held. Failure to include such a description and analysis for any particular objection shall constitute a waiver of the right to a hearing on the objection. Three copies of all documents shall be submitted and shall be identified with the docket number found in brackets in the heading of this document. Any objections received in response to the regulation may be seen in the Dockets Management Branch between 9 a.m. and 4 p.m., Monday through Friday.

V. References

The following references have been placed on display in the Dockets Management Branch (address above) and may be seen by interested persons between 9 a.m. and 4 p.m., Monday through Friday.

Pesticide Tolerance and Animal Feed Additive Regulation for Fluoride Compounds

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: This regulation establishes a 3-year time-limited tolerance for residues of cryolite and/or synthetic cryolite (sodium aluminum fluoride) in or on the raw agricultural commodity potatoes at 2.0 parts per million (ppm) and a 3-year time-limited feed additive regulation for residues of the insecticide cryolite and/or synthetic cryolite (sodium aluminum fluoride) in the commodity processed potato waste (wet or dry) at 22.0 ppm. These regulations to establish a maximum permissible level for residues of the insecticide compounds in or on the commodities were requested in petitions submitted by Atochem North America, Inc. (formally Pennwalt Corp.)

EFFECTIVE DATE: These regulations become effective May 5, 1993.

ADDRESSES: Written objections, identified by the document control number, [PP 9F3739 and FAP 1H5604/R1190], may be submitted to: Hearing Clerk (A-110), Environmental Protection Agency, rm. 3708, 401 M St., St., Washington, DC 20460.

FOR FURTHER INFORMATION CONTACT: By mail: Robert A. Forrest, Product Manager (PM) 14, Registration Division, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460. Office location and telephone number: Rm. 219, CM #2, 1921 Jefferson Davis Hwy., Arlington, VA 22202, (703)-305-6600.

SUPPLEMENTARY INFORMATION: EPA issued notices as follows regarding petitions submitted by Atochem North America, Inc., 3 Parkway, rm. 619, Philadelphia, PA 19102:

1. *PP 9F3739.* Appearing in the Federal Register of March 23, 1989 (54 FR 12009), the petition requested that the Administrator, pursuant to section 408(d) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 346a(d)) propose to establish a tolerance for residues of cryolite and/or synthetic cryolite in or on the raw agricultural commodity (RAC) Irish potatoes at 1.5 ppm. EPA subsequently issued notice of filing of PP 1F3959 in the **Federal Register** of April 3, 1991 (56 FR 13643), stating that Atochem North America, Inc., proposed to increase the tolerance from 1.5 ppm to 2.0 ppm and change the RAC Irish potatoes to the more appropriate designation, potatoes. PP 1F3959 had been intended as an amendment to PP 9F3739, but was published as an initial filing. The April 3, 1991 notice reflects the current amendment.

2. *FAP 1H5604.* Appearing in the **Federal Register** of April 3, 1991 (56 FR 13643), the petition requested that the Administrator, pursuant to section 409(c)(1) of the Federal Food, Drug, and Cosmetic Act (FFDCA), 21 U.S.C. 348(c)(1), propose to establish a tolerance for residues of cryolite and/or synthetic cryolite in the animal feed potato waste at 22.0 ppm resulting from the application of the compounds to growing potatoes. For consistency, the commodity potato waste is corrected to read potato waste (wet or dry) in the final rule.

There were no comments received in response to these notices of filing.

The data submitted in the petitions and all other relevant material have been evaluated. The pesticide is

VOL
58
ISS
85
MY
5
1993
UMI

considered useful for the purposes for which the tolerances are sought and considered capable of achieving the intended physical or technical effect. The toxicological data considered in support of the tolerances include the following:

1. A 2-year rat bioassay conducted by the National Toxicology Program (NTP) using sodium fluoride as the test material in which mottling; dentine incisor dysplasia; and incisor odontoblast and ameloblast degeneration of teeth were observed at the lowest dose tested, 25 ppm (1.3 mg/kg/day). Levels tested were 0, 25, 100, and 175 ppm.

Osteosarcoma of the bone was observed in one male in the 100-ppm group (mid-dose) and in three males in the 175 ppm group (highest dose tested). NTP considers this to be equivocal evidence of carcinogenicity in male F344/N rats. No evidence was seen in female rats.

The currently available information does not support the regulation of cryolite insecticides as carcinogens at this time. The U.S. Department of Health and Human Servcies (USDHHS), Public Health Service, concluded in its 1991 "Review of Fluoride Benefits and Risks" that "Taken together, the two animal studies available at this time fail to establish an association between fluoride and cancer." The two studies examined by USDHHS consisted of the NTP study using male and female rats and mice and one conducted by Procter and Gamble. A total of eight individual sex/species groups (four sex/species groups from each study) were examined. The National Academy of Science is currently examining all available data on fluoride, including the NTP studies, with a report expected to be issued April 1993.

The NTP study utilizing sodium fluoride as the test material in lieu of cryolite or synthetic cryolite satisfies the guideline study requirement for both the rodent chronic feeding study and the rat carcinogenicity study. Fluoride has been identified as the residue of toxicological concern in cryolite and synthetic cryolite, and the available data show that these compounds act as free fluoride. Due to an abundance of data on the effects of fluoride on humans, additional data are not required to define a no-observed-effect-level (NOEL) in rats for the effects of fluoride on teeth.

2. A 2-year mouse bioassay conducted by the NTP utilizing sodium fluoride as the test material with mottling, discoloration, and attrition of teeth observed at the lowest dose tested, 25 ppm (2.4 mg/kg). The bioassay was negative for carcinogenic effects under the conditions of the study. Levels tested were 0, 25, 100, and 175 ppm.

This study utilizing sodium fluoride in lieu of cryolite or synthetic cryolite as the test material satisfies the guideline study requirement for a mouse carcinogenicity study for the reason described above under item one.

3. A developmental toxicity study in rats with developmental and maternal no-observable-effect levels (NOELs) at greater than 3,000 mg/kg/day (highest dose tested).

4. A developmental toxicity study in mice with a developmental no-observable-effect level (NOEL) of 100 mg/kg/day with a lowest-effect level (LEL) of 300 mg/kg/day based on increased incidents of bent ribs and bent rib bones. The maternal NOEL was 30 mg/kg/day with a LEL of 100 mg/kg/day based on increased mortality and reddened mucosa in the glandular portion of the stomach. The guideline study requirement for a developmental toxicity study in a nonrodent species is waived.

5. A 28-day range-finding study in rats with the only compound-related effect being a change in coloration and physical property of the teeth.

6. A supplemental 90-day rat-feeding study at dose levels of 0, 50, 5,000, and 50,000 ppm in which stomach lesions were observed at the 5,000-ppm dose level.

7. A supplemental 90-day dog feeding study at dose levels of 0, 500, 10,000, and 50,000 ppm with systemic effects (fluoride accumulation in the bone) seen at the 500-ppm dose level.

8. Genotoxicity studies including an Ames test (negative), an in vitro assay in human lymphocytes (negative), and an unscheduled DNA synthesis in rat hepatocytes (negative).

9. Open literature studies showing that human and animal metabolism of cryolite and/or synthetic cryolite manifests itself as normal free fluoride metabolism, i.e., dissociation occurs, producing free fluoride ions which are assimilated into bone.

Desirable toxicological data currently lacking and the projected dates for completion of these studies are as follows: (1) 1-year nonrodent feeding study, May 1994; (2) two-generation rat reproduction study, June 1993.

Although there are significant data gaps for cryolite and/or synthetic cryolite, the available toxicity data are considered adequate to support the time-limited tolerance and feed additive regulation. The additional dietary exposure to fluoride resulting from the use of cryolite and/or synthetic cryolite on potatoes is considered negligible when compared to the total dietary exposure to fluoride from noninsecticidal sources such as drinking water, toothpaste, dental fluoride application, and the naturally occurring background levels in addition to that resulting from the current established pesticide tolerances for the compounds.

The current established tolerances for the use of cryolite and/or synthetic cryolite provide for an exposure of 0.029 mg of fluoride per kg/day (.054 mg/kg/day of cryolite and/or synthetic cryolite), and the current maximum contaminant level (MCL) of 4.0 ppm established for the use of sodium fluoride in drinking water provides for an exposure of 0.266 mg of fluoride per kg/day (based on consumption of 2 liters of water per day by a 60-kg person) for a total of 0.285 mg/kg/day. As a result of this regulation, the total maximum estimated dietary exposure will be 0.2862 mg/kg/day of fluoride, or an increase of 0.0012 mg/kg/day (0.4 percent) fluoride. As stated in the **Federal Register** of May 11, 1979 (44 FR 27932-27954), the "Agency will generally consider as insignificant an increase in the theoretical maximum residue concentration of 1.0 percent or less." For purposes of this rule, this is interpreted to include the estimated dietary exposure resulting from nonpesticidal uses.

This percent increase in the dietary exposure is even less when the background levels of fluoride are taken into consideration. Fluoride is ubiquitous and may be present in soils and foodstuffs that have not been treated with cryolite and/or synthetic cryolite. Data submitted in support of the subject petition show background levels of fluoride in untreated potatoes ranged from 0.14 ppm to 0.31 ppm and are consistent with the ranges reported in the open literature. Levels of fluoride found in the treated potatoes ranged from 0.18 ppm to 0.94 ppm. The residue analytical method used for enforcing the subject tolerance cannot distinguish between the naturally occurring fluoride and the fluoride resulting from use of cryolite and/or synthetic cryolite.

The metabolism of the subject insecticides in plants and animals is adequately understood. The residue of concern in or on plants resulting from the application of these insecticides is cryolite and/or synthetic cryolite. Only surface residues of the insecticides per se may be expected to occur on the treated plants. The residue of concern in animals is total fluoride.

An adequate analytical method (fluoride-specific electrode) is available for enforcement purposes for the RAC

potatoes and potato waste. Because the subject compounds are inorganic compounds, the requirement for data using the multiresidue protocols in PAM Vol. I is not applicable.

Because of the long lead time from establishing these tolerances to publication of the enforcement methodology in the Pesticide Analytical Manual, Vol. II, the analytical methodology is being made available in the interim to anyone interested in pesticide enforcement when requested from: Calvin Furlow, Public Information Branch, Field Operations Division (H7506C), Office of Pesticide Programs, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460. Office location and telephone number: Rm. 1128, CM #2, 1921 Jefferson Davis Hwy., Arlington, VA 22202, (703-305-5232).

There is no reasonable expectation of finite residues of cryolite or synthetic cryolite occurring in the meat, milk, poultry, and eggs of animals fed potato waste processed from the treated potatoes and 40 CFR 180.6(a)(3) applies. Thus, secondary tolerances are not necessary at this time in meat, milk, poultry, and eggs.

Because of the lack of a chronic dog feeding study, and a two-generation rat reproduction study, the Agency is limiting the period of time that the regulations are to be in effect. Should the Agency find that these data are acceptable, it will reassess the tolerance for potatoes, and if appropriate, will establish a permanent tolerance for potatoes and a permanent feed additive regulation for processed potato waste (wet or dry). There are no regulatory actions pending against the continued registration of these insecticidal compounds.

Based on the above information, the Agency concludes that the establishment of the section 408 regulation will protect the public health, and use of the pesticide in accordance with the section 409 regulation will be safe. Based on the currently available information, there has been shown no association between fluoride and cancer and thus the pesticide has not been found to induce cancer in man or animals. Therefore, the tolerance and feed additive regulation are established as set forth below.

Residues not in excess of 2.0 ppm remaining in or on the raw agricultural commodity potatoes and 22.0 ppm remaining in or on the processed animal feed potato waste after expiration of the time-limited tolerances will not be considered actionable if the pesticide is legally applied during the term of, and in accordance with, provisions of the tolerance and the feed additive regulation.

Any person adversely affected by these regulations may, within 30 days after publication of this document in the **Federal Register**, file written objections with the Hearing Clerk, at the address given above (40 CFR 178.20). The objections submitted must specify the provisions of the regulations deemed objectionable and the grounds for the objections (40 CFR 178.25). Each objection must be accompanied by the fees provided by 40 CFR 180.33(i). If a hearing is requested, the objections must include a statement of the factual issue(s) on which a hearing is requested, and the requestor's contentions on each such issue, and a summary of the evidence relied upon by the objection (40 CFR 178.27). A request for a hearing will be granted if the Administrator determines that the material submitted shows the following: There is a genuine and substantial issue of fact; there is a reasonable possibility that available evidence identified by the requestor would, if established, resolve one or more of such issues in favor of the requestor, taking into account uncontested claims or facts to the contrary; and resolution of the factual issue(s) in the manner sought by the requestor would be adequate to justify the action requested (40 CFR 178.32).

The Office of Management and Budget has exempted these rules from the requirements of section 3 of Executive Order 12291.

Pursuant to the requirements of the Regulatory Flexibility Act (Pub. L. 96-354, 94 Stat. 1164, 5 U.S.C. 601-612), the Administrator has determined that regulations establishing new tolerances or raising tolerance levels or establishing exemptions from tolerance requirements do not have a significant economic impact on a substantial number of small entities. A certification statement to this effect was published in the **Federal Register** of May 4, 1981 (46 FR 24950).

List of Subjects in 40 CFR Parts 180 and 186

Administrative practice and procedure, Agricultural commodities, Animal feeds, Pesticides and pests, Recording and recordkeeping requirements.

Dated: April 22, 1993.

Douglas D. Campt,

Director, Office of Pesticide Programs.

Therefore, chapter I of title 40 of the Code of Federal Regulations is amended as follows:

PART 180—[AMENDED]

1. In part 180:

a. The authority citation for part 180 continues to read as follows:

Authority: 21 U.S.C. 346a and 371.

b. In § 180.145, by adding new paragraph (c), to read as follows:

§ 180.145 Fluorine compounds; tolerances for residues.

* * * * *

(c) A time-limited tolerance to expire May 6, 1996 is established for residues of the insecticidal fluorine compounds cryolite and synthetic cryolite (sodium aluminum fluoride) in or on the raw agricultural commodity as follows:

Commodity	Parts per million
Potatoes	2.0

PART 186—[AMENDED]

2. In part 186:

a. The authority citation continues to read as follows:

Authority: 21 U.S.C. 348.

b. By adding new § 186.3375, to read as follows:

§ 186.3375 Fluorine compounds.

A time-limited tolerance to expire on May 6, 1996, is established for residues of the insecticidal fluorine compounds cryolite and synthetic cryolite (sodium aluminum fluoride) in the following processed animal feed resulting from application of the compounds to growing crops:

Commodity	Parts per million
Potato waste, process (wet or dry)	22.0

Utah; Final Authorization of State Hazardous Waste Management Program

AGENCY: Environmental Protection Agency.

ACTION: Immediate final rule; correction.

SUMMARY: On February 12, 1993, EPA published in the **Federal Register**, an immediate final rule approving final authorization of revisions to the Utah hazardous waste program under the

VOL 58 ISS 85 MY 5 1993 UMI

Resource Conservation and Recovery Act (RCRA). However, a portion of Table 1 was inadvertently omitted. The purpose of this document is to publish a complete Table 1.

FOR FURTHER INFORMATION CONTACT: Marcella DeVargas, Waste Management Branch, U.S. EPA, 999 18th Street, suite 500, Denver, CO 80202-2466, Phone: 303/293-1670.

SUPPLEMENTARY INFORMATION: In the Federal Register of February 12, 1993, on page 8232, third column, Table 1 is corrected to read as follows:

TABLE 1.—PROVISIONS

40 CFR Part 721

[OPPTS-50582H; FRL-4160-8]

Benzoic Acid, 2,2'-[(dihydroxyphenylene)bis(azo)]bis-, Bis[2-(dimethylamino)ethyl] Ester Dihydrochloride; Revocation of a Significant New Use Rule

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: EPA is revoking a significant new use rule (SNUR) promulgated under section 5(a)(2) of the Toxic Substances Control Act (TSCA) for a chemical substance based on receipt of new toxicity test data and on a reevaluation by EPA of expected water releases. The data and revised water release estimates indicate that the substance will not present an unreasonable risk of injury to the environment and further regulation under section 5 of TSCA is not warranted at this time.

EFFECTIVE DATE: The effective date of this rule is June 4, 1993.

FOR FURTHER INFORMATION CONTACT: Susan B. Hazen, Director, Environmental Assistance Division (TS-799), Office of Pollution Prevention and Toxics, Environmental Protection Agency, Rm. E-543A, 401 M St., SW., Washington, DC 20460, Telephone: (202) 554-1404, TDD: (202) 554-0551.

SUPPLEMENTARY INFORMATION: In the Federal Register of August 15, 1990 (55 FR 33307), EPA issued a SNUR establishing significant new uses for bis(substituted)carbomonocyclic azocarbomonocylicol, which was the generic name of the PMN substance, reflecting the claim of confidentiality for the specific chemical identity of the substance in the PMN submission. Subsequent to the issuance of that SNUR, the original PMN submitter waived its claim of confidentiality for the specific chemical identity at the time of submitting a Notice of Commencement. The specific chemical identity of the substance is benzoic acid, 2,2'-[(dihydroxyphenylene)bis(azo)]bis-, bis[2-(dimethylamino)ethyl] ester, dihydrochloride. Because of additional data EPA has received for this substance and a reevaluation by EPA of expected water releases, EPA proposed to revoke this SNUR in the Federal Register of June 2, 1992 (57 FR 23182).

I. Rulemaking Record

The record for the rule which EPA is revoking was established at OPPTS-50582 (P-88-1753). This record includes information considered by the Agency in developing this rule and includes the test data to which the Agency has responded with this rule.

II. Background

The Agency proposed the revocation of the SNUR for this substance in the Federal Register of June 2, 1992 (57 FR 23182). The background and reasons for the revocation of the SNUR are set forth in the preamble to the proposed revocation. The Agency received no public comment concerning the proposed revocation. As a result EPA is revoking this SNUR.

III. Objectives and Rationale of Revocation of the Rule

During review of the PMN submitted for the chemical substance that is the subject of this revocation, EPA concluded that regulation was warranted under section 5(e) of TSCA pending the development of information sufficient to make a reasoned evaluation of the environmental effects of the substance, and EPA identified the tests considered necessary to evaluate the risks of the substance. The basis for such findings is referenced in Unit II. of this preamble. Based on these findings, a section 5(e) consent order was negotiated with the PMN submitter and a SNUR was promulgated.

EPA reviewed testing conducted by the PMN submitter for the substance and determined that the information available was sufficient to make a reasoned evaluation of the environmental effects of the substance. In addition, EPA reevaluated surface water releases for the substance. EPA concluded that, for the purposes of TSCA section 5, the substance will not present an unreasonable risk and subsequently revoked the section 5(e) consent order. The revocation of SNUR provisions for this substance designated herein is consistent with the revocation of the section 5(e) order.

In light of the above EPA is revoking SNUR provisions for this chemical substance. When this revocation becomes final EPA will no longer require notice of any company's intent to manufacture, import, or process this substance.

IV. Regulatory Flexibility Act

Under the Regulatory Flexibility Act (5 U.S.C. 605(b)), EPA has determined that this rule would not have a significant impact on a substantial number of small businesses. EPA has not determined whether parties affected by this rule would likely be small businesses. However, once the SNUR is revoked EPA will receive no SNUR notices for the substance. Therefore, EPA believes that the number of small businesses affected by this rule will not be substantial.

1-Butene, Polymer with 2-Butene and 2-Methyl-1-propene, Epoxidized; Revocation of a Significant New Use Rule

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: EPA is revoking a significant new use rule (SNUR) promulgated under section 5(a)(2) of the Toxic Substances Control Act (TSCA) for the above chemical substance based on receipt of new data. The data indicate that the substance will not present an unreasonable risk of injury to human health and further regulation under section 5 of TSCA is not warranted at this time.

EFFECTIVE DATE: The effective date of this rule is June 4, 1993.

FOR FURTHER INFORMATION CONTACT: Susan Hazen, Director, Environmental Assistance Division (TS-799), Office of Pollution Prevention and Toxics, Environmental Protection Agency, rm. E-543A, 401 M St., SW., Washington, DC 20460, Telephone: (202) 554-1404, TDD: (202) 554-551.

SUPPLEMENTARY INFORMATION: In the Federal Register of August 15, 1990 (55 FR 33296), EPA issued a SNUR establishing significant new uses for 1-butene, polymer with 2-butene and 2-methyl-1-propene, epoxidized. Because of additional data EPA has received for this substance, EPA proposed to revoke this SNUR in the Federal Register of March 25, 1992 (57 FR 10326).

I. Rulemaking record

The record for the rule which EPA is revoking was established at OPPTS-50582 (P-88-217). This record includes information considered by the Agency in developing this rule.

II. Background

The Agency proposed the revocation of the SNUR for this substance in the Federal Register of March 25, 1992 (57 FR 10326). The background and reasons for the revocation of the SNUR are set forth in the preamble to the proposed revocation. The Agency received no public comment concerning the proposed revocation. As a result EPA is revoking this SNUR.

III. Objectives and Rationale for Revocation of the Rule

During review of the PMN submitted for the chemical substance that is the subject of this revocation, EPA concluded that regulation was warranted under section 5(e) of TSCA pending the development of information sufficient to make a reasoned evaluation of the health effects of the substance, and EPA identified the tests considered necessary to evaluate the risks of the substance. The basis for such findings is referenced in Unit II. of this preamble. Based on these findings, a section 5(e) consent order was negotiated with the PMN submitter and a SNUR was promulgated.

EPA reviewed testing conducted by the PMN submitter for the substance and determined that the information available was sufficient to make a reasoned evaluation of the health effects of the substance. EPA concluded that, for the purposes of TSCA section 5, the substance will not present an unreasonable risk and subsequently revoked the section 5(e) consent order. The revocation of SNUR provisions for this substance designated herein is consistent with the revocation of the section 5(e) order.

In light of the above EPA is revoking the SNUR provisions for this chemical substance. When this revocation becomes final EPA will no longer require notice of any company's intent to manufacture, import, or process this substance.

IV. Regulatory Flexibility Act

Under the Regulatory Flexibility Act (5 U.S.C. 605(b)), EPA has determined that this rule would not have a significant impact on a substantial number of small businesses. EPA has not determined whether parties affected by this rule would likely be small businesses. However, once the SNUR is revoked EPA will receive no SNUR notices for the substance. Therefore, EPA believes that the number of small businesses affected by this rule will not be substantial.

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 68

[CC Docket No. 87–124; FCC 93–191]

Access to Telecommunications Equipment and Services by the Hearing Impaired and Other Disabled Persons

AGENCY: Federal Communications Commission.

ACTION: Final rule; suspension of rule enforcement.

SUMMARY: This Order suspends enforcement of hearing aid compatibility for telephones required by § 68.112(b) (1), (3), and (5) of the Federal Communications Commission rules to be hearing aid compatible by May 1, 1993 for establishments with twenty or more employees and by May 1, 1994 for establishments with fewer than twenty employees. This action responds to an Emergency Request for Stay of § 68.112(b) filed by the Tele-Communications Association and is taken to give the Commission adequate time to evaluate serious issues raised in the Emergency Request involving costs of compliance and the feasibility of compliance with 47 CFR 68.112(b).

EFFECTIVE DATE: April 15, 1993.

FOR FURTHER INFORMATION CONTACT: Robert Kimball, Domestic Services Branch, Domestic Facilities Division, Common Carrier Bureau (202) 634–7150.

SUPPLEMENTARY INFORMATION: This is a synopsis of the Commission's Order in CC Docket No. 87–124, adopted April 13, 1993 and released April 15, 1993.

The complete text of this Order is available for inspection and copying during normal business hours in the FCC Dockets Branch (room 230), 1919 M Street, NW., Washington, DC, and may also be purchased from the Commission's copy contractor, ITS, Inc., at (202) 857–3800, 1919 M Street, NW., room 246, Washington, DC 20554. The Report and Order establishing the rules whose enforcement is suspended by this Order may be found at 7 FCC Rcd 3472 (Rel. June 4, 1992). The Report and Order is summarized at 57 FR 27182 (June 18, 1992).

Synopsis of Order

1. This Order suspends enforcement of hearing aid compatibility for telephones required by § 68.112(b) (1), (3), and (5) of our Rules to be hearing aid compatible by May 1, 1993 for establishments with twenty or more employees and by May 1, 1994 for establishments with fewer than twenty employees. Specifically, it suspends enforcement of the requirement that workplace non-common area telephones be hearing aid compatible by May 1, 1993 for establishments with twenty or more employees and by May 1, 1994 for establishments with fewer than twenty employees. Further, it suspends enforcement of the requirement that telephones in confined settings, including but not limited to, rooms in hospitals, residential health care facilities for senior citizens, convalescent homes, and prisons be hearing aid compatible by May 1, 1993, for establishments with twenty or more employees and by May 1, 1994 for establishments with fewer than twenty employees, but enforcement is suspended only if an alternative means of signaling life-threatening situations is available in such confined settings. Finally, it suspends enforcement of the requirement that telephones in hotels and motels be hearing aid compatible by May 1, 1993 for establishments with twenty or more employees and by May 1, 1994 for establishments with fewer than twenty employees, but only in the event that at least ten percent of the rooms in a hotel or motel are equipped to accommodate a hearing impaired customer as set forth in § 68.112(b)(5) (i) through (iii) of the Commission's Rules, 47 CFR 68.112(b) (i) through (iii). All other provisions of the Commission's hearing aid compatibility rules will be enforced. Any telephone that is required by the Commission's rules to be hearing aid compatible prior to May 1, 1993 is unaffected by this Order. The sections of the Commission's rules that are not affected herein require that telephones in certain parts of all locations mentioned above be hearing aid compatible, for example, those telephones in areas occupied by people with hearing impairments who may need them to signal life-threatening or emergency situations.

2. The Hearing Aid Compatibility Act of 1988 required that all telephones manufactured or imported for use in the United States be hearing aid compatible by August 16, 1989. It also required the Federal Communications Commission to establish such regulations as are necessary to ensure reasonable access to telephone service by persons with impaired hearing but prohibited the Commission from requiring the retrofitting of any but "coin-operated telephones and telephones provided for emergency use." In 1990 the Commission determined that telephones in work place common areas might be needed by hearing impaired persons in an emergency and required that all telephones in common areas of the workplace be hearing aid compatible. Memorandum Opinion and Order and Further Notice of Proposed Rule Making (MO&O), CC Docket No. 87–124, 5 FCC Rcd 3434 (1990), summarized at 55 FR 28762 (July 13, 1990). The Commission determined that it could change the definition of "telephones provided for emergency use," provided it consider the costs and benefits to all telephone users of any new rule, as required by the 1988 Act. In conjunction with the new rule, the Commission proposed that the definition of "telephones provided for emergency use" be expanded to include all workplace telephones and that all workplace telephones be required to be hearing aid compatible because the Commission thought it could not be reliably determined "where a hearing impaired person might be isolated in the event of an emergency." MO&O para. 17. In the Report and Order (R&O) released June 4, 1992, 7 FCC Rcd. 3472, the Commission adopted amendments to 47 CFR Sections 68.4 and 68.112. As amended, § 68.112(b) requires *inter alia*, that all workplace telephones be hearing aid compatible by May 1, 1993, for establishments with 20 or more employees, and by May 1, 1994, for establishments with fewer than 20 employees. In the *R&O*, the Commission considered estimates of average retrofitting costs ranging from $1.50 to $45.14 per telephone and concluded that the $1.50 figure did not accurately represent the costs of retrofitting. The Commission also concluded that the number of telephones affected would be much larger than the limited number in workplace common areas. However, with a delay in implementation of the rule, the Commission determined that attrition would reduce the number of non-hearing aid compatible telephones in workplaces, substantially reducing the costs of the rule. The decision establishing the rule was not appealed.

3. As the implementation date approached, the Commission began to receive a large number of telephone calls expressing concern or seeking clarification of the new regulations.

Many callers asserted that they discovered difficulties in the course of their attempts to comply with the rule that had not been foreseen in the *R&O*. The Commission also began to receive requests for individual waivers of the new regulations. One of these, The Petition for Waiver of Hearing-Aid Compatibility Requirements for Goodwill Industries of Seattle, Washington (Goodwill Petition), was put on Public Notice (DA–93–205) to allow interested parties to file written comments. Comments, petitions for waiver and written complaints were filed by 47 organizations purporting to represent over a million businesses, government agencies, universities, colleges and non-profit institutions. All 47 organizations objected to the HAC requirements or to the HAC implementation dates.

4. In this context, the Tele-Communications Association (Petitioner), an association of telecommunications managers representing colleges, universities, government agencies, health care facilities and public and private corporations, petitioned for a stay of Section 68.112(b), pending a reassessment of the legal status, costs, and benefits of the requirement. In urging the need for a stay, Petitioner argued that the Commission underestimated the costs of the rule by a substantial amount. It based its argument in part on the assertions of retrofitters and others who claimed in comments on the Goodwill Petition that, as a result of the unforeseen length of the recession and the failure of establishments to replace older telephone equipment at a normal attrition rate, the number of telephones which are still not hearing aid compatible is far larger than had been estimated in the *R&O*. The *R&O* had initially concluded that the costs of the rule would outweigh its benefits but for the effects of replacement during the period before it was due to be implemented.[1] The *R&O*'s rate-of-replacement estimate was based on estimates presented in Comments in that proceeding by the North American Telecommunications Association (NATA).[2] However, NATA subsequently acknowledged in remarks submitted in response to the Goodwill Petition, that, because of the recession, its estimates were seriously in error. Petitioner also claimed that safety concerns that led the Commission to establish the new regulations were tenuous, such that a stay in their implementation date would not seriously jeopardize telephone access of the hearing impaired in an emergency. Petitioner argued that all telephones at work stations of hearing-impaired employees, all those in common and public areas of the workplace and all those in other locations where an individual with impaired hearing is most likely to be stranded are already hearing aid compatible, as required by prior Commission rules. In addition, complaints received by the Commission indicate that non-hearing aid compatible telephones are being removed entirely without being replaced in order to comply with the regulations by May 1 and retrofitters have claimed that backlogged orders may make it otherwise impossible to comply with the May 1 date for many establishments. These arguments raised serious concerns. Given the difficulties involved in fairly assessing their accuracy in the time constraints imposed by the impending implementation date, the Commission found that the public interest would best be served by suspending enforcement of the rules as described in part 1 of this synopsis.

5. Accordingly, *it is ordered*, pursuant to sections 1, 4(i) and 710 of the Communications Act, 47 U.S.C. 1, 154(i) and 610, and § 1.3 of the Commission's Rules, 47 C.F.R. 1.3, the at enforcement of hearing aid compatibility for telephones required by §§ 68.112(b)(1), 68.112(b)(3), and 68.112(b)(5) of the Commission's Rules, 47 CFR 68.112(b)(1), 68.112(b)(3), 68.112(b)(5), to be hearing aid compatible as of May 1, 1993 *is suspended* until further notice. This action does not alter requirements imposed by Section 68.112 for telephones that must be hearing aid compatible prior to May 1, 1993.

6. *It is further ordered* that this order is effective upon release.

INTERSTATE COMMERCE COMMISSION

49 CFR Part 1023

[Ex Parte No. MC–100 (Sub-No. 7)]

Single State Insurance Registration—1993 Rules

AGENCY: Interstate Commerce Commission.

ACTION: Final rule; withdrawal.

SUMMARY: In dismissing a petition for review of the decision in this case, which adopted interim rules governing registration of motor vehicles, the United States Court of Appeals for the District of Columbia Circuit directed us to vacate that decision. Therefore, the Commission vacates its decision of September 11, 1992.

EFFECTIVE DATE: May 5, 1993.

FOR FURTHER INFORMATION CONTACT: Richard Felder, (202) 927–5610. [TDD for hearing impaired: (202) 927–5721.]

Accordingly, under the authority of 49 U.S.C. 10321(a), the final rules published on September 18, 1992 at 57 FR 43151 and stayed in a document published in the **Federal Register** on October 5, 1992 at 57 FR 45751 are withdrawn.

Decided: April 28, 1993.

By the Commission, Chairman McDonald, Vice Chairman Simmons, Commissioners Phillips, Philbin, and Walden.

Sidney L. Strickland, Jr.,

Secretary.

VOL 58 ISS 85 MY 5 1993 UMI

Proposed Rules

Federal Register
Vol. 58, No. 85
Wednesday, May 5, 1993

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

OFFICE OF PERSONNEL MANAGEMENT

5 CFR Part 591

RIN 3206–AE36

Allowances and Differentials; Uniform Allowances

AGENCY: Office of Personnel Management.

ACTION: Proposed rule.

SUMMARY: The Office of Personnel Management (OPM) proposes regulations to provide for a higher initial maximum uniform allowance rate for civilian Federal employees in certain situations where the typical basic uniform required by a Federal agency involves a high initial outlay of funds. The Federal Employees Pay Comparability Act of 1990 (FEPCA) increased the Governmentwide maximum amount that an agency may pay for a uniform allowance from $125 per year to $400 per year. The increase to $400 was made effective by OPM on February 14, 1991. The proposed regulations provide procedures authorizing an agency to establish a higher initial maximum uniform allowance rate in certain situations where the typical basic uniform required by the agency for the affected category of employees involves a high initial outlay of funds.

DATES: Comments on the proposed regulations must be submitted on or before July 6, 1993.

ADDRESSES: Comments may be sent or delivered to Barbara L. Fiss, Assistant Director for Compensation Policy, Personnel Systems and Oversight Group, U.S. Office of Personnel Management, room 6H31, 1900 E Street NW., Washington, DC 20415.

FOR FURTHER INFORMATION CONTACT: Jane R. Kuhl, (202) 606–2858.

SUPPLEMENTARY INFORMATION: The proposed regulations apply to an employee who is required by statute, regulation, or an agency's written administrative procedures to wear a uniform. The amendments made by section 202 of FEPCA increased the maximum uniform allowance rate from $125 a year per employee to $400 a year. This increase was made effective by the Office of Personnel Management (OPM) on February 14, 1991 (56 FR 6212). Section 5903 of title 5, United States Code, also authorizes OPM to prescribe such regulations as it considers necessary for administering this program.

Several Federal agencies and members of the Director's Advisory Committee on Law Enforcement and Protective Occupations have advised OPM that its regulations on uniform allowances should recognize the especially high initial cost of uniforms for new employees. Newly-hired employees usually are at lower grades and cannot afford to assemble the basic uniform until after their second or third year of service. One agency reported that the current cost of its basic uniforms ranges from approximately $740 to $1,000.

Therefore, the proposed regulations provide procedures authorizing an agency to establish a higher initial maximum uniform allowance rate in certain situations where the typical basic uniform required by the agency for the affected category of employees involves a high initial outlay of funds. This higher initial allowance rate would apply to eligible employees for the year in which the employee becomes subject to a requirement to wear the uniform.

Under the proposed regulations, authority would be delegated to the head of the agency to establish a higher initial maximum uniform allowance rate in well-defined situations in accordance with procedures set forth in the regulations. The proposed regulations also provide that (1) an agency may establish different higher initial maximum uniform allowance rates for different categories of employees, and (2) an agency may increase an established higher initial maximum allowance rate only as a result of an increase in the average total uniform cost for the affected employees and in accordance with procedures set forth in the proposed regulations.

E.O. 12291, Federal Regulation

I have determined that this is not a major rule as defined under section 1(b) of E.O. 12291, Federal Regulation.

Regulatory Flexibility Act

I certify that these regulations will not have a significant economic impact on a substantial number of small entities because they apply only to Federal agencies and employees.

List of Subjects in 5 CFR Part 591

Government employees, Travel and transportation expenses, Wages.

Office of Personnel Management.

Patricia W. Lattimore,

Acting Deputy Director.

Accordingly, OPM proposes to amend part 591 of title 5 of the Code of Federal Regulations as follows:

PART 591—ALLOWANCES AND DIFFERENTIALS

1. The authority citation for part 591 is revised to read as follows:

Authority: 5 U.S.C. 5903, 5941, and 5942; E.O. 10000, 3 CFR, 1943–1948 Comp., p. 792; E.O. 12748, 3 CFR, 1991 Comp., p. 316.

2. Subpart A is added to read as follows:

Subpart A—Uniform Allowances

Sec.

591.101 Purpose.
591.102 Definitions.
591.103 Governmentwide maximum uniform allowance rate.
591.104 Higher initial maximum uniform allowance rate.

Subpart A—Uniform Allowances

§ 591.101 Purpose.

This subpart prescribes the regulations authorized by section 5903 of title 5, United States Code, for the payment of uniform allowances.

§ 591.102 Definitions.

Agency means an "Executive agency," as defined in 5 U.S.C. 105.

Employee means an employee in or under an agency.

Head of agency means the head of an agency or an official who has been delegated the authority to act for the head of the agency in the matter concerned.

Uniform means a specified article or articles of clothing, including but not limited to shoes, boots, and hats, which an employee is required by an agency to wear to provide a distinctive and easily identifiable appearance in performing his or her job. "Uniform" does not include protective equipment required for the employee's safety or normal business or work attire purchased at the discretion of the employee.

Year means any period of 12 consecutive months, designated by an agency as the basis for applying the maximum uniform allowance rates established under this part.

§ 591.103 Governmentwide maximum uniform allowance rate.

Unless a higher initial maximum uniform allowance rate is payable under § 591.104 to an employee who is required by statute, regulation, or an agency's written administrative procedures to wear a uniform, the head of each agency concerned, out of funds available, shall—

(a) Pay an allowance for a uniform not to exceed $400 a year; or

(b) Furnish a uniform at a cost not to exceed $400 a year.

§ 591.104 Higher initial maximum uniform allowance rate.

(a) The head of an agency may establish one or more initial maximum uniform allowance rates greater than the Governmentwide maximum uniform allowance rate established under § 591.103.

(b) A higher initial maximum uniform allowance rate established under this section may not exceed the average total uniform cost for the minimum basic uniform for the affected employees and, except as provided in paragraph (c) of this section, applies only to the year in which the employee becomes subject to a requirement to wear the uniform.

(c) An agency that has established one or more higher initial maximum uniform allowance rates under this section may continue such higher rates for the year following the year in which the employee becomes subject to the requirement to wear the uniform only upon the advance written approval of OPM.

(d) Before establishing a higher initial maximum uniform allowance rate under this section, an agency shall publish in the Federal Register for notice and comment—

(1) A description and justification of the circumstances requiring a higher initial maximum uniform allowance rate;

(2) An estimate of the number of employees affected;

(3) The specific items required for the basic uniform and the average total uniform cost for the affected employees;

(4) The amount of the proposed higher initial maximum uniform allowance rate; and,

(5) The proposed effective date of the higher initial maximum uniform allowance rate.

(e) So that OPM can evaluate agencies' use of this authority and provide the Congress and others with information regarding the use of a higher initial maximum uniform allowance rate, each agency concerned shall maintain such other records and submit to OPM such other reports and data as OPM shall require.

(f) When OPM finds that an agency has not established a higher initial maximum uniform allowance rate in conformance with the criteria established in this section or otherwise determines that the agency is not using this authority appropriately, it may revoke or suspend the authority granted to the head of the agency by this section for all or any part of the agency and with respect to any category or categories of employees and require that prior OPM approval be secured before establishing a higher initial maximum uniform allowance rate.

(g) An agency may increase a higher initial maximum uniform allowance rate only as a result of an increase in the average total uniform cost for the affected employees. Before effecting an increase under this paragraph, an agency shall follow the notice and comment procedures required by paragraph (d) of this section.

BILLING CODE 6325–01–M

DEPARTMENT OF THE TREASURY

Office of the Comptroller of the Currency

12 CFR Parts 7 and 34

[Docket No. 93–07]

Other Real Estate Owned

AGENCY: Office of the Comptroller of the Currency, Treasury.

ACTION: Notice of proposed rulemaking.

SUMMARY: The Office of the Comptroller of the Currency (OCC) is proposing to remove two interpretive rulings concerning real estate held as other real estate owned (OREO). The proposal would also add a new subpart dealing with OREO to the OCC's regulation concerning real estate lending and appraisals. This proposal is needed to simplify and clarify OCC's requirements regarding national bank treatment of OREO. This proposal is also intended to expand the options that national banks may use to dispose of OREO.

DATES: Comments must be received by June 4, 1993.

ADDRESSES: Comments should be directed to: Communications Division, 250 E Street SW., Washington, DC 20219, Attention: Docket No. 93–07. Comments will be available for public inspection and photocopying at the same location.

FOR FURTHER INFORMATION CONTACT: F. John Podvin, Jr., Attorney, Bank Operations and Assets Division, (202) 874–4460; or Thomas E. Watson, National Bank Examiner, Traditional Activities Division, (202) 874–5170, Office of the Comptroller of the Currency, Washington, DC 20219.

SUPPLEMENTARY INFORMATION: The OCC is proposing, pursuant to 12 U.S.C. 29 and 93a, to amend its regulations in order to clarify and simplify the legal treatment of OREO and to encourage national banks to comply with the disposal requirements of 12 U.S.C. 29 by providing financing to creditworthy borrowers who wish to purchase OREO. The proposal would remove two OCC Interpretive Rulings: (1) Real estate acquired as salvage on uncollectible loans, codified at 12 CFR 7.3020 (§ 7.3020); and (2) Other real estate owned, codified at 12 CFR 7.3025 (§ 7.3025). In their place, the proposal would establish a new subpart E in 12 CFR part 34, entitled Other Real Estate Owned, which would encompass all OREO requirements.

Background

OREO is comprised generally of all real estate acquired and held by a national bank that is not currently in use or contemplated for use in the foreseeable future as bank premises. National banks acquire most OREO through foreclosure proceedings or by similar conveyance. A bank's ability to hold OREO, as well as other real estate, is subject to 12 U.S.C. 29, a provision of the National Bank Act.

As a general rule, under 12 U.S.C. 29, a national bank must dispose of a parcel of OREO within five years of the date that the holding period begins. However, the Comptroller may approve a bank's application to extend the holding period for such property up to an additional five years if: (1) The bank has made a good faith attempt to dispose of the property within the five year period; or (2) disposal within the five year period would be detrimental to the bank.

One of the OCC regulations interpreting 12 U.S.C. 29 is § 7.3025, which prescribes the procedures for the proper handling and disposition of a national bank's OREO. On August 8, 1979, the OCC published a final rule in the Federal Register (44 FR 46428) which amended § 7.3025. The amendment attempted to bring the

VOL 58 ISS 85 MY 5 1993 UMI

accounting treatment of OREO into conformity with Financial Accounting Standards No. 15, Accounting by Debtors and Creditors for Troubled Debt Restructuring (FAS 15), adopted by the Financial Accounting Standards Board (FASB) in June 1977. The amended § 7.3025 imposed requirements on national banks addressing several issues, including generally: How the bank must book OREO, how the bank must use appraisals to obtain and monitor the "fair value" of a parcel of OREO, what actions the bank must take if the value of the OREO deteriorates, what actions the bank may take while holding a parcel of OREO, and how the bank can meet the disposal requirements of 12 U.S.C. 29.

An accounting change that occurred after the OCC amended § 7.3025 caused conflict between the treatment of OREO under generally accepted accounting principles (GAAP) and the legal treatment under § 7.3025. In 1982, the FASB issued Statement of Financial Accounting Standards No. 66, Accounting for Sales of Real Estate (FAS 66), which altered GAAP. FAS 66 established five alternative accounting methods that a bank could use to record a sale of OREO. The introduction of FAS 66 resulted in conflicts between the treatment of OREO under GAAP and under § 7.3025.

The following discussion highlights the conflicts between the legal and accounting treatment of OREO. Under § 7.3025, the legal disposal requirements of 12 U.S.C. 29 are satisfied in an OREO sales transaction when the bank receives a down-payment in cash and private mortgage insurance which equals or exceeds 10 percent of the total sales price, the financing is on market terms, and the usual risks and rewards of ownership are transferred to the purchaser. If any one of these conditions is not met, the transaction is defined as a "covered transaction" and the bank must continue to report the asset as OREO on its Consolidated Reports of Condition and Income (Call Reports). See 12 CFR 7.3025(b) ("the covered transactions definition"). However, GAAP may require a down-payment either greater or less than 10 percent to obtain sales treatment, depending on several factors. These factors include the accounting method the bank uses under FAS 66, the type of property involved, and the risks associated with it.

Because of these differences between the requirements of § 7.3025 and GAAP, currently a bank in a transaction involving OREO property could receive a down-payment in excess of 10 percent and the property could be considered sold under § 7.3025. At the same time, however, the bank may still be required to report the asset as OREO on its books because the transaction did not qualify for sales treatment under GAAP. Alternatively, the transaction may qualify for sales treatment under GAAP with a down-payment less than 10 percent, but the bank must continue to report the asset as OREO on its books under the covered transactions definition.

An additional complicating factor is that the failure to dispose of OREO within the holding period results in a violation of law for the bank even if the transaction was considered a sale under GAAP.

The proposal set out below will deal with these conflicts and disposal problems by conforming OCC accounting treatment for OREO property to GAAP and by providing updated guidance on how a bank can dispose of OREO for purposes of 12 U.S.C. 29.

Two statutory changes also make this rulemaking advisable. First, the Depository Institutions Deregulation and Monetary Control Act of 1980, section 701, Public Law 96–221, 94 Stat. 132 amended 12 U.S.C. 29 (1980 amendment). The 1980 amendment gives the OCC authority to extend the holding period for a parcel of OREO for up to five additional years subject to the conditions discussed earlier. The 1980 amendment also provides that banks may expend funds to develop and improve OREO if the expenditures are needed to enable the bank to recover its total investment in the property. Finally, the 1980 amendment provides that these expenditures can be made only upon notification to the Comptroller, subject to any conditions and limitations the Comptroller shall prescribe. These changes were implemented by the OCC into its supervisory policies.

The proposal set out below would codify the OCC's supervisory policies that implemented the 1980 amendment. In addition, this proposal would clarify when national banks must notify the OCC of planned OREO improvement or development expenditures.

Second, Title XI of the Financial Institutions Reform, Recovery and Enforcement Act of 1989 (FIRREA), Pub. L. 101–73, 103 Stat. 183 (12 U.S.C. 3331 *et seq.*) required the OCC to prescribe appropriate standards for the performance of real estate appraisals in connection with federally related transactions. The OREO appraisal requirements in § 7.3025 predated this statutory change. The fair value appraisal requirements in § 7.3025 (g) and (h) are inconsistent with the regulation implementing Title XI of FIRREA, codified at 12 CFR part 34, subpart C (the OCC's general appraisal requirements).

The proposal set out below removes these inconsistencies and conforms the OREO appraisal requirements to those in the OCC's general appraisal requirements.

Proposal

In this proposal, the OCC intends to simplify the treatment of OREO by doing the following: (1) Increasing and expanding the options that a national bank may use to dispose of OREO; (2) eliminating the inconsistencies in current OREO appraisal requirements; (3) incorporating the statutory changes discussed in the background section; (4) removing conflicting OREO accounting guidance from the current regulation; and (5) providing other miscellaneous guidance. The proposal would remove Interpretive Rulings 7.3020 and 7.3025, and replace them with a new subpart E to part 34. The new regulation would encompass all of the OREO requirements.

Disposal of OREO

The proposal would expand the existing options that a national bank may use to dispose of property categorized as OREO for purposes of 12 U.S.C. 29. Currently, under the covered transactions definition, OREO is not deemed to be disposed of if the bank: (1) Receives less than 10 percent of the total sales price in cash and private mortgage insurance; (2) provides favorable financing to the borrower; or (3) fails to transfer the usual risks and rewards of ownership to the purchaser. See 12 CFR 7.3025(a)(3) and (b). That is, as long as any of these conditions exist, the bank, under current practice, must continue to report the asset as OREO on its Call Report. See 12 CFR 7.3025(i).

Under the proposal, two important new options would be available to national banks and could be used to dispose of OREO. The proposal would also expand the existing option that a national bank may use to dispose of property categorized as OREO. The new options would include sales treatment under GAAP and financing that involves a direct or indirect government guarantee. The existing option—which among other things requires a bank to obtain at least 10 percent of the total sales price in cash and private mortgage insurance—would be expanded to include accumulated principal and interest payments.

Sales Treatment Under GAAP

One of the new options available to national banks to dispose of OREO, for purposes of 12 U.S.C. 29, is to enter into a transaction that is given sales treatment as defined under GAAP. When a bank is attempting to dispose of OREO property, GAAP allows the bank to use one of five different methods to account for the transaction, depending on the circumstances involved in the transaction. See FAS 66. These methods include the full accrual method, the deposit method, the installment method, the cost recovery method, and the reduced-profit method. However, sales treatment is recorded only under four of the methods, with the exception being the deposit method. A brief discussion of each of these methods follows.

The full accrual method is generally used when a sale of OREO is consummated, and the purchaser's down-payment and monthly—or other periodic—payments are adequate to demonstrate a commitment to pay for the property. Under this method, the bank records a sale, recognizes profit in full and reports the asset as a loan.

The installment method is generally used when a sale of OREO is consummated and the purchaser's down-payment is not adequate to allow use of the full accrual method, but recovery of the cost of the property is reasonably assured if the buyer defaults. Under this method, the bank records a sale and reports the asset as a loan. Each payment by the purchaser, including the down-payment, is allocated between recovery of the loan's principal and profit on the sale.

The cost recovery method is generally used when: (1) The sale of OREO is consummated and the purchaser's down-payment is not adequate to allow use of the full accrual method; and (2) the installment method cannot be used because recovery of the cost of the property is not reasonably assured if the buyer defaults. Under this method, the bank records a sale, but all payments made by the purchaser are applied as a reduction of the loan balance. No profit is recognized until the purchaser's payments exceed the bank's cost in the property or until the bank receives sufficient amounts to allow use of another method. Alternatively, the bank may use the deposit method.

OREO transactions that do not qualify for sales treatment under the full accrual, installment or cost recovery methods may also be accounted for using the deposit method. Under this method, the bank does not record a sale and continues to report the asset as OREO. Further, no profit is recognized. Payments received from the purchaser are reported as a deposit until sufficient payments are received to allow the transaction to achieve sales treatment using one of the previous three methods.

Finally, the reduced-profit method is used when the bank receives an adequate down-payment, but the purchaser's monthly payments do not meet the requirements for use of the full accrual method. Under this method, the bank records a sale and reports the asset as a loan. Profit is recognized over the life of the loan using present value concepts.

In the past, many banks have used only the full accrual or the deposit method. While some banks are increasingly using the installment method, they seldom, if ever, use the cost recovery or reduced profit methods. Under this proposal, each of the five methods may be used to account for OREO disposal transactions. Some examples of these methods follow.

Example 1

Bank A sells a single family residence held in OREO for $100,000. The bank receives a $5,000 down-payment and gives the buyer a $95,000 loan. The normal loan terms provide for level payments of principal and interest over 30 years. To qualify for sales treatment under the full accrual method of accounting, FAS 66 requires a minimum down-payment of 5 percent ($5,000) for this type of property.

This transaction qualifies for sales treatment under the full accrual method of accounting. Accordingly, the property is removed from the OREO account and a loan receivable in the amount of $95,000 is recorded.

Example 2

Bank A sells a parcel of single tenancy commercial property held in OREO for $100,000. The bank receives a $7,500 down-payment and gives the buyer a $92,500 loan. To qualify for sales treatment under the full accrual method of accounting, FAS 66 requires a minimum down-payment of 15 percent ($15,000) for this type of property. Accordingly, this transaction does not qualify for sales treatment under the full accrual method. However, the borrower has personally guaranteed the loan and has substantial net worth.

Because of the personal guarantee, recovery of the cost of the property is reasonably assured if the buyer defaults. Accordingly, this transaction qualifies for sales treatment under the installment method. The property is removed from the OREO account and a loan receivable in the amount of $92,500 is recorded.

Example 3

Bank A sells for $100,000 an income-producing OREO asset with cash flow deficiencies. The bank receives a $5,000 down-payment and gives the buyer a $95,000 loan. Monthly payments of principal and interest are $1,000.

Because the bank did not receive a 25 percent ($25,000) down-payment required by FAS 66 for this type of property, the transaction does not qualify for sales treatment under the full accrual method. Further, because the bank is not confident that recovery of the cost of the property is assured if the buyer defaults, the transaction does not qualify for sales treatment under the installment method of accounting.

Accordingly, if the bank wants this transaction to be counted as a sale and the real estate no longer considered OREO, this transaction must be accounted for using the cost recovery method.

Under the cost recovery method, the transaction is accorded sales treatment and the property is removed from the OREO account. However, profit recognition is deferred until the purchaser's payments exceed the bank's cost in the property or until the bank receives sufficient amounts to allow use of another accounting method. A loan receivable of $95,000 is recorded.

Alternatively, FAS 66 would allow the bank to use the more conservative deposit method. Under this method, a sale is not recorded immediately and the asset continues to be reported as OREO.

Nonetheless, the down-payment and the monthly payments are accumulated in a deposit account until sufficient amounts have been received to allow the use of another accounting method to record a sale.

To summarize, under the proposal, when a transaction qualifies for sales treatment under GAAP, a national bank would be allowed to recategorize an asset as a loan on its Call Report. In this case, the asset would no longer be considered OREO or be subject to 12 U.S.C. 29.

Direct or Indirect Government Guarantees

Under the proposal, another new option would allow national banks to dispose of OREO, for purposes of 12 U.S.C. 29, when the purchaser qualifies for financing that involves a direct or indirect government guarantee. This financing would include loans guaranteed or insured by the United States government, an agency of the United States government or loans eligible for purchase by a federally sponsored instrumentality, such as the Federal National Mortgage Association.

In sum, a sale using a direct or indirect government guarantee would allow a national bank to recategorize an asset as a loan on its Call Report. The asset would no longer be considered OREO or be subject to 12 U.S.C. 29. Importantly too, this new option is expected to facilitate the sale of OREO to low and moderate income purchasers.

Covered Transactions Expanded

Under the proposal, the existing covered transactions definition, discussed earlier, is expanded. The proposed covered transactions real estate definition would include not only accumulated principal, but also interest

VOL 58 ISS 85 MY 5 1993 UMI

payments, along with cash and private mortgage insurance, in the calculation of a down-payment needed to constitute a sale for purposes of 12 U.S.C. 29.

Typically, a bank would choose this option only if it could not effect sales treatment under GAAP or provide financing involving a direct or indirect government guarantee. This option does not allow a national bank to recategorize an asset as a loan on its Call Report until the bank obtains sales treatment under GAAP. However, this option would satisfy the disposal requirements of 12 U.S.C. 29 and would preclude the potential for a violation of law for holding a parcel of OREO beyond the permissible period.

Appraisals

The proposal would also eliminate the inconsistencies in current OREO appraisal requirements. Currently, a national bank must substantiate a parcel's fair value—at the time the parcel is transferred into OREO—by providing written directions to an independent, qualified appraiser to prepare a current appraisal. See 12 CFR 7.3025 (d) and (g). A parcel exceeding the lower of 5 percent of the bank's equity capital or $25,000 requires a current appraisal. Annually thereafter, the bank must obtain a new appraisal substantiating the parcel's fair value or, in the alternative, a written certification that the parcel's fair value did not decline. See 12 CFR 7.3025(h). For a parcel that declines in value, the bank must establish a valuation reserve, which may be reduced later if the parcel's value increases.

Under the proposal, OREO would fall under the OCC's general appraisal requirements, which are based on an estimate of market value, rather than fair value. The general rule would require a national bank to obtain a market value appraisal at the time the parcel is transferred into OREO if the transaction value exceeds the threshold amount contained in the OCC's general appraisal requirements. If an appraisal is not required, then the bank must obtain an evaluation.

However, a new appraisal or evaluation would not be required under the general rule if a bank has a valid appraisal or evaluation on file at the time the property becomes OREO. See OCC Banking Circular 225 (Rev.), Real Estate Appraisal and Evaluation Guidelines (September 28, 1992).

The current requirement for an annual subsequent appraisal for OREO would also be replaced by a more flexible approach. Under the proposal, a national bank must develop a "prudent collateral evaluation policy" to provide a procedure for monitoring the market value of a parcel of OREO. This change will result in OREO being treated in the same manner as troubled commercial real estate loans. See OCC Banking Circular No. 208, Guidelines for Troubled Real Estate Loans (March 20, 1992).

Incorporating Statutory Changes

In addition, the proposal would incorporate the statutory changes discussed in the Background section. The proposal would codify previous statutory changes, already implemented into OCC supervisory policies. One of the statutory changes allows a bank to apply to the OCC to hold OREO for up to five additional years, provided certain conditions are met. Another change requires notification to the OCC when the bank plans to expend funds to develop and improve OREO, subject to conditions and limitations set by the OCC.

Holding Period

The proposal would specify when the holding period begins and the permitted length of time that a bank may hold OREO under 12 U.S.C. 29. Under 12 U.S.C. 29, a bank may hold OREO for up to five years. However, the statutory change allowed this period to be extended for up to five additional years if the bank applied to the OCC and has made a good faith attempt to dispose of the property within the five year period, or disposal within the five year period would be detrimental to the bank.

Currently, the regulation is silent regarding the length of the holding period for OREO and refers the reader to 12 U.S.C. 29. See 12 CFR 7.3025(e). However, it does describe when the holding period begins and how to apply the holding period to OREO. See 12 CFR 7.3025 (a)(2) and (e).

Under the proposal, the language relating to the beginning of the holding period would be retained and supplemented with specific language implementing the statutory change that affects the length of the holding period.

Expenditures and Notification

The proposal would specify when a national bank could expend funds to develop and improve a parcel of OREO. The proposal would also specify when a bank is required to notify the OCC of a planned expenditure. Currently, the regulation provides that a bank may make further prudent advances to complete an unfinished construction or development project that are recoverable and will result in a more salable property. See 12 CFR 7.3025(j).

Currently, OCC supervisory policies require all banks with assets in excess of $300 million to notify the OCC of any development or improvement project that would cause the bank's total investment in the OREO to exceed 5 percent of capital and surplus. For banks with assets less than $300 million, the notification threshold is 10 percent. The policy also requires that all expenditures for OREO improvement or development projects be reasonably calculated to significantly minimize any shortfall between the property's value and the bank's total investment. Further, the policy provides that any evidence of speculative activities involving OREO could be considered unsafe and unsound banking practices.

The proposal would set less burdensome notification conditions and limitations than were previously imposed under OCC supervisory guidance. Under the proposal, the bank is required to notify the appropriate OCC supervisory office at least 30 days before implementing a development or improvement plan for OREO that would cause the bank's investment in the property, and any unpaid prior liens on the property, to exceed 10 percent of the bank's capital and surplus. If the OCC does not respond within the 30 day period, the bank may implement the plan anytime thereafter.

The proposal would also implement the OCC supervisory policy requiring that all OREO expenditures be reasonably calculated to reduce any shortfall between the parcel's market value and the bank's original, recorded investment amount, and may not be for the purpose of speculation in real estate.

Further, under the proposal, expenditure for normal repairs and maintenance, including re-fitting an existing building for new tenants, would not require notification.

Accounting Treatment

The proposal would conform the accounting treatment of OREO to the requirements in the Call Report Instructions, which generally follow GAAP. Currently, the regulation contains specific guidance on the accounting treatment of OREO. See 12 CFR 7.3025(b), (c), (g), (h), (i), (j) and (k). Under the proposal, this specific accounting guidance would be removed. The proposal would refer the reader to the Call Report Instructions for specific guidance on the accounting treatment of OREO.

Miscellaneous Guidance

The proposal would retain the current requirements regarding the disposition of OREO. Currently, a national bank must dispose of OREO at any time that prudent judgment dictates but in no event later than the end of the holding period. A bank is also required to make diligent efforts to dispose of each parcel of OREO within the holding period and maintain documentation reflecting those efforts. See 12 CFR 7.3025(e).

Under the proposal, a bank would still be required to dispose of OREO at any time that prudent judgment dictates but before the end of the holding period. The proposal would also require the bank to make diligent efforts to dispose of the OREO within the holding period and to maintain documentation reflecting those efforts. The bank would be expected to maintain only enough documentation to demonstrate its compliance with this requirement.

The proposal would also retain the provisions regarding the disposition of real estate acquired for future bank expansion. Currently, the regulation requires that this property should normally be used within three years. It also requires that after holding a parcel of future banking premises for one year, the board must state, by resolution, definite plans for its use. This resolution must be available to bank examiners. See 12 CFR 7.3025(f).

Under the proposal, the bank would be permitted to use a board resolution or other official action to make the required statement providing definite plans for the property's use. However, this must be accomplished prior to acquisition. This requires the board—or its designee—to know how the bank plans to use the property before the bank acquires it. The remaining provisions relating to future banking premises are unchanged.

Public comment is invited on any aspect of this proposal.

Regulatory Flexibility Act

It is hereby certified that this regulation will not have a significant economic impact on a substantial number of small entities. Accordingly, a regulatory flexibility analysis is not required. This regulation will reduce burden on national banks, regardless of size, by clarifying existing statutory and regulatory requirements.

Executive Order 12291

The OCC has determined that this amendment is not a "major rule" and therefore does not require a Regulatory Impact Analysis. The impact of this proposed rule is expected to be slight and will benefit banks by clarifying existing regulations.

Paperwork Reduction Act

The collections of information contained in this notice of proposed rulemaking have been submitted to the Office of Management and Budget for review in accordance with the Paperwork Reduction Act of 1980 (44 U.S.C. 3504(h)). Comments on the collection of information should be sent to the Comptroller of the Currency, Legislative, Regulatory, and International Activities, Attention: 1557–0153, 250 E Street, SW., Washington, DC 20219, with a copy to the Office of Management and Budget, Paperwork Reduction Project (1557–0153), Washington, DC 20503.

The collections of information in this proposed regulation are located in §§ 34.82(a) and 34.85(b) and are required by 12 U.S.C. 29. The application required under § 34.82(a) is required if a national bank wishes to apply for an extension of the five-year holding period for a parcel of OREO for up to an additional five years. This information will be used by the OCC in deciding whether to approve the application. The OCC may grant approval if the bank has made a good faith attempt to dispose of the OREO within the five-year period, or disposal of the OREO within the five-year period would be detrimental to the bank.

The notification required under § 34.85(b) is required 30 days before a national bank implements a development or improvement plan for OREO that would cause the sum of the bank's recorded investment amount, and any unpaid prior liens on the property, to exceed 10 percent of the bank's capital and surplus. This information will be used by the OCC to determine if the bank can proceed with the plan to develop or improve the OREO, consistent with 12 U.S.C. 29 and with safe and sound banking principles.

The likely respondents are national banks, including small banks. The estimated annual burden per respondent for the application in § 34.82(a) varies from 30 minutes to 3 hours, depending on individual circumstances, with an estimated average of 1 hour. Estimated number of respondents: 2,846 national banks. Estimated annual frequency of responses: 1.2.

The estimated annual burden per respondent for the notification in § 34.85(b) varies from 1 to 8 hours, depending on individual circumstances, with an estimated average of 4 hours. Estimated number of respondents: 140 national banks. Estimated annual frequency of responses: 1.

List of Subjects

12 CFR Part 7

Credit, Insurance, Investments, National banks, Reporting and recordkeeping requirements, Securities, Surety bonds.

12 CFR Part 34

Mortgages, National banks, Reporting and recordkeeping requirements.

Authority and Issuance

For the reasons set out in the preamble, parts 7 and 34 of chapter I of title 12 of the Code of Federal Regulations are proposed to be amended as set forth below:

PART 7—INTERPRETIVE RULINGS

1. The authority citation for part 7 continues to read as follows:

Authority: 12 U.S.C. 1 *et seq.*, 93a.

§ 7.3020 [Removed]

2. Section 7.3020 is removed.

§ 7.3025 [Removed]

3. Section 7.3025 is removed.

PART 34—REAL ESTATE LENDING AND APPRAISALS

4. The authority citation for part 34 continues to read as follows:

Authority: 12 U.S.C. 1 *et seq.*, 93a, 371, 1701j–3, 1828(o), and 3331 *et seq.*

5. A new Subpart E, Other Real Estate Owned, is added to part 34 to read as follows:

Subpart E—Other Real Estate Owned

Sec.
34.81 Definitions.
34.82 Holding period.
34.83 Disposition of real estate.
34.84 Appraisal requirements.
34.85 Additional expenditures and notification.
34.86 Accounting treatment.

Subpart E—Other Real Estate Owned

§ 34.81 Definitions.

(a) *Other real estate owned* is:

(1) Covered transactions real estate;

(2) Debts previously contracted real estate; and

(3) Former banking premises.

(b) *Covered transactions real estate* is, for the purposes of the disposal requirement of 12 U.S.C. 29, a parcel of other real estate owned that is involved in a transaction where:

(1) The transaction is not given sales treatment under generally accepted accounting principles;

(2) The transaction does not involve a loan guaranteed or insured by the

VOL 58 ISS 85 MY 5 1993 UMI

United States government or by an agency of the United States government or a loan eligible for purchase by a federally sponsored instrumentality that purchases loans; and

(3) The bank has not received or accumulated from the purchaser, an amount in cash, principal and interest payments, and private mortgage insurance totaling 10 percent of the sales price.

(c) *Debts previously contracted real estate* means real estate acquired by a national bank through any means in full or partial satisfaction of a debt or debts previously contracted.

(d) *Former banking premises* means real estate (including capitalized leases) for which banking use is no longer contemplated. This includes real estate originally acquired for future expansion that will not be used as anticipated for future expansion or other banking purposes.

(e) *Market value* is determined in accordance with subpart C of this part.

(f) *Recorded investment amount* means:

(1) The recorded loan balance, as defined by generally accepted accounting principles; or

(2) Net book value for former banking premises.

§ 34.82 Holding period.

(a) *Holding period for other real estate owned.* Pursuant to 12 U.S.C. 29, a national bank may hold other real estate owned for a period not to exceed five years, except that the Comptroller may approve an application by the bank to extend the holding period for up to an additional five years, if:

(1) The bank has made a good faith attempt to dispose of the other real estate owned within the five-year period; or

(2) Disposal of the other real estate owned within the five-year period would be detrimental to the bank.

(b) *When the holding period begins.* The holding period begins on the date that ownership of the property is originally transferred to the national bank, except that:

(1) The holding period for former banking premises begins on the date of relocation to new banking quarters. If there is no relocation or if the property was originally acquired for future expansion and will not be used as such, then the holding period begins on the date on which the bank decides that banking use is no longer contemplated.

(2) The holding period for covered transactions real estate remains the date the bank originally acquired ownership of the property if, after an attempt to sell a parcel of other real estate owned, the ownership of the property reverts to the bank while the property is still covered transactions real estate.

§ 34.83 Disposition of real estate.

(a) *Disposal.* Disposal of other real estate owned, for the purposes of 12 U.S.C. 29, occurs when a national bank enters into a sales transaction that results in the property no longer being considered covered transactions real estate.

(1) Other real estate owned shall be disposed of within the holding period permitted by 12 U.S.C. 29 at any time that prudent judgment dictates, but in no event later than the end of such holding period.

(2) A national bank may comply with its obligation under 12 U.S.C. 29 to dispose of debts previously contracted real estate within the holding period applicable to such property by retaining the property for its own use as bank premises or by transferring it to a subsidiary or affiliate for use in the business of the subsidiary or affiliate.

(b) *Disposal efforts and documentation.* The national bank shall make diligent efforts to dispose of each parcel of other real estate owned and shall maintain documentation adequate to reflect those efforts.

(c) *Future bank expansion.* Real estate acquired for future bank expansion should normally be used within three years. Prior to acquisition of such real estate, the bank shall state, by board of directors resolution or other official action, definite plans for its use. The resolution or other official action shall be available for inspection by national bank examiners.

§ 34.84 Appraisal requirements.

(a) *In general.* (1) Upon transfer to other real estate owned, the national bank shall substantiate market value by obtaining an appraisal for property in accordance with subpart C of this part or by obtaining an appropriate evaluation if an appraisal is not required.

(2) The national bank shall develop a prudent collateral evaluation policy that allows the bank to monitor the value of each parcel of other real estate owned in a manner consistent with prudent banking practice.

(b) *Exception.* If a national bank has a valid appraisal or an appropriate evaluation, which was obtained in accordance with paragraph (a)(2) of this section, on a troubled real estate loan or on a loan secured by property designated as in-substance foreclosure under generally accepted accounting principles, and, if an appraisal is required, it meets the requirements of subpart C of this part, then the bank is not required to obtain another appraisal or evaluation when the bank acquires ownership of the property. However, the bank shall continue to follow the prudent collateral evaluation policy required in paragraph (a)(2) of this section.

§ 34.85 Additional expenditures and notification.

(a) *Additional expenditures on other real estate owned.* (1) Normal repairs and maintenance expenses shall be expensed when incurred. Notification under paragraph (b)(1) of this section is not required.

(2) For other real estate owned that is a development or improvement project, a national bank may only make further prudent advances to complete the project if they:

(i) Are reasonably calculated to reduce any shortfall between the parcel's market value and the bank's recorded investment amount; and

(ii) Are not made for the purpose of speculation in real estate.

(b) *Notification procedures.* (1) A national bank shall notify the appropriate supervisory office at least 30 days before implementing a development or improvement plan for other real estate owned that would cause the sum of the bank's recorded investment amount, and any unpaid prior liens on the property, to exceed 10 percent of the bank's capital and surplus, as defined in § 3.100 of this title.

(2) The required notification must include any documentation necessary to demonstrate that the additional expenditure is consistent with the conditions and limitations in paragraphs (a)(2) (i) and (ii) of this section.

(3) If the appropriate supervisory office imposes no additional conditions or limitations on the national bank's plan within 30 days following receipt of the bank's notification by the OCC, then on the thirty-first day following receipt of the bank's notification by the OCC (or sooner if notified by the OCC), the bank may implement the plan to develop or improve the other real estate owned.

§ 34.86 Accounting treatment.

Sales of other real estate owned shall be accounted for in accordance with the Instructions for the preparation of the Consolidated Reports of Condition and Income.

Dated: April 15, 1993.

Eugene A. Ludwig,

Comptroller of the Currency.

[FR Doc. 93-10687 Filed 5-4-93; 8:45 am]

BILLING CODE 4810-33-P

FEDERAL DEPOSIT INSURANCE CORPORATION

12 CFR Part 325

RIN 3064-AB20

Capital Maintenance

AGENCY: Federal Deposit Insurance Corporation (FDIC).

ACTION: Proposed rule.

SUMMARY: The FDIC is proposing to amend its capital standards for insured state nonmember banks to establish a limitation on the amount of certain deferred tax assets that may be included in (that is, not deducted from) the Tier 1 capital calculation for risk-based and leverage capital purposes. Under the proposal, deferred tax assets that can be realized through carrybacks to taxes paid on income earned in prior periods generally would not be subject to limitation for regulatory capital purposes. On the other hand, deferred tax assets that can only be realized if an institution earns sufficient taxable income in the future would be limited for regulatory capital purposes to the amount that the institution is projected to realize within one year of the most recent calendar quarter-end date, based on the institution's projection of taxable income for that year, or ten percent of Tier 1 capital, whichever is less. Deferred tax assets in excess of these limitations would be deducted from Tier 1 capital and from assets for purposes of calculating both the risk-based and leverage capital ratios.

This capital proposal was developed on a consistent basis by the FDIC, the Board of Governors of the Federal Reserve System (FRB), the Office of the Comptroller of the Currency (OCC), and the Office of Thrift Supervision (OTS) (hereafter, the federal banking agencies or the agencies) in response to the issuance by the Financial Accounting Standards Board (FASB) of Statement No. 109, "Accounting for Income Taxes" (FASB 109), in February 1992. This FASB accounting standard must be adopted by insured state nonmember banks for regulatory reporting and financial reporting purposes no later than the first quarter of 1993, or the beginning of their first fiscal year thereafter, if later.

The proposed capital limitation is intended to balance the FDIC's concerns about deferred tax assets that are dependent upon future taxable income against the fact that such assets will, in many cases, be realized.

DATES: Comments must be received by June 4, 1993.

ADDRESSES: All comments should be addressed to Hoyle L. Robinson, Executive Secretary, Federal Deposit Insurance Corporation, 550 17th Street NW., Washington, DC 20429, or delivered to room F-400, 1776 F Street, NW., between the hours of 8:30 a.m. and 5 p.m. on business days. [Fax number (202) 898-3838.] Comments will be available for inspection and photocopying in the FDIC's Reading Room, room 7118, 550 17th Street, NW., between 9 a.m. and 4:30 p.m. on business days.

FOR FURTHER INFORMATION CONTACT: Robert F. Storch, Chief, Accounting Section, Division of Supervision, (202) 898-8906, Federal Deposit Insurance Corporation, 550 17th Street, NW., Washington, DC. 20429.

SUPPLEMENTARY INFORMATION:

I. Background

Characteristics of Deferred Tax Assets

Deferred tax assets are assets that reflect, for financial reporting purposes, amounts that will be realized as reductions of future taxes or as future receivables from a taxing authority. Deferred tax assets may arise because of specific limitations under tax laws of different tax jurisdictions that require that certain net operating losses (*i.e.*, when, for tax purposes, expenses exceed revenues) or tax credits be carried forward if they cannot be used to recover taxes previously paid. These "tax carryforwards" are realized only if the institution generates sufficient future taxable income during the carryforward period.

Deferred tax assets may also arise from the tax effects of certain events that have been recognized in one period for financial statement purposes but will result in deductible amounts in a future period for tax purposes, *i.e.*, the tax effects of "deductible temporary differences." For example, many depository institutions may report higher income to taxing authorities than they reflect in their regulatory reports [1] because their loan loss provisions are expensed for reporting purposes but are not deducted for tax purposes until the loans are charged off.

Deferred tax assets arising from an organization's deductible temporary differences may or may not exceed the amount of taxes previously paid that the organization could recover if the differences fully reversed at the report date. Some of these deferred tax assets may theoretically be "carried back" and recovered from taxes previously paid. On the other hand, when such deferred tax assets exceed such previously paid tax amounts, they will be realized only if there is sufficient future taxable income during the carryforward period.[2]

FASB 109

In February 1992, the FASB issued Statement No. 109, which supersedes Accounting Principles Board Opinion No. 11 (APB 11) and FASB Statement No. 96, the previous standards governing accounting for income taxes. FASB 109 provides guidance on many aspects of accounting for income taxes, including the accounting for deferred tax assets. FASB 109 potentially allows some insured state nonmember banks to record significantly higher deferred tax assets than previously permitted under generally accepted accounting principles (GAAP) and the federal banking agencies' prior reporting policies. Unlike the general practice under previous standards, FASB 109 permits the reporting of deferred tax assets that are dependent upon future taxable income.[3] However, FASB 109 requires the establishment of a valuation allowance to reduce the net deferred tax asset to an amount that is more likely than not (*i.e.*, a greater than 50 percent likelihood) to be realized.

FASB 109 is effective for fiscal years beginning on or after December 15, 1992, but early adoption of this standard was encouraged by the FASB. The adoption of this standard could result in the reporting of additional deferred tax assets in Call Reports that would directly increase an institution's undivided profits and thus its Tier 1 capital.

[1] Insured commercial banks and FDIC-supervised savings banks are required to file quarterly Consolidated Reports of Condition and Income (Call Reports) with their primary federal regulatory agency (the FDIC, the FRB, or the OCC, as appropriate). Insured savings associations file quarterly Thrift Financial Reports with the OTS.

[2] Hereafter, such deferred tax assets and deferred tax assets arising from tax carryforwards are referred to as "deferred tax assets that are dependent upon future taxable income."

[3] Prior supervisory policies of the OCC and FDIC, as set forth in Banking Circular 202 dated July 2, 1985, and Bank Letter BL-36-85 dated October 4, 1985, respectively, limited the reporting of deferred tax assets in the regulatory reports filed by national banks and insured state nonmember banks to the amount of taxes previously paid which are potentially available through carryback of net operating losses. As such, the OCC and FDIC did not permit the reporting of deferred tax assets that are dependent upon future taxable income in the Call Reports filed by national and insured state nonmember banks. The FRB and OTS did not issue policies explicitly addressing the recognition of deferred tax assets. Consequently, state member banks and savings associations were able to report deferred tax assets in accordance with GAAP. Prior to FASB 109, GAAP, as set forth in APB 11 and FASB 96, also for the most part did not permit the reporting of deferred tax assets that are dependent upon future taxable income.

Concerns Regarding Deferred Tax Assets That Are Dependent Upon Future Taxable Income

Certain regulatory concerns exist with respect to including in capital deferred tax assets that are dependent upon future taxable income. Realization of such assets depends on whether a bank has sufficient future taxable income during the carryforward period. Since a bank that is in a net operating loss carryforward position is often experiencing financial difficulties, its prospects for generating sufficient taxable income in the future are uncertain. In addition, the condition of and future prospects for an organization often can and do change very rapidly in the banking environment. This raises concerns about the realizability of deferred tax assets that are dependent upon future taxable income, even when a bank appears on the surface to be sound and well-managed. Thus, for many banks, such deferred tax assets may not be realized and, for other banks, there will be a high degree of subjectivity in determining the realizability of this asset.

In addition, as a bank's condition deteriorates, it is less likely that deferred tax assets that are dependent upon future taxable income will be realized. Therefore, the bank would be expected under FASB 109 to reduce its deferred tax assets through increases to the asset's valuation allowance. Additions to this allowance would reduce the bank's regulatory capital at precisely the time it needs capital support the most. Thus, the reporting of deferred tax assets that are dependent upon future taxable income raises, for safety and soundness reasons, a supervisory concern.

Moreover, net operating loss carryforwards of an acquired bank can be severely limited to the acquirer when an acquisition or change in control occurs. If an acquisition is structured as a taxable asset purchase, the net operating loss carryforwards are generally extinguished. In addition, if an acquisition or change in control qualifies as a tax-free reorganization, a strict limitation (Section 382 of the Internal Revenue Code) on the use of the acquired institution's net operating loss carryforwards generally applies. This limitation is based on the value of the acquired institution at the time of its acquisition, and thus the potential value of a net operating loss carryforward to a prospective purchaser tends to decline as the institution's financial condition weakens.

Because of these concerns, in March 1992, the FDIC and the other federal banking agencies issued separate letters to the banking organizations under their supervision expressing concerns about FASB 109 and stated that banking organizations should not adopt FASB 109 for regulatory reporting purposes until the agencies had determined the appropriate regulatory reporting and capital treatment.[4]

FFIEC Request For Comment

On August 3, 1992, the agencies, under the auspices of the Federal Financial Institutions Examination Council (FFIEC), requested public comment on various regulatory reporting and capital treatments for deferred tax assets of depository institutions (57 FR 34135). In the comment request, the agency staffs indicated that, while no final decision would be made until all comments were received, their preference would be to limit the amount of deferred tax assets that could be reported to the amount that could be recovered through the carryback of losses against taxes previously paid (hereafter referred to as the "carryback approach"). Under the carryback approach, depository institutions' deferred tax assets that are dependent upon future taxable income could not be reported as assets for regulatory reporting purposes and, thus, would be excluded from regulatory capital.

The FFIEC received 198 comment letters in response to its request for comment, primarily from banks, thrifts, and holding companies. The vast majority of the commenters indicated that they believe that strong reasons exist for adopting FASB 109 for both regulatory reporting and capital purposes. These commenters generally asserted that deferred tax assets that are dependent upon future taxable income are valuable assets for many institutions and that FASB 109 provides sufficient criteria for measuring these assets and for distinguishing those institutions that will be able to realize these assets from those that will not. Furthermore, the commenters indicated that, under the carryback approach, the agencies were effectively proposing a liquidation value approach to deferred tax assets and that such an approach is inconsistent with the going concern concept used for measuring other assets and liabilities.

Commenters also noted that tax laws have changed significantly in the last several years, and many banking organizations will have a longer carryforward period (*i.e.*, 15 years) than they now have to absorb all losses beginning in 1994. (For these organizations, the carryforward period for losses attributable to bad debts is now five years.) Thus, these commenters indicated there is a greater likelihood that in the future carryforwards will ultimately be realized. Moreover, commenters indicated that, as a result of changes in tax laws that require some banking organizations to deduct charge-offs, rather than provisions for loan losses, for tax purposes, even strong banking organizations may have large amounts of deferred tax assets that are dependent upon future taxable income.

Commenters also expressed concern that the carryback approach could create a difference between the deferred tax assets reported in GAAP financial statements and regulatory reports, thereby creating an additional reporting burden for institutions. Commenters also questioned whether banking organizations could compete equally with other financial services companies if the carryback approach were imposed.

Some commenters indicated that, if the agencies did limit deferred tax assets, they should permit the recognition of some deferred tax assets that are dependent upon future taxable income and should set the limitation for capital purposes rather than for reporting purposes.

II. Proposal

The FDIC and the other agencies remain concerned about the realizability and characteristics of deferred tax assets that are dependent upon future taxable income. On the other hand, the agencies believe that many of the comments received in response to the FFIEC request for comment have merit. In this regard, some relatively strong organizations have large amounts of deferred tax assets that are dependent upon future taxable income. Such deferred tax assets could not be reported under the carryback approach. Yet there is a high likelihood in some cases that such assets will be realized. Thus, the agencies believe that the recognition of some amounts of deferred tax assets that are dependent upon future taxable income is appropriate. Furthermore, the agencies believe that their supervisory concerns regarding deferred tax assets can be adequately addressed by setting forth a limitation through the capital standards rather than through reporting instructions. Such an approach would not result in a difference between GAAP and regulatory reporting requirements.

Therefore, after careful consideration of the comments received, the FFIEC

[4] The OTS's letter indicated that savings associations could adopt the provisions of FASB 109, except that any deferred tax asset could not exceed what was allowed to be reported under APB 11 or FASB 96.

decided that banks and savings associations should adopt FASB 109 for reporting purposes in Call Reports and Thrift Financial Reports (TFRs) beginning in the first quarter of 1993 (or the beginning of their first fiscal year thereafter, if later). Insured banks were notified by the FFIEC that they should report deferred tax assets in their Call Reports in accordance with GAAP as prescribed in FASB 109 in Financial Institutions Letter FIL–97–92 dated December 31, 1992. As FDIC-supervised banks adopt FASB 109 during 1993, this GAAP reporting standard will supersede the regulatory reporting limitation on deferred tax assets established as a supervisory policy by the FDIC in Bank Letter BL–36–85 dated October 4, 1985. As a result, the FDIC will be able to withdraw this 1985 Bank Letter.

The FFIEC, in reaching its decision on regulatory reporting, also recommended that each of the federal banking and thrift regulatory agencies should amend its regulatory capital standards to limit the amount of deferred tax assets that are dependent upon future taxable income that can be included in regulatory capital to the lesser of:

(1) The amount of deferred tax assets that are dependent upon future taxable income that is expected to be realized within one year of the quarter-end date,[5] based on an institution's projections of future taxable income (exclusive of tax carryforwards and reversals of existing temporary differences) for that year. Such projections should include the estimated effect of tax planning strategies that the institution expects to implement to realize tax carryforwards that will otherwise expire during the year, or

(2) Ten percent of Tier 1 capital.

When the recorded amount of deferred tax assets that are dependent upon future taxable income, net of any valuation allowance for deferred tax assets, exceeds this limitation, the excess amount is to be deducted from Tier 1 capital and from assets in regulatory capital calculations. Deferred tax assets which can be realized from taxes paid in prior carryback years and from future reversals of existing taxable temporary differences would generally not be limited.

The FDIC is proposing to adopt the recommendation of the FFIEC in full, as summarized immediately above.[6] Furthermore, consistent with the recommendations of the FFIEC, FASB 109, and longstanding policy of the FDIC and the other agencies, the FDIC is proposing that the capital limit should be determined on a separate entity basis for each insured state nonmember bank.[7] However, in some cases, an insured state nonmember bank's holding company may not have the financial capability to reimburse the institution for tax benefits derived from the institution's carryback of net operating losses or tax credits. In these cases, the amount of carryback potential the bank may consider in calculating the capital limit on deferred tax assets should be limited to the lesser amount which it could reasonably expect to have refunded by its parent. Thus, a bank's ownership by a holding company may not increase the deferred tax assets an insured state nonmember bank may include in its Tier 1 capital, but may reduce them.

Consistent with FASB 109, the limit based on projected future taxable income would also be determined on a tax jurisdiction-by-jurisdiction basis. A limit for one jurisdiction (*e.g.*, the United States) in excess of the reported amount of deferred tax assets for that jurisdiction should not be used to effectively increase the limit for other jurisdictions (*e.g.*, the state in which the bank is chartered).

The proposed capital limitation is intended to balance the FDIC's concerns about deferred tax assets that are dependent upon future taxable income against the fact that such assets will, in many cases, be realized. The proposed approach generally permits full inclusion of deferred tax assets potentially recoverable from carrybacks, since there is a high likelihood that such amounts will be realized. In addition, the proposed approach also includes those deferred tax assets that are dependent upon future taxable income, if any, that can be recovered from projected taxable income during the next year. The FDIC is proposing to limit projections of future taxable income to one year because, in general, the FDIC believes that many banks are able to make reasonable projections of taxable income for the next twelve month period and then achieve their projected results. However, the reliability of these projections and the ability to actually achieve them tends to decrease significantly beyond that time period. Deferred tax assets that are dependent upon future taxable income are further limited to ten percent of Tier 1 capital, since the FDIC believes such assets should not comprise a large portion of a bank's capital base given the uncertainty of realization associated with these assets and the difficulty in selling these assets apart from the bank.

The amount of deferred tax assets that banks report in their Call Reports and use to meet capital requirements will be subject to examiner review.

III. Questions for Comment

While the FDIC is seeking public comment on all aspects of its proposal on the regulatory capital treatment of deferred tax assets, it seeks specific comment on the following questions.

(1) When determining the maximum allowable amount of deferred tax assets that are dependent upon future taxable income under the proposal, these assets would be subject to a ten percent of Tier 1 capital limit. Is this an appropriate percentage limitation given the nature of these assets or would a higher or lower percentage limitation be more appropriate? What factors should be considered in setting the limit?

(2) Under previous GAAP as set forth in Accounting Principles Board Opinion No. 16, "Business Combinations," the reported value of an asset (other than goodwill) acquired in a purchase business combination is adjusted for the tax effect of the difference between the market or appraised value of the asset and its tax basis. FASB 109 changes this treatment by requiring that this tax effect be recorded separately in a deferred tax account. This change in treatment could cause a large increase in the reported amount of certain identifiable intangible assets which are deducted for purposes of computing regulatory capital. Should these increases in identifiable intangible assets acquired in purchase business combinations and the related tax effects be treated differently then in accordance with the existing regulatory capital rules for intangibles and as proposed above for deferred taxes? If so, why is a different treatment warranted and what should this treatment be? Are there any

[5] For purposes of determining the limit in (1) above, the FDIC proposes that insured state nonmember banks should assume that all temporary differences fully reverse at the report date. Other than this provision, the one-year cutoff for projections of future taxable income, and the inclusion of an organization's tax planning strategies as part of those projections, insured state nonmember banks should adhere to FASB 109 when determining this limit. Consistent with FASB 109 and the separate entity method discussed later in this proposal, the FDIC proposes to permit the netting of deferred tax liabilities and assets for a particular tax-paying component of an insured state nonmember bank and within a particular tax jurisdiction. Netting of deferred tax assets and liabilities attributable to different tax-paying components of an insured state nonmember bank or to different tax jurisdictions would not be permitted.

[6] Under the FDIC's risk-based capital guidelines, all deferred tax assets included in capital would continue to be assigned a risk weight of 100 percent.

[7] Under the separate entity method, a bank (together with its consolidated subsidiaries) that is a subsidiary of a holding company is treated as a separate taxpayer rather than as part of the consolidated group of which it is a member.

VOL 58 ISS 85 MY 5 1993 UMI

other provisions of FASB 109 which the agencies should consider for purposes of applying a different regulatory capital treatment than has been proposed above?

(3) The FDIC is interested in receiving comments on ways of reducing the potential burden associated with this proposal and requests comments on this matter. For example, is a limitation based on projections of future taxable income difficult to implement? Would it be simpler to base a capital limitation on deferred tax assets without consideration of future projections of taxable income, such as permitting only healthy organizations to include in capital deferred tax assets that are dependent upon future taxable income up to a specified percentage of Tier 1 capital (*e.g.*, five or ten percent)? Would there be any other method that would be simpler to administer while recognizing the FDIC's concerns about deferred tax assets? Also, for example, the limitation, as proposed, would be based on the separate entity method. Would another method be more appropriate for determining the limitation on deferred tax assets and for tax-sharing agreements in general?

(4) The proposal would require tax planning strategies to be included as part of an institution's projections of taxable income for the next year. Furthermore, the proposal would require banks to assume that all temporary differences fully reverse at the report date. Comment is specifically requested on the appropriateness of these provisions.

(5) The proposed rule includes a definition for "deferred tax assets that are dependent upon future taxable income." Is it necessary to define this term in the rule or would it be sufficient to define the term in the instructions for the Call Reports?

IV. Regulatory Flexibility Act Analysis

The FDIC does not believe that the adoption of this proposal would have a significant economic impact on a substantial number of small business entities (in this case, small banks), in accordance with the spirit and purposes of the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*). In this regard, the vast majority of small banks currently have very limited amounts of net deferred tax assets, which are the subject of this proposal, as a component of their capital structures. Furthermore, adoption of this proposal, in combination with the recent adoption of FASB 109 for regulatory reporting purposes, will allow many banks to increase the amount of deferred tax assets they include in regulatory capital.

V. Paperwork Reduction Act

The FDIC has received approval from the Office of Management and Budget (OMB) to collect in the Reports of Condition and Income (Call Reports) information on the amount of deferred tax assets disallowed for regulatory capital purposes. (OMB Control Number 3064–0052.)

List of Subjects in 12 CFR Part 325

Bank deposit insurance, Banks, banking, Capital adequacy, Reporting and recordkeeping requirements, State nonmember banks.

For the reasons set forth in the preamble, the Board of Directors of the Federal Deposit Insurance Corporation proposes to amend 12 CFR part 325 as follows:

PART 325—CAPITAL MAINTENANCE

1. The authority citation for Part 325 continues to read as follows:

Authority: 12 U.S.C. 1815(a), 1815(b), 1816, 1818(a), 1818(b), 1818(c), 1818(t), 1819(Tenth), 1828(c), 1828(d), 1828(i), 1828(n), 1828(o), 1831o, 3907, 3909; Pub. L. 102–233, 105 Stat. 1761, 1789, 1790 (12 U.S.C. 1831n note); Pub. L. 102–242, 105 Stat. 2236, 2386 (12 U.S.C. 1828 note).

§ 352.2 [Amended]

2. Section 325.2 is amended in paragraphs (t) and (v) by adding "minus deferred tax assets in excess of the limit set forth in § 325.5(g)," after "12 CFR part 567),".

3. Section 325.5 is amended:

a. In paragraphs (f)(3)(i) and (f)(4)(i), by removing the word "and", by adding a comma after "rights", and by adding ", and any disallowed deferred tax assets" after "relationships"; and

b. By adding a new paragraph (g) to read as follows:

§ 325.5 Miscellaneous.

* * * * *

(g) *Treatment of deferred tax assets.* For purposes of calculating Tier 1 capital under this part (but not for financial statement purposes), deferred tax assets are subject to the conditions, limitations, and restrictions described in this section.

(1) *Deferred tax assets that are dependent upon future taxable income* are deferred tax assets arising from deductible temporary differences that exceed the amount of taxes previously paid that could be recovered through loss carrybacks if existing temporary differences (both deductible and taxable) fully reverse at the calendar quarter-end date and deferred tax assets arising from operating loss and tax credit carryforwards.

(2) *Tier 1 capital limitations.* (i) The maximum allowable amount of deferred tax assets that are dependent upon future taxable income, net of any valuation allowance for deferred tax assets, will be limited to the lesser of:

(A) The amount of deferred tax assets that are dependent upon future taxable income that is expected to be realized within one year of the most recent calendar quarter-end date, based on projected future taxable income for that year; or

(B) Ten percent of the amount of Tier 1 capital that exists before the deduction of any disallowed purchased mortgage servicing rights, any disallowed purchased credit card relationships, and any disallowed deferred tax assets.

(ii) For purposes of this limitation, all existing temporary differences should be assumed to fully reverse at the calendar quarter-end date. The recorded amount of deferred tax assets that are dependent upon future taxable income, net of any valuation allowance for deferred tax assets, in excess of this limitation will be deducted from assets and from equity capital for purposes of determining Tier 1 capital under this part. The amount of deferred tax assets that can be realized from taxes paid in prior carryback years and from the reversal of existing taxable temporary differences generally would not be deducted from assets and from equity capital. However, notwithstanding the above, the amount of carryback potential that may be considered in calculating the amount of deferred tax assets that a member of a consolidated group (for tax purposes) may include in Tier 1 capital may not exceed the amount which the member could reasonably expect to have refunded by its parent.

(3) *Projected future taxable income.* Projected future taxable income should not include net operating loss carryforwards to be used within one year of the most recent calendar quarter-end date or the amount of existing temporary differences expected to reverse within that year. Projected future taxable income should include the estimated effect of tax planning strategies that are expected to be implemented to realize tax carryforwards that will otherwise expire during that year.

4. Section I.B. of Appendix A to subpart A of part 325 is amended by adding a new paragraph (5) to read as follows:

Appendix A to Subpart A of Part 325—Statement of Policy on Risk-Based Capital

* * * * *

I. * * *

B. * * *

(5) *Deferred tax assets* in excess of the limit set forth in 12 CFR 325.5(g). These disallowed deferred tax assets are deducted from the core capital (Tier 1) elements.

5. Table I in Appendix A to subpart A of part 325 is amended by changing footnote designator "3" to read "4" each time it appears, by adding "Less: Certain deferred tax assets[3]" after "Less: All intangible assets other than mortgage servicing rights and purchased credit card relationships.[2]", and by adding a new footnote 3 to read as follows:

[3] Deferred tax assets are subject to the capital limitations set forth in § 325.5(g) of the FDIC's regulations.

By order of the Board of Directors.

Dated at Washington, DC, this 20th day of April, 1993.

Federal Deposit Insurance Corporation.

Hoyle L. Robinson,

Executive Secretary.

[FR Doc. 93–10527 Filed 5–4–93; 8:45 am]

BILLING CODE 6714–01–P

12 CFR Part 337

RIN 3064–AA80

Unsafe and Unsound Banking Practices

AGENCY: Federal Deposit Insurance Corporation (FDIC).

ACTION: Proposed rule.

SUMMARY: This proposed rule revises certain definitions used in FDIC regulations governing the acceptance of brokered deposits. The revisions are being made in order to conform those definitions to the definitions used in regulations implementing section 38 of the Federal Deposit Insurance Act (FDI Act). As a result of these revisions, the capital category definitions used in FDIC regulations governing the acceptance of brokered deposits will have the same meaning as provided under regulations implementing section 38 of the FDI Act.

DATES: Comments must be received on or before July 6, 1993.

ADDRESSES: All comments should be submitted to Hoyle L. Robinson, Executive Secretary, Attention: room F–400, Federal Deposit Insurance Corporation, 550 17th Street, NW., Washington, DC 20429. Comments may be hand-delivered to room F–400, 1776 F Street, NW., Washington, DC, on business days between 8:30 a.m. and 5:p.m. FAX number (202) 898–3838. Comments will be available for inspection in the FDIC's Reading Room, room 7118, 550 17th Street, NW., Washington, DC, on business days between 8:30 a.m. and 5 p.m.

FOR FURTHER INFORMATION CONTACT: Valerie Jean Best, Counsel, Legal Division, (202) 898–3812, or William G. Hrindac, Examination Specialist, Division of Supervision, (202) 898–6892, Federal Deposit Insurance Corporation, 550 17th Street, NW., Washington DC 20429.

SUPPLEMENTARY INFORMATION:

Discussion

Description of Regulations Governing Brokered Deposits

The FDIC Board of Directors adopted a final rule implementing section 301 of the Federal Deposit Insurance Corporation Improvement Act of 1991 (FDICIA) on May 29, 1992. 57 FR 23933 (June 5, 1992). Section 301 of FDICIA amended section 29 of the Federal Deposit Insurance Act (FDI Act) and added a new section 29A. 12 U.S.C. 1831f, 1831f-1. Section 301 of FDICIA, entitled "Limitations on Brokered Deposits and Deposit Solicitations," significantly expanded the restrictions first imposed through the Financial Institutions Reform, Recovery, and Enforcement Act of 1989 (FIRREA) on funds obtained, directly or indirectly, by or through any "deposit broker" for deposit into one or more deposit accounts (*i.e.*, brokered deposits). Section 301 also expanded the interest rate restrictions first imposed through FIRREA. The final rule implementing section 301 became effective on June 16, 1992.

The statutory scheme created by FDICIA for brokered deposits tracks the language of other provisions of FDICIA calling for progressively more stringent restrictions and supervision as capital levels decline. Thus, "well capitalized" insured depository institutions may accept, renew, or roll over brokered deposits without first obtaining a waiver from the FDIC. However, "adequately capitalized" insured depository institutions are prohibited by FDICIA from accepting, renewing, or rolling over brokered deposits unless they first obtain a waiver from the FDIC. "Undercapitalized" insured depository institutions are prohibited from accepting, renewing, or rolling over brokered deposits. FDICIA also imposed certain interest rate restrictions on adequately capitalized and undercapitalized insured depository institutions.

In the final rule adopted on May 29, 1992, the FDIC noted that the terms "well capitalized" and "adequately capitalized" are not defined in section 29, as amended. The FDIC further noted in the final rule that those terms are the same as found in section 38 of the FDI Act dealing with prompt corrective action. Moreover, section 29, as amended, indicates that the term "undercapitalized" is to have the same meaning provided in section 38 of the FDI Act. The FDIC noted in the final rule governing brokered deposits that the precise regulatory definitions of the different capital levels identified in section 38 were being developed in consultation with the other federal banking agencies but that those definitions would not be available until after the date when final regulations implementing the new brokered deposit restrictions were required to be in place. The FDIC stated: "For consistency and in keeping with the evident intent of Congress, the FDIC intends to adopt the section 38 definitions of capital levels when they become effective." 57 FR 23933, 23935 (June 5, 1992). To the same effect, see the FDIC's statement in the proposed rule governing brokered deposits adopted by the FDIC on March 24, 1992. 57 FR 11442, 11443 (April 3, 1992). In the interim, the final rule governing brokered deposits implemented the following definitions:

* * * A "well capitalized institution" was defined as one that: (1) Has a ratio of total capital to risk-weighted assets of not less than 10.0 percent; (2) Has a ratio of Tier 1 capital to risk-weighted assets of not less than 6.0 percent; (3) Has a ratio of Tier 1 capital to total book assets of not less than 5.0 percent; and (4) Has not been notified by its appropriate federal banking agency that it is in a "troubled condition." The term "troubled condition" was given the meaning prescribed in regulations implementing section 32 of the FDI Act issued by the appropriate federal banking agency. This term is discussed in more detail later in this document in connection with the discussion of reclassification.

* * * An "undercapitalized institution" was defined as one that fails to meet the minimum regulatory capital requirements prescribed by its appropriate federal banking agency.

* * * An "adequately capitalized institution" was defined as one that is neither a well capitalized insured depository institution nor an undercapitalized insured depository institution.

The FDIC noted that these interim definitions "should suffice until definitions of capital levels for purpose of section 38 are adopted." 57 FR 23933, 23938 (June 5, 1992); 57 FR 11442, 11443 (April 3, 1992).

Insured Branches of Foreign Banks Operating in the U.S.

The final rule governing brokered deposits also set out capital category definitions applicable to insured branches of foreign banks. The final rule

VOL
58
ISS
85
MY
5
1993
UMI

provided that an insured branch of a foreign bank is "well capitalized," for purposes of the brokered deposit prohibitions, if it: (1) Maintains the pledge of assets required under 12 CFR 346.19; (2) Maintains the required volume of eligible assets prescribed by 12 CFR 346.20(a) at 108 percent of the preceding quarter's average book value of the insured branch's liabilities, exclusive of liabilities due to the foreign bank's head office, other branches, agencies, offices, or wholly owned subsidiaries; and (3) Has not been notified by the appropriate federal banking agency that it is in a "troubled condition." The reference to "troubled condition" parallels the criteria used in the definition of "well capitalized" applicable to all other insured depository institutions. The final rule provided that an "undercapitalized" insured branch is one that fails to maintain either (1) the pledge of assets required under 12 CFR 346.19, or (2) the required volume of eligible assets prescribed by 12 CFR 346.20.

Prompt Corrective Action

Section 131 of FDICIA, which is entitled "Prompt Corrective Action," creates a new statutory framework that applies to every insured depository institution a system of supervisory actions indexed to the capital level of the individual institution. The new framework is contained in section 38 of the FDI Act (12 U.S.C. 1831o). The FDIC, the Board of Governors of the Federal Reserve System (Board of Governors), the Office of the Comptroller of the Currency (OCC), and the Office of Thrift Supervision (OTS) (collectively "the agencies") have each adopted final rules revising their regulations to implement for the institutions which they supervise the system of prompt corrective action established by section 131 of FDICIA. 57 FR 44866 (September 29, 1992). The prompt corrective action regulations adopted by each agency establish the capital levels at which institutions will be deemed to come within the five capital categories created by section 131 of FDICIA. The capital thresholds that have been adopted for each of the five capital categories are set forth below. For purposes of section 38 of the FDI Act, an institution is deemed to be:

• • • "Well capitalized" if the institution: (1) Has a total risk-based capital ratio of 10.0 percent or greater; (2) Has a Tier 1 risk-based capital ratio of 6.0 percent or greater; (3) Has a leverage ratio of 5.0 percent or greater; and (4) Is not subject to any written agreement, order, capital directive, or prompt corrective action directive to meet and maintain a specific capital level for any capital measure.

• • • "Adequately capitalized" if the institution: (1) Has a total risk-based capital ratio of 8.0 percent or greater; (2) Has a Tier 1 risk-based capital ratio of 4.0 percent or greater; (3) Has a leverage ratio of 4.0 percent or greater (or a leverage ratio of 3.0 percent or greater if the institution is rated composite 1 under the CAMEL or MACRO rating system in its most recent report of examination, subject to appropriate federal banking agency guidelines); and (4) Does not meet the definition of a well capitalized institution;

• • • "Undercapitalized" if the institution: (1) Has a total risk-based capital ratio that is less than 8.0 percent; or (2) Has a Tier 1 risk-based capital ratio that is less than 4.0 percent; or (3) Has a leverage ratio that is less than 4.0 percent (or a leverage ratio that is less than 3.0 percent if the institution is rated composite 1 under the CAMEL or MACRO rating system in its most recent report of examination, subject to appropriate federal banking agency guidelines).

• • • "Significantly undercapitalized" if the institution: (1) Has a total risk-based capital ratio that is less than 6.0 percent; or (2) Has a Tier 1 risk-based capital ratio that is less than 3.0 percent; or (3) Has a leverage ratio that is less than 3.0 percent.

• • • "Critically undercapitalized" if the institution has a ratio of tangible equity to total assets that is equal to or less than 2.0 percent.

The overlap between these last three categories is contemplated by the statute and has the effect of applying to significantly undercapitalized institutions and to critically undercapitalized institutions any provisions of section 38 of the FDI Act that are applicable to undercapitalized institutions. The capital thresholds that have been adopted for each of the five capital categories are the thresholds that were originally proposed by the agencies, and were adopted by the agencies only after the comments received in response to the proposals—including comments as to the five capital categories—were reviewed by the agencies.[1] Capital categories were also adopted for insured branches for foreign banks.

In establishing a system of prompt corrective action based primarily on the capital level of each institution, Congress also recognized that factors other than capital should in certain circumstances be used to assess the financial condition of an institution. Section 38 provides that the appropriate banking agency may, under certain circumstances, reclassify a well capitalized insured depository institution as adequately capitalized. Section 38 also permits the appropriate agency to require an adequately capitalized or undercapitalized institution to comply with the supervisory provisions as if the institution were in the next lower category (but not treat a significantly undercapitalized institution as critically undercapitalized) based on supervisory information other than the capital levels of the institution.

Incorporation of Prompt Corrective Action Capital Categories

For the most part, the definitions of "well capitalized", "adequately capitalized", and "undercapitalized" used in the current brokered deposit regulations are substantively the same as those finally adopted by the agencies in their respective regulations implementing section 38. That is, the brokered deposit definitions use the same stated percentages of leverage and risk-based capital as do the prompt corrective action definitions. Likewise, the current brokered deposit regulations—like the final prompt corrective action regulations—require an insured branch to maintain the pledge of assets required under 12 CFR 346.19 and, further, to maintain the eligible assets prescribed under 12 CFR 346.20 at 108 percent exclusive of certain third-party liabilities, in order to be considered well capitalized.

The only material difference between the current brokered deposit capital category definitions and the final prompt corrective action definitions is that, for purposes of the brokered deposit regulations, the "well capitalized" definition excludes insured depository institutions that satisfy the stated percentages of leverage and risk-based capital but, nonetheless, are found to be in "troubled condition". The final regulations issued under section 38 by the agencies do not incorporate this requirement. Instead, as outlined above, the prompt corrective action regulations exclude an institution from the well capitalized category if it is subject to any written agreement, order, capital directive, or prompt corrective action directive, to meet and maintain a specific capital level for any capital measure. Similarly, the "well capitalized" definition applicable to insured branches of foreign banks used in the brokered deposit regulations excludes insured branches that are in "troubled condition". In contrast, the prompt corrective action definitions exclude an insured branch of a foreign bank from the well capitalized category if it has received written notice from: (1) The OCC to increase its capital

[1] The proposed rules implementing section 38 of the FDI Act were published in the Federal Register as follows. FDIC—57 FR 29662 (July 6, 1992). Board of Governors—57 FR 29226 (July 1, 1992). OCC—57 FR 29606 (July 7, 1992). OTS—57 FR 29626 (July 7, 1992). The final rules were published at 57 FR 44866 (Sept. 29, 1992).

equivalency deposit pursuant to 12 CFR 28.6(a) or to comply with asset maintenance requirements pursuant to 12 CFR 28.9; or (2) The FDIC to pledge additional assets pursuant to 12 CFR 346.19 or to maintain a higher ratio of eligible assets pursuant to 12 CFR 346.20.

All other differences in the definitions are believed to be non-substantive. These non-substantive differences are as follows. The brokered deposit regulations do not contain specific definitions for "significantly undercapitalized" and "critically undercapitalized" institutions. This is because section 29 of the FDI Act restricts all undercapitalized institutions from accepting, renewing, or rolling over brokered deposits; it is irrelevant into which of the three lower capital categories the depository institution falls. Likewise, no undercapitalized institution may solicit deposits by offering rates of interest that are significantly higher than the prevailing rates of interest on insured deposits: (1) In such institution's normal market areas; or (2) In the market area in which such deposits would otherwise be accepted. Again, it is not relevant if the institution is significantly or critically undercapitalized—it is sufficient if the institution is undercapitalized.

Another difference between the definitions presently used in the brokered deposit regulations and the definitions used in the prompt corrective regulations concerns the definition of "adequately capitalized". As noted above, an institution is adequately capitalized for purposes of the prompt corrective action provisions if it has a total risk-based capital ratio of 8.0 percent or greater, a Tier 1 risk-based capital ratio of 4.0 percent or greater, and a leverage ratio of 4.0 percent or greater (or a leverage ratio of 3.0 percent or greater if the institution is rated composite 1 in its most recent report of examination, subject to appropriate federal banking agency guidelines), and the institution does not meet the definition of a well-capitalized institution. In contrast, the current brokered deposit regulation provides that an institution is "adequately capitalized" if is "neither a well capitalized insured depository institution nor an undercapitalized insured depository institution". 57 FR 23933, 23941 (June 5, 1992). Although differently stated, the definitions are substantively the same except that the prompt corrective definitions categorize an institution as "adequately capitalized" if it has a leverage ratio of 3.0 percent or greater if the institution is rated composite 1 under the CAMEL or MACRO rating systems in the most recent examination, subject to appropriate federal banking guidelines.

Consistent with the statements made by the FDIC in both the proposed rule and the final rule implementing the brokered deposit restrictions, the FDIC is proposing to amend its brokered deposit regulations in order to incorporate the capital definitions used in the prompt corrective action regulations issued by the agencies. As a result of this change, the reference to "troubled condition" will be eliminated from the definitions of "well capitalized" currently used in the brokered deposit regulations. Instead, in order to be considered well capitalized, an institution must not be subject to any written agreement, order, capital directive, or prompt corrective action directive, to meet and maintain a specific capital level for any capital measure. Because of this change, more institutions may come within the definition of "well capitalized" for purposes of the brokered deposit regulations. This is because the definition of "troubled condition" encompasses more institutions than does the criteria outlined in the relevant prompt corrective action definition. For example, the term "troubled condition" encompasses, among others, institutions that are subject to a written agreement.[2] In contrast, only those institutions that are subject to a written agreement, order, capital directive, or prompt corrective action directive, to meet and maintain a specific capital level for any capital measure, are eliminated from the well capitalized category for purposes of the prompt corrective action provisions. Similarly, by deleting the reference to "troubled condition" from the definition of "well capitalized" applicable to insured branches of foreign banks, and incorporating the above-described prompt corrective action regulatory requirements, it is anticipated that more insured branches of foreign banks may qualify as "well capitalized" branches. Again, this is because the definition of "troubled condition" encompasses a greater number of institutions than does the exclusionary factors used in the definition of "well capitalized" for purposes of the prompt corrective action regulations.

The FDIC is also incorporating the definition of "adequately capitalized" used in the prompt corrective action provisions. As noted above, the only substantive effect of this change is to permit an institution that has a leverage ratio of 3.0 percent or greater and that is rated composite 1 in its most recent report of examination, subject to appropriate federal banking agency guidelines, to be classified as adequately capitalized. In the absence of this change, such an institution would be classified as undercapitalized for purposes of the brokered deposit provisions. Few, if any, institutions are expected to be affected by this change, and no insured depository institution will be adversely affected by this change.

Reclassification Under Prompt Corrective Action Regulations

Section 38 of the FDI Act provides that the appropriate banking agency may, under certain circumstances, reclassify a well capitalized insured depository institution as adequately capitalized. The statute provides, in part, that if the appropriate Federal banking agency determines (after notice and opportunity for hearing) that an insured depository institution is in an unsafe or unsound condition or, pursuant to section 8(b)(8), deems the institution to be engaging in an unsafe or unsound practice, the agency may reclassify the institution as adequately capitalized if the institution is well capitalized. 12 U.S.C. 1831o(g)(1)(A). Section 8(b)(8) of the FDI Act, referred to above, was amended by FDICIA and provides that if an insured depository institution receives, in its most recent report of examination, a less-than-satisfactory rating for asset quality, management, earnings or liquidity, the appropriate Federal banking agency may (if the deficiency is not corrected) deem the institution to be engaging in an unsafe or unsound practice. 12 U.S.C. 1818(b)(8).

The prompt corrective action provisions adopted by each agency track, for the most part, the statutory

[2] Under FDIC regulations, an institution is in "troubled condition" if it is subject to a "written agreement which requires action to improve or maintain the safety and soundness of the institution." 12 CFR 303.14((a)(4)(iii). To the same effect, see OTS Thrift Bulletin 45 (April 25, 1990) (A savings association is deemed to be in "troubled condition" if it is subject to a "written agreement . . . addressing safety or soundness issues."). Regulations issued by the Board of Governors provide that an institution is in "troubled condition" if it is subject to a "formal written agreement that requires action to improve the financial condition of the institution." 12 CFR 225.71(b)(2). Regulations issued by the OCC provide that an institution is in "troubled condition" if it is subject to a "formal written agreement." 12 CFR 5.51(4)(II). An institution may be in "troubled condition" on the basis of criteria other than that quoted above.

VOL 58 ISS 85 MY 5 1993 UMI

language quoted above.[9] The agencies provide an opportunity for an informal hearing in the case of both types of reclassification (*i.e.*, unsafe or unsound condition, or unsafe or unsound practice). It should also be noted that reclassification of an institution based on an examination rating is not an automatic result of receiving an unsatisfactory rating. Instead, each agency retains discretion to initiate the procedures for reclassification and do so based on the facts of each case.

As explained above, the FDIC proposes to amend its brokered deposit regulations in order to incorporate the capital definitions used in the prompt corrective action regulations issued by the agencies. One result of this revision is that a well capitalized institution that is reclassified as adequately capitalized by the appropriate federal banking agency pursuant to section 38 of the FDI Act will be subject to the brokered deposit provisions applicable to adequately capitalized institutions. For the most part, this is not regarded as a substantive change to the brokered deposit regulations because the term "troubled condition" currently used in the brokered deposit regulations encompasses most of the criteria pursuant to which a well capitalized institution may be reclassified as adequately capitalized.

The federal banking agencies have each prescribed a definition for the term "troubled condition", as required by section 914 of FIRREA (which added a new section 32 to the FDI Act) (12 U.S.C. 1831i(f)). The definitions are generally the same although certain definitions are slightly more specific. Each of the agencies define the term "troubled condition" to include depository institutions assigned a composite rating of 4 or 5 under the Uniform Financial Institutions Rating System or, in the case of the OTS, a composite MACRO rating of 4 or 5. Each of the agencies define the term to include any depository institution that is informed that it has been designated as in "troubled condition" or that is subject to a cease and desist order. The term also covers depository institutions subject to a written agreement: The FDIC and OTS cover written agreements that concern safety and soundness issues; the Board of Governors covers formal written agreements that require action to improve the financial condition of the institution; the OCC covers all formal written agreements. FDIC regulations specifically include within the term depository institutions subject to capital directives, as well as those subject to proceedings for termination or suspension of deposit insurance. Both the FDIC and the OCC apply the term to institutions subject to cease and desist proceedings. OTS policy guidelines provide that an institution that does not meet its minimum capital requirements is considered to be in "troubled condition".

As can be seen from the aforementioned criteria, a well capitalized institution that is reclassified as adequately capitalized pursuant to prompt corrective action provisions may also be in "troubled condition" or eligible to be designated as in "troubled condition". For example, an institution that is found to be in an unsafe or unsound condition for purposes of prompt corrective action may also be subject to a written agreement or a cease and desist order. Even if it were not subject to such an agreement or order, however, the appropriate federal banking agency could designate it as being in "troubled condition".

As noted above, a depository institution that receives a less-than-satisfactory rating for asset quality, management, earnings or liquidity, may be deemed to be engaging in an unsafe or unsound practice and, consequently, subject to reclassification. Under the definition of "troubled condition", a depository institution assigned a composite rating of 4 or 5 is deemed to be in "troubled condition". In this instance, the reclassification criteria appears to be more comprehensive than the "troubled condition" criteria. On the other hand, an institution that receives a less-than-satisfactory rating for asset quality, management, earnings or liquidity, could also be designated as being in "troubled condition".

In summary, by incorporating into its brokered deposit regulations the capital definitions used in the prompt corrective action regulations issued by the agencies, a well capitalized institution that is reclassified as adequately capitalized by the appropriate federal banking agency pursuant to section 38 of the FDI Act will be subject to the brokered deposit provisions applicable to adequately capitalized institutions. When the grounds and procedure for reclassification are compared to the grounds and procedure for designating an institution as being in "troubled condition", it appears that the reclassification criteria are somewhat narrower than the "troubled condition" criteria. Consequently, this change should not have an adverse impact on a large number of institutions.

Section 38 of the FDI Act permits the appropriate federal banking agency to require an adequately capitalized or undercapitalized institution to comply with the supervisory provisions as if the institution were in the next lower category (but not treat a significantly undercapitalized institution as critically undercapitalized) based on supervisory information other than the capital levels of the institution. These provisions are not strictly a reclassification. 57 FR 44866, 44876 (Sept. 29, 1992). The FDIC has determined that, if the appropriate federal banking agency subjects an adequately capitalized insured depository institution to the supervisory actions applicable to a lower capital category pursuant to section 38 of the FDI Act, the institution will not be subjected to the provisions applicable to such lower capital category (*i.e.*, undercapitalized) under the brokered deposit rule. The basis for this determination is that an adequately capitalized institution's access to brokered deposits is already strictly regulated by the brokered deposit statute and regulations. An adequately capitalized institution is prohibited from accepting brokered deposits unless it first obtains a waiver from the FDIC. A waiver is granted only if the FDIC concludes that the acceptance of brokered deposits does not constitute an unsafe or unsound practice with respect to the applicant. 12 U.S.C. 1831f(c); 12 CFR 337.6(c). Since the acceptance of brokered deposits by adequately capitalized institutions is controlled, little would be achieved by subjecting an adequately capitalized institution to the prohibitions applicable to undercapitalized institutions.

Paperwork Reduction Act

This proposed rule does not impose any new information-collection requirements. Consequently, no information has been submitted to the Office of Management and Budget for review.

Regulatory Flexibility Act

The Board of Directors of the FDIC hereby certifies that these amendments to part 337 will not have a significant economic impact on a substantial number of small business entities within the meaning of the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*) In light of this certification, the Regulatory Flexibility Act requirements (at 5 U.S.C. 603, 604) to prepare initial and final regulatory flexibility analyses do not apply.

[9] FDIC—12 CFR 325.103(d). Board of Governors—12 CFR 208.33(c). OCC—12 CFR 6.4(d). OTS—12 CFR 565.4(c).

List of Subjects in 12 CFR Part 337

Banks, banking, Reporting and recordkeeping requirements, Savings associations, Securities.

For the reasons set forth in the preamble, the Board of Directors of the FDIC hereby proposes to amend part 337 of chapter III of title 12 of the Code of Federal Regulations as set forth below.

PART 337—UNSAFE AND UNSOUND BANKING PRACTICES

1. The authority citation for Part 337 continues to read as follows:

Authority: 12 U.S.C. 375a(4), 375b, 1816, 1818(a), 1818(b), 1819, 1821(f), 1828(j)(2), 1831f, 1831f-1.

2. Section 337.6 is amended by removing paragraphs (a)(1), (a)(9), and (e)(10); by redesignating paragraphs (a)(2) and (a)(3) as paragraphs (a)(1) and (a)(2), respectively; and by adding a new paragraph (a)(3) to read as follows:

§ 337.6 Brokered deposits.

(a) * * *

(3) *Capital categories.* (i) For purposes of section 29 of the Federal Deposit Insurance Act and this § 337.6, the terms *well capitalized, adequately capitalized,* and *undercapitalized,*[11] shall have the same meaning as to each insured depository institution as provided under regulations implementing section 38 of the Federal Deposit Insurance Act and issued by the appropriate federal banking agency for that institution.[12]

(ii) If the appropriate federal banking agency reclassifies a well capitalized insured depository institution as adequately capitalized pursuant to section 38 of the Federal Deposit Insurance Act, the institution so reclassified shall be subject to the provisions applicable to such lower capital category under this § 337.6.

(iii) An insured depository institution shall be deemed to be within a given capital category for purposes of this § 337.6 as of the date the institution is notified of, or is deemed to have notice of, its capital category, under regulations implementing section 38 of the Federal Deposit Insurance Act and issued by the appropriate federal banking agency for that institution.[13]

* * * * *

By order of the Board of Directors.

Dated at Washington, DC this 27th day of April, 1993.

Federal Deposit Insurance Corporation.

Hoyle L. Robinson,

Executive Secretary.

[FR Doc. 93–10509 Filed 5–4–93; 8:45 am]

BILLING CODE 6714–01–P

[11] The term *undercapitalized* includes any institution that is *significantly undercapitalized* or *critically undercapitalized* under regulations implementing section 38 of the Federal Deposit Insurance Act and issued by the appropriate federal banking agency for that institution.

[12] For the most part, the capital measure terms are defined in the following regulations: FDIC—12 CFR part 325, subpart B, Federal Reserve System—12 CFR part 208, Office of the Comptroller of the Currency—12 CFR part 6, Office of Thrift Supervision—12 CFR part 565.

[13] The regulations implementing section 38 of the Federal Deposit Insurance Act and issued by the federal banking agencies generally provide that an insured depository institution is deemed to have been notified of its capital levels and its capital category as of the most recent date:

(1) A Consolidated Report of Condition and Income or Thrift Financial Report is required to be filed with the appropriate federal banking agency;

(2) A final report of examination is delivered to the institution; or

(3) Written notice is provided by the appropriate federal banking agency to the institution of its capital category for purposes of section 38 of the Federal Deposit Insurance Act and implementing regulations or that the institution's capital category has changed.

Provisions specifying the effective date of determination of capital category are generally published in the following regulations: FDIC—12 CFR 325.102, Federal Reserve System—12 CFR 208.32, Office of the Comptroller of the Currency—12 CFR 6.3, Office of Thrift Supervision—12 CFR 565.3.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Chapter I

[Summary Notice No. PR–93–9]

Petition for Rulemaking: Summary of Petitions Received; Dispositions of Petitions Issued

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of petitions for rulemaking received and of dispositions of prior petitions.

SUMMARY: Pursuant to FAA's rulemaking provisions governing the application, processing, and disposition of petitions for rulemaking (14 CFR part 11), this notice contains a summary of certain petitions requesting the initiation of rulemaking procedures for the amendment of specified provisions of the Federal Aviation Regulations and of denials or withdrawals of certain petitions previously received. The purpose of this notice is to improve the public's awareness of, and participation in, this aspect of FAA's regulatory activities. Neither publication of this notice nor the inclusion or omission of information in the summary is intended to affect the legal status of any petition or its final disposition.

DATES: Comments on petitions received must identify the petition docket number involved and must be received July 6, 1993.

ADDRESSES: Send comments on any petition in triplicate to: Federal Aviation Administration, Office of the Chief Counsel, Attn: Rules Docket No. _____, 800 Independence Avenue, SW., Washington, DC 20591.

The petition, any comments received, and a copy of any final disposition are filed in the assigned regulatory docket and are available for examination in the Rules Docket (AGC–10), room 915G, FAA Headquarters Building (FOB 10A), 800 Independence Ave., SW., Washington, DC 20591; telephone (202) 267–3132.

FOR FURTHER INFORMATION CONTACT: Mr. Frederick M. Haynes, Office of Rulemaking (ARM–1), Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591; telephone (202) 267–3939.

This notice is published pursuant to paragraphs (b) and (f) of § 11.27 of part 11 of the Federal Aviation Regulations (14 CFR part 11).

Issued in Washington, DC on April 28, 1993.

Donald P. Byrne,

Assistant Chief Counsel for Regulations.

Dispositions of Rulemaking Petitions

Docket No. 26076.

Petitioner: Aircraft Owners and Pilots Association, Experimental Aircraft Association, Helicopter Association International, and National Association of State Aviation Officials.

Regulations Affected: 14 CFR 91.215(b).

Description of Rulechange Sought: To amend the Federal Aviation Regulations (FAR) regarding the requirement for an altitude-encoding (Mode C) transponder in a terminal control area (TCA) Mode C veil, by establishing the base of a Mode C veil at 2,500 feet above ground level (AGL) and, therefore, create a "free flight area" in each Mode C veil.

Denial: April 22, 1993.

[FR Doc. 93–10568 Filed 5–4–93; 8:45 am]

14 CFR Parts 21 and 25

[Docket No. NM-81, Notice No. SC-93-3-NM]

Special Conditions: Extended Range Operation of Boeing Model 777 Series Airplanes

AGENCY: Federal Aviation Administration, DOT.

ACTION: Notice of proposed special conditions.

SUMMARY: The FAA proposes these special conditions for approval of the Boeing Model 777 airplane for Extended Range Operation with Two-engine Airplanes (ETOPS) without the prerequisite service experience currently required for ETOPS approval. The manufacturer has requested that the Model 777 airplane be found to be acceptable for ETOPS operation at the time of type certification. Extended range operation of twin engine airplanes is not envisioned by the airworthiness standards of FAR 25, and has been determined to constitute a novel or unusual feature. This notice contains the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that provided by the airworthiness standards of part 25 of the Federal Aviation Regulations.

DATES: Comments must be received on or before June 21, 1993.

ADDRESSES: Comments may be mailed in duplicate to: Federal Aviation Administration, Office of the Assistant Chief Counsel, Attn: Rules Docket (ANM-7), Docket No. NM-81, 1601 Lind Avenue SW, Renton, Washington, 98055-4056; or delivered in duplicate to the Office of the Assistant Chief Counsel at the above address. Comments must be marked: Docket No. NM-81. Comments may be inspected in the Rules Docket weekdays, except Federal holidays, between 7:30 a.m. and 4 p.m.

FOR FURTHER INFORMATION CONTACT: Bob McCracken, FAA, Flight Test and Systems Branch, ANM-111, Transport Airplane Directorate, Aircraft Certification Service, 1601 Lind Avenue SW, Renton, Washington 98055-4056; telephone (206) 227-2118.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested persons are invited to participate in the making of these proposed special conditions by submitting such written data, views, or arguments as they may desire. Communications should identify the regulatory docket or notice number and be submitted in duplicate to the address specified above. All communications received on or before the closing date for comments will be considered by the Administrator before further rulemaking action on this proposal is taken. The proposals contained in this notice may be changed in light of the comments received. All comments received will be available in the Rules Docket, both before and after the closing date for comments, for examination by interested parties. A report summarizing each substantive public contact with FAA personnel concerning this rulemaking will be filed in the docket. Commenters wishing the FAA to acknowledge receipt of their comments submitted in response to this notice must include a self-addressed, stamped postcard on which the following statement is made: "Comments to Docket No. NM-81." The postcard will be date stamped and returned to the commenter.

Background

On June 18, 1990, the Boeing Commercial Airplane Group, P.O. Box 3707, Seattle, Washington 98124-2207, applied for a type certificate for their new Model 777 airplane. The Model 777 is a long range, transport category airplane powered by two Pratt & Whitney 4073A, Rolls-Royce RB211-Trent 870, or General Electric GE90-B3 engines with 73,500, 71,200, and 74,500 lb. thrust ratings, respectively. The overall length of the Model 777 is 209 feet, the height is 61 feet, and the wingspan is 198 feet. The airplane has a seating capacity in a typical three class configuration of 305 to 328 passengers, or 375 to 400 passengers in a two class configuration. The Model 777 has a maximum takeoff weight of 535,000 lbs., a maximum landing weight of 445,000 lbs., a maximum operating altitude of 43,100 ft., and a range of 4,200 nautical miles in a two class configuration or 6,600 nautical miles in a three class configuration.

Type Certification Basis

Under the provisions of § 21.17, Boeing must show that the Model 777 airplane meets the applicable provisions of part 25, as amended by Amendments 25-1 through 25-71. Boeing has also elected to comply with certain aspects of Amendment 25-72, and all of Amendments 25-73 through 25-77. The amendment levels of the applicable Federal Aviation Regulations (FAR) are: Part 25 through Amendment 25-77, except for § 25.571(e)(1), which remains at Amendment 25-71 level; part 36, as amended at the time of certification; and part 34, as amended through Amendment 34-1. In addition, the certification basis will be upgraded to include any subsequent amendments to part 25 that are required for operation under part 121, the special conditions proposed for the Model 777 basic airplane, and the special conditions for early ETOPS approval proposed in this notice.

If the Administrator finds that the applicable airworthiness regulations (i.e., part 25 as amended) do not contain adequate or appropriate safety standards for the Model 777 airplane because of novel or unusual design features, special conditions are prescribed under the provisions of § 21.16.

Special conditions, as appropriate, are issued in accordance with § 11.49 after public notice, as required by §§ 11.28 and 11.29(b), effective October 14, 1980, and become part of the type certification basis in accordance with § 21.17(a)(2).

Model 777 Design Features

The structure of the Model 777 is generally of conventional design and construction, but with considerable use of composite materials. Elements of the primary structure (the fin and horizontal tail) are constructed of composites, as are some elements of secondary structure, including the elevators, rudders, flaps, spoilers, ailerons, engine cowls, and main deck floor beams.

The Model 777 utilizes a combination of multiple computer channels and redundant sensors which channel command signals to various control surface actuators in response to programmed control laws. This control architecture, referred to as fly-by-wire (FBW), provides closed loop command to move servo-actuators for the elevators, ailerons, rudder, spoilers, horizontal stabilizer, slats and flaps, and engine power levers. In the unlikely event of simultaneous failure of all digital primary and analog backup computers, mechanical control is available to control the airplane's attitude until computer control is restored. This mechanical backup is not designed for controlling the airplane to a landing.

Hydraulic power for the flight control system is provided by three independent hydraulic systems. Functions are shared among these systems to ensure airplane control in the event of loss of one or two systems. The left and right systems are pressurized by variable displacement pumps driven from the engine accessory gearboxes. In addition, the left and right systems each have one electrically-driven demand pump. The center system is pressurized by two electrically-driven hydraulic pumps. This system also has two air-

driven demand pumps that use air from the airplane pneumatic system.

Normal electrical power is supplied by two integrated drive generators, one on each engine. An electrical generator powered by an auxiliary power unit (APU) is also available. Backup electrical power is available to selected airplane alternating current (AC) busses from two variable speed constant frequency generators, one of which is mounted on each engine. The main direct current (DC) system can also receive power from the backup generators. Primary power for the FBW system is provided by dedicated permanent magnet generators in each of the two backup generator units. The FBW system can alternately receive power from the main DC system or the standby DC system. The standby DC system is powered by a ram air turbine (RAT) driven AC generator, which can provide a source of standby electrical power that is not time limited. The RAT is deployed automatically upon loss of all normal and backup AC power sources. A manual deploy feature is available to the flightcrew should the RAT fail to deploy automatically.

The engine control system consists of two dual channel, full authority, digital engine controls (FADEC) mounted on the fan cases of each engine. The FADEC's are interfaced with the various airplane systems to provide redundant control of the engines through a "hard-wired" throttle angle resolver system. In addition, the throttles move in proportion to commanded changes in engine power, and in the event of a total failure of the engine indicating and crew alerting system (EICAS), analog rotor speeds are available to determine engine power levels. Each FADEC provides gas generator control, engine limit protection, power management, input to the thrust reverser system, and engine parameter inputs for the flight deck displays.

Control inputs are made through conventional flight deck control wheels, columns, and rudder pedals. The flight instruments are displayed on six liquid crystal flat panel displays. Two flat panel displays are mounted directly in front of both the pilot and copilot and display primary flight instruments and navigational information. The other two flat panel displays are located in the center of the instrument panel and display engine parameters, warnings, and system diagnostics.

The proposed type design of the Model 777 contains novel or unusual design features not envisioned by the applicable part 25 airworthiness standards, including extended range operation with two-engine airplanes.

Discussion

All two-engine airplanes operating under part 121 of the FAR are required to comply with § 121.161, which states, in pertinent part, that "no certificate holder may operate two-engine or three-engine airplanes * * * over a route that contains a point farther than one hour flying time * * * from an adequate airport." Advisory Circular 120-42A, Extended Range Operation With Two-Engine Airplanes (ETOPS), provides an acceptable means for obtaining approval for two-engine airplanes to operate over a route that contains a point farther than one hour flying time from an adequate airport. The two basic objectives of this Advisory Circular are to establish that the airplane and its supporting systems are suitable for the extended range mission and that the maintenance and procedures to be employed in conducting ETOPS operations are adequate. This is accomplished by acquiring a substantial amount of service experience during non-ETOPS operation and then extensively evaluating this experience during non-ETOPS operation and then extensively evaluating this experience in the areas of systems reliability, maintenance tasks, and operating procedures. When it is determined that the appropriate reliabilities and capabilities have been achieved, the airplane is found eligible to be considered for use in ETOPS operation by an airline.

Boeing has proposed that the Model 777 be approved for ETOPS operation simultaneously with the issuance of the basic type certificate. Policy guidance does not exist at this time for a finding of this type. Because the timing of the proposed ETOPS type design approval for the Model 777 airplane precludes use of the guidance given in Advisory Circular (AC) 120-42A, Extended Range Operation With Two-Engine Airplanes, regarding the accumulation of service experience, an alternative method must be devised that will provide an adequate level of inherent airplane reliability for the ETOPS mission under consideration for approval. It is important to note that the requirements for certification of the airplane regarding the design's suitability for ETOPS operation, as described in these special conditions, relate to type certification approval only. Advisory Circular 120-42A contains guidance regarding operational and maintenance practices criteria that must be met by the operator before ETOPS operations can be conducted. It is incumbent upon the operator to apply for operational approval in accordance with the guidance contained in AC 120-42A. Satisfaction of the requirements of these special conditions does not constitute operational approval.

Existing practices to achieve airplane certification safety objectives have involved incorporation of safety margins, performance capabilities, and a prediction of failure probabilities through analysis and test. On the other hand, historical evidence, in general, indicates that a period of actual revenue service experience is necessary to identify and resolve problems not observed during the normal certification process prior to granting ETOPS type design approval for a specific airplane-engine combination. However, several recent airplane engine combinations incorporating new or substantially modified propulsion systems have demonstrated a high level of reliability consistent with ETOPS operation upon entry into revenue service. In addition, this high level of reliability was evidenced during basic certification activity by the small number of problems encountered. These recent successful airplane and engine development and certification programs lead the FAA to consider it feasible that the proposed development and certification activities of the Model 777 engine and airplane have the potential of providing a relatively "mature" product at the time of entry into revenue service. Certification criteria for early ETOPS type design approval of the Model 777 airplane will be largely dependent upon a process that can be found to result in the appropriate levels of reliability. This process is intended to result in a high level of airplane reliability that is equivalent to the level of reliability previously found to be acceptable via service experience. Since the early ETOPS development process must have a means of measuring success, the certification requirements proposed in these special conditions focus on defining a measurement process, as well as providing a feedback loop in order to quickly resolve problems that may occur.

Existing ETOPS airplane/engine assessments conducted in accordance with AC 120-42A focus on two main objectives: (1) Preclude any failure or malfunction that could result in diversion from intended flight, and (2) protect the safety of the diversion. A diversion is precluded by ensuring high reliability of the propulsion system and of all other systems important to ETOPS, and resolution of all problems that compromise the safety of ETOPS flight. The safety of the diversion is protected by high reliability of the propulsion system and of those systems important to the diversion, and resolution of all problems that

VOL
58
ISS
85
MY
5
1993
UMI

compromise the safety of the diversion. The early ETOPS approval criteria maintain this two-fold safety concept.

The major elements of the early ETOPS type design approval process include an ETOPS type design assessment, additional analysis requirements, additional test requirements including 1000 flights on a complete airplane that simulates an actual airline operation, a problem tracking system, and a reliability assessment that will be carried out by an FAA Reliability Assessment Board. The Reliability Assessment Board will consist of members from a broad spectrum, including FAA airplane and engine certification offices, FAA aircraft evaluation groups for both the engines and airplane, FAA maintenance and operational approval offices, and FAA headquarters. The Reliability Assessment Board will have a function similar to that currently carried out by the Propulsion System Reliability Assessment Board, as defined in AC 120–42A, except that the Reliability Assessment Board will have the responsibility to review all of the relevant airplane systems in addition to the propulsion system.

Design requirements and relevant service experience assessments are required as part of the ETOPS type design assessment in order to define appropriate design, test, analysis, or other manufacturing, maintenance, or operational features necessary to comply with the applicable airworthiness requirements, as well as to achieve the two-fold ETOPS objectives (i.e., preclude and protect the diversion).

The proposed special conditions require the frequency and type of failures or malfunctions that occur during the airplane flight test program and the additional 1000 flight ETOPS test to be consistent with the frequency and type of failures or malfunctions that would be expected to occur on certified 180-minute ETOPS airplanes. The ETOPS Reliability Assessment Board will be responsible for evaluating these problems and their solutions, and ultimately formulating a recommendation to the Manager, Transport Airplane Directorate, regarding the adequacy of the 777 type design for 180-minute ETOPS operation.

This determination will be based on a review of the circumstances surrounding each failure or malfunction, the effectiveness of the proposed corrective action, and the potential consequences of the event on the continued safe operation of the airplane. In addition, corrective actions must be identified and implemented prior to ETOPS approval for all problems that could affect the safety of ETOPS operations. These corrective actions must be substantiated to be effective in eliminating both the specific problem and any similar problems elsewhere in the design. These criteria will continue to apply a "fix all problems" approach that is also the basis for all ETOPS approvals made under AC 120–42A. In the event that, after entry into passenger service, a problem is discovered that could compromise the safety of the ETOPS mission, the FAA will, at its option, invoke the normal Airworthiness Directive (AD) process, as provided by part 39 of the FAR, to require corrective action.

Since the granting of a finding of ETOPS suitability concurrently with the issuance of the airplane Type Certificate is not envisioned by part 25 of the FAR, and since there is no appropriate guidance material available for this project, the FAA has determined that this method of finding ETOPS suitability is a "novel and unusual" feature within the meaning of § 21.16, and that therefore a special condition is required.

Conclusion

This action affects only certain unusual or novel design features on one model series of airplanes. It is not a rule of general applicability and affects only the manufacturer who applied to the FAA for approval of these features on the airplane.

List of Subjects in 14 CFR Part 25

Air transportation, Aircraft, Aviation Safety, Safety.

The authority citation for these proposed special conditions is as follows:

Authority: 49 U.S.C. app 1344, 1348(c), 1352, 1354(a), 1355, 1421 through 1431, 1502, 1651(b)(2); 42 U.S.C. 1857f–10, 4321 et seq.; E.O. 11514; and 49 U.S.C. 106(g).

The Proposed Special Conditions

Accordingly, the Federal Aviation Administration (FAA) proposes the following special conditions as part of the type certification basis for the Boeing Model 777 airplane:

In addition to the airworthiness requirements of part 25 of the Federal Aviation Regulations (FAR), the Model 777 airplane must comply with the following requirements in order to be eligible for Extended Range Operation with Two-Engine Airplanes (ETOPS) without the requisite operating experience specified in Advisory Circular (AC) 120–42A:

(a) *Introduction.* An approved ETOPS Type Design Assessment Plan covering the engine and each applicable airplane system must be established. The specific methods that will be used to substantiate compliance with the requirements of this special condition must be defined in the plan. Specific systems that will undergo the complete analysis, testing, and development program tracking defined in paragraph (c) of these special conditions must be identified. Other airplane systems that may contribute to the overall safety of an ETOPS operation, but that do not warrant the rigorous type design requirements and relevant experience assessments defined in paragraph (c) of these special conditions, must be identified and agreed to by the FAA. Compliance must be shown for these other systems with all provisions of these special conditions, except paragraph (c). In showing compliance with these special conditions, tests and analyses conducted to substantiate compliance with the basic airworthiness standards of part 25 may be referenced, if applicable.

(b) *Engine Assessment.* (1) The ETOPS eligibility of the engine must be determined specifically for the airplane installation for which early ETOPS type design approval is requested.

(2) Procedures for an engine condition monitoring program must be defined and validated at the time of ETOPS type design approval. The engine condition monitoring program must be able to predict when an engine is no longer capable of providing, within certified engine operating limits, the maximum thrust required for a single engine diversion.

(c) *ETOPS Type Design Assessment.* (1) *Design Requirements Assessment.* Part 25 of the FAR, including applicable amendments, defines most of the requirements necessary to design an airplane that is suitable for ETOPS operation, as long as the ETOPS mission is considered in applying these requirements for all anticipated dispatch configurations. In addition to these requirements, the propulsion system must be designed to preclude failures or malfunctions that could result in an engine inflight shutdown. The applicant must identify and list methods of compliance for each of the applicable ETOPS requirements, including those specific part 25 requirements for which methods of compliance relative to the ETOPS mission are different from those traditionally used for two-engine airplanes. Paragraph (c)(3) of these special conditions lists certain design feature categories that may be affected

by a consideration of the ETOPS mission in the design of these systems. The effects of the applicable ETOPS requirements on the design of any of those design feature categories listed in paragraph (c)(3) must be specifically addressed by this assessment.

(2) *Relevant Experience Assessment.* For each system covered by the ETOPS Type Design Assessment, there must be an assessment of the relevant design, manufacturing, and operational problems experienced on previous airplanes built by the applicant. The assessment must include the applicable relevant service experience of vendor supplied systems or, to the extent possible, the service experience of components on aircraft built by other manufacturers. Specific corrective actions taken to preclude similar problems from occurring on the new airplane must be identified.

(3) *Design Features.* (i) The applicant must define any design features implemented to comply with the design requirements listed in paragraph (c)(1). Consideration of the following design feature categories must be specifically addressed:

(A) Airplane capabilities and capacities for the ETOPs mission;

(B) Fuel system integrity, including consideration of uncontained main engine rotor burst and fuel availability as affected by cross-feed capability and electrical power to pumps and other components;

(C) Fuel quantity indication to the flightcrew, including alerts that consider the fuel required to complete the mission and possible fuel leaks between the tanks and the main engines;

(D) Communication systems for the ETOPS environment;

(E) Navigation systems for the ETOPS environment;

(F) Minimum single engine cruise altitude capability; and

(G) Failure tolerant designs of cockpit indicating systems or avionics systems to prevent unnecessary airplane diversions.

(ii) The applicant must define the specific design features used to address problems identified in the relevant service experience assessment of paragraph (c)(2).

(4) *Test Features.* The applicant must define specific new tests, or enhanced tests, that will be used to assure engine and airplane system design integrity. These test features may be derived from the requirements assessment of paragraph (c)(1) and the relevant service experience assessment of paragraph (c)(2).

(5) *Analysis Feotures.* The applicant must define specific new analyses, or enhanced analyses, that will be used to assure engine and airplane system design integrity. These analysis features may be derived from the requirements assessment of paragraphs (c)(1) and the relevant service experience assessment of paragraph (c)(2).

(6) *Manufacturing, Maintenance, or Operational (Other) Features.* The applicant must define specific new, or enhanced, manufacturing processes or procedures, and maintenance or operational procedures that are being implemented to assure engine and airplane system integrity. These "other" features may be derived from the requirements assessment of paragraph (c)(1) of this section and the relevant experience assessment of paragraph (c)(2).

(d) *Additional ETOPS Analysis Requirements.* (1) *Performance and Failure Analyses.* Engine and airplane performance and failure analyses required for certification must be expanded to consider ETOPS mission requirements, including exposure times associated with a 180-minute single engine diversion and a subsequent 15-minute hold in the terminal airspace at the diversion airport. Consideration must be given to crew workload and operational implications of continued operation with failure effects for an extended period of time. The rationale and all assumptions used in the analyses must be documented, justified, and validated, including maintenance interval and maintainability assumptions.

(2) *Maintenance and Flight Operations Evaluation.* The Type Design Assessment Plan must contain a program to systematically detect and correct problems occurring as a result of improper execution of maintenance or flight operations. Corrective actions for any problems found must be identified and implemented through the Problem Tracking and Resolution System required by paragraph (f).

(3) *Manufacturing Variability.* The Type Design Assessment Plan must contain a program to minimize potential manufacturing problems. The plan should address early validation of tooling and procedures, as well as any related problems, as identified in paragraph (c)(2). Corrective actions for problems that impact the safe operation of the airplane must be identified and implemented through the Problem Tracking and Resolution System required by paragraph (f).

(e) *Additional ETOPS Test Requirements.* As part of, or in addition to, the testing identified in paragraph (c)(4), the following specific test requirements apply:

(1) *Configuration Requirements.* All testing defined in paragraph (e) must be conducted with the configuration proposed for certification, and must include sufficient interfacing system hardware and software to simulate the actual airplane installation.

(2) *Completion of Applicable Failure Analyses.* Failure analyses required for ETOPS type design approval must be submitted to the FAA prior to the start of the testing defined in paragraph (e).

(3) *Vibration Testing.* Vibration testing must be conducted on the complete installed engine configuration to demonstrate that no damaging resonances exist within the operating envelope of the engine that could lead to component, part, or fluid line failures. The complete installed engine configuration includes the engine, nacelle, engine mounted components, and engine mounting structure up the strut to wing interface.

(4) *New Technology Demonstration Testing.* Testing must be conducted to substantiate the suitability of any technology new to the applicant, including substantially new manufacturing techniques.

(5) *Auxiliary Power Unit Demonstration Test.* If requesting credit for APU backup electrical power generation, one auxiliary power unit (APU), of the type to be certified with the airplane, must complete 3000 equivalent airplane operational cycles.

(6) *Engine Demonstration Test.* One engine of each type to be certified with the airplane must complete 3000 equivalent airplane operational cycles. The engine must be configured with a complete airplane nacelle package for this administration, including engine-mounted equipment.

(7) *Airplane Demonstration Test.* For each engine type to be certified with the airplane, one complete airplane must complete at least 1000 flight cycles simulating an actual airline operation. The airplane must be exposed to representative environmental variations within the normal expected airplane operational envelope during the 1000 cycles. The 3000 cycle test engine and propulsion system specified in paragraph (e)(6) above, or another suitable high cycle test engine and propulsion system acceptable to the Administrator, must be installed on the airplane for a minimum of 500 cycles during this demonstration.

(f) *Problem Tracking System.* An FAA-approved problem tracking system must be established to address problems encountered on the engine and airplane systems that could affect the safety of ETOPS operations.

VOL
58
ISS
85
MY
5
19 93
UMI

(1) The system must contain a means for the prompt identification of those problems that could impact the safety of ETOPS operations in order that they may be resolved in a timely manner.

(2) The system must contain the process for the timely notification to the responsible FAA office of all relevant problems encountered, and corrective actions deemed necessary, in a manner that allows for appropriate FAA review of all planned corrective actions.

(3) The system must be in effect during the phases of airplane development that will be used to assess early ETOPS eligibility, and for at least the first 250,000 engine-hours of fleet operating experience after the airplane enters revenue service. For the revenue service period, this system must define the sources and content of in-service data that will be made available to the manufacturers in support of the problem tracking system. The content of the data provided must include, as a minimum, the data necessary to evaluate the specific cause of all service incidents reportable under § 21.3(c) of part 21, in addition to any other failure or malfunction that could prevent safe flight and landing of the airplane, or affect the ability of the crew to cope with adverse operating conditions.

(4) Corrective actions for all problems discovered during the development and certification test program that could affect the safety of ETOPS operations, or the intended function of systems whose use is relied upon to accomplish the ETOPS mission, must be identified and implemented in accordance with paragraph (g)(2). If, during the certification program, it is discovered that a fault has developed that requires significant rework of manufacturing, maintenance, and/or operational procedures, the FAA will review the ETOPS suitability of the affected system and interfacing hardware and identify any additional actions to be accomplished to substantiate the corrective actions.

(5) For each engine type to be certified with the airplane, the system must include provisions for an accelerated engine cyclic endurance test program that will accumulate cycles on one representative production-equivalent propulsion system in advance of the high cycle revenue fleet engine. This test program will assist the applicant and the FAA in identifying and correcting problems before they occur in revenue service. This program must be in place for, at a minimum, the first 250,000 engine-hours of fleet operating experience after the airplane enters revenue service. The representative production-equivalent propulsion system may, at the manufacturer's discretion, be used for other fleet support activities.

(g) *Reliability Assessment Board.* (1) An FAA Reliability Assessment Board will be formed to evaluate the suitability of the airplane for ETOPS approval and make a recommendation to the Manager, Transport Airplane Directorate, regarding the adequacy of the type design for 180-minute ETOPS operation. The purpose of this board will be:

(i) To periodically review the development and certification flight test program accomplishments from both type design and operational perspectives;

(ii) To ensure that all specific problems, as well as their implications on the effectiveness of the Early ETOPS process, are resolved; and

(iii) To assess the design suitability for ETOPS. The board will consider design, maintenance, manufacturing, and operational aspects of the type design when finding suitability for ETOPS approval.

(2) The FAA Reliability Assessment Board will review and evaluate the data from the Problem Tracking and Resolution System to establish compliance with the requirements of paragraph (h). The board will evaluate the overall type design for ETOPS suitability as demonstrated in flight test, and the 1000 cycle ETOPS test, considering all resolutions of problems. The following suitability criteria will be applied:

(i) No unresolved source of engine shutdown/thrust loss, engine anomalies, or airplane system problems that have a potential significant adverse effect on in-service safety is evident.

(ii) Resolutions are identified for all items in paragraph (i) with analysis and/or testing to show all resolutions are effective. These resolutions may be accomplished through one or more of the following categories:

Design change
Operating procedure revision
Maintenance procedure revision
Manufacturing change

(iii) The resolutions of paragraphs (i) and (ii) will be incorporated prior to entry into service.

(iv) The engine shutdown history of the test program indicates that the engine reliability of the configuration is suitable for the ETOPS approval being considered.

(v) Where interim resolutions having operational impact are defined, the cumulative effect must be determined to be acceptable.

(vi) System or component failures experienced during the program are consistent with the assumptions made in the failure analyses.

(h) *Reliability Demonstration Acceptance Criteria.*

(1) For the engine and airplane systems, the type and frequency of failures that occur during the airplane flight test program and the 1000 flight cycle ETOPS test must be consistent with the type and frequency of failures or malfunctions that would be expected to occur on presently certified 180-minute ETOPS airplanes. The failures to be considered are those associated with system components that conform to the type design requested for certification. The Reliability Assessment Board will determine compliance with this requirement based on an evaluation of the problem reporting system data, considering system redundancies, failure significance, problem resolution, and engineering judgement.

(2) If the corrective action for any of the following classes of problems occurring during the testing identified in paragraph (h)(1) requires a major system redesign, this would be cause for delayed ETOPS type design approval, or approval for reduced single engine diversion time, unless corrective action has been substantiated to, and accepted by, the FAA Reliability Assessment Board:

(i) Any source of unplanned inflight shutdown or loss of thrust.

(ii) Any problem that jeopardizes the safety of an airplane diversion.

(3) The FAA Reliability Assessment Board must determine that the suitability criteria of paragraph (g)(2) have been met.

(i) *Demonstration of Compliance.* In order to be eligible for 180-minute ETOPS type design approval, the following conditions apply:

(1) The engine assessment has been completed and eligibility for ETOPS operation has been approved by the FAA Engine Certification Office.

(2) All design, manufacturing, maintenance, operational, and other features necessary to meet the ETOPS requirements of paragraph (c)(1), and to resolve the problems identified in paragraph (c)(2), have been successfully implemented.

(3) The identified test and analysis features in paragraphs (c)(4) and (c)(5) have been shown to be effective in validating the successful implementation of the features in paragraph (i)(2).

(4) The additional analysis requirements of paragraph (d) have been completed and the results have been approved.

(5) The additional test requirements of paragraph (e) have been successfully completed.

(6) All significant problems identified in accordance with paragraph (f) have been resolved, and fixes substantiated to be effective have been implemented.

(7) Compliance with the reliability demonstration acceptance criteria of paragraph (h) has been found by the Reliability Assessment Board.

Issued in Renton, Washington, on April 27, 1993.

Darrell M. Pederson,

Assistant Manager, Transport Airplane Directorate, Aircraft Certification Service.

BILLING CODE 4910-13-M

FEDERAL TRADE COMMISSION

16 CFR Part 305

Rule Concerning Disclosures of Energy Consumption and Water Use Information About Certain Home Appliances and Other Products Required Under the Energy Policy and Conservation Act

AGENCY: Federal Trade Commission.

ACTION: Notice of proposed rulemaking (Plumbing Products).

SUMMARY: The Federal Trade Commission ("Commission") seeks comments on a proposal to add showerheads, faucets, water closets and urinals to the Commission's Appliance Labeling Rule. This action is being taken because the Energy Policy Act of 1992 ("EPA 92") has directed the Commission to prescribe, by October 24, 1993, rules requiring such products to be marked and labeled with certain disclosures about their water use.

DATES: Written comments must be submitted on or before June 21, 1993. Persons desiring a public hearing on the proposed amendments should advise the Secretary of the Commission by no later than May 26, 1993. If hearings are scheduled, the date and time of the hearings, as well as the date for submission of prepared witness statements and exhibits, will be announced in a subsequent Notice.

ADDRESSES: Written comments and requests for public hearings should be submitted to Secretary, Federal Trade Commission, Washington, DC 20580, 202-326-2514. Comments and requests for public hearings should be identified as "16 CFR part 305—Comment—Plumbing Products" or "16 CFR part 305—Request for Public Hearing—Plumbing Products," respectively. If possible, submit comments both in writing and on a personal computer diskette in Word Perfect or other word processing format (to assist in processing, please identify the format used). Written comments should be submitted, when feasible and not burdensome, in five copies.

FOR FURTHER INFORMATION CONTACT: Terrence J. Boyle, Attorney, 202-326-3016, Division of Enforcement, Bureau of Consumer Protection, Federal Trade Commission, Washington, DC 20580.

SUPPLEMENTARY INFORMATION:

I. Introduction

EPA 92[1] was enacted on October 24, 1992. One subchapter of EPA 92 amends in several respects the Energy Policy and Conservation Act of 1975 ("EPCA").[2] This statute directed the Commission to issue the Appliance Labeling Rule,[3] which requires, for certain products covered by EPCA, labeling that discloses information about the products' energy consumption and efficiency.

EPA 92 adds four categories of plumbing products, showerheads, faucets, water closets (i.e., toilets) and urinals, to EPCA's list of covered products.[4] 106 Stat. 2821 (to be codified at 42 U.S.C. 6292(a)(15)-(18)). It establishes for each of these four plumbing products maximum permissible water usage rates (*e.g.*, all urinals manufactured after January 1, 1994, will be allowed to use just 1.0 gallons per flush), 106 Stat. 2826-27 (to be codified at 42 U.S.C. 6295(j)(1)-(2) and (k)(1)-(2)), and establishes as national standards certain American Society of Mechanical Engineers ("ASME") testing protocols for measuring the products' water usage rates, 106 Stat. 2821 (to be codified at 42 U.S.C. 6293(b)(7)(A) and (8)(A)). EPA 92 directs the Commission, within one year, to prescribe rules requiring the plumbing products themselves (except faucets) to be permanently marked with legible disclosures of their water usage rates, 106 Stat. 2822-23 (to be codified at 42 U.S.C. 6294(a)(2)(D)(i) and (E)(i)), and requiring their labeling to bear certain disclosures presently specified in ASME standards, *Id.* EPA 92 leaves unchanged the Commission's authority under section 324(c)(4) and 326(a) of EPCA, 42 U.S.C. 6294(c)(4) and 6296(a), to require disclosures in point-of-sale promotional materials and catalog advertising. EPA 92 also directs the Commission to include in the rules the requirement that manufacturers of these products submit annually to the Commission relevant data about their products. 106 Stat. 2829 (to be codified at 42 U.S.C. 6296(b)(4)). Lastly, EPA 92 directs the Commission to prescribe a format and manner of display for labels containing statements of annual operating costs for these plumbing products if a manufacturer should elect to make such claims. 106 Stat. 2823-24 (to be codified at 42 U.S.C. 6294(c)(8)).

II. Background

A. EPCA and the Existing Appliance Labeling Rule

EPCA established energy consumption standards for certain categories of major home appliances and directed the Department of Energy ("DOE") to devise similar standards for certain other categories of such products. 42 U.S.C. 6295. EPCA also directed the Commission to prescribe rules or, for some categories of products, to consider prescribing rules requiring these appliances to be labeled with disclosures of estimated annual energy cost or another useful measure of energy usage. 42 U.S.C. 6294. Small appliances such as toasters and blenders, which use insignificant amounts of energy, were not included in EPCA's coverage. EPCA also allowed the Commission, in considering rules, to exempt some categories of covered products from labeling requirements if the Commission determined such labeling would not be technologically or economically feasible or not likely to help consumers in making purchasing decisions. 42 U.S.C. 6294(a)(1)-(2).

The Commission, pursuant to EPCA's directives, issued the Appliance Labeling Rule ("Rule") on November 19, 1979.[5] For most of EPCA's original list of covered products, the Commission's Rule now requires EnergyGuides. The Commission has twice amended the Rule to add new covered products.[6] The

[1] Pub. L. 102-486, 106 Stat. 2776, 2817-2832 (1992) (to be codified at 42 U.S.C. 6201, 6291-6307). This act is not yet codified in U.S.C. or U.S.C.A. Hence, reference herein will be to the session law pages.

[2] 42 U.S.C. 6291 *et seq.* EPCA has also been amended by the National Energy Conservation Policy Act of 1978, Public Law 95-619, 92 Stat. 3258 (1978); the National Appliance Energy Conservation Act of 1987 ("NAECA 87"); Pub. L. 100-12, 101 Stat. 103 (1987); and the National Appliance Energy Conservation Amendments of 1988 ("NAECA 88"); Public Law 100-357, 102 Stat. 671 (1988).

[3] 16 CFR part 305.

[4] Besides these four plumbing products, EPA 92 adds fluorescent and incandescent lamps to EPCA. 106 Stat. 2821 (to be codified at 42 U.S.C. 6292(a)(14)). These products will be addressed in a subsequent rulemaking proceeding.

[5] 44 FR 66466.

[6] 52 FR 46888 (Dec. 10, 1987), adding a new product category—central air conditioners and heat pumps—and two additional subcategories of furnaces to the furnace category—pulse combustion

Rule now requires EnergyGuide labeling for all residential furnaces, refrigerators, refrigerator-freezers, freezers, water heaters, clothes washers, dishwashers, room air conditioners, central air conditioners and heat pumps sold in the United States. 16 CFR 305.11(a)–(c). Following the 1988 EPCA amendment, the Rule now also requires fluorescent lamp ballasts to be labeled or marked with a symbol denoting that the ballast meets a DOE energy efficiency standard. The required symbol is simply a capital letter E enclosed in a circle. 16 CFR 305.11(d).

The EnergyGuides required by the Rule are 5⁹⁄₁₆" by 7⅜" labels with black type on a yellow background. 16 CFR 305.11(a)(1)–(3). Although alike in appearance, they vary somewhat by product in the "primary energy usage disclosure" that they must contain. Some have data on estimated annual operating costs; others have energy efficiency ratings. 16 CFR 305.11(a)(5)(i)(E) and 305.11(a)(5)(iii)(C). Both types disclose the product's energy consumption rate within a range of the rates known for other, similar-sized models of the product. 16 CFR 305.11(a)(5)(i)(F) and 305.11(a)(5)(iii) (D)–(E). Consumers may then choose among competing brands of more or less energy usage. For most of these products, the Rule also requires the EnergyGuides to give a "secondary energy usage disclosure," intended to help consumers estimate their own operating costs based on local utility rates. 16 CFR 305.11(a)(5)(i)(H). Except for fluorescent lamp ballasts, the Rule also requires point-of-sale promotional materials and catalog advertising for covered products to contain disclosures of required energy consumption and efficiency information. 16 CFR 305.13 and 305.14. Further, the Rule also requires, for furnaces, disclosure of energy usage information on fact sheets, 16 CFR 305.11(b), and, for central air conditioners and heat pumps, on fact sheets or in industry directories, 16 CFR 305.11(c).

EPCA authorizes the Commission to assess administratively monetary civil penalties for violations of the Rule. 42 U.S.C. 6303 (a) and (d). Manufacturers or private labelers who knowingly distribute covered products not properly labeled are subject to a penalty of not more than $100 for each unit. 16 CFR 305.4(a)(1). Manufacturers, distributors, or retailers who knowingly remove or make illegible a required label are subject to a penalty of not more than $100 for each unit. 16 CFR 305.4(a)(2). Manufacturers or private labelers who fail to include required disclosures in their catalog advertising are subject to a penalty of not more than $100 per day. 16 CFR 305(b)(5). Manufacturers or private labelers who fail to keep records or provide reports or product samples as specified by the Rule are also subject to a penalty of not more than $100 per day. 16 CFR 305.4(b) (2) and (4). EPCA also grants to the United States District Courts authority to issue injunctions against such violations. 42 U.S.C. 6304.

furnaces and condensing furnaces; and, 54 FR 28031 (July 5, 1989), adding a new product category—fluorescent lamp ballasts.

B. EPA 92's Provisions Concerning Plumbing Products

EPA 92 establishes maximum permissible water use rates for all urinals, water closets (*i.e.*, toilets), showerheads and faucets sold in this country. 106 Stat. 2826–27 (to be codified at 42 U.S.C. 6295(j)(1)–(2) and (k)(1)–(2)). For all urinals and for most toilets, EPA 92 establishes maximum water use standards of 1.0 and 1.6 gallons per flush respectively. 106 Stat. 2827 (to be codified at 42 U.S.C. 6295(k)(1)–(2)). (Blowout toilets, the one exception, are allowed 3.5 gallons per flush. 106 Stat. 2827 (to be codified at 42 U.S.C. 6295(k)(1)(A)). These are products for commercial use only that are designed to be able to discharge virtually anything.) For all showerheads and faucets other than metering faucets (including aerators [7] sold separately but meant to be inserted in faucets), EPA 92 establishes a maximum water use standard of 2.5 gallons per minute at 80 pounds of water pressure per square inch. 106 Stat. 2826 (to be codified at 42 U.S.C. 6295(j)(1)–(2)). Metering faucets are limited to .25 gallons per cycle. 106 Stat. 2826 (to be codified at 42 U.S.C. 6295(j)(2)). These are devices that over a few seconds gradually turn themselves off. After January 1, 1994, no non-conforming product may be sold in this country.[8] 106 Stat. 2826–27 (to be codified at 42 U.S.C. 6295(j)(1)–(2) and(k)(1)–(2)).

EPA 92 adopts two ASME standards for determining a covered product's water usage rate. 106 Stat. 2821 (to be codified at 42 U.S.C. 6293(b)(7)(A) and (8)(A)). These standards ("ASME A112.18.1M–1989. Plumbing Fixture Fittings" and "ASME A112.19.2M–1990. Vitreous China Plumbing Fixtures") have already been recognized by all government jurisdictions with plumbing codes and govern the construction and performance of these fixtures and fittings throughout the United States. EPA 92 leaves unchanged DOE's authority to enforce EPCA's energy conservation standards, 42 U.S.C. 6302(a)(5) and 6303(a), which, since the enactment of EPA 92, include the water use standards for these plumbing products. EPA 92 authorizes DOE to modify the standards for these plumbing products, where appropriate, if ASME revises its flow rate measuring test protocol standards. 106 Stat. 2821–22 (to be codified at 42 U.S.C. 6293(b)(7)(B) and (8)(B)).

EPA 92 assigns to the Commission the responsibility to prescribe and enforce rules requiring certain disclosures of the products' water use rates according to those standards. 106 Stat. 2822–23 (to be codified at 42 U.S.C. 6294(a)(2)(D)(i) and (E)(i)). Congress has directed the Commission to require certain disclosures on the products themselves (except for faucets [9]), *Id.*, and other disclosures in their labeling. *Id.* Congress has left unchanged the Commission's authority to require in point-of-sale promotional materials and catalog advertising the same disclosures as are required in the labeling. 42 U.S.C. 6294(c)(4) and 6296(a).

In requiring disclosures in the products' labeling, EPA 92 incorporated by reference the existing labeling provisions of the two ASME standards. 106 Stat. 2822–23 (to be codified at 42 U.S.C. 6294(a)(2)(D)(i) and (E)(i)). If ASME should ever change the standards, and DOE approves of the changes, the Commission would then have to consider amending its Rule. 106 Stat. 2822–23 (to be codified at 42 U.S.C. 6294(a)(2)(D)(ii) and (E)(ii)). The ASME standards presently require every plumbing product itself to be permanently marked with a legible disclosure of the manufacturer's identity "located where it can be seen after installation" (ASME A112.18.1M–1989, para. 8.1(a)) or "located so as to be visible after the fixture is installed, except for a fixture built into or for a counter or cabinet" (ASME A112.19.2M–1990, para. 8.1.1). These standards also require every product either to be itself marked with a disclosure of the product's water use rate and the identity of the pertinent ASME standard or else to have its labeling bear the same information.[10] ASME A112.18.1M–1989, para. 8.1, and ASME A112.19.2M–1990, para. 8.1. EPA 92 goes beyond the standards to require that the products themselves, except faucets, be permanently marked with legible disclosures of their water usage rates. 106 Stat. 2822–23 (to be codified at 42 U.S.C. 6294(a)(2)(D)(i) and (E)(i)).

EPA 92 also directs the Commission to include in the rules for these plumbing products a requirement that the manufacturers annually submit to the Commission relevant data about their products' water usage rates. 106 Stat. 2829 (to be codified at 42 U.S.C. 6296(b)(4)). The term "relevant data" was not defined; but, inasmuch as section 305.8 of the Rule, 16 CFR 305.8, requires manufacturers of all covered products to put in their annual reports information needed to identify the firms and their products, it appears at this time reasonable to conclude that Congress expects the same for plumbing product reports.

Lastly, EPA 92 also directs the Commission to prescribe the format and manner of display for labels containing statements of estimated annual operating costs, if a manufacturer elects to make such claims. 106 Stat. 2823–24 (to be codified at 42 U.S.C. 6294(c)(8)). EPA 92 does not define the terms "format" and "manner of display" and the statute does not specify how the Commission is to prescribe them.

[7] Aerators are flow restricting or controlling spout end devices used to create a water flow with a consistent spray. They improve the taste of water by mixing in air and act to slow the faucet's water flow.

[8] An exception to this deadline is made for 2 piece gravity tank-type toilets marked "For Commercial Use Only" and using 3.5 gallons per flush, which may be sold until January 1, 1997. 106 Stat. 2827 (to be codified at 42 U.S.C. 6295(k)(1)(B)). These toilets are different from the blowout toilets that indefinitely will be allowed 3.5 gallons per flush. 106 Stat. 2827 (to be codified at 42 U.S.C. 6295(k)(1)(A)).

[9] Faucets were exempted from the marking requirement so as not to mar the appearance of designer models.

[10] In the terminology of the ASME standards, labeling includes the product's "package," the "label on the product" and/or a "tag attached to the product." ASME A112.18.1M–1989, para. 8.1, and ASME A112.19.2M–1990, para. 8.1.1.

III. Proposed Amendments to the Appliance Labeling Rule

EPA 92 adds four new products to EPCA's list of "covered products." 106 Stat. 2821 (to be codified at 42 U.S.C. 6292(a)(15)–(18)). Because these four products, unlike all the other products covered by EPCA and the Commission's Appliance Labeling Rule, use water instead of directly consuming energy, Congress has revised several sections of EPCA to alter expressions like "energy efficiency" to say instead "energy efficiency or * * * water use." See, for example, 106 Stat. 2822 (to be codified at 42 U.S.C. 6293). And, because EPCA, as amended by EPA 92, requires only these four product categories to be permanently marked, Congress has revised several provisions of EPCA to add the word "marking" where heretofore EPCA has said "label." 106 Stat. 2822–23 (to be codified at 42 U.S.C. 6294(a)(2)(D)–(E)). The Commission proposes amending the Rule to reflect these changes.

Each proposed Rule amendment is addressed below. The substantive revisions are discussed in detail. Minor, self-explanatory Rule changes are merely noted. (The texts of the proposed amendments are in Section E of this Notice. These texts include the revisions of sections 305.5, .8, .13, .14, and .15 of the Rule, 16 CFR 305.5, .8, .13, .14, and .15, that the Commission proposed on March 4, 1993, 58 FR 12818.)

A. Section 305.1 Scope

This section of the Rule summarizes the coverage of the Rule. The Commission proposes amending three of its four subsections to include water usage.

B. Section 305.2 Definitions

This section of the Rule contains definitions of seventeen terms used by EPCA and the Rule. The Commission proposes amending it to add (as five new subsections) definitions for five terms that EPA 92 uses for the various plumbing fixtures and fittings that EPA 92 has added to EPCA (*e.g.*, "water use," "ASME," "flushometer valve").

C. Section 305.3 Description of Covered Products To Which This Part Applies

This section of the Rule lists the ten categories of appliances now covered by EPCA and the Rule. The Commission proposes amending it to add (as four new subsections) the four categories of plumbing fixtures and fittings that EPA 92 has added to EPCA.

D. Section 305.4 Prohibited Acts

This section of the Rule makes it unlawful to distribute in commerce any covered product not labeled and advertised as prescribed by the Rule. Failing to maintain and make available certain records and product samples as prescribed by the Rule is also prohibited. Amendments to four subsections of this section of the Rule are being proposed.

The Commission proposes minor amendments to subsections (a) and (b) of this section to reflect that EPA 92 requires disclosures on the labels of covered plumbing products, in certain catalog advertising, and on the products themselves. The Rule at present does not require any covered product itself to be permanently marked. Therefore, in three instances in this section where the expressions "label" or "labeled" are used (*i.e.*, subsections (a)(1); (a)(2); and (b)(4)) the Commission proposes amendments to say "marking and/or label" or "marked and/or labeled." Other language in the Rule makes clear which products are to be both marked and labeled and which just labeled.

Subsection (d) of this section states that it is an unfair or deceptive act or practice in violation of section 5(a)(1) of the FTC Act, 15 U.S.C. 45(a)(1), to represent the energy consumption of, or the cost of energy consumed by, a covered product unless the representation fairly discloses the results of tests conducted on the product in accordance with the applicable DOE test procedure. The Commission proposes amending subsection (d) to include these plumbing products and to make clear that for them it is representations of water usage, or of the cost of water used, that are subject to this subsection. This subsection also needs to be revised to make clear that for these plumbing products the relevant test procedures are statutorily established and not DOE prescribed. The proposed amendments split subsection (d) into two paragraphs that are worded almost exactly the same as section 323(c) of EPCA, 42 U.S.C. 6293(c), as it has been amended by NAECA 87 and EPA 92.

Finally, for subsection (e) of this section, which identifies the Rule's effective date for each category of covered product, the Commission proposes adding a sentence and a phrase stating when the amendments for these plumbing fixtures take effect. Congress directed the Commission to prescribe by October 24, 1993, rules for covered plumbing fixtures and fittings. The rules are to become effective twelve months after their publication in final form.

E. Section 305.5 Determinations of Estimated Annual Energy Cost and Energy Efficiency Rating and of Water Use Rate

This section of the Rule specifies the test procedures to be used for measuring the energy consumption and efficiency of the various categories of products covered by the Rule. The Commission proposes amending it by adding a subsection specifying the ASME standards that EPA 92 establishes for measuring the water use rates of these plumbing products.

F. Section 305.8 Submission of Data

This section of the Rule requires all manufacturers of covered products to submit annually to the Commission certain data concerning their products' energy consumption and efficiency. EPA 92 has amended section 326(b)(4) of EPCA, 42 U.S.C. 6296(b)(4), to direct the Commission to require plumbing products manufacturers also to submit

VOL 58 ISS 85 MY 5 1993 UMI

annually to the Commission, at times to be specified by the Commission, relevant data reflecting their products' water usage. 106 Stat. 2829 (to be codified at 42 U.S.C. 6296(b)(4)). Congress did not, however, specify what it meant by "relevant data." The Commission therefore proposes amending section 305.8 of the Rule, 16 CFR 305.8, to require that plumbing products manufacturers submit to the Commission by March 1, 1995, and annually thereafter, reports disclosing each company's name and address and the trade names, model numbers, and water usage rates of its covered products. This amendment would require plumbing products manufacturers to submit the same type of information manufacturers of other products covered by the Rule submit.

G. Section 305.11 Labeling For Covered Products

This section of the Rule contains specific labeling requirements for the Rule's covered products. The section presently has four subsections: The first applies to all the covered products heretofore included in the Rule except fluorescent lamp ballasts; the second concerns only furnaces and central air conditioners; the third only central air conditioners; and the fourth only fluorescent lamp ballasts.

The Commission proposes adding a fifth subsection to address the labeling and marking requirements that EPA 92 directs for these four plumbing products. This subsection (e) specifies that covered plumbing fixtures and fittings must be marked and labeled consistent with the marking and labeling requirements of the two ASME standards presently in effect that EPA 92 adopts. These standards already require every covered plumbing product itself to be permanently marked with a legible disclosure of the manufacturer's identity "located where it can be seen after installation" (ASME A112.18.1M–1989, para. 8.1(a)) or "located so as to be visible after the fixture is installed, except for a fixture built into or for a counter or cabinet" (ASME A112.19.2M–1990, para. 8.1.1). In addition, the standards presently require every product to bear a disclosure identifying the ASME standard applicable to it. For showerheads and faucets, this disclosure may be by means of either a permanent mark on the product, a label on the product, or a tag attached to the product. ASME A112.18.1M–1989, para. 8.1(b). For water closets and urinals, although this disclosure must be marked on the product, the mark need not be permanent, but shall be visible after installation. ASME A112.19.2M–1990, para. 8.1.2. The standards also require disclosures about the products' water consumption. For showerheads and faucets, this disclosure must be on the packaging or on any label attached to the packaging and must state the actual or maximum allowed water flow rate. ASME A112.18.1M–1989, para. 8.2(b). For water closets and urinals, the disclosure the standards presently require must appear on both the products and their packaging in a sentence stating the products' water consumption classification and maximum allowable water consumption rate. ASME A112.19.2M–1990, paras. 8.3.3 and 8.4.3.

Pursuant to EPA 92's directive, the new subsection (e) would specify the particular labeling requirements of the ASME standards regarding disclosures of water flow rates, manufacturer's identity, and standard designation henceforth required to be made under the Rule. This subsection would also, pursuant to EPA 92's directive, require all these products (except for faucets) to be permanently and legibly marked with the products' water use rates.

With respect to the requirement that the marking be legible, the Commission has identified the following issues to consider: the intelligibility of the statement; the type style and size used; the color contrast of the words of the statement with their background; and the placement of the statement.

For plumbing products EPA 92 mandates the wording of the flow rate marking disclosure. Accordingly, the intelligibility of the required disclosure is not at issue. Placement of the disclosures, however, is an important factor for several reasons. First, "legibility" is only meaningful if the purchaser can readily find the disclosure. Second, this labeling is more than a mere technical requirement to allow code officials and other professionals to determine a product's water use rate. Consumers' ability to comparison-shop for efficient plumbing products at retail is enhanced by readily discernible disclosures. There may also be other considerations. For example, in certain circumstances consumers may need to be able to ascertain whether their plumbing fixtures and fittings comply with the EPA 92 water use standards. Some states such as California are considering legislation to require homeowners offering their homes for sale to certify that their plumbing meets these standards.

Manufacturers of the plumbing products to be covered by this Rule are already required by state plumbing and building codes and by the ASME standards to mark permanently their products with the manufacturer's identity. The Commission's staff has examined dozens of different brands of covered plumbing products on display in local retail outlets. The Commission believes that at present manufacturers routinely choose to put their identifying marks in the optimum locations (*i.e.*, in places readily findable after installation). Therefore, if manufacturers should place the Rule's required disclosures near their own identifying markings, consumers should have little difficulty locating the required water use disclosures.

The Commission's proposed Rule therefore states that disclosing the water use rate in a location near the manufacturers' identifying mark will suffice for purposes of legibility. The Rule would not require any particular location. The Commission used a similar "safe harbor" approach in setting the size specifications for the required disclosure for lamp ballasts when it last amended the Rule. The Commission, however, seeks comments on whether this approach is also appropriate for plumbing products.

The Commission does not believe the remaining two aspects of legibility, type size/style and color contrast, need to be specified. The overriding requirement of legibility should suffice. The wide variety of plumbing fixtures and fittings, from nozzles to urinals, comprises so many shapes, sizes, colors and surface conditions that the Commission believes it would be impractical to specify any particular format or even a safe harbor for all the covered products. The Commission solicits comments on this approach.

Similarly, the Commission does not believe the requirement that markings be permanent needs any amplification. Presumably, numerous techniques (dyeing, etching, carving, etc.) can produce permanent markings. The number of available techniques and the great variety of products covered by this Rule provision make it impractical to impose any uniform definition of what manufacturing processes would constitute permanent marking. The state codes that require permanent marking of the manufacturer's identity, and the ASME standards that those codes are based upon, also do not specify how the marking is to be done, instead leaving it to the manufacturer to decide. The Commission, therefore, proposes this same course of action for these disclosures. The Commission solicits comments about this approach.

Finally, the Commission proposes that all disclosures be made in terms of gallons per flush, minute or cycle, and in liters, except where the size of the product would make it impractical. (See discussion of metrication in Part VIII of the Notice.) The Commission also solicits comments on this proposal.

H. Section 305.13 Promotional Material Displayed or Distributed at Point of Sale

This section of the Rule presently requires that all promotional materials for covered products that are displayed at the point of sale bear the following specific statement: "Before purchasing this appliance, read important energy cost and efficiency information available from your retailer." EPA 92 has left unchanged the Commission's authority under section 324(c)(4) of EPCA, to require that point-of-sale promotional materials for covered products contain the same disclosures as the Rule would require on the products' labels. 42 U.S.C. 6294(c)(4). The Commission proposes requiring plumbing product point-of-sale materials to bear disclosure statements. But, because the disclosure statement now required by this subsection for covered products is not one the Commission is authorized to require on plumbing product labels, the Commission proposes adding to this section a new clause requiring disclosure of these products' water usage rates.

I. Section 305.14 Catalogs

This section of the Rule presently requires advertising for covered products in catalogs, from which purchasers may order the items being offered for sale, to disclose information about those products' energy consumption and efficiency. EPA 92 has left unchanged the Commission's authority under section 326(a) of EPCA to require such catalog advertising for covered plumbing products also to make such disclosures. 42 U.S.C. 6296(a). The Commission therefore proposes amending the Rule to make clear that manufacturers of covered plumbing fixtures and fittings are to disclose their products' water usage rates, rather than energy cost and efficiency information. The Commission also proposes deleting, in existing 305.14(a), the reference to payment by cash, charge account or credit terms, as this limitation in payment method is not required by the statute and may not encompass all methods of purchase that could occur in the future.

J. Section 305.15 Test Data Records

This section of the Rule requires energy consumption and efficiency test data to be maintained and made available to the Commission. The Commission proposes amending subsection (b) to include water usage test data.

IV. Format and Manner of Display for Voluntary Disclosures of Estimated Annual Operating Cost Claims on Labels of Covered Plumbing Products

EPA 92 did not amend EPCA to require plumbing products manufacturers to make estimated annual operating cost disclosures. It does, however, envision that in the future some manufacturers might voluntarily make such claims. Specifically, EPA 92 has amended section 324(c) of EPCA to provide that:

> If a manufacturer of a covered product specified in paragraph (15) or (17) of section 322(a) elects to provide a label for such covered product conveying the estimated annual operating cost of such product or the range of estimated annual operating costs for the type or class of such product—
>
> (A) such estimated cost or range of costs shall be determined in accordance with test procedures prescribed under section 323;
>
> (B) the format of such label shall be in accordance with a format prescribed by the Commission; and
>
> (C) such label shall be displayed in a manner, prescribed by the Commission, to be likely to assist consumers in making purchasing decisions and appropriate to carry out the purposes of this Act. 106 Stat. 2823–24 (to be codified at 42 U.S.C. 6294(c)(8)).

The Commission's staff has consulted with industry representatives and interested consumer and environmental groups, who have told the staff they know of no manufacturer that presently makes estimated annual operating costs claims or intends to do so. Moreover, unlike other appliances covered by the Rule (*e.g.*, refrigerators), for which EPCA has directed DOE to devise estimated annual cost of operation energy consumption data, DOE does not now have such data available for plumbing products. There are many ways annual operating cost claims could be made. Claims could be in terms of dollars and cents spent for water or in terms of amounts of water used. The claims could speak of typical household use (*e.g.*, X number of showers a day by family of Y number of people) or could just speak of a typical shower taking X minutes and using Y amount of water. Differently phrased claims would raise distinct questions regarding the statistical bases on which the claims rest (*e.g.*, claims for showerheads and faucets, where hot water is involved, might involve energy consumption as well as water use costs).

Because EPA 92 does not specify any time frame by which the Commission has to prescribe formats and manners of display for labels bearing such claims, the Commission proposes postponing doing so until informed that manufacturers are electing to make covered claims.[11] At that time the Commission will evaluate the types of claims manufacturers propose using and will prescribe format and manner of display requirements accordingly. In the meantime, cost claims that are made will be regulated by section 305.4(d) of the Rule, 16 CFR 305.4(d), which states that it is a violation of section 5(a)(1) of the FTC Act to make unsubstantiated cost claims. 15 U.S.C. 45(a)(1). The Commission solicits comments on its proposal to defer prescribing a format, and on whether, in fact, any firm is now making or intends to make such claims.

EPA 92 does not specify how the Commission is to prescribe such formats and manners of display. Wherever else in the statute Congress directed the Commission to "prescribe" requirements it directed the Commission to "prescribe by rule." For these voluntary disclosures, however, Congress only directed that the Commission "shall prescribe" the format and manner of display. Therefore, the Commission is considering whether to prescribe formats and manners of display by rule or by an enforcement policy statement. The Commission solicits comments on this issue. If the Commission prescribes by rule, manufacturers who voluntarily disclose operating cost information would be liable for civil penalties if they did not follow the prescribed format and manner of display. An enforcement policy statement would not be enforceable through civil penalties (although a section 5(b) administrative proceeding, 15 U.S.C. 45(b), or a section 13(b) court injunctive proceeding, 15 U.S.C. 53(b), are remedies that the Commission could pursue). An enforcement policy statement, however, could be adopted more quickly and with greater ease then a rule. A policy statement also would be easier to amend, if necessary, as manufacturers identified different proposed claims or as other circumstances changed.

V. Paperwork Reduction Act

The Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.*, requires government agencies, before promulgating rules or other regulations that require "collection of information" (*i.e.*, recordkeeping or reporting

[11] When manufacturers of covered plumbing fixtures and fittings elect to make claims about the estimated annual operating costs of their products, they should submit the proposed claim(s) to the Commission.

VOL
58
ISS
85
MY
5
19 93
UMI

requirements), to obtain approval from the Office of Management and Budget ("OMB"). Sections 305.8 and 305.15 of the current and proposed Rule include requirements that data be reported annually by manufacturers to the Commission and that certain records be retained.

These requirements are "collections of information" as defined by 5 CFR 1320.7(c), the regulations implementing the Paperwork Reduction Act. They have therefore been submitted to OMB for review under the Paperwork Reduction Act. These provisions, described more fully below in the Notice of Application to OMB Under the Paperwork Reduction Act, implement the requirements of the Energy Policy and Conservation Act that manufacturers retain test records and submit energy usage data to the Commission annually. The burden estimate for these requirements is approximately 1,000 hours.

VI. Regulatory Flexibility Act

This Notice does not contain a regulatory analysis under the Regulatory Flexibility Act, 5 U.S.C. 603–604, because the Commission believes that the amendments, if promulgated, would not have "a significant economic impact on a substantial number of small entities." 5 U.S.C. 605. The Commission has reached this conclusion because the amendments, if enacted, would have a minimal effect on all business entities within the affected industries, regardless of their size. The Commission's staff has been informed by industry representatives that approximately 100 to 120 American companies manufacture the covered plumbing products. Of those that do, most are not "small entities" as that term is defined in section 601 of the Regulatory Flexibility Act and in the regulations of the Small Business Administration, found in 13 CFR part 121 (1992).

While there are some "small entities" among these companies, the impact on these small entities would be minimal. The proposed amendments require: (1) manufacturers to make annual reports to the Commission that they are already required, by state plumbing and building codes, to submit to state authorities, and (2) labeling, catalog advertising, and point-of-sale promotional materials for these products to bear water usage disclosures that are already required to be disclosed on product labels. Thus, the impact of requiring the manufacturers to send a duplicate copy to the Commission would be de minimis and not, therefore, significant. Further, any economic costs imposed on small entities are primarily statutorily imposed, and the proposed regulations, will impose few, if any independent additional costs.

In light of the above, the Commission certifies, pursuant to section 605 of the Regulatory Flexibility Act, that the proposed amendments would not, if promulgated, have a significant impact on a substantial number of small entities. However, to ensure that no substantial economic impact is being overlooked, the Commission requests comments on this issue. After reviewing any comments received, the Commission will determine whether the preparation of a final regulatory flexibility analysis is necessary.

VII. Regulatory Review

The Commission has implemented a program for regulatory review of all the Commission's current and proposed rules and guides. One of the purposes of the review is to minimize the economic impact of new regulatory actions. As part of that review, the Commission requests comments on the impact of the proposed amendments to the Appliance Labeling Rule to include certain plumbing products. At this time, the Commission seeks comments about the costs and benefits only of these proposed amendments. The Commission is not now requesting comments about the costs and benefits of the requirements of the Appliance Labeling Rule for products other than the plumbing products that are the subject of this rulemaking proceeding. The Commission will seek comments on the requirements of the Appliance Labeling Rule for other products separately.

The proposed amendments closely follow the mandates in the Energy Policy Act of 1992. In order to maximize benefits and minimize costs imposed by the proposed rule, the Commission solicits comments on the following questions:

(1) What would be the economic impact and regulatory impact of the proposed amendments?

(2) What paperwork requirements would the proposed amendments impose?

(3) What possible regulatory alternatives are there that would reduce the economic impact of the proposed amendments, yet fully implement the regulatory mandate of the Energy Policy Act of 1992?

VIII. Metric Conversion Act

Section 205b of the Metric Conversion Act, 15 U.S.C. 205b, states that the metric measurement system is the preferred system of weights and measures in the United States. It also requires federal agencies to use the metric system of measurement in all procurements, grants and other business-related activities (including rulemakings), except to the extent that such use is impractical or is likely to cause significant inefficiencies or loss of markets to United States firms. These requirements are also expressed in Executive Order 12770 of July 25, 1991.[12]

EPA 92 specifies that the required disclosures for covered plumbing fixtures and fittings be in terms of gallons. Nothing in EPA 92 or its legislative history suggests that Congress intended to override the Metric Conversion Act for these plumbing products. The Commission, therefore, is proposing that the Rule require disclosures both in gallons and liters unless the size of the product makes dual disclosure impractical (in which case only gallons would have to be disclosed).

The Commission solicits comments on the dual disclosure approach. Specifically, comments are requested on whether dual disclosures would be burdensome; whether consumers are knowledgeable enough about metric measurement to necessitate dual disclosures; and whether the use of dual disclosures would serve an educational function by increasing consumers' knowledge of the metric system. Comments are also solicited as to whether the sizes and shapes of the covered plumbing products are such that it would be impractical to lengthen the disclosures by even a few words to achieve dual disclosures.

IX. Information for Interested Persons

Section A—Invitation To Comment

Interested persons are hereby notified that they may comment on any issue of fact, law or policy that may have bearing upon the proposed rules. Although the Commission welcomes comments on any aspect of the proposed rules, the Commission is particularly interested in comments on the questions and issues discussed in this Notice. All comments and testimony should be referenced specifically to either the question or issue raised by the Commission or the relevant proposed amendment to the Appliance Labeling Rule.

The specific requests for comments made in the preceding sections of this Notice are as follows:

1. EPA 92 requires that the water use rates of the covered plumbing products be disclosed legibly and permanently.

[12] 56 FR 35801 (July 29, 1991).

A. *Placement*—The Commission proposes that for placement purposes the water use rate would be considered disclosed in a legible fashion if it is located near a manufacturer's identifying mark. What are the advantages and disadvantages of this approach? Will this approach enable consumers to obtain readily information about the water use rates of covered plumbing products? Is there some other location that would be preferred to that being proposed? If so, explain.

B. *Format*—The Commission does not propose requiring that for legibility any particular format for the type size/style and color contrast be used in markings and/or labels identifying the manufacturer and the water use rates of the covered products. What are the advantages and disadvantages of this approach? Will this approach enable consumers to obtain readily information about the water use rates of the covered plumbing products? Should the Commission instead prescribe a specific format? If so, what format, and why?

C. *Permanence*—The Commission does not believe this requirement needs any further amplification. Thus, manufacturers may make their own decision about how to comply. What are the advantages and disadvantages of this approach? Will this approach enable consumers to obtain readily information about the water use rates of the covered plumbing products? Should the Commission instead prescribe the method(s) for permanent marking? If so, what methods should the Commission specify, and why?

2. The Commission proposes that all water use disclosures be made in terms of gallons and liters per flush, minute or cycle, except where the size of the product would make it impractical to include the metric measure. What are the advantages and disadvantages of requiring disclosures in both non-metric and metric measures, as proposed? To what extent is dual disclosure burdensome? Are covered plumbing products sold in such sizes and shapes that it would be impractical to lengthen the required water use rate disclosures to achieve dual disclosures? Are consumers knowledgeable enough about metric measures to warrant dual disclosures? Does dual disclosure enhance consumers' knowledge of the metric system?

3. The Commission believes that presently no manufacturers make annual operating cost claims for any of the covered plumbing products. EPA 92 requires that if such claims are made in the future they must be in "accordance with a format prescribed by the Commission." The Commission has decided to postpone the design of a cost disclosure format until such time as a manufacturer makes such a claim. In the interim any unsubstantiated claims would be subject to enforcement under section 5(1)(a) of the FTC Act. Is the Commission correct in its belief that annual operating cost claims are not presently being made? Is it likely that such claims will be made in the future? How might such claims be made, if any? Should the Commission postpone prescribing a format and manner of display until such time as manufacturers elect to make such claims? If not, what format and manner of display should the Commission specify now, and why? Should the Commission prescribe such format and manner of display by an enforcement policy statement rather than by rule? What are the advantages and disadvantages of the approach proposed by the Commission?

4. The proposed amendments require a manufacturer to report annually to the Commission the manufacturer's name and address and the trade names, model numbers, and water use rates of its covered plumbing products. What costs (e.g., dollars and/or work hours) beyond those already incurred by manufacturers in the ordinary course of business will be imposed upon manufacturers in complying with this proposed reporting requirement?

5. What are the economic impact and the regulatory impact of the proposed amendments, especially upon small business entities? In responding to this question, the Commission particularly would welcome any statistical data concerning the number and size of manufacturers of the covered products, the expected additional costs of compliance by size of firm, and the economic impact of any such cost increase.

6. What paperwork requirements would the proposed amendments impose?

7. Are there other possible regulatory alternatives that would reduce the economic impact of the proposed amendments, yet fully provide consumers with information about the water use rates of the covered plumbing products and implement the regulatory mandate of the Energy Policy Act of 1992?

8. Overall, what are the benefits and costs of the proposed amendments?

The Commission requests that commenters provide representative factual data. Individual firms' experiences are relevant to the extent they typify industry experience in general or the experience of similar-sized firms. Comments opposing the proposed rules or specific provisions thereof should, if possible, suggest a specific alternative. Proposals for alternative regulations should include reasons and data that indicate why the alternatives would better serve the purposes of the proposed rules. Comments should be supported by a full discussion of all the relevant facts and/or be based directly on firsthand knowledge, personal experience or general understanding of the particular issues addressed by the proposed rules.

Before adopting these proposed rules as final rules, consideration will be given to any written comments timely submitted to the Secretary of the Commission or made on the record of any hearing that may be held. Comments submitted will be available for public inspection in accordance with the Freedom of Information Act, 5 U.S.C. 552, and Commission Regulations, on normal business days between the hours of 8:30 a.m. to 5:00 p.m. at the Public Reference Room 130, Federal Trade Commission, 6th and Pennsylvania Ave., NW., Washington, DC 20580.

Section B—Public Hearings

Persons desiring a public hearing on the proposed amendments should notify the Secretary of the Commission no later than May 26, 1993. If there is a hearing, it will take place in Room 532 of the Federal Trade Commission, Pennsylvania Avenue at Sixth Street, NW., Washington, DC, at a time and date that will be announced in a subsequent notice. If a hearing is held, persons desiring to testify will be required to submit to the Secretary of the Commission a complete statement in advance. This will be entered into the record in full. As a general rule, oral statements should not exceed ten minutes. There will be no opportunity for interested persons to cross-examine witnesses. Further instructions to witnesses will be contained in the notice announcing the hearing.

Section C—Motions or Petitions

Any motions or petitions in connection with this proceeding must be filed with the Secretary of the Commission for transmission to a Presiding Officer who will be responsible for the orderly conduct of the proceeding and who shall have all powers necessary to that end, including the authority to rule on all motions or petitions filed.

Applications for review of rulings by a Presiding Officer will not be entertained by the Commission prior to its review of the record unless the Presiding Officer certifies in writing to

VOL
58
ISS
85
MY
5
1993
UMI

the Commission that a ruling involves a controlling question of law or policy as to which there is substantial ground for difference of opinion and that an intermediate review of the ruling may materially advance the ultimate termination of the proceeding or that subsequent review will be an inadequate remedy.

Section D—Communications by Outside Parties to Commissioners or Their Advisors

Pursuant to Rule 1.26(b)(5) of the Commission's Rules of Practice, 16 CFR 1.26(b)(5), communications with respect to the merits of this proceeding from any outside party to any Commissioner or Commissioner advisor during the course of this rulemaking shall be subject to the following treatment. Written communications, including written communications from members of Congress, shall be forwarded promptly to the Secretary for placement on the public record. Oral communications, not including oral communications from members of Congress, are permitted only when such oral communications are transcribed verbatim or summarized at the discretion of the Commissioner or Commissioner advisor to whom such oral communications are made and are promptly placed on the public record, together with any written communications and summaries of any oral communications relating to such oral communications. Oral communications from members of Congress shall be transcribed or summarized at the discretion of the Commissioner or Commissioner advisor to whom such oral communications are made and promptly placed on the public record, together with any written communications and summaries of any oral communications relating to such oral communications.

List of Subjects in 16 CFR Part 305

Advertising, Water conservation, Household appliances, Labeling, Reporting and recordkeeping requirements.

Proposed Amendments

Accordingly, it is proposed that 16 CFR part 305 be amended as set forth below.

PART 305—RULE CONCERNING DISCLOSURES OF ENERGY CONSUMPTION AND WATER USE INFORMATION ABOUT CERTAIN HOME APPLIANCES AND OTHER PRODUCTS REQUIRED UNDER THE ENERGY POLICY AND CONSERVATION ACT

1. The heading of part 305 is proposed to be revised as set forth above.

2. The authority citation for part 305 is proposed to be revised to read as follows:

Authority: 42 U.S.C. 6294.

3. Further, it is proposed that § 305.1 be amended by revising paragraphs (a), (b), and (d) to read as follows:

§ 305.1 Scope.

* * * * *

(a) Labeling and/or marking the products with information disclosing their water use rates and related information required by this part or their estimated annual energy costs or energy efficiency ratings, and related information or their compliance with applicable standards under section 325 of the Energy Policy and Conservation Act, 42 U.S.C. 6295;

(b) Including in printed matter displayed or distributed at the point of sale of such products, or including in any catalog from which the products may be purchased, information concerning their water use or their energy consumption;

* * * * *

(d) Making representations, in writing or in broadcast advertising, respecting the water use, energy consumption, or energy efficiency of the products, or the cost of water used or energy consumed by the products.

4. Further, it is proposed that § 305.2 be amended by adding new paragraphs (r) through (v), to read as follows:

§ 305.2 Definitions.

* * * * *

(r) *Water use* means the quantity of water flowing through a showerhead, faucet, water closet, or urinal at point of use, determined in accordance with test procedures under section 323 of the Act, 42 U.S.C. 6293.

(s) *ASME* means the American Society of Mechanical Engineers and, as used herein, is the prefix for standards adopted by the Society, including ASME A112.16.1M–1989 and ASME A112.19.2M–1990.

(t) *ANSI* means the American National Standards Institute and, as used herein, is the prefix for standards adopted by the Institute.

(u) *Flushometer valve* means a valve attached to a pressured water supply pipe and so designed that, when actuated, it opens the line for direct flow into the fixture at a rate and quantity to operate properly the fixture, and then gradually closes to provide trap reseal in the fixture in order to avoid water hammer. The pipe to which this device is connected is in itself of sufficient size that, when opened, will allow the device to deliver water at a sufficient rate of flow for flushing purposes.

(v) *Flow restricting or controlling spout end device* means an aerator used in a faucet.

5. Further, it is proposed that § 305.3 be amended by adding new paragraphs (k) through (n), to read as follows:

§ 305.3 Description of covered products to which this part applies.

* * * * *

(k) *Showerhead* means any showerhead (including a handheld showerhead), except a safety shower showerhead.

(l) *Faucet* means a lavatory faucet, kitchen faucet, metering faucet, or replacement aerator for a lavatory or kitchen faucet.

(m) *Water closet* means a plumbing fixture having a water-containing receptor which receives liquid and solid body waste and, upon actuation, conveys the waste through an exposed integral trap seal into a gravity drainage system, except such term does not include fixtures designed for installation in prisons.

(n) *Urinal* means a plumbing fixture which receives only liquid body waste and, on demand, conveys the waste through a trap seal into a gravity drainage system, except such term does not include fixtures designed for installation in prisons.

6. Further, it is proposed that § 305.4 be amended by revising paragraphs (a)(1), (a)(2), (b)(4), (d), (e) introductory text, (e)(2), and (e)(3), to read as follows:

§ 305.4 Prohibited acts.

(a) * * *

(1) For any manufacturer or private labeler knowingly to distribute in commerce any new covered product unless such covered product is marked and/or labeled in accordance with § 305.11 with a marking, label, flap tag, hang tag, or energy fact sheet which conforms to the provisions of the Act and this part.

(2) For any manufacturer, distributor, retailer, or private labeler knowingly to remove or render illegible any marking or label required to be provided with such product by this part.

* * * * *

(b) * * *

(4) Refuse, when requested by the Commission or its designated representative, to supply at the manufacturer's expense, no more than two of each model of each covered product to any laboratory designated by the Commission for the purpose of ascertaining whether the information in catalogs or set out on the label or marked on the product as required by this part is accurate. This action will be taken only after review of a manufacturer's testing records and an opportunity to revalidate test data has been extended to the manufacturer.

* * * * *

(d)(1) It shall be an unfair or deceptive act or practice in violation of section 5(a)(1) of the Federal Trade Commission Act, 15 U.S.C. 45(a)(1), for any manufacturer, distributor, retailer or private labeler to make any representation in or affecting commerce, in writing (including a representation on a label) or in any broadcast advertisement, with respect to the energy use or efficiency or, in the case of showerheads, faucets, water closets, and urinals, water use, of a covered product to which a test procedure is applicable under section 323 of the Act, 42 U.S.C. 6293, or the cost of energy consumed by such product, unless such product has been tested in accordance with such test procedure and such representation fairly discloses the results of such testing.

(2) Effective 180 days after an amended or new test procedure applicable to a covered product is prescribed or established under section 323(b) of the Act, 42 U.S.C. 6293(b), it shall be an unfair or deceptive act or practice in violation of section 5(a)(1) of the Federal Trade Commission Act, 15 U.S.C. 45(a)(1), for any manufacturer, distributor, retailer or private labeler to make any representation in or affecting commerce, in writing (including a representation on a label) or in any broadcast advertisement, with respect to the energy use or efficiency or, in the case of showerheads, faucets, water closets and urinals, water use of such product, or cost of energy consumed by such product, unless the product has been tested in accordance with such amended or new test procedures and such representation fairly discloses the results of such testing. This requirement is not limited to consumer appliance products covered by the labeling requirements of this Part.

(3) Any manufacturer, distributor, retailer, or private labeler may file a petition with the Commission not later than sixty (60) days before the expiration of the period involved for an extension of the 180 day period. If the Commission finds that the requirements would impose an undue hardship on the petitioner, the Commission may extend the 180 day period with respect to the petitioner up to an additional 180 days.

(e) This part shall not apply to:

* * * * *

(2) Any covered product, except central air conditioners, pulse combustion and condensing furnaces, and fluorescent lamp ballasts, if the manufacture of the product was completed prior to May 19, 1980. Any central air conditioner, pulse combustion furnace or condensing furnace if its manufacture was completed prior to June 7, 1988. Any fluorescent lamp ballast if its manufacture was completed prior to January 1, 1990. Any showerhead, faucet, water closet or urinal if its manufacture was completed prior to October 24, 1994.

(3) Any catalog or point-of-sale printed matter pertaining to covered products other than central air conditioners and pulse combustion and condensing furnaces distributed prior to May 19, 1980, or showerheads, faucets, water closets and urinals distributed prior to October 24, 1994, and any catalog or point-of-sale printed matter pertaining to central air conditioners and pulse combustion and condensing furnaces distributed prior to June 7, 1988, and any catalog or point-of-sale printed matter pertaining to showerheads, faucets, water closets and urinals distributed prior to October 24, 1994, except that if representations respecting the energy consumption or energy efficiency or water use of any covered product or other consumer appliance product or cost of energy consumed or water used by such product are included, they are subject to the requirements of paragraph (d) of this section.

* * * * *

7. Further, it is proposed that § 305.5 be revised to read as follows:

§ 305.5 Determinations of estimated annual energy cost and energy efficiency rating and of water use rate.

(a) Procedures for determining the estimated annual energy costs, the kilowatt-hour uses per year, the energy factors, the energy efficiency ratings and the power and efficacy factors of covered products are those found in 10 CFR part 430, subpart B, in the following sections:

(1) Refrigerators and refrigerator-freezers—§ 430.22(a).

(2) Freezers—§ 430.22(b).

(3) Dishwashers—§ 430.22(c).

(4) Water heaters—§ 430.22(e).

(5) Room air conditioners—§ 430.22(f).

(6) Clothes washers—§ 430.22(j).

(7) Furnaces—§ 430.22(n).

(8) Central air conditioners and heat pumps—§ 430.22(m).

(9) Fluorescent lamp ballasts—§ 430.22(q).

(b) Procedures for determining the water use rates of covered products are those found in the following standards:

(1) Showerheads and faucets—ASME A112.18.1M–1989.

(2) Water closets and urinals—ASME A112.19.2M–1990.

8. Further, it is proposed that § 305.8(a) and (b) be revised to read as follows:

§ 305.8 Submission of data.

(a)(1) Each manufacturer of a covered product, except manufacturers of fluorescent lamp ballasts, showerheads, faucets, water closets or urinals, shall submit annually to the Commission a report listing the kilowatt-hour use per year (for refrigerators, refrigerator-freezers and freezers), the energy factor (for clothes washers, dishwashers and water heaters) or the energy efficiency rating (for room air conditioners, central air conditioners, heat pumps and furnaces) for each basic model in current production, determined according to § 305.5 and statistically verified according to § 305.6. The report must also list, for each basic model in current production: the model number; the total energy consumption, determined in accordance with § 305.5, used to calculate the kilowatt-hour per year, energy factor, or energy efficiency rating; the number of tests performed; and its capacity, determined in accordance with § 305.7. For those models that use more than one energy source or more than one cycle, each separate amount of energy consumption, or energy cost, measured in accordance with § 305.5, shall be listed in the report. Appendix J of this part illustrates a suggested reporting format. Starting serial numbers or other numbers identifying the date of manufacture of covered products shall be submitted whenever a new basic model is introduced in the market.

(2) Each manufacturer of a covered fluorescent lamp ballast shall submit annually to the Commission a report for each basic model of fluorescent lamp ballast in current production. The report shall contain the following information:

(i) Name and address of manufacturer;

(ii) All trade names under which the fluorescent lamp ballast is marketed;

(iii) Model number;

(iv) Starting serial number, date code or other means of identifying the date of

§ 305.13 Promotional material displayed at

VOL 58 ISS 85 MY 5 1993 UMI

manufacture (date of manufacture information must be included with only the first submission for each basic model);

(v) Nominal input voltage and frequency;

(vi) Ballast efficacy factor; and

(vii) Type (F40T12, F96T12 or F96T12HO) and number of lamp or lamps with which the fluorescent lamp ballast is designed to be used.

(3) Each manufacturer of a covered showerhead, faucet, water closet or urinal shall submit annually to the Commission a report for each basic model of such products in current production. The report shall contain the following information:

(i) Name and address of manufacturer;

(ii) All trade names under which the product is marketed;

(iii) Model number;

(iv) Starting serial number, date code or other means of identifying the date of manufacture (date of manufacture information must be included with only the first submission for each basic model);

(v) The product's water use, expressed in gallons and liters per flush (gpf/Lpf) or gallons and liters per minute (gpm/Lpm) or per cycle (gpc/Lpc) as determined in accordance with § 305.5.

(b) All data required by § 305.8(a) except serial numbers, shall be submitted to the Commission annually, on or before the following dates:

Products	Deadline for data submission
Refrigerators	Aug. 1.
Refrigerator-freezers	Aug. 1.
Freezers	Aug. 1.
Central air conditioners	July 1.
Heat pumps	July 1.
Dishwashers	June 1.
Water heaters	May 1.
Room air conditioners	May 1.
Furnaces	May 1.
Clothes washers	Mar. 1.
Fluorescent lamp ballasts	Mar. 1.
Showerheads	Mar. 1.
Faucets	Mar. 1.
Water closets	Mar. 1.
Urinals	Mar. 1.

All revisions to such data (both additions to and deletions from the preceding data) shall be submitted to the Commission as part of the next annual report period. Serial number reports for new covered products are due sixty days after the annual effective mandatory labeling date for each product.

* * * * *

9. Further, it is proposed that § 305.11 be amended by revising the heading of paragraph (a) and by adding a new paragraph (e), to read as follows:

§ 305.11 Labeling for covered products.

(a) *Labels for covered products other than fluorescent lamp ballasts, showerheads, faucets, water closets and urinals*—(1) *Layout.* * * *

* * * * *

(e) *Plumbing Fixtures*—(1) *Showerheads and Faucets.* Showerheads and faucets shall be marked and labeled as follows:

(i) Each showerhead and flow restricting or controlling spout end device shall bear a permanent legible marking indicating the flow rate, expressed in gallons per minute (gpm) or gallons per cycle (gpc), and the flow rate value shall be the actual flow rate or the maximum flow rate specified by the standards established in subsection (j) of section 325 of the Act, 42 U.S.C. 6295(j). Except where impractical due to the size of the fitting, each flow rate disclosure shall also be given in liters per minute (Lpm) or liters per cycle (Lpc). For purposes of this section, the marking indicating the flow rate will be deemed "legible," in terms of placement, if it is located in close proximity to the manufacturer's identification marking.

(ii) Each showerhead and faucet shall bear a permanent legible marking to identify the manufacturer. This marking shall be the trade name, trademark, or other mark known to identify the manufacturer. Such marking shall be located where it can be seen after installation.

(iii) Each showerhead and faucet shall be marked "A112.18.1M" to demonstrate compliance with the applicable ASME standard. The marking shall be by means of either a permanent mark on the product, a label on the product, or a tag attached to the product.

(iv) The package for each showerhead and faucet shall disclose the manufacturer's name and the model number.

(v) The package or any label attached to the package for each showerhead or faucet shall contain at least the following: "A112.18.1M" and the flow rate expressed in gallons per minute (gpm) or gallons per cycle (gpc), and the flow rate value shall be the actual flow rate or the maximum flow rate specified by the standards established in subsection (j) of section 325 of the Act, 42 U.S.C. 6295(j). Each flow rate disclosure shall also be given in liters per minute (Lpm) or liters per cycle (Lpc).

(2) *Water closets and Urinals.* Water closets and urinals shall be marked and labeled as follows:

(i) Each such fixture (and flushometer valve associated with such fixture) shall bear a permanent legible marking indicating the flow rate, expressed in gallons per flush (gpf), and the water use value shall be the actual water use or the maximum water use specified by the standards established in subsection (k) of section 325 of the Act, 42 U.S.C. 6295(k). Except where impractical due to the size of the fixture, each flow rate disclosure shall also be given in liters per flush (Lpf). For purposes of this section, the marking indicating the flow rate will be deemed "legible," in terms of placement, if it is located in close proximity to the manufacturer's identification marking.

(ii) Each water closet (and each component of the water closet if the fixture is comprised of two or more components) and urinal shall be marked with the manufacturer's name or trademark or, in the case of private labeling, the name or registered trademark of the customer for whom the unit was manufactured. This mark shall be legible, readily identified, and applied so as to be permanent. The mark shall be located so as to be visible after the fixture is installed, except for fixtures built into or for a counter or cabinet.

(iii) Each water closet (and each component of the water closet if the fixture is comprised of two or more components) and urinal shall be marked at a location determined by the manufacturer with the designation "ASME A112.19.2M" to signify compliance with the applicable standard. This mark need not be permanent, but shall be visible after installation.

(iv) The package, and any labeling attached to the package, for each water closet and urinal shall disclose the flow rate, expressed in gallons per flush (gpf), and the water use value shall be the actual water use or the maximum water use specified by the standards established in subsection (k) of section 325 of the Act, 42 U.S.C. 6295(k). Each flow rate disclosure shall also be given in liters per flush (Lpf).

(v) With respect to any gravity tank-type white 2-piece toilet offered for sale or sold before January 1, 1997, which has a water use greater than 1.6 gallons per flush (gpf), any printed matter distributed or displayed in connection with such product (including packaging and point of sale material, catalog material, and print advertising) shall include, in a conspicuous manner, the words "For Commercial Use Only."

10. Further, it is proposed that § 305.13 be amended by revising paragraph (a) to read as follows:

§ 305.13 Promotional material displayed or distributed at point of sale.

(a)(1) Any manufacturer, distributor, retailer, or private labeler who prepares printed material for display or distribution at point of sale concerning a covered product (except fluorescent lamp ballasts, showerheads, faucets, water closets, and urinals) shall clearly and conspicuously include in such printed material the following required disclosure:

Before purchasing this appliance, read important energy cost and efficiency information available from your retailer.

(2) Any manufacturer, distributor, retailer, or private labeler who prepares printed material for display or distribution at point-of-sale concerning a covered showerhead, faucet, water closet, or urinal shall clearly and conspicuously include in such printed material the product's water use, expressed in gallons and liters per minute (gpm/Lpm) or per cycle (gpc/Lpc) or gallons and liters per flush (gpf/Lpf) as specified in § 305.11(e).

* * * * *

11. Further, it is proposed that § 305.14 be amended by revising paragraph (a) introductory text and by adding a new paragraph (d), to read as follows:

§ 305.14 Catalogs.

(a) Any manufacturer, distributor, retailer, or private labeler who advertises a covered product (except fluorescent lamp ballasts, showerheads, faucets, water closets or urinals) in a catalog, from which it may be purchased, shall include in such catalog, on each page that lists the covered product, the following information required to be disclosed on the label:

* * * * *

(d) Any manufacturer, distributor, retailer, or private labeler who advertises a covered showerhead, faucet, water closet or urinal in a catalog, from which it may be purchased, shall include in such catalog, on each page that lists the covered product, the product's water use, expressed in gallons and liters per minute (gpm/Lpm) or per cycle (gpc/Lpc) or gallons and liters per flush (gpf/Lpf) as specified in § 305.11(e).

12. Further, it is proposed that § 305.15 be amended by revising paragraph (b) to read as follows:

§ 305.15. Test data records.

* * * * *

(b) Upon notification by the Commission or its designated representative, a manufacturer or private labeler shall provide, within 30 days of the date of such request, the underlying test data from which the water use or energy consumption rate, the energy efficiency rating, or the estimated annual cost of using each basic model was derived.

* * * * *

By direction of the Commission.

Donald S. Clark,

Secretary.

RIN 2070–AC18

Pesticide Tolerances for Glyphosate

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: This document proposes tolerances and food additive regulations for residues of the herbicide glyphosate [(*N*-phosphonometyhyl)glycine). The specific proposals are as follows: an amended tolerance in or on the raw agricultural commodities (RACs) wheat at 5.0 parts per million (ppm), wheat straw at 85 ppm, the tree nut crop group at 1.0 ppm, almond hulls at 25 ppm, and a food additive regulation for wheat milling fractions (except flour) at 20 ppm. Monsanto Co. submitted petitions requesting EPA to establish the maximum permissible residues of the herbicide in or on these RACs and the processed human food.

DATES: Written comments, identified by the document control number, [PP 0F3865, PP 2F4081, FAP 2H5635/P559), must be received on or before June 4, 1993.

ADDRESSES: By mail, submit comments to: Public Docket and Freedom of Information Section, Field Operations Division (H7506C), Office of Pesticide Programs, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460. In person, bring comments to: Rm. 1128, CM #2, 1921 Jefferson Davis Hwy., Arlington, VA 22202.

Information submitted as a comment concerning this document may be claimed confidential by marking any part or all of that information as "Confidential Business Information" (CBI). Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2. A copy of the comment that does not contain CBI must be submitted for inclusion in the public record. Information not marked confidential may be disclosed publicly by EPA without prior notice. All written comments will be available for public inspection in rm. 1128 at the address given above, from 8 a.m. to 4 p.m., Monday through Friday, excluding legal holidays.

FOR FURTHER INFORMATION CONTACT: By mail, Robert J. Taylor, Product Manager, Registration Division (H7505C), Office of Pesticide Programs, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460. Office location and telephone number: Rm. 241, CM #2, 1921 Jefferson Davis Hwy., Arlington, VA, (703)-305-6800.

SUPPLEMENTARY INFORMATION: EPA issued a notice in the **Federal Register** of July 18, 1990 (55 FR 29267), announcing that the Monsanto Co., 700 14th St., NW., Washington, DC 20005, had submitted a petition (PP 0F3865) proposing to amend 40 CFR 180.364 by establishing a regulation under section 408 of the Federal Food, Drug, and Cosmetic Act (FFDCA) (21 U.S.C. 346a), to permit combined residues of the herbicide glyphosate, [*N*-(phosphonomethyl)glycine] and its metabolite aminomethylphosphonic acid resulting from the application of the isopropylamine salt in or on the RACs wheat grain at 4 parts per million (ppm) and wheat straw at 85 ppm. In the **Federal Register** of June 10, 1992 (57 FR 24645), the Agency issued notices which announced that Monsanto Co. had submitted PP No. 2F4081 proposing to amend 40 CFR 180.364 under sec. 408 of FFDCA by establishing a regulation to permit the residues of glyphosate and its metabolite resulting from the application of isopropylamine salt of glyphosate and/or the monoammonium salt of glyphosate in or on almond bulls at 25 ppm and tree nut crops at 1.0 ppm and FAP No. 2H5635 proposing to amend 40 CFR 185.3500 under sec. 409 of FFDCA (21 U.S.C. 348) by establishing a food additive regulation to permit the combined residues of glyphosate and its metabolite on wheat milling fractions (excluding flour) at 12 ppm.

There were no comments or requests for referral to an advisory committee received in response to these notices of filing.

Subsequently, the petitioner amended PP 0F3865, FAP 2H5635, and PP 2F4081 by submitting revised section Fs deleting the metabolite from the expressions, increasing the proposed tolerances on wheat grain to 5 ppm and

VOL 58 ISS 85 MY 5 1993 UMI

wheat milling fractions (excluding flour) to 20 ppm, and adding the monoammonium salt of glyphosate to the wheat grain (5 ppm) and wheat straw (85 ppm) expression. Because the increased tolerances for wheat grain at 5 ppm and wheat milling fractions (excluding flour) to 20 ppm have not been previously proposed, this document is being published as a proposed rule to allow a period of 30 days for public comment.

The data submitted in the petitions and other relevant material have been evaluated. The glyphosate toxicological data listed below were considered in support of these tolerances.

1. Several acute toxicology studies placing technical-grade glyphosate in Toxicity Category III and Toxicity Category IV.

2. A 1-year feeding study with dogs fed dosage levels of 0, 20, 100, and 500 milligrams/kilogram/day (mg/kg/day) with a no-observable-effect level (NOEL) of 500 mg/kg/day.

3. A 2-year carcinogenicity study in mice fed dosage levels of 0, 150, 750, and 4,500 mg/kg/day with no carcinogenic effect at the highest dose tested (HDT) of 4,500 mg/kg/day.

4. A chronic feeding/carcinogenicity study in rats fed dosage levels of 0, 3, 10, and 31 mg/kg/day with no carcinogenic effects observed under the conditions of the study at dose levels up to and including 31 mg/kg/day (HDT) and a systemic NOEL of 31 mg/kg/day (HDT). Because a maximum tolerated dose (MTD) was not reached, this study was classified as supplemental for carcinogenicity.

5. A chronic feeding/carcinogenicity study in rats fed dosage levels of 0, 100, 400, and 1,000 mg/kg/day with no carcinogenic effects noted under the conditions of the study at dose levels up to and including 1,000 mg/kg/day (HDT) and a systemic NOEL of 400 mg/kg/day based on decreased body weight and body weight gain in females, cataracts in males, decreased urinary pH in males, increased relative liver weight (to body) at 12 months, increased absolute and relative liver weight (to brain) at 24 months at 1,000 mg/kg/day (HDT).

6. A developmental toxicity study in rats given doses of 0, 300, 1,000, and 3,500 mg/kg/day with a developmental NOEL of 1,000 mg/kg/day based on an increase in number of litters and fetuses with unossified sternubrae, and decrease in fetal body weight at 3,500 mg/kg/day, and a maternal NOEL of 1,000 mg/kg/day based on decrease in body weight gain, diarrhea, soft stools, breathing rattles, inactivity, red matter in the region of nose, mouth, forelimbs, or dorsal head, and deaths at 3,500 mg/kg/day (HDT).

7. A developmental toxicity study in rabbits given doses of 0, 75, 175, and 350 mg/kg/day (HDT); a maternal NOEL of 175 mg/kg/day based on increased incidences of soft stool, diarrhea, nasal discharge, and deaths at 350 mg/kg/day (HDT).

8. A multigeneration reproduction study with rats fed dosage levels of 0, 3, 10, and 30 mg/kg/day with a developmental NOEL of 10 mg/kg/day based on increased incidence of focal tubular dilation of the kidney (both unilateral and bilateral combined) of male F_1b pups.

9. A two generation reproduction study with rats fed dosage levels of 0, 100, 500, and 1,500 mg/kg/day with a developmental NOEL of 500 mg/kg/day based on decreased pup body weight and body weight gain on lactation days 14 and 21 at 1,500 mg/kg/day (HDT).

10. Mutagenicity data included chromosomal aberration *in vitro* (no aberrations in Chinese hamster ovary cells were caused with and without S9 activation); DNA repair in rat hepatocytes; *in vivo* bone marrow cytogenic test in rats; rec-assay with *B. subtilis*; reverse mutation test with *S. typhimurium*; Ames test with *S. typhimurium*; and dominant-lethal mutagenicity test in mice (all negative).

The reference dose (RfD) based on a developmental study with rabbits (NOEL of 175 mg/kg/ bwt/day) and using a hundred-fold safety factor is calculated to be 2.0 mg/kg body weight/day. The theoretical maximum residue contribution (TMRC) for published tolerances and food and feed additive regulations is 0.011362 mg/kg bwt/day or 0.6 percent of the RfD for the overall U.S. population. The current actions on tree nut crop group and wheat grain and wheat milling fractions will contribute 0.000012 mg/kg/ bwt/day and 0.009217 mg/kg bwt/day, respectively, to the TMRC. These tolerances and the food additive regulation will utilize a total of 0.462 percent of the RfD for the overall U.S. population.

For U.S. subgroup populations, nonnursing infants and children 1 to 6 years of age, the current action and previously established tolerances and the food additive regulation utilize, respectively, a total of 2.38 and 2.17 percent of the RfD, assuming that residue levels are at the established tolerance levels and that 100 percent of the crop is treated.

There are no desirable data lacking for this pesticide. There are currently no actions pending against the continued registration of this pesticide. No detectable residues of *N*-nitrosoglyphosate, a contaminant of glyphosate, are expected to be present in the commodities for which tolerances are established. The carcinogenic potential of glyphosate was first considered by a panel, then called the Toxicology Branch AD Hoc Committee, in 1985. The Committee, in a consensus review dated March 4, 1985, classified glyphosate as a Group C carcinogen based on an increased incidence of renal tumors in male mice. The Committee also concluded that dose levels tested in the 26-month rat study were not adequate for assessment of glyphosate's carcinogenic potential in this species. These findings, along with additional information, including a reexamination of the kidney slides from the long-term mouse study, were referred to the FIFRA Scientific Advisory Panel (SAP). In its report dated February 24, 1986, SAP classified glyphosate as a Group D Carcinogen (inadequate animal evidence of carcinogenic potential). SAP concluded that, after adjusting for the greater survival in the high-dose mice compared to concurrent controls, that no statistically significant pairwise differences existed, although the trend was significant.

SAP determined that the carcinogenic potential of glyphosate could not be determined from existing data and proposed that the rat and/or mouse studies be repeated in order to classify these equivocal findings. On reexamination of all information, the Agency classfified glyphosate as a Group D Carcinogen and requested that the rat study be repeated and that a decision on the need for a repeat mouse study would be made upon completion of review of the rat study.

Upon receipt and review of the second rat chronic feeding/ carcinogenicity study, all toxicological findings for glyphosate were referred to the Health Effects Division Carcinogenicity Peer Review Committee on June 26, 1991, for discussion and evaluation of the weight of evidence on glyphosate with particular emphasis on its carcinogenic potential. The Peer Review Committee classified glyphosate as a Group E (evidence of noncarcinogenicity for humans), based upon lack of convincing carcinogenicity evidence in adequate studies in two animal species. This classification is based on the following findings: (1) None of the types of tumors observed in the studies (pancreatic islet cell adenomas in male rat, thyroid c-cell adenomas and/or carcinomas in male and female rats, hepatocellular adenomas and carcinomas in male rats, and renal tubular neoplasms in male mice) were determined to be compound related; (2) glyphosate was tested up to the limit dose on the rat and up to levels higher than the limit dose in mice; and (3) there is no evidence of genotoxicity for glyphosate. Accordingly, EPA concludes that glyphosate has not been "found to induce cancer when ingested by man or animal." 21 U.S.C. 348(c)(3).

The nature of the residue in plants is adequately understood, adequate methodology (HPLC) is available for enforcement purposes, and the methodology has been published in the Pesticide Analytical Manual (PAM), Vol. II. Any secondary residues occurring in liver and kidney of cattle, goats, horses, poultry, and sheep will be covered by existing tolerances. The pesticide is considered useful for the purpose for which the regulation is sought and is capable of achieving the intended physical or technical effect.

Based on the information cited above, the Agency has determined that the establishment of tolerances by amending 40 CFR part 180 will protect the public health, and the establishment of a food additive regulation by amending 40 CFR part 185 will be safe. It is proposed, therefore, that the tolerances and food additive regulation be established as set forth below.

Any person who has registered or submitted an application for registration of a pesticide under the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) as amended, which contains any of the ingredients listed herein, may request within 30 days after publication of this document in the **Federal Register** that this rulemaking proposal be referred to an Advisory Committee in accordance with section 408(e) of the Federal Food, Drug, and Cosmetic Act.

Interested persons are invited to submit written comments on the proposed regulations. Comments must bear a notation indicating the document control number, [PP 0F3865, PP 2F4081, FAP 2H5635/P559]. All written comments filed in response to this petition will be available in the Public Information Branch, at the address given above, from 8 a.m. to 4 p.m., Monday through Friday, except legal holidays.

The Office of Management and Budget has exempted this rule from the requirements of section 3 of Executive Order 12291.

Pursuant to the requirements of the Regulatory Flexibility Act (Pub. L. 96-354, 94 Stat. 1164, 5 U.S.C. 601-612), the Administrator has determined that regulations establishing new tolerances or raising tolerance levels or establishing exemptions from tolerance requirements do not have a significant economic impact on a substantial number of small entities. A certification statement to this effect was published in the **Federal Register** of May 4, 1981 (46 FR 24950).

List of Subjects in 40 CFR Part 180

Administrative practice and procedure, Agricultural commodities, Pesticides and pests.

Dated: April 22, 1993.

Douglas D. Campt,

Director, Office of Pesticide Programs.

Therefore, it is proposed that chapter I of title 40 of the Code of Federal Regulations be amended as follows:

PART 180—[AMENDED]

1. In part 180:

a. The authority citation for part 180 continues to read as follows:

Authority: 21 U.S.C. 346a and 371.

b. In § 180.364, by amending paragraph (a) in the table therein by revising the entry "grain crops" and by adding new paragraph (d), to read as follows:

§ 180.364 Glyphosate; tolerance for residues.

(a) * * *

Commodity	Parts per million
* * * * *	
Grain crops (except wheat)	0.1 (N)
* * * * *	

* * * * *

(d) Tolerances are established for the residues of glyphosate [*N*-(phosphonomethyl)glycine) resulting from the application of the isopropylamine salt of glyphosate and/ or the monoammonium salt of glyphosate in or on the following raw agricultural commodities:

Commodity	Parts per million
Almond hulls	25.0
Tree nut crop group	1.0
Wheat, grain	5.0
Wheat, straw	85.0

PART 185—[AMENDED]

2. In part 185:

a. The authority citation for part 185 continues to read as follows:

Authority: 21 U.S.C. 348.

b. In § 185.3500, by adding new paragraph (a)(3), to read as follows:

§ 185.3500 Glyphosate.

(a) * * *

* * * * * *

(3) Glyphosate [*N*-(phosphonomethyl)glycine] resulting from the application of the isopropylamine salt of glyphosate and or the monoammonium salt of glyphosate for herbicidal purposes.

Food	Parts per million
Wheat milling fractions (excluding flour)	20.0

* * * * * *

BILLING CODE 6560-50-F

40 CFR Part 721

[OPPTS-50575C; FRL-4171-4]

Adipic Acid; Polymer with 1,4-Cyclohexanedimethanol, Dipropylene Glycol, Alkanepolyol, Substituted Alkanolamines, and Carbomonocyclic Dicarboxylic Acid; Proposed Revocation of a Significant New Use Rule

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA is proposing to revoke a significant new use rule (SNUR) promulgated under section 5(a)(2) of the Toxic Substances Control Act (TSCA) for a chemical substance based on receipt of new data. The data indicate that the substance will not present an unreasonable risk to health.

DATES: Written comments must be submitted to EPA by June 4, 1993.

ADDRESSES: Since some comments may contain confidential business information (CBI), all comments must be sent in triplicate to: TSCA Document Receipt Office (TS-790), Office of Pollution Prevention and Toxics, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460. Comments should include the docket control number. The docket control number for the chemical substance covered in this SNUR is OPPTS-50575C-266. Nonconfidential versions of comments on this proposed rule will be placed in the rulemaking record and will be available for public inspection. Unit IV. of this preamble contains additional information on submitting comments containing CBI.

FOR FURTHER INFORMATION CONTACT: Susan B. Hazen, Director, Environmental Assistance Division (TS-

VOL 58 ISS 85 MY 5 1993 UMI

799). Office of Pollution Prevention and Toxics, Environmental Protection Agency, Rm. E-543A, 401 M St., SW., Washington, DC 20460, Telephone: (202) 554-1404, TDD: (202) 554-0551.

SUPPLEMENTARY INFORMATION: In the **Federal Register** of September 28, 1990 (55 FR 39892), EPA issued a SNUR establishing significant new uses for adipic acid; polymer with 1,4-cyclohexanedimethanol, dipropylene glycol, alkanepolyol, substituted alkanolamines, and carbomonocyclic dicarboxylic acid. Because of additional data EPA has received for this substance, EPA is proposing to revoke this SNUR.

I. Rulemaking Record

The record for the rule which EPA is proposing to revoke was established at OPPTS-50575 (P-89-653). This record includes information considered by the Agency in developing this rule and includes the test data to which the Agency has responded with this proposal.

II. Background

EPA is proposing to revoke the significant new use and recordkeeping requirements for the following chemical substance under 40 CFR part 721 subpart E. In this unit, EPA provides a brief description for the substance, including its PMN number, chemical name (generic name if the specific name is claimed as CBI), CAS number (if assigned), basis for the revocation of the section 5(e) consent order for the substance, and the CFR citation removed in the regulatory text section of this rule. Further background information for the substance is contained in the rulemaking record referenced above in Unit II.

PMN Number P-89-653

Chemical name: (generic) Adipic acid; polymer with 1,4-cyclohexanedimethanol, dipropylene glycol, alkanepolyol, substituted alkanolamines, and carbomonocyclic dicarboxylic acid.
CAS number: Not available.
Effective date of revocation of section 5(e) consent order: April 30, 1992.
Basis for revocation of section 5(e) consent order: The order was revoked based on test data submitted under the terms of the consent order. Based on the Agency's analysis of the submitted data, EPA found for purposes of TSCA section 5 that this substance will not present an unreasonable risk of injury to human health or the environment and concludes that further regulation under section 5(e) is not warranted at this time.
Toxicity testing results: An in vivo mouse micronucleus study by intraperitoneal (IP) route showed that the chemical substance is not a chromosome mutagen. An Ames study showed that the chemical substance is nonmutagenic in bacteria. An acute oral toxicity study in rats showed an LD50 of >5 gm/kg. A 28-day repeated dose oral study in rats showed a no-adverse-effect-level (NOEL) of 300 mg/kg/day based on increased absolute and relative liver weights and an increased neutrophil count at 1 gm/kg/day, the highest dose tested.
CFR citation: 40 CFR 721.266.

III. Objectives and Rationale of Proposing Revocation of the Rule

During review of the PMN submitted for the chemical substance that is the subject of this proposed revocation, EPA concluded that regulation was warranted under section 5(e) of TSCA pending the development of information sufficient to make a reasoned evaluation of the environmental effects of the substance, and EPA identified the tests considered necessary to evaluate the risks of the substance. The basis for such findings is referenced in Unit II. of this preamble. Based on these findings, a section 5(e) consent order was negotiated with the PMN submitter and a SNUR was promulgated. EPA reviewed testing conducted by the PMN submitter for the substance and determined that the information available was sufficient to make a reasoned evaluation of the environmental effects of the substance. EPA concluded that, for the purposes of TSCA section 5, the substance will not present an unreasonable risk and subsequently revoked the section 5(e) consent order. The proposed revocation of SNUR provisions for this substance designated herein is consistent with the revocation of the section 5(e) order. In light of the above EPA is proposing a revocation of SNUR provisions for this chemical substance. When this revocation becomes final EPA will no longer require notice of any company's intent to manufacture, import, or process this substance.

IV. Comments Containing Confidential Business Information

Any person who submits comments claimed as confidential business information must mark the comments as "confidential," "trade secret," or other appropriate designation. Comments not claimed as confidential at the time of submission will be placed in the public file. Any comments marked as confidential will be treated in accordance with the procedures in 40 CFR part 2. Any party submitting comments claimed to be confidential must prepare and submit a public version of the comments that EPA can place in the public file.

V. Regulatory Flexibility Act

Under the Regulatory Flexibility Act (5 U.S.C. 605(b)), EPA has determined that this rule would not have a significant impact on a substantial number of small businesses. EPA has not determined whether parties affected by this rule would likely be small businesses. However, once the SNUR is revoked EPA will receive no SNUR notices for the substance. Therefore, EPA believes that the number of small businesses affected by this rule will not be substantial.

List of Subjects in 40 CFR Part 721

Chemicals, Environmental protection, Hazardous materials, Recordkeeping and reporting requirements, Significant new uses.

Dated: February 26, 1993.

Victor J. Kimm,

Acting Assistant Administrator for Prevention, Pesticides and Toxic Substances.

Therefore, it is proposed that 40 CFR part 721 be amended as follows:

PART 721—[AMENDED]

1. The authority citation for part 721 will continue to read as follows:

Authority: 15 U.S.C. 2604, 2607, and 2625(c).

§ 721.266 [Removed]

2. By removing § 721.266.

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 74

[MM Docket No. 93-106, FCC 93-183]

Experimental, Auxiliary, and Special Broadcast and Other Program Distribution Services; Instructional Television Fixed Service, Purpose and Permissible Service

AGENCY: Federal Communications Commission.

ACTION: Notice of proposed rule making.

SUMMARY: Section 74.931(a) of the Commission's Rules provides that every authorized channel must be used to transmit formal educational programming offered for credit to enrolled students of accredited schools. Section 74.931(e)(2) requires that an Instructional Television Fixed Service (ITFS) licensee leasing its excess capacity to a wireless cable operator provide at least 20 hours per channel per week of ITFS programming and reserve an additional 20 hours per channel per week. This Notice of Proposed Rule Making proposes to modify these rules so that ITFS licensees with a group of channels may "channel load" their minimum ITFS programming on only one or two of their channels. The Notice responds to requests for waiver of the minimum programming rules, filed in February 1992 by four ITFS permittees. On July 23, 1992, the Commission issued a Public Notice seeking comment on those requests, urging commenters and opponents specifically to address the question of whether the four requests would best be addressed in a waiver proceeding or in a rule making proceeding. Having examined the comments, the Commission determined that the proper avenue for addressing the concerns in the waiver requests is a rule making proceeding, initiated by this Notice.

DATES: Comments are due by June 14, 1993, and reply comments are due by July 29, 1993.

ADDRESSES: Federal Communications Commission, 1919 M Street, NW., Washington, DC 20554.

FOR FURTHER INFORMATION CONTACT: Anne Lucey, Mass Media Bureau, Video Services Division, Distribution Services Branch, (202) 632-6357.

SUPPLEMENTARY INFORMATION: This is the Commission's Notice of Proposed Rule Making in MM Docket No. 93-106, adopted on April 6, 1993 and released on April 26, 1993.

The complete text of this Notice of Proposed Rule Making is available for inspection and copying during normal business hours in the FCC Reference Center, room 239, at the Federal Communications Commission, 1919 M Street, NW., Washington, DC, 20554, and may also be purchased from the Commission's copy contractor, International Transcription Service, at (202) 857-3800, 2100 M Street, NW., suite 140, Washington, DC 20037.

Notice of Proposed Rule Making

1. On July 23, 1992, the Commission issued a Public Notice seeking comment on four petitions requesting waiver of our rules regarding the provision of formal educational and other Instructional Television Fixed Service (ITFS) programming on every licensed ITFS channel. The Public Notice urged commenters and opponents specifically to address the question of whether the four requests would best be addressed in a waiver proceeding or in a rule making proceeding. Having examined the comments [1] and the issue, we find, for reasons set forth below, that the proper avenue for addressing the fundamental regulatory concerns expressed in the waiver requests is a rule making proceeding. Accordingly, we initiate this Notice of Proposed Rule Making to solicit further comment on our minimum ITFS programming requirements.

Background

2. Since its inception in 1963, ITFS has had as its primary purpose the transmission of instructional material to accredited public and private schools, colleges and universities for the formal education of students. Educational Television, 39 F.C.C. 846, 852-53 (1963), recon. denied, 39 F.C.C. 873 (1964). We have not, in the nearly 30 years since the inauguration of the ITFS service, deviated from that primary purpose in fashioning ITFS rules, and amendments to those rules. What we have calibrated, however, is the point of equilibrium in attempting to balance the fixed educational purpose of ITFS with fluid factors, such as the ability of educators to finance the construction and operation of ITFS facilities, the utilization of the spectrum, and the growth of "wireless cable" [2] as a competitive spur to conventional cable operators. Indeed, upon initiation of ITFS in 1963, we were urged by manufacturers to expand eligibility so as to encourage a great many users to enter the service, thereby increasing the demand for equipment and lowering costs to educators. *Id.* at 854. Instead, we limited those who could apply for ITFS, noting that "[i]t would not be in the public interest to create a demand far in excess of the capacity of the band." *Id.* The service, however, was founded on the principle that most ITFS systems "will require more than one channel so that teaching material in several subjects may be transmitted simultaneously." *Id.* at 846.

3. Twenty years later, we acknowledged that there was far less demand for ITFS spectrum than originally anticipated: although the 28 ITFS channels were heavily utilized in several large metropolitan areas, other large metropolitan areas had no licensed ITFS stations. Instructional TV Fixed Service—Report and Order in Gen. Docket No. 80-112 (Report and Order), 94 F.C.C. 2d 1203, 1214 (1933) 48 FR 33873, July 26, 1983, *recon. denied*, 98 F.C.C. 2d 129 (1984) 49 FR 27147, July 2, 1984. In addition, there was little ITFS spectrum in use outside the large metropolitan areas. *Id.* But even as we conceded the underutilization of ITFS spectrum during the first 20 years, we foresaw an increase in demand for channels by institutions of higher education for the delivery of graduate level training to the workplaces of engineers, scientists, and other professionals. *Id.* at 1220. Conversely, the prognostication for ITFS use by elementary, junior high and high school systems, as well as for delivery of health services information, was less optimistic. *Id.* Thus, while reaffirming our belief in the concept of spectrum reserved for educational service, we reallocated eight of the 28 ITFS channels, the E- and F-channel groups, to the burgeoning wireless cable sector. *Id.* at 1247. At the same time, in concert with our principle of balancing the educational purpose of ITFS, we attempted to bolster ITFS licensees by permitting them to use their excess capacity for non-ITFS purposes in order to generate revenues for their facilities. *Id.* at 1250. Although we initially rejected specific time limitations on non-ITFS use of licensee excess channel capacity, we expected licensees to "utilize each of their ITFS main channels substantially for legitimate ITFS use." *Id.* at 1251.

4. In adopting the present quantitative minimum of weekly educational programming on each ITFS channel for those ITFS licensees leasing excess capacity, we emphasized that this time limitation was an "elementary necessity to guarantee the intended use of ITFS channels in the face of the revenue-generating uses which will also be permitted." Instructional TV Fixed Service—Second Report and Order in MM Docket No. 83-523 (Second Report and Order), 101 F.C.C. 2d 49, 85 (1985) 50 FR 26736, June 26, 1985. In lieu of a strict reservation scheme, we established a minimum actual use of 20 hours of educational programming per channel per week, with an equal, readily recapturable amount to be

[1] a list of the parties filing comments and replies is provided below, with abbreviated descriptions of associations and joint parties.

[2] "Wireless cable" is a term used to describe Multipoint Distribution Service (MDS) and Multichannel Multipoint Distribution Service (MMDS), which utilize over-the-air microwave radio channels rather than coaxial or fiber optic cable to deliver video material to subscribers. There are 12 or 13 channels available to wireless cable for full-time use: 11 MMDS channels, E1-E4, F1-F4, and H1-H3; two single-channel MDS channels available in 50 cities; and one single-channel MDS channel in the rest of the country. In addition, wireless cable has access to the 20 ITFS channels, A1-A4, B1-B4, C1-C4, D1-D4, and G1-G4, on a leased, part-time basis. We do not intend to suggest by our use of the term "wireless cable" that it constitutes "cable" service for statutory or regulatory purposes.

5
19 93
UMI

"preserved" for use at a later time. This recapture element harmonized the primary purpose of ITFS, presentation of educational programming for instructional use, with the needs of new ITFS entities, unable to commence operations with a 40-hour schedule, and the needs of wireless cable lessees, able to provide service where there would otherwise be an "unnecessary waste of valuable airtime." *Id.* However, we specifically rejected the practice of day loading, the shifting of all requisite programming to one day of the week, and channel loading, the shifting of all requisite programming to one channel. Instead, we required that a minimum of 20 hours of actual use per channel per week of ITFS programming be scheduled at least three hours each weekday, between 8 a.m. and 10 p.m., and five additional hours, Monday through Saturday, between 8 a.m. and 10 p.m. An additional 20 hours of ready recapture time was to be scheduled on each channel with the same scheduling restrictions. Finally, we noted that prospective licensees which could not meet the established standards but wished to lease should consider the feasibility of merging or sharing facilities with others whose needs were similarly slight. *Id.* at 88.

5. We ratified our commitment to minimum programming requirements for ITFS licensees leasing excess capacity in Report and Order (Wireless Cable Order), 5 F.C.C. Rcd 6410, 6416 (1990) 55 FR 46006, October 31, 1990, underscoring that excess capacity usage is "ancillary" and that the ITFS spectrum was allotted for transmission of educational materials, not as a source of financial support for educational institutions. Yet, we relaxed our minimum actual use requirement to 12 hours per channel per week for the first two years of an ITFS station operation in hopes of stimulating ITFS expansion and facilitating the initiation of new wireless cable systems. *Id.* at 6416.

6. Upon reconsideration of our leasing restrictions, we agreed that Section 74.932, which limits eligibility to accredited local educators, and Section 74.931(e), which requires 20 hours per channel per week of actual educational programming for those licensees leasing excess capacity, were sufficient to insure that ITFS licenses were not secured merely to realize financial gain from wireless cable operators. Wireless Cable Order Recon., 6 F.C.C. Rcd 6764, 6773–74 (1991) 56 FR 57596, November 13, 1991.[3] Consequently, we revised the rules once again to strike "the appropriate balance between our interest in promoting alternative uses of excess ITFS spectrum, on the one hand, and our interest in ensuring that ITFS entities retain the right to fully exploit their ITFS channels for legitimate educational purposes, on the other." *Id.* at 6774. With regard to the 20 hours per channel per week of actual use and 20 hours per channel per week of recapture time, we removed the time-of-day and hours-per-day restrictions permitting ITFS licensees to fulfill the per channel minimum required programming at any time of the day and on any day of the week. We also rendered the recapturability by the ITFS licensee subject to one year's written notice to the wireless cable lessee. Moreover, we acknowledged the permissibility of using channel mapping technology, which, we believed, could meet both our leasing restrictions and the lessee's programming need for apparent full-time use of the same channels. Channel mapping technology allows an ITFS licensee with a staggered schedule to transmit ITFS programming over each of the four channels and a student-viewer to receive that programming on what appears to be uninterrupted service on as few as one channel. Wireless cable lessees are also able to channel map their commercial programming over the channels so that their subscribers receive what appears to be uninterrupted service on as many as three channels. In sanctioning the utilization of channel mapping, we described an arrangement in which "[t]he leasing is scheduled on different channels in a staggered pattern," so that "[t]he subscriber's channel selection is unchanged and the subscriber is unaware that the channel is automatically switched." *Id.* We did not sanction, however, the diversion of all ITFS programming to one channel only, nor did we endorse any specific amount of channel time that could be mapped to another channel. Moreover, we cautioned ITFS applicants that they "should not request more frequencies than necessary for their educational needs." *Id.* at 6774 n.48.

7. Most recently, in order to create a "shared and symbiotic use of spectrum," we permitted wireless cable entities to be licensed on a maximum of eight of the remaining 20 ITFS channels in communities where at least eight other ITFS channels remain available in that area for future ITFS use.[4] Second Report and Order in Gen. Docket 90–54, 6 F.C.C. Rcd 6792, 6802 (1991) 56 FR 57808, November 14, 1991. We provided ITFS entities with the right to demand access to those wireless cable facilities licensed on the ITFS frequencies. Indeed, we allowed ITFS operation on all ITFS frequencies, if the demand for ITFS warranted the use of all channels,[5] while limiting access to a maximum of 40 hours per channel per week, with the ITFS operator entitled to 20 of those hours during specific periods of the day.[6] This access limitation, we noted, rendered "the outer limits of a wireless cable operator's exposure to liability measurable, so that it can make a reasonable judgment as to whether a wireless cable system dependent on ITFS channels would be viable." *Id.* at 6803.

8. In February 1992, four ITFS permittees, North American Catholic Educational Programming Foundation, Inc., Spokane Community College, Spokane Falls Community College, and Gonzaga University Telecommunications Association (the permittees), each submitted a revised programming schedule and concomitant request for waiver of §§ 74.931 (a) and (e)(2) of the Commission's Rules. Section 74.931(a) provides that every authorized channel "must be used to transmit formal educational programming offered for credit to enrolled students of accredited schools." Section 74.931(e)(2) requires that an ITFS licensee leasing its excess capacity to a wireless cable operator provide at least 20 hours per channel per week of ITFS programming and reserve an additional 20 hours per channel per week, subject to one year's advance written notification, for such programming. The four permittees, each authorized to operate four channels in Spokane, Washington,[7] seek waiver of these rules so that each may transmit a

[3] But we cautioned that we would strictly enforce the existing eligibility rules and, if the need arises, would consider restricting ITFS eligibility. *Id.* at 6774 n.47.

[4] For the various restrictions governing the wireless cable entities' use of ITFS frequencies, see Second Report and Order, 6 F.C.C. Rcd at Appendix C.

[5] While no minimum amount of programming is required of an ITFS entity seeking access to channels licensed to a wireless cable operator, the ITFS entity must utilize at least 20 hours per week on each channel before requesting another. Second Report and Order, 6 F.C.C. Rcd at 6904.

[6] An ITFS entity has an unqualified right to transmit its programming for 15 of those 20 hours between 8 a.m. and 10 p.m. Monday through Friday, excluding holidays and school vacations, and the remaining five hours between 8 a.m. and 10 p.m. Monday through Saturday. *Id.*

[7] The permittees' authorizations are as follows: Gonzaga University Telecommunications Association, B-group channels on WLX–816; North American Catholic Educational Programming Foundation, Inc., C-group channels on WLX–276; Spokane Community College, D-group channels on WLX–813; and Spokane Falls Community College, G-group channels on WLX–514.

minimum of 80 hours of educational programming on only one of its channels. This schedule would allow the permittees to "channel load" their minimum ITFS program requirements of 20 hours per channel per week onto one channel so that each could lease its remaining three channels on a 24-hour basis to Skyline Entertainment Network (Spokane) Limited Partnership, a wireless cable operator and the permittees' excess capacity lessee. As for the demonstration of need for four channels, a prerequisite for an ITFS license provided in Section 74.902(d), the permittees assert that such a need is "self-evident": without four channels, a wireless cable operator would be unwilling to construct the ITFS facility.

9. As we have noted in the past, the function of a request for waiver is not to change the general standard, a matter in which the opportunity for general comment is a prerequisite under Section 553(a) of the Administrative Procedure Act, but to justify an *ad hoc* exception to that standard on the ground that it works against the public interest in the particular case. *VHF Drop-In Proceeding*, 90 F.C.C. 2d 160, 166 (1982), *aff'd sub nom. Springfield Television of Utah, Inc.* v. *FCC*, 710 F.2d 620 (10th Cir. 1983). However, a general rule, deemed valid because its overall objectives are in the public interest, may not be in the public interest if extended to an applicant which proposes a new service that will not undermine the policy served by the rule. *WAIT Radio* v. *FCC*, 418 F.2d 1153, 1157 (1969). Here, we find that the permittees, authorized to operate ITFS stations and intending to lease their excess capacity to a wireless cable operator, features possessed by most ITFS licensees, have failed to demonstrate the "special circumstances" generally required to trigger the "safety valve" of a waiver proceeding. *Id.* Nevertheless, we are persuaded that review of our underlying rules is warranted. To that end, we initiate this rule making, on an expedited basis, in order to address the issues raised by the permittees in their waiver requests.

Proposed Rules Changes

Comments

10. Although the scope of the Public Notice was limited to the question of whether the issue of channel loading should be addressed in a waiver or rule making proceeding, most of the commenters, in anticipation of a Notice, argued the advantages and disadvantages of modifying Sections 74.931 (a) and (e)(2). We include some of the comments here in order to lay the foundation for an informed debate regarding our proposed rules changes.[8]

11. Those favoring the use of channel loading argue, as did the four permittees in their waiver requests, that our approval of the use of channel mapping technology makes our approval of channel loading the "next logical step." They contend that since the licensee of a four-channel ITFS station can stagger its schedule to implement channel mapping so that only one of its channels is employed at a given time to transmit ITFS programming, and where only one of its channels is ever employed for receipt of that programming, the Commission should "remove the fiction of channel mapping" and simply allow licensees to transmit all required programming on one channel for receipt on that channel. This would enable wireless cable operators to lease three channels on a full-time basis, necessary for its commercial programming, without the expenses affiliated with channel mapping. The cost of the channel mapping switch alone, according to WCA, is $115,000, in addition to $100,000 for time-base correction equipment, $700 per month for increased space, power and environmental controls associated with the switching equipment, and $150 for each set-top converter to be installed on every subscriber's television set.[9] A system with 10,000 subscribers, WCA estimates, could spend at least $1 million to implement channel mapping alone, funds that could be better spent, several wireless cable operators note, developing additional systems, increasing the support for educational activities, and funding the addition of new subscribers. While several wireless cable operators endorse retention of the licensee's right to simultaneously program all of its licensed channels as a "safeguard" designed to ensure that an educators' future needs are accommodated in a channel loading scheme, WCA rejects such a proposal if it is mandated by the Commission. Although WCA supports ready recapture rights to all channels if negotiated for by the ITFS licensee and the wireless cable operator, it asserts that required preservation of all channels would continue to necessitate the use of channel mapping technology, in the event the licensee were to exercise its rights.

12. Even those educators opposed to channel mapping agree that the technology is beneficial because it isolates educational from commercial programming, thereby avoiding situations where students accidentally view adult commercial programming before or after a scheduled educational program. However, the major disadvantage to channel mapping, NIA notes, is that it precludes the simultaneous use of ITFS channels for instructional use, "often relegating the educational programs to one or two channels." And, channel loading, according to NIA, will ultimately lead to the proposal that three of the four ITFS channels in each of the five channel groups be directly licensed to wireless cable operators. This, in turn, would effectively terminate the "healthy and robust partnership" which derives from balancing the protection of traditional ITFS use and the growth of the wireless cable industry. In contrast, a group of commenters, the ITFS Parties, contends that although they are not "comfortable" with the Commission's approval of the use of channel mapping, they "see no virtue in requiring the reality of the use of ITFS channels to be different than the appearance of that use." However, the ITFS Parties caution, channel loading must be counterbalanced with safeguards in order to prevent the *de facto* reallocation of three channels of every ITFS channel group. One such safeguard suggested by the ITFS Parties is Commission review of any ITFS lease permitting channel loading to ensure ready recapture on each of the three remaining channels. Second, the ITFS Parties urge the Commission to require a heightened demonstration of "*bona fide* educational intent" to ensure that the ITFS licensee will actually provide an educational service that "will be used by local institutions and that its future use of the channels will be dictated by educational goals, not an intent to maximize lease revenues."

13. The panacea to the Commission's difficulties in allotting ITFS spectrum, according to many commenters, educators as well as wireless cable operators, is digital compression. Implementation of this technology may soon make it possible for the licensee of a four-channel ITFS station to simultaneously transmit 40 or more compressed video programs over the station's 24 MHz of spectrum. But WCA and NIA diverge as to how to modify §§ 74.931(a) and (e)(2) to address digital compression. WCA suggests imposing

[8] Comments submitted by parties in response to the *Public Notice* will be maintained as part of the record in this proceeding.

[9] In addition to the substantial costs associated with channel mapping, there are, according to WCA, several other drawbacks to the technology: It is impossible for viewers to view one channel while recording another on a video cassette recorder, to automatically tape consecutive programs on separate channels, or to utilize the "picture-in-picture" features of newer television and video cassette recorders without the aid of additional expensive equipment.

minimum formal educational programming and other ITFS programming requirements on a "per station" rather than on a "per channel" basis, thereby encompassing the current technology of channel mapping, the implementation of channel loading, as well as that of digital compression, which may yield as many as 10 program paths per channel, and of digital advanced television, which may yield only one or two very high quality advanced signals.[10] NIA, conversely, views digital compression as a guarantor of the availability of 20 program paths, or four channels in five channel groups, to be utilized substantially for ITFS programming.

Discussion

14. At the outset, we must address the confusion that our recognition of channel mapping technology apparently has engendered. We did not, in sanctioning the use of channel mapping, intend to revise or eliminate the requirements of our ITFS rules governing minimum instructional use, § 74.931, or the demonstration of need for the number of channels requested, § 74.902. Rather, we believed that channel mapping might permit a less disruptive scheduling of instructional and commercial uses of ITFS channels to the benefit of both educational institutions and wireless cable operators. We did not envision that channel mapping technology would be utilized to an extreme by diverting all instructional programming to only one channel. However, we now believe that a relaxation of the per channel minimum use requirements may be appropriate in order to permit a more flexible leasing scheme that will benefit and nurture ITFS operations during the transition to an era of channel compression technology.

15. Specifically, we propose to permit ITFS applicants to seek up to four channels where they propose a minimum average of 20 hours of use per channel per week, regardless of the distribution of that use via channel mapping. Thus, an ITFS applicant could request four channels so long as it proposes a minimum of 80 hours of instructional use, even if all 80 hours are diverted to only one of the channels. Under such a proposal, there is no reason to prohibit channel loading, as opposed to channel mapping, as the means for freeing up channels for leasing to wireless cable operators. Indeed, if we allow the diversion of all instructional programming to one channel by the use of channel mapping technology, it is senseless to prohibit the same result by the use of less costly channel loading. The policy debate at issue here is not the mechanism by which ITFS channel time is made available to wireless cable operators, but how we can preserve the primary purpose of ITFS in light of our proposals here. We seek comment on these proposals, including the benefits and detriments which they may bring. We recognize that the relaxation we offer here carries certain risks and we expressly invite comment on those dangers. We are particularly interested in comments addressing the issue of whether and in what manner this proposal might constitute a *de facto* reallocation of the ITFS spectrum, as some commenters fear. At least preliminarily, we believe that the current needs of ITFS licensees for funding, of wireless cable operators for channel capacity, and of the cable subscribing public for viable multichannel alternatives all favor the proposal we have outlined. We also believe, however, that the period in which this approach may best serve these needs is limited in duration and that the proper balance of licensing criteria in the ITFS service will be deeply affected by the arrival of digital compression technology.

16. Accordingly, we propose to authorize the more flexible ITFS licensing described above on a temporary basis, for between three and five years, until digital compression technology is a viable alternative, technologically and economically. We believe this length of time is appropriate in view of a report cited by WCA, which heralds the imminent arrival of digital compression: Within two years wireless cable operators will be able to purchase digital video compression decoders and to install these within subscribers' households.[11] Indeed, in July 1992, we granted for the first time experimental licenses to two wireless cable operations, authorizing the use of the 2.5 GHz band for the testing of digital transmissions.[12] We seek comment regarding the duration of the temporary period, emphasizing that the terminus should be the anticipated data when digital compression can be practically implemented. At the expiration of the temporary period, we shall examine the state of digital technology. If use of digital compression is not yet feasible, we may extend that period, but if so, we shall at that time adapt our purpose and permissible rules in light of that technology.[13]

17. In proposing this interim measure, we attempt to meet the wireless cable operators' asserted demand for additional spectrum without reallocating the ITFS spectrum. We acknowledge the role the wireless cable industry has played in reinvigorating the ITFS service, [14] and we believe that channel loading will provide the incentive for wireless cable operators which may have been reluctant to invest in a "partnership" with an educator yielding no full-time access to ITFS channels. At the same time, we stress that this interim measure is permissive only, and not mandatory. Thus, those educators desiring to transmit instructional programming simultaneously on every channel may continue to do so, leasing their excess capacity pursuant to the modified minimum programming requirements. And, mindful of our long-standing commitment to the primary purpose of ITFS, we take note of the potential for abuse were we to permit channel loading without any offsetting restrictions upon its use. Therefore, we seek comment on whether and what additional means of safeguarding the primary purpose of ITFS in the event we permit the use of channel loading.

18. First, should the use of channel loading be limited so as to free up less than three full-time channels for commercial programming? Second, should a specified number of the required programming hours be scheduled during specified times of the day, such as between the hours of 8 a.m. and 10 p.m., Monday through Saturday? Third, should the ready recapture of all four channels be required so that an ITFS licensee may simultaneously transmit its programming on all channels if the need arises? Or ready recapture of only three channels? Or two? Or one? Fourth, should a comparative advantage in mutually exclusive cases be awarded to those applicants refraining from the use of channel loading or channel mapping? If so, what number of merit points should such an applicant be entitled to? Finally, we seek comment on whether there should be, as suggested by the ITFS Parties, a heightened demonstration of *bona fide* educational intent in order to discourage applicants seeking a financial bonanza. If so, what should this "heightened demonstration" consist of? As to technical safeguards, we inquire whether those licensees utilizing channel loading should be given ITFS protection for their receive sites only with regard to the channel or channels being utilized for ITFS programming while protection for the remaining channels would be limited to the 15-mile protection of § 21.902(d). Commenters are urged to suggest additional changes which would promote our objectives.

19. Finally, in the event we modify § 74.931 (a) and (e)(2), we may have to reconcile § 74.902(d) with that action. That section provides that a licensee "is limited to the assignment of no more than four channels for use in a single area of operation" and that the number of channels authorized to an applicant "will be based on the demonstration of need for the number of channels requested." Several commenters favoring channel loading, suggest that because § 74.902(d) was not undermined by channel mapping, it is, therefore, not undermined by channel loading. As for demonstration of need for the channels requested, the permittees seeking waiver of our rules assert, as noted above, that the need for four channels is "self-evident." They insist that an authorization of fewer than four channels renders an ITFS licensee undesirable to wireless cable operator willing to finance the construction and operation of a station in exchange for an excess capacity lease agreement. Moreover, these commenters contend, the educator-licensee's ready recapture rights of the remaining channels for simultaneous transmission of ITFS programming comports with the required demonstration of need of § 74.902(d). We seek additional comments on these issues.

Procedural Matters

20. Pursuant to applicable procedures set forth in §§ 1.415 and 1.419 of the Commission's Rules, 47 CFR 1.415 and 1.419, interested parties may file comments on or before June 14, 1993, and reply comments on or before July 29, 1993. All relevant and timely comments will be considered by the Commission before taking further action in this proceeding. To file formally in this proceeding, participants must file an original and four copies of all comments, reply comments and supporting comments. If participants want each Commissioner to receive a personal copy of their comments, an original and nine copies must be filed. Comments and reply comments should be sent to Office of the Secretary, Federal Communications Commission, Washington, DC 20554.

21. For further information concerning this Notice of Proposed Rule Making, contact Anne Lucey (202–632–6357), Mass Media Bureau, Video Services Division, Distribution Services Branch, Federal Communications Commission, Washington, DC 20554.

BILLING CODE 6712–01–M

[10] The comments of the four permittees which originally sought waiver of our purpose and permissible service rules propose that we amend Section 74.931(e) to prescribe "an average" of 20 hours per channel per week, similar to that required in § 74.913(b)(4). That section provides for the awarding of one comparative point to applicants proposing a "weekly schedule of 21 or more average hours per channel per week," and two points for "41 or more average hours per channel per week of formal educational programming." As to § 74.931(a), the permittees seem to suggest that the provisions of Section 74.931(e) would be exceptions to the requisite formal programming on each channel.

[11] Vivian Associates, Inc., Wireless Cable and Compressed Video at 4 (July 21, 1992).

[12] Cross Country Telecommunications, Inc., FCC File No. 3233–EX–PL–92, and People's Choice TV of Tucson, FCC File No. 3234–EX–PL–92, were granted those authorizations.

[13] We decline, therefore, to now modify §§ 74.931(a) and (e) in anticipation of digital compression technology, as WCA would have us do. Moreover, at the expiration of the temporary period, we may also be better able to address the impact of high definition television, or HDTV, on the ITFS service.

[14] As we noted in a recent Notice of Proposed Rule Making, in Amendment of part 74 of the Commission's Rule with Regard to the Instructional Television Fixed Service in MM Docket No. 93–24, 8 F.C.C. Rcd 1275 (1993) 58 FR 12011, March 2, 1993, new or major change ITFS applications were filed in fiscal year 1991 alone. The following year, the number of applications doubled, with more than 90 percent of them containing excess capacity lease agreements with wireless cable operators which supply funding for the construction and operation of the ITFS facilities.

Notices

Federal Register
Vol. 58, No. 85
Wednesday, May 5, 1993

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF AGRICULTURE

Forms Under Review by Office of Management and Budget

April 30, 1993.

The Department of Agriculture has submitted to OMB for review the following proposal for the collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. chapter 35) since the last list was published. This list is grouped into new proposals, revisions, extension, or reinstatements. Each entry contains the following information:

(1) Agency proposing the information collection;
(2) Title of the information collection;
(3) Form number(s), if applicable;
(4) How often the information is requested;
(5) Who will be required or asked to report;
(6) An estimate of the number of responses;
(7) An estimate of the total number of hours needed to provide the information;
(8) Name and telephone number of the agency contact person.

Questions about the items in the listing should be directed to the agency person named at the end of each entry. Copies of the proposed forms and supporting documents may be obtained from: Department Clearance Officer, USDA, OIRM, room 404–W Admin. Bldg., Washington, DC 20250, (202) 690–2118.

Agricultural Marketing Service

Meeting for National Organic Standards Board (NOSB)

AGENCY: Agricultural Marketing Service, USDA.

ACTION: Notice.

SUMMARY: In accordance with the Federal Advisory Committee Act (Pub. L. No. 92–463), as amended, the Agricultural Marketing Service (AMS) announces a forthcoming meeting of the NOSB.

DATES AND TIME: May 16–21, 1993, 8 a.m. to 7 p.m.

ADDRESSES: Rodale Research Institute, 611 Siegfriedale Road, Kutztown, Pennsylvania. All meetings of the NOSB for the week will be held at that address.

FOR FURTHER INFORMATION CONTACT: Dr. Harold S. Ricker, Staff Director, NOSB, room 4006 South Building, USDA, AMS, Transportation and Marketing Division, P.O. Box 96456, Washington, DC 20090–6456. Phone 202/720–2704.

SUPPLEMENTARY INFORMATION: Section 2119 (7 U.S.C. 6518), of the Food, Agriculture, Conservation, and Trade Act of 1990 (FACT Act), as amended (7 U.S.C. 6501 *et seq.*), requires establishment of a NOSB. The purpose of the Board is to assist in the development of standards for substances to be used in organic production and to advise the Secretary on any other aspects of the implementation of Title XXI of the Fact Act. The NOSB met for the first time in Washington, DC, in March 1992 and formed six committees to work on various aspects of the program. The committees are: Crops Standards; Processing, Labeling and Packaging; Livestock Standards; Accreditation; National Materials List; and International Issues.

Purpose and Agenda

The Sunday morning meeting of NOSB will be a full board meeting. The Sunday afternoon session will be given over to public comment. The Board will hold plenary sessions all day on Monday, May 17, 1993, and Tuesday, May 18, 1993, to hear and discuss reports from the six working committees. Wednesday and Thursday mornings, (May 19–20, 1993) will be devoted to Committee meetings. The full board will reconvene Thursday afternoon and Friday morning, with adjournment scheduled for noon on Friday.

Topics to be covered include position papers on product ingredients and labeling developed by the Processing Committee; organic farm plan, residue testing, irrigation water quality, planting stock policies, and requirements for split operations developed by the Crops Committee; a comprehensive livestock production practices position paper including health care standards, husbandry, transportation, and recordkeeping and audit trail developed by the Livestock Committee; and discussion of materials being developed by the various committees for consideration for the National List. In addition, the Board will develop plans for its operations in light of budgetary limitations.

A final agenda is available. Persons requesting copies should contact Ms. Faith Ashton at the above address or phone number.

Type of Meeting

All meetings will be open to the public. Individuals and organizations wishing to provide written comments on these issues or to express public comment on any organic issues should forward the request to Dr. Harold S. Ricker at the above address or FAXED to 202/690–0338 by May 12, 1993, in order to be scheduled. The NOSB has scheduled time for public input on Sunday, May 16, 1993, beginning at 1 p.m. and continuing until 5 p.m. While people may sign up to speak at the door, advance scheduling assures an opportunity in the time allowed and helps the NOSB plan its activities. Each individual or organization will be allocated 10 minutes for presenting orally the key issues of concern, and should provide copies of written material elaborating on those issues for the Committees.

During Committee presentations to the Board on Monday, May 17, 1993, and Tuesday, May 18, 1993, discussion will be limited to Board and Staff members only, but time has been allocated immediately after each session for receiving public comments on the

issues relevant to the previous discussion.

Dated: April 29, 1993.

L.P. Massaro,
Acting Administrator.
[FR Doc. 93–10597 Filed 5–4–93; 8:45 am]
BILLING CODE 3410–02–P

Forest Service

Newspapers Used for Publication of Legal Notice of Appealable Decisions for Pacific Northwest Region, OR and WA

AGENCY: Forest Service, USDA.

ACTION: Notice.

SUMMARY: This notice lists the newspapers that will be used by all ranger districts, forests, and the Regional Office of the Pacific Northwest Region to publish legal notice of all decisions subject to appeal under 36 CFR part 217. This action is necessary to implement the Secretary of Agriculture's final rule amending the Forest Service administrative appeal procedures, which was signed on December 5, 1990 and was published in the **Federal Register** on February 6, 1991 (56 FR 4914). The intended effect of this action is to inform interested members of the public which newspapers will be used to publish legal notices of decisions, thereby allowing them to receive constructive notice of a decision, to provide clear evidence of timely notice, and to achieve consistency in administering the appeals process.

DATES: Publication of legal notices in the listed newspapers will begin with decisions subject to appeal that are made on or after April 30, 1993. The list of newspapers will remain in effect until October 1993 when another notice will be published in the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: James L. Schuler, Regional Appeals Coordinator, Pacific Northwest Region, P.O. Box 3623, Portland, Oregon 97208–3628, phone: (503) 326–2322.

SUPPLEMENTARY INFORMATION: On December 5, 1990 the Deputy Secretary of Agriculture signed a final rule amending the administrative appeal procedures 36 CFR part 217 of the Forest Service to require publication of legal notice in a newspaper of general circulation of all decisions subject to appeal. This newspaper publication of notices of decisions is in addition to direct notice to those who have requested notice in writing and to those known to be interested and affected by a specific decision.

The legal notice is to identify: the decision by title and subject matter; the date of the decision; the name and title of the official making the decision; and how to obtain copies of the decision. In addition, the notice is to state the date the appeal period begins is the day following publication of the notice.

In addition to the principal newspaper listed for each unit, some forest supervisors and district rangers have listed newspapers providing additional notice of their decisions. The timeframe for appeal shall be based on the date of publication of the notice in the first (principal) newspaper listed for each unit.

The newspapers to be used are as follows:

BILLING CODE 3410–11–M

Exempt Decision for Indianberry Salvage From Appeal, Umatilla National Forest, OR

AGENCY: Forest Service, USDA.

ACTION: Notice to Exempt decision from administrative appeal.

SUMMARY: This is a notification that the decision to implement the Indianberry Salvage, located on the North Fork John Day Ranger District, Umatilla National Forest is exempted from appeal. This is in conformance with provisions of 36 CFR 217.4(a)(11) as published in the **Federal Register** on January 23, 1989 (54 FR 3342).

EFFECTIVE DATE: May 5, 1993.

FOR FURTHER INFORMATION CONTACT: Jeff Blackwood, Forest Supervisor, Umatilla National Forest, 2517 SW Hailey Avenue, Pendleton, Oregon 97801; or Craig Smith-Dixon, District Ranger, North Fork John Day Ranger District, P.O. Box 158, Ukiah, Oregon 97880, phone (503) 276–3811.

SUPPLEMENTARY INFORMATION: In the fall of 1990 the Indianberry Planning Area was identified for analysis due to the western spruce budworm and bark beetle infestations which were resulting in tree and stand mortality and reduced big game cover. Fuel loadings have also increased due to tree mortality. This has created a hazardous situation that could result in moderate to high intensity wildfires. In the summer of 1991, a district interdisciplinary team (IDT) surveyed the Indianberry Planning Area to assess what could be salvaged, and the effects of that on wildlife habitat, riparian, and in stream habitat.

The IDT identified the need to salvage dead trees while they were still merchantable. The IDT also identified the desirability to complete the salvage quickly so that establishment of new forest stands could take place promptly.

Public scoping began early in 1992, with individuals, groups, state and Federal agencies, and the Confederated Tribes of the Umatilla and Warm

VOL 58 ISS 85 MY 5 1993 UMI

Springs Indian Reservations. The analysis of the proposed action continued throughout the year. It was determined that this project was not a major federal action, and would not significantly affect the quality of the human environment. Therefore, an environmental impact statement was not required.

The proposed action will salvage harvest 6.3 million board feet on approximately 867 acres. Only dead or dying trees will be harvested. No specified road construction would be required. There will be temporary road construction of approximately 4.0 miles and reconstruction of approximately 9.8 miles of existing system road. The harvest method will be tractor and skyline based. Reforestation with seral species will occur where post harvest surveys indicate. All main skid trails, temporary roads, and landings will be "sub-soiled" to alleviate impacts to future growth and productivity.

The proposed action is not consistent with the Umatilla Land and Resource Management Plan Standards and Guidelines for elk habitat effectiveness and big game cover in Big Game Winter Range (C3) and Wildlife Habitat (C4) management areas. The proposed action is not consistent due to the large scale western spruce budworm defoliation and past harvest activities. The Forest Supervisor has decided to issue a site-specific, non-significant Forest Plan amendment for the Indianberry Salvage Project which will not alter the desired future condition in these management areas. In addition the Forest Plan will be amended to drop the existing Dedicated Old Growth management area (C1) and incorporate a new area into the dedicated old growth system. The existing Dedicated Old Growth area does not meet the Forest Plan requirements because it contains old harvest units over most of the area and lacks sufficient habitat for species dependent on mature and old growth characteristics.

Biological evaluations have been completed for all plant, wildlife, and fish Proposed, Endangered, Threatened and Sensitive (PETS) species within the project area. There will be no direct effect on any PETS species or their critical habitat. There will be moderate risk of cumulative effects on wolverine habitat as a result of this project. Cultural resource surveys indicate that this project will have no effect on native American religious sites, archeological sites, or historic properties or areas.

The Indianberry Salvage and accompanying work are designed to accomplish the objectives as quickly as possible and minimize the amount of salvage volume lost and resource damage. Based upon the environmental analysis and the need to expedite this salvage, I have determined that good cause exist to exempt this decision from administrative appeal (36 CFR part 217). Under this regulation, the following are exempt from appeal:

Decisions related to rehabilitation of National Forest System lands and recovery of forest resources resulting from natural disasters or other natural phenomena, such as wildfires * * * when the Regional Forester * * * determines and gives notice in the **Federal Register** that good cause exists to exempt such decisions from review under this part.

After publication of this notice in the **Federal Register**, the Decision Notice/Finding of No Significant Impact for the Indianberry Salvage may be signed by the Umatilla National Forest Supervisor. This project will not be subject to review under 36 CFR part 217.

Dated: April 29, 1993.

Robert T. Jacobs,

Deputy Regional Forester.

BILLING CODE 3410-11-M

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Public Meeting on Final Management Plan for the Delaware National Estuarine Research Reserve

AGENCY: Sanctuaries and Reserve Division, Office of Ocean and Coastal Resource Management, National Ocean Service, National Oceanic and Atmospheric Administration, Commerce.

ACTION: Public meeting notice.

SUMMARY: Notice is hereby given that the Delaware Department of Natural Resources and Environmental Control will hold a public meeting to present and discuss the proposed final management plan for the Delaware National Estuarine Research Reserve. The purpose of the meeting is to receive the views of interested parties on the final management plan.

As part of the procedures leading to the designation of the reserve, the State of Delaware must submit the proposed final management plan to NOAA for its review and approval. Copies of the plan will be made available for review before the meeting by Monday, May 10, 1993 at the following libraries; Dover Public Library in Dover, DE; Milford Public Library in Milford, DE; Smyrna Public Library in Smyrna, DE; Appoquinimick Public Library in Middletown, DE; Corbit-Calloway Public Library in Odessa, DE; and the New Castle Public Library in New Castle, DE.

The public meeting will take place at 7 p.m. on Monday, May 24, 1993 at the Fraternal Order of Police Kitts Hummock Lodge on Kitts Hummock Road, County Road 68, 1¼ miles east of Route 9 and located on the south side of County Road 68, in Dover, Delaware.

FOR FURTHER INFORMATION CONTACT: Cheryl A. Graham, Sanctuaries and Reserves Division, Office of Ocean and Coastal Resource Management, NOS/NOAA, 1825 Connecticut Avenue, NW., Washington, DC 20235 (202) 606-4122.

(Federal Domestic Assistance Catalog Number 11.420 (Coastal Zone Management) Estuarine Sanctuaries)

Dated: April 28, 1993.

W. Stanley Wilson,

Assistant Administrator for Ocean Services and Coastal Zone Management.

BILLING CODE 3510-08-M

Meetings; Florida Keys National Marine Sanctuary Advisory Council

AGENCY: Sanctuaries and Reserves Division (SRD), Office of Ocean and Coastal Resource Management (OCRM), National Ocean Service (NOS), National Oceanic and Atmospheric Administration (NOAA), Department of Commerce.

ACTION: Florida Keys National Marine Sanctuary Advisory Council notice of open meeting.

SUMMARY: The Council was established in December 1991 to advise and assist the Secretary of Commerce in the development and implementation of the comprehensive management plan for the Florida Keys National Marine Sanctuary.

TIME AND PLACE: May 17, 1993 from 9 a.m. until adjournment. The meeting location will be at the Holiday Inn Beachside, North Roosevelt Boulevard, Key West, Florida.

AGENDA: 1. Discussion of Florida Bay water quality problem.

PUBLIC PARTICIPATION: The meeting will be open to public participation and the last thirty minutes will be set aside for oral comments and questions. Seats will be set aside for the public and the media. Seats will be available on a first-come first-served basis.

FOR FURTHER INFORMATION CONTACT: Pamala James at (305) 743-2437 or Ben Haskell at (202) 606-4016.

(Federal Domestic Assistance Catalog Number 11.429 Marine Sanctuary Program)

Dated: April 28, 1993.

Frank W. Maloney,

Deputy Assistant Administrator for Ocean Services and Coastal Zone Management.

[FR Doc. 93-10433 Filed 5-4-93; 8:45 am]

BILLING CODE 3510-08-M

Endangered Species; Permits

AGENCY: National Marine Fisheries Service (NMFS), NOAA, Commerce.

ACTION: Notice of an application for modification to Scientific Research Permit No. 777 (P496).

Notice is hereby given that the U.S. Army Corps of Engineers, Waterways Experiment Station, Coastal Ecology Group has applied in due form for a Modification to a Scientific Research Permit to take listed species as authorized by the Endangered Species Act of 1973 (ESA) (16 U.S.C. 1531-1543) and the NMFS regulations governing listed fish and wildlife permits (50 CFR part 217-222).

Permit No. 777 was issued on April 17, 1992 (57 FR 15286) as authorized by the ESA. It authorized the Permit Holder to take listed loggerhead (*Caretta caretta*); green (*Chelonia mydas*), Kemp's ridley (*Lepidochelys kempii*), leatherback (*Dermochelys coriacea*), and hawksbill sea turtles (*Eretmochelys imbricata*) for measurements, photographs, blood sampling, tagging, and release through April 16, 1993.

A Modification to Permit No. 777 was issued on April 22, 1993 (58 FR 25811) as authorized by the ESA. It authorized the continuation of previous research and an increased direct take of loggerhead and Kemp's ridley sea turtles to be fitted with satellite transmitters to monitor seasonal movements into and out of U.S. East coast channels. Also, additional loggerhead and Kemp's ridely sea turtles were authorized to be taken by trawler, equipped with radio and depth sensitive sonic tags, and monitored. This Modification also extended the duration of the Permit through April 21, 1994.

The permittee is requesting to add two locations to those already authorized in the Permit, including York Spit Channel and Cape Henry Channel within the Chesapeake Bay, Virginia. The additional take would include up to 25 loggerhead, eight Kemp's ridley, and five green turtles for measurements, photographs, blood sampling, tagging, and release during May through September 1993. The objectives of adding these two channels are: (1) To establish baseline relative abundance data of sea turtles in the channels; and (2) to use the information gathered to determine months with the least potential for sea turtle impingement by the hopper dredge.

Written data or views, or requests for a public hearing on this modification application should be submitted to the Director, Office of Protected Resources, NMFS, 1335 East-West Highway, room 8268, Silver Spring, MD 20910, within 30 days of the publication of this notice. Those individuals requesting a hearing should set forth the specific reasons why a hearing on this particular modification application would be appropriate. The holding of such a hearing is at the discretion of the Assistant Administrator for Fisheries. All statements and opinions contained in this Modification application summary are those of the applicant and do not necessarily reflect the views of NMFS.

Documents submitted in connection with the above modification application are available for review by interested persons in the following offices:

Office of Protected Resources, NOAA, NMFS, 1335 East-West Highway, room 8268, Silver Spring, Maryland 20910, (301/713-2289); and

Director, Southeast Region, NOAA, NMFS, 9450 Koger Boulevard, St. Petersburg, FL 33702.

Dated: April 29, 1993.

Patricia A. Montanio,

Acting Director, Office of Protected Resources.

[FR Doc. 93-10531 Filed 5-4-93; 8:45 am]

BILLING CODE 3510-22-M

DEPARTMENT OF DEFENSE

Office of the Secretary

National Security Telecommunications Advisory Committee

AGENCY: National Communications System, DoD.

ACTION: Notice of meeting.

A meeting of the National Security Telecommunications Advisory Committee will be held on Thursday, May 27, 1993. The business session of the meeting will be held at the Department of State. An executive session of the meeting will be held at the Old Executive Office Building. The agenda is as follows:

Business Session

—Call to Order
—Task Force Briefings (Energy, NSSC)
—IES Report
—Manager's Report
—Adjournment

Executive Session

—Call to Order
—Remarks by National Security Advisor
—Remarks by Executive Agent
—Adjournment

Due to the requirement to discuss classified information, in conjunction with the issues listed above, the meeting will be closed to the public in the interest of National Defense. Any person desiring information about the meeting may telephone (703) 692-9274 or write the Manager, National Communications System, 701 S. Court House Road, Arlington, VA 22204-2198.

Dated: April 29, 1993.

L.M. Bynum,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

[FR Doc. 93-10540 Filed 5-4-93; 8:45 am]

BILLING CODE 5000-04-M

Strategic Environmental Research and Development Program, Scientific Advisory Board

AGENCY: Office of the Secretary, DOD.

ACTION: Notice.

In accordance with section 10(a)(2) of the Federal Advisory Committee Act (Pub.L. 92-463), announcement is made of the following Committee meeting:

Date of Meeting: Tuesday, May 18, 1993 and Wednesday, May 19, 1993. 0800 to approximately 1700.

Place: Main Auditorium, National Guard Building, One Massachusetts Avenue, NW., Washington, DC.

Matters to be Considered: The Scientific Advisory Board will hold management sessions, review the balance of Phase III proposals that are equal to or in excess of $1M, and reevaluate proposals that the Board directed to be modified.

This meeting is open to the public. Any interested person may attend, appear before, or file statements with the Scientific Advisory Board at the time and in the manner permitted by the Board. For Further Information Contact: Mr. Chuck Miller, CERD-M, room 6213, 20 Massachusetts Avenue, NW., Washington, DC 20314-1000, (202) 272-1840.

Dated: April 30, 1993.

L.M. Bynum,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

DEPARTMENT OF ENERGY

Office of Nuclear Energy

Recommendations and Government Programs to Promote the Export of Domestic Uranium

AGENCY: Office of Nuclear Energy, U.S. Department of Energy.

ACTION: Notice of availability.

SUMMARY: The Department of Energy, in compliance with the Energy Policy Act, announces the availability of a report on recommendations and Government programs to promote the export of domestic uranium.

ADDRESSES: Copies of the report can be obtained by contacting the Office of Plans & Evaluation (NE–12), Office of Nuclear Energy, U.S. Department of Energy, Washington, DC 20585; telephone (202) 586–8728.

FOR FURTHER INFORMATION CONTACT: Mr. John P. Gutteridge, (202) 586–6457.

SUPPLEMENTARY INFORMATION: Section 1014(b) of the Energy Policy Act of 1992 (Pub. L. 102–486) requires the Department of Energy, with the cooperation of the Department of Commerce, the United States Trade Representative, and other organizations, to encourage the export of domestic uranium. In response to this request, the Department is submitting to the Congress a report detailing recommendations and an implementation strategy for Government actions to promote the export of domestic uranium. The report cites four key issues as significantly impacting U.S. uranium export activities. They are: (1) The lack of appropriate Government facilitation of uranium export activities; (2) regulatory and policy impediments; (3) excess supply; and (4) the dismantlement of foreign nuclear weapons. The report recommends several programmatic activities needed to respond to these issues. These activities are relatively low-cost and can be implemented in the near-term. The report also proposes institutional responsibilities and schedules for implementation of the recommendations.

J.D. Dulton,

Acting Assistant Secretary for Nuclear Energy.

[FR Doc. 93–10586 Filed 5–4–93; 8:45 am]

BILLING CODE 6450–01–M

Pittsburgh Energy Technology Center; Noncompetitive Financial Assistance Award

AGENCY: Pittsburgh Energy Technology Center, Department of Energy.

ACTION: Notice of a noncompetitive financial assistance grant award with the Engineering Foundation.

SUMMARY: The Department of Energy (DOE), Pittsburgh Energy Technology announces that pursuant to 10 CFR 600.7(b)(2)(i)(B), it intends to award a grant to the Engineering Foundation for an international conference. The grant is entitled "Engineering Foundation Conference on the Impact of Ash Deposition on Coal Conversion Plants." The Conference will be organized and conducted by the grantee using its own funds or funds donated by third parties. DOE support of the Conference would enhance the public benefits to be derived, and DOE knows of no other entity that is conducting or planning to conduct such an activity.

ADDRESSES: Department of Energy, Pittsburgh Energy Technology Center, Acquisition and Assistance Division, P.O. Box 10940, MS 921–118, Pittsburgh, PA 15236.

FOR FURTHER INFORMATION CONTACT:

Jo Ann C. Zysk, Contract Specialist (412) 892–6200.

SUPPLEMENTARY INFORMATION:

Grant Number: DE–FG22–93PC93678

Title of the Conference Effort:
"International Conference on the Impact of Ash Deposition on Coal Conversion Plants"

Awardee: Engineering Foundation

Term of Assistance Effort: Five (5) days

Grant Estimated Total Value: $150,000.00 (DOE: $10,000.00; Cost-Sharing: $140,000.00)

Objective: The immediate objective of this project is to provide an opportunity, on an international scale, for the researchers working on ash deposition in combustion systems and the industrial sector to exchange information and ideas in order to identify means to predict and mitigate ash related problems in combustion systems.

Justification: Implementation of the proposed grant is based upon the authority of 10 CFR 600.7(b)(2)(i)(B). This is a five-day international conference with an estimated value of $150,000.00 (DOE: $10,000.00; Total Cost-Sharing: $140,000.00).

Dale A. Siciliano,

Contracting Officer.

[FR Doc. 93–10584 Filed 5–4–93; 8:45 am]

BILLING CODE 6450–01–M

Bonneville Power Administration

Record of Decision; Resource Programs Final Environmental Impact Statement

AGENCY: Bonneville Power Administration (BPA), Department of Energy (DOE).

ACTION: Record of Decision (ROD) on the Resource Programs Final Environmental Impact Statement (EIS).

SUMMARY: BPA needs to acquire sufficient new resources to meet electricity deficits caused by growing customer loads.

The purposes of this action are to:

- Ensure that BPA can meet its contractual obligations to supply cost-effective electric power as requested by its customers—taking into account potential environmental consequences when making any decisions to acquire resources to meet those loads;
- Assure consistency with BPA's statutory responsibilities, including the Pacific Northwest Electric Power Planning and Conservation Act, taking into consideration the Northwest Power Planning Council's Conservation and Electric Power Plan and its Fish and Wildlife Program; and
- Restore and enhance environmental quality and avoid or minimize possible adverse environmental effects.

BPA's Resource Programs EIS examines the environmental trade-offs among the resource types available to meet this need and potential mitigation for environmental impacts. The EIS also examines 12 alternative ways to meet projected loads, as well as No Action. Each alternative includes a combination of resources. BPA's preferred alternative is the Emphasize Conservation Alternative. The environmentally preferred alternative is the Emphasize High Conservation Alternative.

BPA has decided to take the following actions in pursuit of its long-term conservation and generation resource acquisition objectives.

BPA's Preferred Alternative

BPA's resource acquisitions (through its Resource Programs) will be guided by the Emphasize Conservation Alternative of the Resource Programs Final EIS; that is, all cost-effective conservation and efficiency improvements will be acquired, supplemented by a mix of renewable and thermal resources, such as cogeneration and combustion turbine generation.

In order to analyze maximum environmental impacts and to insure against the loss of existing resources, the amount of each resource type in the Emphasize Conservation Alternative was based on an assumption of the need to meet high load growth. High load growth is unlikely; therefore, BPA would probably not acquire the full amount of each resource type identified in the EIS for this alternative.

Environmentally Preferred Alternative

BPA's emphasis on conservation is consistent with BPA's Conservation Implementation Plan, which since late 1991 has guided BPA on an "accelerated path" to the acquisition of all cost-effective conservation. BPA will actively investigate the additional conservation resources described in the Emphasize High Conservation Alternative, and to the extent that their supply, cost-effectiveness, and reliability can be validated, BPA will seek to acquire them. This activity is also consistent with Objective 3 of the Northwest Power Planning Council's 1991 Plan: To "determine cost and availability of resources" (both conservation and renewables). The Resource Supply Expansion Program (RSEP) will be BPA's primary mechanism for confirming the supply, cost, and reliability of the additional conservation and renewable energy supplies that distinguish the Emphasize High Conservation Alternative from the Emphasize Conservation Alternative.

Resource Programs

BPA will determine the specific amounts of conservation and generation resources it proposes to acquire through its Resource Programs, which will periodically clarify and update the decisions made in this Record of Decision. Each Resource Program will update load projections and resource data, and will use information from the Resource Programs EIS regarding resource characteristics and environmental impacts to set targets for acquisition of resources of various types. Each Resource Program will include opportunities for public review and input to the BPA Administrator's resource decisions.

Resources may be acquired through a variety of resource acquisition processes, including competitive bidding, billing credits, and targeted acquisitions. Unsolicited proposals may be considered, and resource options (such as those being considered under BPA's Resource Contingency Plan) may be acquired.

Site-specific NEPA documentation (tiered to the programmatic Resource Programs EIS) will be prepared for generation projects the BPA Administrator proposes to acquire. Because conservation programs involve region-wide rather than site-specific measures, conservation programs may be implemented based on the environmental analysis of conservation measures documented in the Resource Programs EIS.

Mitigation

The BPA Administrator proposes to adopt a number of mitigations to minimize the environmental impacts associated with acquiring and operating conservation and generation resources. These mitigations are described in the attached Mitigation Action Plan.

1. For generation projects, the Mitigation Action Plan specifies mitigation measures to be built into the resource acquisition process.

2. In addition, BPA may prepare Mitigation Action Plans on a site-specific basis for individual generating resource acquisitions. These Mitigation Plans would be prepared in conjunction with National Environmental Policy Act (NEPA) decision documents for those acquisitions.

3. For conservation projects, the Mitigation Action Plan identifies specific mitigation actions for programs in each conservation sector.

FOR FURTHER INFORMATION CONTACT: Mr. Charles Alton, Environmental Coordinator for the Office of Energy Resources—RAE, Bonneville Power Administration, P.O. Box 3621, Portland, Oregon 97208, telephone (503) 230–5878. Copies of the Resource Programs Final EIS (DOE/EIS–0162), February 1993, and the Record of Decision are available from BPA's Public Involvement Office, P.O. Box 12999, Portland, Oregon 97212. Copies of the documents may also be obtained by using BPA's nationwide toll-free document request line, (800) 622–4520. Information may also be obtained from:

Mr. James Normandeau, Boise District Manager, Room 450, 304 North Eighth Street, Boise, Idaho 83702, 208–334–9137.

SUPPLEMENTARY INFORMATION:

1. Background

On April 2, 1990, BPA published Notice of Intent to Prepare an EIS in the **Federal Register**. The official comment period on the scope of the Resource Programs EIS was from April 2 through May 15, 1990. However, comments were accepted through October. A scoping meeting was held in Portland on May 1, 1990. In all, 209 comment letters were received on the scope of the EIS.

Persons involved in BPA's Resource Program, as well as fishery agencies and Tribes, environmental groups, and other special interest groups were invited to participate in a Technical Review Panel (TRP) to assist in the development of the EIS. Those who were interested came to an initial meeting on August 13, 1990, and participated at various levels thereafter as they chose. Because of the size of the TRP and the variety of interests, three work groups—Environmental Effects, Environmental Costs, and Modeling and Analysis—were formed.

On May 15, 1992, the Draft Resource Programs EIS was released for public review (through July 6, 1992). On June 16, 1992, BPA held an open house and public hearing on the Draft EIS. Fifty-two people commented at the hearing or by letter. Comments on the Draft EIS were addressed in the Final EIS, issued in February 1993. The comments and responses as well as the complete text of the comment letters are included in Volume 3 of the Final EIS.

2. BPA's Resource Program

2.1 The Process

Every 2 years, BPA prepares a Resource Program, which identifies projected loads and the amounts and types of resources that BPA will acquire to meet the power requirement of its

VOL 58 ISS 85 MY 5 1993 UMI

customers. In developing the Resource Program, BPA prepares load forecasts in cooperation with the Northwest Power Planning Council (Council). A range of forecasts (currently: low, medium-low, medium, medium-high, and high) is prepared to reflect uncertainties about future load growth. A corresponding range of load/resource balances is prepared by comparing the energy capability of Federal system resources to the range of projected Federal system energy loads over the next 20 years. In a parallel process, BPA and the Council develop new resource supply forecasts.

According to the 1991 joint forecast, if medium load growth were to occur, the Federal system would be 400 to 500 aMW in deficit in the near term, and would require 800 aMW by the year 2000. If demand grows faster than the medium loads case or if resources do not perform as expected, BPA could face a larger deficit. Under high load growth, BPA would have almost 5,000 aMW of additional load to meet by the end of its 20-year planning period. The uncertainty surrounding load growth and supply is part of the reason BPA must use the Resource Programs to update and clarify the resource decisions described in this Record of Decision.

In addition to this projected energy load growth, changes in the operation of the hydroelectric system to increase fish survival may reduce the capacity of the Federal system. As a result, the capacity characteristics of conservation and generation resources may become an increasingly important goal of BPA's future Resource Programs.

2.2 The 1992 Resource Program

The 1992 Resource Program was developed through a collaborative process involving a technical review panel that included representatives from customer utilities and many other interests. In addition, working groups dealt with specific technical issues, such as modeling and analysis, conservation implementation, generating resource implementation, fuel choice, environmental costs, and Local Conservation Plan development. The priorities of the 1992 Resource Program were based on the Northwest Power Planning Council's 1991 Northwest Power Plan, the 1991 Joint Load Forecast, the most current information on resource supplies, and information about environmental impacts of conservation and generation resources from the Resource Programs Draft EIS.

The 1992 Resource Program proposes that BPA set budgets for the 1994–95 period that would allow it to acquire all cost-effective conservation (targeting 660 aMW) and 120 aMW of efficiency improvements through 2003. The 1992 Resource Program also proposes that BPA acquire an additional 400 aMW of generating resources or interregional power purchases or exchanges in addition to 350 aMW of resources previously committed to through the billing credits program and a competitive bid. The 1992 Resource Program also recommends a total of 1,450 aMW of options and contingency resources.

3. Alternatives Examined in the Resource Programs EIS

The Resource Programs EIS examines both resource types (e.g., conservation, geothermal, combustion turbines) and resource alternatives (combinations of resources to meet long-term need, each of which emphasizes a particular resource type).

3.1 Resource Types

For most resource types, information is provided on technical characteristics, operating characteristics, contribution to system capacity, cost (both direct and environmental), environmental effects and possible mitigations, and supply. The following resource types are examined in the Resource Programs EIS:

- Conservation (commercial, residential, industrial, irrigation, and agricultural sectors).
- Renewable resources (hydropower, geothermal, wind, and solar).
- Cogeneration.
- Combusion turbines.
- Nuclear (the completion of WNP–1 and WNP–3).
- Coal (both conventional pulverized coal and clean coal technologies).
- Fuel switching.
- Energy imports.
- Efficiency improvements.

Figure 1 compares principal resource types in terms of their environmental impacts (relative to each other).

Information is also provided on load management and emerging technologies (fuel cells, hydrogen, and new nuclear fission technology). If these resources become more cost-effective and commercially viable, they could replace one or more of the resources in the resource stacks analyzed in this EIS. The Resource Programs will help identify and evaluate how emerging technologies become viable and how they could replace other resources.

3.2 Alternatives

The Resource Programs EIS examines 13 alternatives, which represent the range of actions BPA could take to meet its load obligations. In the No Action Alternative, the underlying need for energy to meet the growing loads of BPA customers would not be satisfied. Neither BPA nor the region would acquire new resources to meet these loads.

Each of the alternatives other than the No Action Alternative comprises a combination of the resource types listed above, as seen in Tables 1 and 2. The Status Quo Alternative is based on minimizing total system costs, with no dollar quantification of environmental costs (as was done in the 1990 Resource Program). The Base Case Alternative is also a least-cost resource mix, but the costs considered in ordering the resource mix include quantified environmental costs. The environment costs used to rank resources in the resource stack did not include CO_2 because of the uncertain evidence supporting CO_2 impacts costs. However, CO_2 was included in the analysis of environmental effects of resource types and alternatives illustrated in Figures 1, 2, and 3.

Each of the other alternatives analyzed in the EIS emphasizes a particular resource type, and is evaluated in comparison to the Base Case. The resource stacks for these remaining alternatives were developed by placing the available supply of the emphasized resource at the top of the Base Case stack (without regard to cost) after non-discretionary conservation. These alternatives were developed in the recognition that the supplies of most resource types are insufficient to serve all the resource need (if high load growth occurs), and in order to look at potential interactions and cumulative impacts of emphasizing particular resource types. The following alternatives were compared to the Base Case:

- Emphasize Conservation Alternative.
- Emphasize High Conservation Alternative.
- Emphasize Renewables Alternative.
- Emphasize Cogeneration Alternative.
- Emphasize Combustion Turbines Alternative.
- Emphasize Nuclear Alternative.
- Emphasize Coal Alternative.
- Emphasize Clean Coal Alternative.
- Emphasize Fuel Switching Alternative.
- Emphasize Imports Alternative.

4. Decision Factors and Issues

The alternatives examined in the Resource Programs EIS were evaluated against the purpose of and need for the action (see the Summary of this ROD).

Meeting BPA's Contractual Obligations: All of the alternatives except No Action were designed to meet the needs of assuring that BPA can cost-effectively fulfill its contractual obligation to meet the electrical loads of its customers. The alternatives with the lowest total system costs (i.e., direct plus environmental costs) were the Emphasize High Conservation and Emphasize Fuel Switching Alternatives, followed by the Emphasize Conservation Alternative.

Consistency With BPA's Statutory Responsibilities: All of the alternatives were designed to be consistent with BPA's statutory obligations, including the Northwest Power Act (which requires consideration of the Council's Plan and its Fish and Wildlife Program). Specifically, load assumptions were developed jointly with the Council. The environmental costs used in the EIS were developed using the Council's methodology and data. The hydropower supply curves used in the EIS excluded projects located in the Council's Protected Areas (see paragraph 6, Mitigation). The Northwest Power Act specifies that cost-effective resources are to be acquired according to the following priorities: (1) Conservation, (2) renewables, (3) high-efficiency resources such as cogeneration, and (4) other resources. The conservation emphasis of the preferred alternative is consistent with these resource priorities.

Environmental Quality: The EIS examines the potential environmental impacts of resource types and combinations of resource types. It evaluates a range of environmental impacts, including air quality, water consumption, thermal discharges, and land use. It also compares the quantified environmental costs of each alternative, looks at potential impacts on hydroelectric operations, and evaluates the potential contribution of each alternative to the overall capacity of the Federal system.

The EIS shows that the alternative with the lowest environmental impacts overall, as well as the lowest environmental costs and total system costs, is the Emphasize High Conservation Alternative. The Emphasize High Conservation Alternative is not the BPA Administrator's preferred alternative, although it is the environmentally preferred alternative, because the cost-effectiveness, reliability, and commercial availability of the additional conservation resources that distinguish the Emphasize High Conservation Alternative from the Emphasize Conservation Alternative have not been confirmed. Although BPA has established the goal of acquiring all cost-effective conservation, it is not clear that all of the conservation resources that make up the Emphasize High Conservation Alternative can be acquired reliably or cost-effectively. Through RSEP, the supply of reliable, cost-effective conservation will be expanded. Therefore, BPA will establish conservation acquisition targets near the level represented by the Emphasize High Conservation Alternative in order to try to reach a higher level of conservation acquisition.

After the Emphasize High Conservation Alternative, the Emphasize Conservation Alternative has the next lowest environmental impacts overall. This alternative would lead to the same or fewer emissions of sulfur dioxide, nitrous oxides, particulates, carbon monoxide, and carbon dioxide than all other alternatives except High Conservation and Renewables. It would discharge the same or less waste heat and would use the same or less water than all alternatives except High Conservation and Renewables, and would use the same or less land than all alternatives except High Conservation.

The Emphasize Fuel Switching Alternative has lower system costs and lower total costs than the Emphasize Conservation Alternative, but its environmental costs are predicted to be slightly higher than the Emphasize Conservation Alternative.

5. BPA Decision Regarding the Preferred Alternative

The BPA Administrator's preferred alternative is the Emphasize Conservation Alternative. This alternative is cost-effective and environmentally responsible: direct and environmental costs are low, and environmental impacts low. In addition, the supply and availability of the resources included are reliable.

BPA's resource acquisitions (through its Resource Programs) will be guided by the Emphasize Conservation Alternative; that is, all cost-effective conservation and efficiency improvements will be acquired, as well as a mix of renewable and thermal resources, such as cogeneration and combustion turbines. In order to reduce the environmental impacts associated with the acquisition of conservation and generation resources, BPA will review the information about environmental impacts of resource types and combinations of resource types contained in this EIS when it makes future resource acquisition decisions. BPA will consider the environmental impacts associated with generating resources operations that are evaluated in the Resource Programs EIS when considering the acquisition of existing resources.

New coal resources are not likely to be acquired because of their cost and environmental impacts. Unless load growth is unexpectedly high, there is little probability that BPA would acquire the nuclear resources identified in this alternative (WNP–1 or–3) because of the large size of the two plants and their costs, which are higher than some other available resources.

In addition to acquiring the conservation resources that are part of the Emphasize Conservation Alternative, BPA will also strive to confirm the supply and cost of the additional conservation resources that make up the Emphasize High Conservation Alternative and acquire all additional cost-effective conservation. Likewise, BPA will strive to expand the supply of renewable resources.

With the objective of appropriately reflecting the total costs of new resources, BPA will include quantified environmental costs in the costs used to establish resource supply and cost curves in its Resource Programs.

6. Mitigation Action Plan

BPA proposes to adopt several mitigation measures. These measures, in conjunction with the project-specific mitigation measures that will be prepared for generation projects, will assure that all practicable means are taken to avoid or minimize environmental harm.

It should be noted that mitigation for conservation is described in more detail than mitigation for generating resources because generating resources will be the subject of additional project-specific NEPA review, as described below.

6.1 Generating Resources

Project-specific environmental review: In order to reduce the environmental impacts associated with the acquisition of new generating resources, BPA will prepare a project-specific NEPA review tiered from this EIS before it acquires the output of any generating resource.

Protected Areas: BPA will not acquire the output of any hydroelectric resource located within any Council-designated Protected Area inside or outside the Columbia River Basin.

Environmental Review Criteria: BPA will include clear environmental review criteria in all resource acquisition processes in order to reduce the likelihood of acquiring resources with significant unmitigable environmental impacts. These review criteria will apply to all new and existing resources proposed for BPA acquisition.

6.2 Conservation

6.2.1 Residential Sector

BPA's residential sector energy conservation programs currently operate according to the New Energy-Efficient Homes Programs ROD, dated February 23, 1989, and the ROD for the Expanded Residential Weatherization Program (for existing homes), dated October 18, 1984. The requirements from both of these RODs will continue to apply to the respective programs, except for the specific changes noted in this Resource Programs ROD.

The New Energy-Efficient Homes Programs ROD recognized the need not only to maintain indoor air quality (IAQ), but also to enhance it to ensure that new energy-efficient homes cause fewer health risks than those potentially occurring in homes built using 1983 standard building practices. Energy-efficient performance standards known as the Model Conservation Standards (MCS) were adopted in 1983, and BPA chose to maintain the ventilation rates at levels generally found in homes built prior to their adoption. A mitigation package formed an integral part of the new energy-efficient homes programs. The environmental requirements included exhaust fans for kitchen and bathrooms, designated outside air supplies for combustion appliances, occupant information on indoor air quality, HUD product standards for formaldehyde emissions from structural building materials, and the offer of a radon package for radon monitoring and radon source control.

The existing environmental requirements for new homes remain intact, except for changes to the radon package. The Resource Programs EIS explains in section 3.1.2 that is now known that radon entry into homes is predominantly caused by natural forces such as pressure gradients, wind, and air temperature, rather than by house-tightening techniques. In addition, the Environmental Protection Agency (EPA) plans to implement a campaign to test all homes in the U.S. for radon levels The EPA has also developed certification standards and procedures

VOL 58 ISS 85 MY 5 1993 UMI

for radon mitigators, which will help homeowners to select qualified individuals or firms to mitigate for radon in their homes. Therefore, BPA has determined that it is no longer necessary to require builders to provide specific foundation treatments or offer radon monitoring and mitigation to homeowners.

The ROD for the Expanded Residential Weatherization Program required the adoption of mitigation strategies to lessen the risk of adverse human health effects that might result from the installation of "house tightening" measures (storm windows, other window treatments for conserving energy, wall insulation, weatherstripping, caulking, and door treatments such as thermal pane replacements). The mitigation strategies included:

a. Giving program participants information on indoor air pollutant sources and practical steps for reducing concentrations,

b. Giving program participants options for having their homes monitored for radon concentrations, and

c. Partially subsidizing the installation of a proven mitigation device if radon concentrations exceeding 5 picocuries per liter.

BPA will continue to provide information on indoor air pollutant sources for the benefit of Residential Weatherization Program participants when appropriate. As stated above, studies have revealed that there is no direct correlation between house tightening and radon levels. Moreover, the EPA plans to initiate radon testing for all homes in the U.S. and has developed certification standards and procedures for radon mitigators. For these reasons, BPA has determined that it is no longer necessary to offer radon monitoring and mitigation as part of its residential weatherization programs.

BPA recently decided to include manufactured homes in its residential weatherization programs. Retrofitting insulation into existing manufactured homes provides greater house tightening than the same measures retrofitted into site-built homes. This is because many existing mobile homes have enclosed ceiling and floor cavities containing air spaces that allow air movement and ventilated walls that were designed to let air flow through the wall cavities. Insulating the ceiling floor, or wall cavities in mobile homes has a greater effect on air leakage because doing so can virtually block any ventilation. Therefore, BPA will require that existing manufactured homes receiving insulation treatment also receive ventilation treatment equivalent to that required in the New Energy Efficient Homes programs.

6.2.2 Commerical Sector

Two Environmental Assessments (EA), titled Energy Conservation Opportunities in Commercial-Sector Facilities in the Pacific Northwest (August 1982), and BPA's Alternative Approaches for Acquiring Energy Savings in Commercial Sector Buildings (September 1991), have been prepared by BPA to analyze the effects of energy conservation measures (ECMs) in commercial sector buildings. The 1991 EA incorporated the analysis from the 1982 EA with subsequent environmental review documents that were prepared for commercial sector conservation activities. BPA developed specific environmental requirements for proven ECMs in a document entitled Commercial Environmental Requirements (CERs), which is referenced in the 1991 EA.

All of BPA's commercial conservation programs must comply with the CERs prevailing at the time of installation. The CERs are periodically updated to incorporate new information relevant to the potential environmental impacts of ECMs and to allow for modifications or additions to the list of proven ECMs.

The requirements developed for the September 1991 EA remain intact, except for the following:

a. When ECMs reducing the amount of ventilation air during occupied periods are installed in commercial buildings, the latest American Society of Heating, Refrigeration, and Air Conditioning Engineers (ASHRAE) Standard 62 or equivalent, rather than ASHRAE Standard 62–89, will be required ventilation standard. This will allow for updating of the standard for IAQ, just as ASHRAE 62–81 was updated to 62–89.

b. Naturally ventilated buildings must comply with state and local building codes and, at a minimum, must meet the Uniform Building Code (UBC) ventilation requirements.

c. As stated in section 3.1.1 of the Resource Programs Final EIS, studies indicate that there is no direct correlation between the tightening of a building envelope and radon levels. Therefore, BPA may choose to discontinue the offer of radon monitoring when ECMs that reduce air infiltration are installed in apartment buildings. This will be consistent with the modified radon monitoring requirements of the Residential Weatherization Program.

d. Programs involving HVAC and refrigeration measures will require the recovery and recycle of chlorofluorocarbons (CFCs) in accordance with the Clean Air Act Amendments of 1990. This requirement will apply, when appropriate, to programs in all conservation sectors.

e. BPA routinely provides building owners with information developed by EPA regarding disposal of pre-1978 light ballasts potentially containing PCBs. Program participants are required to follow all Federal, state, and local regulations governing disposal and are encouraged to comply with the disposal guidelines and policies developed by EPA Region 10. However, the small PCB capacitors contained in light ballasts, along with spent fluorescent light tubes, continue to be disposed of in municipal landfills, risking ground and water contamination. Therefore, BPA will work closely with Federal and state agencies and BPA customers to develop an acceptable PCB light ballast and lamp disposal plan for its service territory. The disposal plan will apply to conservation programs in all sectors

6.2.3 Industrial Sector

BPA has developed a list of proven ECMs for the industrial sector that were categorically excluded from NEPA review and are described in section 3.1.3 of the Resource Programs Final EIS. The ECMs were previously evaluated and were determined not to affect environmentally sensitive areas when they are applied to current mechanical processes or are placed within existing commercial or industrial facilities. As stated in section 3.1.3 of the Resource Programs Final EIS, the highly regulated nature of the industrial sector is a safeguard against potential significant adverse environmental impacts. In order to ensure this safeguard, ECMs that are not listed or those that involve new mechanical processes or the development of facilities will receive environmental review by BPA prior to their inclusion in any sponsored programs.

6.2.4. Agricultural Sector

BPA's existing irrigated agriculture energy conservation program was categorically excluded from NEPA review on January 8, 1985. Specific mitigation strategies were developed to minimize potential erosion caused by increased runoff that could result from increased droplet size. The mitigation strategies are:

a. A signed statement is required from the equipment installer stating runoff control was considered in the system design.

b. A brochure explaining runoff problems and detailing methods of control is to be delivered to each of the program participants.

c. Proper training of BPA-certified irrigation system inspectors to evaluate potential runoff problems is required.

d. A technical assessment must be prepared in cooperation with the local Soil Conservation Service office to identify potential runoff problems and develop specific mitigation strategies.

e. A follow-up analysis of representative farms is to be conducted to determine if irrigators are, in fact, adopting runoff control strategies. If not, the mitigation plan will be revised appropriately.

These mitigation strategies will continue to apply to all irrigated agriculture energy conservation programs and pilot programs to ensure that increased water droplet size does not cause a significant increase in runoff and erosion.

6.2.5 Customer System Efficiency Improvements (CSEI)

BPA utility customer distribution and transmission system efficiency improvements include transformer replacements, conductor replacement, and insulator additions and replacements and other activities. Many of these CSEI projects occur within previously developed facility areas and are categorically excluded from NEPA review. Transformers containing PCBs and removed from service will be disposed of in accordance with the requirements of the Resource Conservation and Recovery Act (RCRA) and the Toxic Substances Control Act (TSCA).

Issued in Portland, Oregon, on April 22, 1993.

Randall Hardy,

Administrator, Bonneville Power Administration.

BILLING CODE 6450–01–M

Energy Information Administration

Proposed Extension of the Form EIA–28, "Financial Reporting System," and Solicitation of Comments

AGENCY: Energy Information Administration, Department of Energy.

SUMMARY: The Energy Information Administration (EIA), as part of its continuing effort to reduce paperwork and respondent burden (required by the Paperwork Reduction Act of 1980, Pub. L. No. 96–511, 44 U.S.C. 3501 et seq.), conducts a presurvey consultation program to provide the general public and other Federal agencies with an opportunity to comment on proposed and/or continuing reporting forms. This program helps to ensure that requested data can be provided in the desired format, reporting burden is minimized, reporting forms are clearly understood, and the impact of collection requirements on respondents can be properly assessed. Currently, EIA is soliciting comments concerning the proposed extension to Form EIA–28, "Financial Reporting System." Also, a question has been added to the standard list of questions for potential data users to solicit comments on preferences as to whether EIA should publish data measured in metric units.

DATES: Written comments must be submitted on or before June 4, 1993. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact listed below of your intention to do so as soon as possible.

ADDRESSES: Send comments to Gregory P. Filas, Office of Energy Markets and End Use, EI–622, Forrestal Building, U.S. Department of Energy, Washington, DC 20585, telephone number (202) 586–1347.

FOR FURTHER INFORMATION OR TO OBTAIN COPIES OF THE PROPOSED FORM AND INSTRUCTIONS:

Requests for additional information or copies of the form and instructions should be directed to Gregory P. Filas at the address listed above.

SUPPLEMENTARY INFORMATION:

I. Background
II. Current Actions
III. Request for Comments

I. Background

In order to fulfill its responsibilities under the Federal Energy Administration Act of 1974 (Pub. L. No. 93–275) and the Department of Energy Organization Act (Pub. L. No. 95–91), the Energy Information Administration is obliged to carry out a central, comprehensive, and unified energy data and information program. As part of this program, EIA collects, evaluates, assembles, analyzes, and disseminates data and information related to energy resource reserves, production, demand, and technology, and related economic and statistical information relevant to the adequacy of energy resources to meet demands in the near and longer term future for the Nation's economic and social needs.

The EIA, through its Form EIA–28, collects financial information and other measures of energy-related business efforts and results for major energy companies. Since the FRS data are collected on a uniform, segmented basis, the comparability of information across energy lines of business is unique to this reporting system. For example, petroleum activities can be compared to activities in other energy lines of business or nonenergy areas, and domestic activities can be compared to foreign activities. The data are used to evaluate the competitive environment within which energy products are supplied and developed and to analyze the nature of institutional arrangements as they relate to energy resource development, supply, and distribution. The FRS report, entitled Performance Profiles of Major Energy Producers (Profiles), has been published for each of the reporting years 1977 through 1991. The Profiles report for 1992 will be published in December 1993.

II. Current Actions

This is an extension with revisions to an existing collection. The proposed extension is to December 31, 1966. The revisions to the form will include a new geographic reporting area for petroleum exploration, development, production and reserves information on Schedules 5211, 5241, and 5246 of Form EIA–28. The new reporting area is comprised of the East European countries that were part of the former Soviet Bloc, and the Commonwealth of Independent States (formerly the Soviet Union). If legislation is enacted to collect energy taxes, a revision to the form will be proposed to collect this data. The public will be notified, and comments will be solicited.

III. Request for Comments

Prospective respondents and other interested parties should comment on the actions discussed in item II. The following general guidelines are provided to assist in the preparation of responses.

As a potential respondent:

A. Are the instructions and definitions clear and sufficient? If not, which instructions require classification?

B. Can the data be submitted using the definitions included in the instructions?

C. Can data be submitted in accordance with the response time specified in the instructions?

D. Public reporting burden for this collection is estimated to average 700 hours per response. How much time, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information, do you estimate it will require you to complete and submit the required form?

VOL
58
ISS
85
MY
5
1993
UMI

E. What is the estimated cost of completing this form, including the direct and indirect costs associated with the data collection? Direct costs should include all costs, such as administrative costs, directly attributable to providing this information.

F. How can the form be improved?

G. Do you know of any other Federal, State, or local agency that collects similar data? If you do, specify the agency, the data element(s), and the means of collection.

As a potential user:

A. Can you use data at the levels of detail indicated on the form?

B. For what purpose would you use the data? Be specific.

C. How could the form be improved to better meet your specific needs?

D. Are there alternate sources of data and do you use them? What are their deficiencies and/or strengths?

E. For the most part, information is published by EIA in U.S. customary units, e.g., cubic feet of natural gas, short tons of coal, and barrels of oil. Would you prefer to see EIA publish more information in metric units, e.g., cubic meters, metric tons, and kilograms? If yes, please specify what information (e.g., coal production, natural gas consumption, and crude oil imports), the metric unit(s) of measurement preferred, and in which EIA publication(s) you would like to see such information.

EIA is also interested in receiving comments from persons regarding their views on the need for the information contained in the Financial Reporting System.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of the form; they also will become a matter of public record.

Statutory Authority: Section 2(a) of the Paperwork Reduction Act of 1980, (Pub. L. No. 96–511), which amended chapter 35 of title 44 of the United States Code (See 44 U.S.C. 3506(a) and (c)(1)).

Issued in Washington, DC, April 27, 1993.

Yvonne M. Bishop,

Director, Statistical Standards, Energy Information Administration.

Federal Energy Regulatory Commission

[Docket Nos. ES93–33–000, et al.]

The Detroit Edison Co., et al.; Electric Rate, Small Power Production, and Interlocking Directorate Filings

April 29, 1993.

Take notice that the following filings have been made with the Commission:

1. The Detroit Edison Co.

[Docket No. ES93–33–000]

Take notice that on April 23, 1993, The Detroit Edison Company (Detroit Edison) filed an application under Section 204 of the Federal Power Act requesting authorization to issue from time to time, on or before May 31, 1996, not more than $1.0 billion of debt securities and promissory notes bearing final maturities not to exceed two years. Also, Detroit Edison requests exemption from the Commission's competitive bidding regulations.

Comment date: May 21, 1993, in accordance with Standard Paragraph E at the end of this notice.

2. Alabama Power Co.

[Docket No. ER93–191–000]

Take notice that on April 23, 1993, Alabama Power Company (APCo) submitted additional documentation and information pertaining to certain reimbursements by Alabama Electric Cooperative, Inc. for modifications to APCo's transmission facilities resulting from requests by that customer pursuant to the terms and conditions of the Agreement for Transmission Service to Distribution Cooperative Members of Alabama Electric Cooperative, Inc. This additional documentation and information was submitted in response to a verbal request to that effect by the Staff.

Comment date: May 12, 1993, in accordance with Standard Paragraph E at the end of this notice.

3. PacifiCorp

[Docket No. ER93–583–000]

Take notice that PacifiCorp on April 23, 1993, tendered for filing in accordance with 18 CFR part 35 of the Commission's Rules and Regulations, an unexecuted Joint Use and Interconnection Agreement (Agreement) between PacifiCorp and Dixie Escalante Rural Electric Association, Inc. (Dixie Escalante).

The Agreement provides for the installation, interconnection and joint use of transmission facilities to serve PacifiCorp's and Dixie Escalante's loads in Iron and Washington Counties, Utah.

PacifiCorp requests an effective date not later than sixty days from the date the filing is received by the Commission as the installed facilities are anticipated to be in service in June 1993.

Copies of this filing were supplied to Dixie Escalante, the Public Utility Commission of Oregon and the Utah Public Service Commission.

Comment date: May 12, 1993, in accordance with Standard Paragraph E at the end of this notice.

4. Puget Sound Power & Light Co.

[Docket No. ER93–582–000]

Take notice that on April 22, 1993, Puget Sound Power & Light Company (Puget) tendered for filing information relating to the extension of the period of Puget's provision of standby transmission service to Public Utility District No. 1 of Snohomish County (Snohomish) under Puget's Supplement No. 2 to Rate Schedule FERC No. 88. A copy of the filing was served upon Snohomish.

Comment date: May 12, 1993, in accordance with Standard Paragraph E at the end of this notice.

5. Walter M. Vannoy

[Docket No. ID–2784–000]

Take notice that on April 22, 1993, Walter M. Vannoy (Applicant) tendered for filing a supplemental application under section 305(b) of the Federal Power Act to hold the following positions:

Director—Illinois Power Company

Director—Chempower, Inc.

Comment date: May 14, 1993, in accordance with Standard Paragraph E at the end of this notice.

6. Pacific Gas and Electric Co.

[Docket No. ER93–581–000]

Take notice that on April 22, 1993, Pacific Gas and Electric Company (PG&E) tendered for filing an revised appendix A (Contract Capacity) to the Power Sale Agreement (PSA) between PG&E and the Sacramento Municipal Utility District (SMUD). This appendix has been revised to reflect the reduction in capacity purchased by SMUD under the PSA from 550 MW to 500 MW as of November 1, 1993, pursuant to SMUD's written notice to PG&E.

Copies of this filing have been served upon SMUD and California Public Utilities Commission.

Comment date: May 12, 1993, in accordance with Standard Paragraph E at the end of this notice.

7. Appalachian Power Co.

[Docket No. ER93–587–000]

Take notice that Appalachian Power Company (APCo), on April 26, 1993, tendered for filing with the Commission a March 29, 1993 Addendum to the existing Electric Service Agreement between APCo and the City of Radford, Virginia (Radford), which increases APCo's maximum capacity commitment to Radford from 50,000 kW to 65,000 kW.

APCo proposes an effective date of June 28, 1993, and states that a copy of its filing was served on the affected customer.

Comment date: May 12, 1993, in accordance with Standard Paragraph E at the end of this notice.

8. Central Vermont Public Service Corp.

[Docket No. ER93–386–000]

Take notice that on April 26, 1993, Central Vermont Public Service Corporation tendered for filing an amendment containing supplemental financial information to its February 22, 1993 filing in this docket.

To the extent necessary to allow for the sale of power pursuant to the Service Agreement commencing April 19, 1993, Central Vermont requests that the Commission waive its notice requirements. In support of its requests Central Vermont states that allowing the Service Agreement to become effective as provided will enable the Company and its customers to achieve mutual benefits.

Comment date: May 12, 1993, in accordance with Standard Paragraph E at the end of this notice.

9. Wisconsin Power and Light Co.

[Docket No. ER93–407–000]

Take notice that on April 26, 1993, Wisconsin Power and Light Company (WPL) tendered for filing an amendment providing supplemental information dated April 14, 1993, between the Wisconsin Public Service Corporation and WPL. WPL states that this amendment supplements the previous agreement for sharing a spare transformer between the two parties which was dated December 7, 1992, and on file in Docket No. ER93–407–000 by the Commission.

The purpose of this amendment is to clarify the terms of service and to show the method of calculations for the fees for service.

WPL requests that an effective date concurrent with the amendment filing date of April 14, 1993 be assigned. WPL states that copies of the agreement and the filing have been provided to the Wisconsin Public Service Corporation and the Wisconsin Public Service Commission.

Comment date: May 12, 1993, in accordance with Standard Paragraph E at the end of this notice.

10. Carolina Power & Light Co.

[Docket No. ER93–584–000]

Take notice that on April 26, 1993, Carolina Power & Light Company (CP&L) tendered for filing with the Commission the change outlined below to its agreement with Wake EMC.

1. *Wake EMC-Oxford POD*—Increase in metered voltage from 12 kV to 23 kV.

The Company requests that this supplement be made effective June 1, 1993.

A copy of this filing has been sent to the affected party, the North Carolina Utilities Commission, and the South Carolina Public Service Commission.

Comment date: May 12, 1993, in accordance with Standard Paragraph E at the end of this notice.

Standard Paragraphs

E. Any person desiring to be heard or to protest said filing should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). All such motions or protests should be filed on or before the comment date. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of this filing are on file with the Commission and are available for public inspection.

Lois D. Cashell,

Secretary.

BILLING CODE 6717–01–M

Briefing by U.S. Fish and Wildlife Service, Wisconsin Department of Natural Resources, Michigan Department of Natural Resources With FERC Staff

April 29, 1993.

a. *Date and Time of Meeting:* May 21, 1993, 8:30 a.m.

b. *Place:* 810 1st Street NE., Washington DC, 8th floor Hearing Room No. 1.

c. *FERC Contact:* Ed Lee (202) 219–2809.

d. *Purpose of the Meeting:* U.S. Fish and Wildlife Service, Wisconsin Department of Natural Resources (DNR), Michigan Department of Natural Resources will brief the Federal Energy Regulatory Commission staff on the issues concerning fish entrainment and mortality at existing hydropower projects in Wisconsin and Michigan.

e. *Proposed Agenda:*

(1) Agency fisheries guidelines for hydroelectric projects.

(2) Wisconsin DNR fisheries entrainment and mortality mitigation guidance.

(3) Fisheries entrainment and mortality issues on the Wisconsin River projects.

(4) Fisheries entrainment and mortality issues at Thornapple.

(5) Fisheries entrainment and mortality issues on the Menominee River projects.

(6) The differences between netting and hydroacoustics for entrainment studies.

(7) The statewide implications of fisheries entrainment and mortality.

(8) Critique of the 1992 EPRI report on "Fish Entrainment and Turbine Mortality Review and Guidelines."

f. The licensees for applications for new license that have been filed with the Commission, as described on the list attached to this notice, are herein notified and invited to attend this briefing. All intervenors and interested parties are also invited to attend this briefing. If you have any questions, please contact Ed Lee at the number listed above.

Lois D. Cashell,

Secretary.

BILLING CODE 6717-01-M

[Docket Nos. CP89-471-007, et al.]

Gateway Pipeline Co., et al.; Natural Gas Certificate Filings

Take notice that the following filings have been made with the Commission:

1. Gateway Pipeline Co.

[Docket No. CP89-471-007]

April 19, 1993.

Take notice that on April 14, 1993, Gateway Pipeline Company (Gateway), 600 Travis, P.O. Box 1478, Houston, TX 77251-1478, filed pursuant to section 7 of the Natural Gas Act, in Docket No. CP89-471-007 to amend the certificate authority issued on June 25, 1991, in Docket No. CP89-471-000, et at., requesting authorization to increase the operating pressure of Gateway's facilities located in Mobile County, Alabama, all as more fully set forth in the amendment, which is on file with the Commission and open to public inspection.

Gateway states that it proposes to increase the operating pressure from 800 psig to 1,010 psig in order to insure that Gateway can operate at its designed capacity. Gateway states that the proposed increase in pressure would not require the construction of any additional facilities.

Comment date: May 10, 1993, in accordance with the first paragraph of Standard Paragraph F at the end of this notice.

2. Tennessee Gas Pipeline Co.

[Docket No. CP93-297-000]

April 19, 1993.

Take notice that on April 15, 1993, Tennessee Gas Pipeline Company (Tennessee), P.O. Box 2511, Houston, Texas 77252, filed in Docket No. CP93-297-000 a request pursuant to § 157.205 of the Commission's Regulations to operate six existing delivery point facilities initially constructed under section 311(a) of the Natural Gas Policy Act of 1978 (NGPA) under Tennessee's blanket certificate issued in Docket No. CP82-413-000, pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request on file with the Commission and open to public inspection.

Tennessee proposes to operate (1) the Cabell County, W. Va. Sales No. 2 delivery point in Cabell County, West Virginia; (2) the Cat Springs Sales delivery point in Austin County, Texas; (3) the Cranberry Sales delivery point in Kanawha County, West Virginia; (4) the Aberdeen delivery point in Monroe County, Mississippi; (5) the New Hope delivery point in Lownes County, Mississippi; and (6) the Neches-TGP delivery point in Montgomery County, Texas, to provide for all transportation services, whether jurisdictional or non-jurisdictional pursuant to section 311 of the NGPA, for the benefit of all customers on Tennessee's system. Tennessee states that each of these existing delivery points were constructed under section 311(a) of the NGPA to provide section 311(a) transportation services. Tennessee states that the delivery of volumes through the existing delivery points would not impact Tennessee's peak day and annual deliveries and that the proposed activity is not prohibited by its existing tariff. Tennessee has sufficient capacity to accommodate the changes proposed herein without detriment or disadvantage to Tennessee's other customers, it is stated.

Comment date: June 3, 1993, in accordance with Standard Paragraph G at the end of this notice.

3. CNG Transmission Corp.

[Docket No. CP80-223-002 and CP84-306-002]

April 19, 1993.

Take notice that on April 2, 1993, CNG Transmission Corporation (CNG), 445 West Main Street, Clarksburg, West Virginia 26301, filed in Docket Nos. CP80-223-002 and CP84-306-002, a petition to amend the orders issued on June 16, 1980 and October 3, 1984, in Docket Nos. CP80-223 and CP84-306-000, respectively, pursuant to section 7(c) of the Natural Gas Act for authorization to amend its currently effective certificates of public convenience and necessity to allow CNG to render storage services directly to certain customers of Texas Eastern Transmission Corporation (Texas Eastern) and Algonquin Gas Transmission Company (Algonquin) which CNG now provides directly to Texas Eastern, all as more fully set forth in the petition to amend which is on file with the Commission and open to public inspection.

CNG states that this application concerns two storage service agreements between CNG and Texas Eastern dated December 18, 1979, and March 20, 1984. CNG further states that the agreements provide for a combined storage capacity of 51 MMdt. CNG says it was granted authority to render these services to Texas Eastern under section 7(c) of the Natural Gas Act in *Texas Eastern Transmission Corporation, et al.*, 11 FERC ¶61,284 (1980) and *Consolidated Gas Transmission Corporation, et al.*, 29 FERC ¶61,032 (1984). It is stated that Texas Eastern resells the storage services it receives under the two storage service agreements to its customers, including Algonquin, under its Rate Schedules SS-2 and SS-3. CNG indicates that Texas Eastern received its certificate authority to resell CNG's storage service to its SS-2 and SS-3 customers in the same orders that CNG received the authorization to render the underlying Rate Schedule GSS service. Algonquin resells the SS-2 storage services that it receives from Texas Eastern to its customers under its Rate Schedule STB under the authorization granted in Texas Eastern Transmission Corporation, et al., 11 FERC ¶61,284 (1980), it is stated. CNG indicates that Algonquin resells Texas Eastern's SS-3 storage services to its customers taking service under its Rate Schedule SS-III [1] in accordance with a certificate originally granted in *Algonquin Gas Transmission Company*, 29 FERC ¶61,305 (1984) and amended in *Algonquin Gas Transmission Company*, 35 FERC ¶61,271 (1986).

CNG states that it requests that the certificates originally issued in Docket Nos. CP80-223 and CP84-306-000 be amended in two ways: (1) To substitute the assignees for Texas Eastern as the "buyer" of the service, and (2) to apportion the originally certificated contract quantities among the assignees. CNG further states that each assignee's beginning inventory balance would be

[1] Customers under Texas Eastern Rate Schedules SS-2 and SS-3 and Algonquin's Rate Schedules STB and SS-III are referred to herein as "the assignees".

established by CNG based upon written Gas Act for authorization to abandon accommodate natural gas deliveries to

the request which is on file with the

VOL
58
ISS
85
MY
5
1993
UMI

established by CNG based upon written notification received by Texas Eastern and Algonquin. It is stated that the term of the amended authorization for the Texas Eastern assignees would become effective on the latter of: (1) The date that the Commission issues an order granting the requested amendment or (2) the date Texas Eastern Implements restructured services in accordance with the Commission's orders in Docket No. RS92–11–000. CNG says that the amended authorization would become effective for the Algonquin assignees on the latter of: (1) The date that the Commission issues an order granting the requested amendment or (2) the date Algonquin implements restructured services in accordance with the Commission's orders in Docket No. RS92–28–000.

Comment date: May 10, 1993, in accordance with the first paragraph of Standard Paragraph F at the end of this notice.

4. Northern Natural Gas Co.

[Docket No. CP93–294–000]

April 19, 1993.

Take notice that on April 14, 1993, Northern Natural Gas Company (Northern), 1111 South 103rd Street, Omaha, Nebraska 68124–1000, filed in Docket No. CP93–294–000, a request pursuant to §§ 157.205 and 157.212 of the Commission's Regulations under the Natural Gas Act and pursuant to Northern's blanket certificate issued in Docket No. CP82–401–000, for authority to install and operate three (3) new delivery points and to upgrade two (2) existing delivery points to accommodate natural gas deliveries to Iowa Electric Light and Power Company (Iowa Electric), all as more fully set forth in the application which is on file and open to public inspection.

Northern states that Iowa Electric has requested additional service to accommodate the growth of residential and commercial markets it serves. Northern estimates an increase of 3,319 Mcf per day and 137,920 Mcf per annual of natural gas deliveries to be delivered to Iowa Electric.

Comment date: June 3, 1993, in accordance with Standard Paragraph G at the end of this notice.

5. Transcontinental Gas Pipe Line Corp.

[Docket No. CP93–303–000]

April 20, 1993.

Take notice that on April 16, 1993, Transcontinental Gas Pipe Line Corporation (Transco), P.O. Box 1396, Houston, Texas 77251, filed in Docket No. CP93–303–000 an application pursuant to section 7(b) of the Natural Gas Act for authorization to abandon one 3,500 horsepower compressor located on a production platform owned by Arco Oil and Gas Company (Arco) in High Island Area Block A–467, Offshore Texas, all as more fully set forth in the application which is on file with the Commission and open to public inspection.

Transco states that, due to Arco's declining gas production in this area, the current configuration of compressors is no longer operationally efficient. It is stated that there are no longer sufficient natural gas reserves from the High Island Block A–466 and A–467 fields to operate compressors located on platforms in each block. It is indicated that, as a result, Transco proposes to move a 1,000 horsepower compressor unit from the production platform located on High Island Block A–466 to the platform located in Block A–467 under § 157.208 of the Commission's Regulations as a miscellaneous rearrangement of facilities. Transco states that, because Arco's High Island A–467 platform cannot support both compressors, it must first obtain Commission authorization to abandon the 3,500 horsepower unit currently located on the platform. Transco also states that the 3,500 horsepower compressor unit would ultimately be sold or utilized elsewhere on the Transco system.

Transco states that the requested abandonment would have no impact on the daily design capacity or operating conditions on Transco's system. Transco also states that no service to any other customers would be impacted by the proposed abandonment.

Transco requests abandonment approval on an expedited basis. Transco states that it has been advised by Arco that a failure to reconfigure the facilities on a timely basis in response to the declining natural gas production could result in a potentially substantial loss of Arco's reserves in this offshore area.

Comment date: May 11, 1993, in accordance with Standard Paragraph F at the end of this notice.

6. Northern Natural Gas Co.

[Docket No. CP93–309–000]

April 22, 1993.

Take notice that on April 21, 1993, Northern Natural Gas Company (Northern), P.O. Box 1188, Houston, Texas 77251–1188, filed in Docket No. CP93–309–000 a request pursuant to §§ 157.205 and 157.212 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205 and 157.212) for authorization to construct and operate a delivery point to accommodate natural gas deliveries to Wisconsin Power and Light Company (WP&L), under the blanket certificate issued in Docket No. CP82–401–000, pursuant to section 7(c) of the Natural Gas Act, all as more fully set forth in the request which is on file with the Commission and open to public inspection.

Northern states that it requests authority to install a delivery point (Dodgeville TBS #1A town border station) located in Iowa County, Wisconsin to accommodate natural gas deliveries to WP&L under Northern's currently effective service agreement. It is indicated that WP&L has requested service due to the expansion into markets not previously served by WP&L Northern indicates that the volumes proposed to be delivered at the new town border station would result in an estimated increase in Northern's peak day and annual deliveries of 1,476 Mcf and 180,945 Mcf, respectively. Northern indicates that the end use of the deliveries at the new town border station would be residential, commercial and industrial. Northern estimates that the facilities would cost $55,000, with WP&L making a contribution in aid of construction of the total cost of facilities.

Northern advises that the total volumes to be delivered to the customer after the request do not exceed the total volumes authorized prior to the request. Also, it is indicated that the proposed activity is not prohibited by its existing tariff and that it has sufficient capacity to accommodate the changes proposed herein without detriment or disadvantage to Northern's other customers.

Comment date: June 7, 1993, in accordance with Standard Paragraph G at the end of this notice.

7. Williston Basin Interstate Pipeline Co.

[Docket No. CP93–302–000]

April 22, 1993.

Take notice that on April 16, 1993, Williston Basin Interstate Pipeline Company (Williston Basin), 200 North Third Street, Suite 300, Bismarck, North Dakota 58501, filed in Docket No. CP93–302–000 as a request pursuant to § 157.205 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205) for authorization to reassign currently effective Maximum Daily Quantities (MDQ) among various delivery points for sales to Montana-Dakota Utilities Co. (Montana-Dakota), under Williston Basin's blanket certificate issued in Docket No. CP83–1–000 *et al.*, all as more fully set forth in the request which is on file with the Commission and open to public inspection.

It is stated that Williston Basin makes firm sales of natural gas to Montana-Dakota pursuant to Williston Basin's Rate Schedule G–1. It is asserted that the service agreement for the sale, dated June 23, 1988, has been amended, as of April 15, 1993. It is explained that the volumes to be delivered following the reassignment proposed herein are within Montana-Dakota's authorized entitlement from Williston Basin. It is asserted that Williston Basin's tariff does not prohibit the reassignment of individual delivery point MDQ's. It is further asserted that Williston Basin has sufficient capacity to accomplish the deliveries without detriment or disadvantage to its other customers. It is explained that no new facilities are proposed to be constructed herein.

Comment date: June 7, 1993, in accordance with Standard Paragraph G at the end of this notice.

8. K N Energy, Inc.

[Docket No. CP93–305–000]

April 22, 1993.

Take notice that on April 20, 1993, K N Energy, Inc. (K N), P.O. Box 281304, Lakewood, Colorado, 80228, filed in Docket No. CP93–305–000 a request pursuant to §§ 157.205 and 157.211 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205) for authorization to construct and operate sales taps for the delivery of gas to end users under K N's blanket certificate issued in Docket Nos. CP83–140–000, CP83–140–001, and CP83–140–002 pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request that is on file with the Commission and open to public inspection.

K N requests authorization to construct and operate sales taps to various end users located along its jurisdictional pipelines. K N states that the proposed sales taps are not prohibited by any of its existing tariffs and that the additional taps will have no significant impact on its peak day and annual deliveries.

Comment date: June 7, 1993, in accordance with Standard Paragraph G at the end of this notice.

Standard Paragraphs

F. Any person desiring to be heard or make any protest with reference to said filing should on or before the comment date file with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, a motion to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a motion to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to jurisdiction conferred upon the Federal Energy Regulatory Commission by sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this filing if no motion to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that a grant of the certificate is required by the public convenience and necessity. If a motion for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for the applicant to appear or be represented at the hearing.

G. Any person or the Commission's staff may, within 45 days after the issuance of the instant notice by the Commission, file pursuant to Rule 214 of the Commission's Procedural Rules (18 CFR 385.214) a motion to intervene or notice of intervention and pursuant to § 157.205 of the Regulations under the Natural Gas Act (18 CFR 157.205) a protest to the request. If no protest is filed within the time allowed therefore, the proposed activity shall be deemed to be authorized effective the day after the time allowed for filing a protest. If a protest is filed and not withdrawn within 30 days after the time allowed for filing a protest, the instant request shall be treated as an application for authorization pursuant to section 7 of the Natural Gas Act.

Lois D. Cashell,

Secretary.

[FR Doc. 93–10544 Filed 5–4–93; 8:45 am]

BILLING CODE 6717–01–M

[Docket Nos. CP93–318–000, et al.]

Williams Natural Gas Company, et al.; Natural Gas Certificate Filings

April 29, 1993.

Take notice that the following filings have been made with the Commission:

1. Williams Natural Gas Co.

[Docket No. CP93–318–000]

Take notice that on April 27, 1993, Williams Natural Gas Company (Williams), P.O. Box 3288, Tulsa, Oklahoma 74101, filed in Docket No. CP93–318–000 a request pursuant to §§ 157.205 and 157.212 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205 and 157.212) for authorization to use for other purposes facilities originally installed for the delivery of gas to Greeley Gas Company (Greeley) under Section 311 of the Natural Gas Policy Act of 1978 (NGPA), under the blanket certificate issued in Docket No. CP82–479–000, pursuant to section 7(c) of the Natural Gas Act, all as more fully set forth in the request which is on file with the Commission and open to public inspection.

Williams states that it installed a tap, measuring and appurtenant facilities on its line XQ–1 located in Johnson County, Kansas for the delivery of NGPA Section 311 transportation gas to Greeley for system supply. Williams in this request proposes to use the NGPA section 311 facilities to deliver transportation gas to Greeley for any purpose. It is indicated that the $23,460 cost of the facilities was reimbursed by Greeley. Williams states that it anticipates delivering an average of 500 dt equivalent of natural gas per day to Greeley and that the deliveries would have no impact on Williams' peak day or annual deliveries.

Williams indicates that the proposed activity is not prohibited by its existing tariff and that it has sufficient capacity to accommodate the changes proposed herein without detriment or disadvantage to Williams' other customers.

Comment date: June 14, 1993, in accordance with Standard paragraph G at the end of this notice.

2. National Fuel Gas Supply Corp.

[Docket No. CP93–313–000]

Take notice that on April 26, 1993, National Fuel Gas Supply Corporation (National), 10 Lafayette Square, Buffalo, New York 14203, filed in Docket No. CP93–313–000 a request pursuant to Sections 157.205 and 157.211 of the Commission's Regulations under the National Gas Act (18 CFR 157.205,

157.211) for authorization to construct

Tennessee further states that the

Commission's regulations and section

waiver of the Commission's reporting

said requests for waiver should file a

be taken, but will not serve

VOL 58 ISS 85 MY 5 1993 UMI

157.211) for authorization to construct and operate sales tap facilities under National's blanket certificate issued in Docket No. CP83–4–000 pursuant to section 7 of the Natural Gas Act, all as more fully set forth in the request that is on file with the Commission and open to public inspection.

National proposes to install three sales tap connections to enable its existing customer, National Fuel Gas Distribution Corporation (Distribution), to serve the residential end-users shown below. National states that the service to Distribution would be performed under the terms of its Rate Schedule RQ. National further states that, following the restructuring of its services pursuant to the proceeding instituted in Docket No. RS92–21–000, the service would be performed under its Rate Schedule EFT.

End-user	Line	Location	Annual Mcf
Norman J. Keeley.	N–M47	Mercer County, PA.	150
Wayne R. Brest.	N–M47	Mercer County, PA.	150
John Burford.	T–3	Clarion County, PA.	150

Comment date: June 14, 1993, in accordance with Standard Paragraph G at the end of this notice.

3. Tennessee Gas Pipeline Co.

[Docket No. CP93–315–000]

Take notice that on April 26, 1993, Tennessee Gas Pipeline Company (Tennessee), P.O. Box 2511, Houston, Texas 77252, filed in Docket No. CP93–315–000 a request pursuant to § 157.205 of the Commission's Regulations under the Natural Gas Act (18 CFR 157.205) for authorization to construct and operate a delivery tap to Capital Gas Distribution Company, Inc. (Capital) under Tennessee's blanket certificate issued in Docket No. CP82–413–000 pursuant to Section 7 of the Natural Gas Act, all as more fully set forth in the application which is on file with the Commission and open to public inspection.

Tennessee states that it has entered into an amendment to a gas transportation agreement with Tenngasco Corporation (Tenngasco), a marketer of natural gas, to transport, on an interruptible basis, up to 300 dekatherms of natural gas per day for delivery to Capital in Montgomery County, Texas. Tennessee avers that Tenngasco has requested this delivery point and that it will reimburse Tennessee for the cost of the facilities.

Tennessee further states that the delivery will have no impact on Tennessee's peak day and annual deliveries; that the proposed delivery point is not prohibited by its traffic; and that Tennessee has sufficient capacity to accommodate this delivery without detriment or disadvantage to Tennessee's other customers.

Comment date: June 14, 1993, in accordance with Standard Paragraph G at the end of this notice.

G. Any person or the Commission's staff may, within 45 days after the issuance of the instant notice by the Commission, file pursuant to Rule 214 of the Commission's Procedural Rules (18 CFR 385.214) a motion to intervene or notice of intervention and pursuant to § 157.205 of the Regulations under the Natural Gas Act (18 CFR 157.205) a protest to the request. If no protest is filed within the time allowed therefore, the proposed activity shall be deemed to be authorized effective the day after the time allowed for filing a protest. If a protest is filed and not withdrawn within 30 days after the time allowed for filing a protest, the instant request shall be treated as an application for authorization pursuant to section 7 of the Natural Gas Act.

Lois D. Cashell,

Secretary.

BILLING CODE 6717–01–M

[Docket Nos. ST93–2803–000, et al.]

Delhi Gas Pipeline Corp., et al.; Self-Implementing Transactions

April 29, 1993.

Take notice that the following transactions have been reported to the Commission as being implemented pursuant to part 284 of the Commission's regulations, sections 311 and 312 of the Natural Gas Policy Act of 1978 (NGPA), section 7 of the NGA and section 5 of the Outer Continental Shelf Lands Act.[1]

The "Recipient" column in the following table indicates the entity receiving or purchasing the natural gas in each transaction.

The "Part 284 Subpart" column in the following table indicates the type of transaction.

A "B" indicates transportation by an interstate pipeline on behalf of an intrastate pipeline or a local distribution company pursuant to § 284.102 of the Commission's regulations and section 311(a)(1) of the NGPA.

A "C" indicates transportation by an intrastate pipeline on behalf of an interstate pipeline or a local distribution company served by an interstate pipleine pursuant to § 284.122 of the Commission's regulations and section 311(a)(2) of the NGPA.

A "D" indicates a sale by an intrastate pipeline to an interstate pipeline or a local distribution company served by an interstate pipeline pursuant to § 284.142 of the Commission's regulations and section 311(b) of the NGPA. Any interested person may file a complaint concerning such sales pursuant to § 284.147(d) of the Commission's regulations.

An "E" indicates an assignment by an intrastate pipeline to any interstate pipeline or local distribution company pursuant to § 284.163 of the Commission's regulations and section 312 of the NGPA.

A "G" indicates transportation by an interstate pipeline on behalf of another interstate pipeline pursuant to § 284.222 and a blanket certificate issued under § 284.221 of the Commission's regulations.

A "G–I" indicates transportation by an intrastate pipeline company pursuant to a blanket certificate issued under § 284.227 of the Commission's regulations.

A "G–S" indicates transportation by interstate pipelines on behalf of shippers other than interstate pipelines pursuant to § 284.223 and a blanket certificate issued under § 284.221 of the Commission's regulations.

A "G–LT" or "G–LS" indicates transportation, sales or assignments by a local distribution company on behalf of or to an interstate pipeline or local distribution company pursuant to a blanket certificate issued under § 284.224 of the Commission's regulations.

A "G–HT" or "G–HS" indicates transportation, sales or assignments by a Hinshaw Pipeline pursuant to a blanket certificate issued under § 284.224 of the Commission's regulations.

A "K" indicates transportation of natural gas on the Outer Continental Shelf by an interstate pipeline on behalf of another interstate pipeline pursuant to § 284.303 of the Commission's regulations.

A "K–S" indicates transportation of natural gas on the Outer Continental Shelf by an interstate pipeline on behalf of shippers other than interstate pipelines pursuant to § 284.303 of the Commission's regulations.

Certain companies as indicated in the attached table have requested partial

[1] Notice of a transaction does not constitute a determination that the terms and conditions of the proposed service will be approved or that the noticed filing is in compliance with the Commission's regulations.

waiver of the Commission's reporting requirements contained in § 284.126 of the Commission's Regulations to allow the filing of reports listing self-implementing transactions with multiple interstate pipeline companies as the "on behalf of" parties, similar to the waiver granted by the Commission in *Transok, Inc.*, Docket No. ST90–267–000, 61 FERC ¶61,347 (1992). Any person desiring to be heard or to protest said requests for waiver should file a motion to intervene or protest with the Federal Energy Regulatory Commission, 825 North Capitol Street, NE., Washington, DC 20426, in accordance with 18 CFR 385.214 and 385.211 of the Commission's Rules and Regulations. All such motions or protests should be filed on or before May 11, 1993. Protests will be considered by the Commission in determining the appropriate action to be taken, but will not serve to make protestants parties to the proceeding. Any person wishing to become a party must file a motion to intervene. Copies of these filings are on file with the Commission and are available for public inspection in the public reference room.

Lois D. Cashell,

Secretary.

[Docket No. CP93-311-000]

Transcontinental Gas Pipe Line Corp.; Application

April 29, 1993.

Take notice that on April 23, 1993, Transcontinental Gas Pipe Line Corporation (Transco), P.O. Box 1396, Houston, Texas 77251, filed in Docket No. CP93-311-000 an application pursuant to section 7(b) of the Natural Gas Act for permission and approval to abandon transportation services for Amoco Production Company (Amoco), a producer of natural gas, all as more fully set forth in the application which is on file with the Commission and open to public inspection.

Transco proposes to abandon three transportation services rendered for Amoco, as detailed below:

Rate schedule	Quality of service	Quantity	Location	Proposed effective date
X-163	Firm	28,400 Mcf/d	LA, Offshore LA	2/5/93
X-212	Firm	12,000 Mcf/d	LA, Offshore LA	5/1/92
X-218	Interruptible	12,000 dt equivalent per day	MS, LA	10/22/92

Transco asserts that it has notified Amoco of its intent to terminate the service agreements for the three transportation services. It is further asserted that Amoco consents to the abandonments and did not request replacement services. Transco states that the proposed abandonments would not affect service to any other customers.

No facilities are proposed to be abandoned.

Any person desiring to be heard or to make any protest with reference to said application should on or before May 20, 1993, file with the Federal Energy Regulatory Commission, Washington, DC 20426, a motion to intervene or a protest in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.214 or 385.211) and the Regulations under the Natural Gas Act (18 CFR 157.10). All protests filed with the Commission will be considered by it in determining the appropriate action to be taken but will not serve to make the protestants parties to the proceeding. Any person wishing to become a party to a proceeding or to participate as a party in any hearing therein must file a motion to intervene in accordance with the Commission's Rules.

Take further notice that, pursuant to the authority contained in and subject to the jurisdiction conferred upon the Federal Energy Regulatory Commission by sections 7 and 15 of the Natural Gas Act and the Commission's Rules of Practice and Procedure, a hearing will be held without further notice before the Commission or its designee on this application if no motion to intervene is filed within the time required herein, if the Commission on its own review of the matter finds that permission and approval for the proposed abandonment are required by the public convenience and necessity. If a motion for leave to intervene is timely filed, or if the Commission on its own motion believes that a formal hearing is required, further notice of such hearing will be duly given.

Under the procedure herein provided for, unless otherwise advised, it will be unnecessary for Transco to appear or be represented at the hearing.

Lois D. Cashell,

Secretary.

Office of Hearing and Appeals

Cases Filed During the Week of April 9 Through April 16, 1993

During the Week of April 9 through April 16, 1993, the appeals and applications for exception or other relief listed in the Appendix to this Notice were filed with the Office of Hearings and Appeals of the Department of Energy.

Under DOE procedural regulations, 10 CFR part 205, any person who will be aggrieved by the DOE action sought in these cases may file written comments on the application within ten days of service of notice, as prescribed in the procedural regulations. For purposes of the regulations, the date of service of notice is deemed to be the date of publication of this Notice or the date of receipt by an aggrieved person of actual notice, whichever occurs first. All such comments shall be filed with the Office of Hearings and Appeals, Department of Energy, Washington, DC 20585.

Dated: April 29, 1993.

George B. Breznay,

Director, Office of Hearings and Appeals.

LIST OF CASES RECEIVED BY THE OFFICE OF HEARINGS AND APPEALS

[Week of Apr. 9 through Apr. 16, 1993]

Date	Name and location of applicant	Case no.	Type of submission
Apr. 9, 1993	ARCO/Anton's Arco Service Station, Atlantic Beach, FL.	RR304-60	Request for modification/rescission in the Arco refund proceeding. If granted: The 3/17/93 Dismissal Letter (Case No. RF304-12803) issued to Anton's Arco Service Station would be modified regarding the firm's application for refund submitted in the Arco refund proceeding.
Do	Gulf/Villa Maria Gulf, Cordova, TN	RR300-251	Request for modification/rescission in the Gulf refund proceeding. If granted: The August 29, 1991 Decision and Order (Case RF300-12091) issued to Villa Maria Gulf would be modified regarding the firm's application for refund submitted in the Gulf refund proceeding.
Apr. 12, 1993	David DeKok, Harrisburg, Pennsylvania	LFA-0282	Appeal of an information request denial. If granted: The March 22, 1993 Freedom of Information Request Denial issued by the Idaho Field Office would be rescinded, and David DeKok would receive access to documents pertaining to the clean-up of the 1979 Three Mile Island nuclear power plant accident.
Do	Seehuus Associates, Prosser, Washington.	LFA-0283	Appeal of an information request denial. If granted: The Freedom of Information Request Denial issued by the Oak Ridge Field Office would be rescinded, and Seehuus Associates would receive access to information regarding procurement actions made by the Oak Ridge M & O contractor.
Do	Energy Products, Inc., Sacramento, California.	LFA-0281	Appeal of an information request denial. If granted: The March 29, 1993 Freedom of Information Request Denial issued by the Oak Ridge Field Office would be rescinded, and Energy Products, Inc. would receive access to the name of the company or manufacturer for Product "S" from the "Preliminary Evaluation of Radiation Control Coatings for Energy Conservation in Buildings" report.
Do	Nabisco Brands, Inc., Parsippany, NJ	RR272-103	Request for modification/rescission in the crude oil refund proceeding. If granted: The March 13, 1993 Decision and Order (Case No. RC272-170) issued to Nabisco Brands, Inc. would be modified regarding the firm's application for refund submitted in the Crude Oil Refund Proceeding.
Apr 14, 1993	Cal Brekke, San Jose, CA	LFA-0284	Appeal of an information request denial. If granted: Cal Brekke would receive access to DOE Information.
Do	Texaco/Borg Warner Chemicals, Inc., Kernesville, NC.	RR321-127	Request for modification/rescission in the Texaco refund proceeding. If granted: The 1/4/93 Dismissal Ltr. (Case No. RF321-18545) issued to Borg Warner Chemicals, Inc. would be modified regarding the firm's application for refund submitted in the Texaco refund proceeding.
Apr 16, 1993	Power City Electric, Inc., Spokane, WA	LFA-0285	Appeal of an information request denial. If granted: The March 8, 1993 Freedom of Information Request Denial issued by the Office of Freedom of Information would be rescinded, and Power City Electric, Inc. would receive access to DOE information.

Office of Hearings and Appeals

Issuance of Decisions and Orders During the Week of March 8 Through March 12, 1993

During the week of March 8 through March 12, 1993, the decisions and orders summarized below were issued with respect to appeals and applications for other relief filed with the Office of Hearings and Appeals of the Department of Energy. The following summary also contains a list of submissions that were dismissed by the Office of Hearings and Appeals.

Appeals

Eugene Maples, 3/12/93, LFA–0271

Eugene Maples filed an Appeal from a partial denial by the DOE's Atlanta Support Office (the ASO) of a Request for Information which he had submitted under the Freedom of Information Act (the FOIA). In considering the Appeal, the DOE found that the search for responsive documents conducted by the ASO was inadequate and remanded the case to the ASO for a new search for responsive documents. DOE's determination was based on the fact that documents that were released in response to Maples' request showed that other responsive documents existed in the ASO's files, but were not identified as responsive in the ASO's determination letter.

Robertson, Phillips & Knight, 3/11/93, LFA–0202

Robertson, Phillips & Knight (RPK) filed an Appeal from a determination issued by the Bonneville Power Administration (BPA) of the Department of Energy (DOE). The determination denied, in part, a Request for Information which RPK submitted under the Freedom of Information Act (FOIA). RPK requested documents relating to soil conditions and soil condition testing at the site of a BPA construction project. The BPA withheld a memorandum pursuant to Exemption 5 of the FOIA. In considering the Appeal, the DOE found that the BPA had failed to provide in its determination letter a specific justification for withholding the memorandum under Exemption 5. Accordingly, the DOE granted RPK's Appeal and remanded the matter to the BPA to either release the memorandum or issue a new determination supporting the withholding of the memorandum.

Remedial Order

Kenneth H.N. Taves, K.T. Trading Corporation, James M. Betz, 3/9/93 LRO–0001

Kenneth H.N. Taves (Taves), together with K.T. Trading Corporation (K.T. Trading), and James M. Betz (Betz) filed respective Statements of Objections to a Proposed Remedial Order (PRO) issued by the Economic Regulatory Administration (ERA) jointly to Taves, K.T. Trading, Betz d/b/a Betz Oil and Trading Company, Robert J. Martin (Martin) and Gordon S. Gregson (Gregson) (collectively, "the Recipients"). In the PRO, the ERA charged that during the period January through December 1980, the Recipients participated in certain certification swap schemes involving artificial crude oil purchase, sale, exchange and processing agreements to defraud the DOE Entitlements Program, 10 CFR 211.66, 211.67, thereby resulting in the circumvention and contravention of regulatory requirements in violation of 10 CFR 205.202 and 210.62(f). In considering the Statements of Objections, the DOE rejected claims by Taves/K. T. Trading and Betz, *inter alia*, that: (i) The action was barred by the statute of limitations and the equitable doctrine of laches; (ii) the PRO failed to establish a prima facie case and denied due process; (iii) their actions did not constitute a violation of the Entitlements Program or anti-circumvention regulations; (iv) Taves and Betz should not be held liable on the basis of "central figure" liability; and (v) the ERA and miscalculated the amount of the violation. The DOE further determined that: (i) in view of a Consent Order entered into by Martin with the ERA pursuant to 10 CFR 205.199J, Martin should be dismissed from the proceeding and the PRO amended to reduce the liability of remaining Recipients, and (ii) the PRO should be issued as a final Remedial Order to Gregson since he failed to file any objection in the proceeding. Accordingly, the PRO was issued as a final Remedial Order to Taves, K. T. Trading, Betz and Gregson as follows: Gregson and Betz jointly and severally liable for the full amount of the violation during the period January through December 1980, $22,584,485, plus interest, and Taves/K. T. Trading jointly and severally liable for the violation occurring during the period May through December 1980, $10,214,839, plus interest.

Refund Applications

Baltimore City Department of Education, 3/9/93, RF272–83777

The DOE issued a Decision and Order denying an Application for Refund filed in the crude oil special refund proceeding on behalf of the Baltimore City Department of Education (BCDE). BCDE was found to be an affiliate of Baltimore City and, therefore, bound by the waiver the City signed when it elected to participate in one of the Stripper Well refund proceedings. It was determined, therefore, that BCDE was ineligible for a Subpart V crude oil refund. Accordingly, BCDE's Application for Refund was denied.

Cummins Engine Company, Inc., 3/9/93, RF272–25980, RD272–25980

The DOE issued a Decision and Order granting an Application for Refund filed by Cummins Engine Company, Inc., a manufacturer of heavy-duty diesel engines and engine components, in the Subpart V crude oil refund proceeding. A group of States and Territories (States) objected to the application on the grounds that the applicant was able to pass through increased petroleum costs to its customers. In support of their objection, the States cited a portion of Cummins' 1979 annual report predicting that increases in fuel costs would lead to wider use of the diesel fuel engine. Thus, the States argued that Cummins, as a manufacturer of diesel engines, benefitted from increased fuel prices. The DOE determined that the evidence offered by the States was insufficient to rebut the presumption of end-user injury and that the applicant should receive a refund. The DOE also denied the States' Motion for Discovery, finding that discovery was not warranted where the States had not presented evidence sufficient to rebut the applicant's presumption of injury. The refund granted to the applicant in this Decision was $42,422.

E.D.G./Rocky Home Dairy, Inc., 3/12/93, RR311–1

The DOE issued a Decision and Order denying a Motion for Reconsideration filed by Rocky Home Dairy in the E.D.G. special refund proceeding. In a prior Decision and Order, the DOE had granted Rocky Home Dairy a refund based on the reseller-retailer small-claim presumption of injury. Rocky Home Dairy filed this Motion for Reconsideration to obtain a larger refund based on the end-user presumption of injury. While purchasing gasoline from E.D.G., Rocky Home Dairy had operated both a retail gasoline station and a fleet of delivery trucks. Rocky Home Dairy contended that it was entitled to the end-user presumption of injury because it consumed a greater volume of gasoline in its delivery fleet than it resold through the gasoline station. The DOE found that the business records submitted by Rocky Home Dairy did not support this contention, but showed instead that the firm sold considerably more gasoline than it consumed. The DOE further found that Rocky Home Dairy, as a regulated firm in the petroleum industry that had been required to keep records of its cost and price increases, was not eligible for consideration under the end-user presumption of injury. Finally, the DOE rejected Rocky Home Dairy's claim that the prior Decision and Order had denied it of a property right under the Fifth Amendment to the Constitution of the United States.

Texaco Inc./Ed Yarbrough Texaco Service Center, 3/9/93, RF321–19609

The Office of Hearings and Appeals (OHA) of the Department of Energy issued a Decision and Order concerning an Application for Refund that was filed in the Texaco refund proceeding by Ed Yarbrough Texaco Service Center (Case No. RF321–1599). In the Decision, the OHA modified a prior Decision approving that application and rescinded in part the refund that was granted to Mr. Yarbrough. That refund was based upon Mr. Yarbrough's statement that he owned and operated his service station during the entire period from August 1974 through January 1981. Subsequently, the OHA learned that another applicant claimed that he operated the same station until October 21, 1974. Mr. Yarbrough admitted that he purchased the station effective on that date. The Decision, therefore, determined that Mr. Yarbrough had been granted an excessive refund, and required him to remit $289 to the DOE.

Texaco Inc./Harris & E Texaco et al., 3/9/93, RF321–13707 et al.

The DOE issued a Decision and Order concerning 34 Applications for Refund filed in the Texaco Inc. special refund proceeding. Each of the Applicants was either a reseller whose allocable share is less than $10,000 or an end-user of Texaco products. The DOE determined that each applicant was eligible to receive a refund equal to its full allocable share. The sum of the refunds granted was $93,609 (69,335 principal plus $24,274 interest).

Refund Applications

The Office of Hearings and Appeals issued the following Decisions and Orders concerning refund applications, which are not summarized. Copies of the full texts of the Decisions and Orders are available in the Public Reference Room of the Office of Hearings and Appeals.

BILLING CODE 6450–01–P

Issuance of Decisions and Orders During the Week of April 5 Through April 9, 1993

During the week of April 5 through April 9, 1993 the decisions and orders summarized below were issued with respect to applications for relief filed with the Office of Hearings and Appeals of the Department of Energy. The following summary also contains a list of submissions that were dismissed by the Office of Hearings and Appeals.

Refund Applications

Gulf Oil Corporation/Dixie Brewing Co., 4/8/93, RF300–21728

The DOE issued a Decision and Order concerning an Application for Refund submitted in the Gulf Oil Corporation special refund proceeding by Dixie Brewing Co. The Application for Refund was dismissed because it was filed after the March 1, 1993 deadline established as the final filing date for the Gulf proceeding.

Gulf Oil Corporation/Durable Fuel Oil, Inc., 4/9/93, RF300–21733

The DOE issued a Decision and Order concerning an Application for Refund submitted in the Gulf Oil Corporation special refund proceeding by Durable Fuel Oil, Inc. The Application for Refund was dismissed because it was filed after the March 1, 1993 deadline established as the final filing date for the Gulf proceeding.

Gulf Oil Corporation/Timmers Petroleum Inc., 4/8/93, RF300–21724

The DOE issued a Decision and Order concerning an Application for Refund submitted in the Gulf Oil Corporation special refund proceeding by Timmers Petroleum, Inc. The Application for Refund was dismissed because it was filed after the March 1, 1993 deadline established as the final filing date for the Gulf proceeding.

Murphy Oil Corporation/Aldridge & Love Service Station, 4/9/93, RF309–1206

This Decision and Order considered the Application for Refund filed by James Love on behalf of Aldridge and Love Service Station (ALSS), an indirect purchaser of Murphy petroleum products. During the refund period, the station was operated under a partnership between Mr. Love and his parents-in-law, Odell and Marjorie W. Aldridge. After the refund period ended, Mr. and Mrs. Aldridge sold their interest in the station to Mr. Love. The March 7, 1986 Contract and Bill of Sale indicated Mr. and Mrs. Aldridge's intent to transfer all assets to Mr. Love, including intangible assets such as refunds: "* * * all property and assets of said partnership business of every kind and nature whatsoever, both tangible and intangible." Thus, Mr. Love acquired the right to the refund for ALSS' purchases of Murphy petroleum products. Accordingly, Mr. Love was granted a refund of $783 ($524 in principal and $259 in interest).

Texaco Inc./Donald E. Riggle, 4/5/93, RF321–19680

On October 11, 1991, the DOE issued a Decision and Order in the Texaco Inc. refund proceeding concerning an Application for Refund filed by Donald E. Riggle, a Texaco consignee. That refund was based upon a printout prepared by Texaco of the firm's consignments of Texaco gasoline for the period from March 1973 to 1980. Subsequently, another applicant filed an application for refund for the same consigneeship for the period from March through June 1973. Mr. Riggle agreed that he did not begin operating the business until June 1973. Accordingly, the DOE found that Mr. Riggle had received a refund that was larger than that to which he was entitled, and the DOE directed that Mr. Riggle repay, with interest, that portion of his refund attributable to consignments made prior to June 1973.

Refund Applications

The Office of Hearings and Appeals issued the following Decisions and Orders concerning refund applications, which are not summarized. Copies of the full texts of the Decisions and Orders are available in the Public Reference Room of the Office of Hearings and Appeals.

ENVIRONMENTAL PROTECTION AGENCY

[FRL–4651–4]

Availability of FY 92 Grant Performance Reports for Alabama, Florida, Georgia, Kentucky, Mississippi, North Carolina, South Carolina, and Tennessee

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice of availability of grantee performance evaluation reports.

SUMMARY: EPA's grant regulations (40 CFR 35.150) require the Agency to evaluate the performance of agencies which receive grants. EPA's regulations for regional consistency (40 CFR 56.7) require that the Agency notify the public of the availability of the reports of such evaluations. EPA recently performed end-of-year evaluations of eight state air pollution control programs (Alabama Department of Environmental Management, Florida Department of Environmental Regulation, Georgia Environmental Protection Division, Kentucky Department for Environmental Protection, Mississippi Bureau of Pollution Control, North Carolina Department of Environment, Health, and Natural Resources, South Carolina Department of Health and Environmental Control and Tennessee Department of Conservation and Environment), and 16 local programs (Knox County Department of Air Pollution Control, Chattanooga-Hamilton County Air Pollution Control Bureau, Memphis-Shelby County Health Department, Nashville-Davidson County Metropolitan Health Department, Jefferson County Air Pollution Control District, Western North Carolina Regional Air Pollution Control Agency, Mecklenburg County Department of Environmental Protection, Forsyth County Environmental Affairs Department, Palm Beach County Public Health Unit, Hillsborough County Environmental Protection Commission, Dade County Environmental Resources Management, Jacksonville Air Quality Division, Broward County Environmental Quality Control Board, Pinellas County Department of Environmental Management, City of Huntsville Department of Natural Resources, Jefferson County Department of Health). These audits were conducted to assess the agencies' performance under the grants made to them by EPA pursuant to section 105 of the Clean Air Act. EPA Region IV, has prepared reports for the twenty-four agencies identified above and these 105 reports are now available for public inspection.

ADDRESSES: The reports may be examined at the EPA's Region IV office, 345 Courtland Street, NE., Atlanta, Georgia 30365, in the Air, Pesticides, and Toxics Management Division.

FOR FURTHER INFORMATION CONTACT: Linda Thomas, at the above Region IV address, for information concerning States of Alabama, Florida, Mississippi, and Georgia. Vera Bowers, at the above Region IV address, for information concerning the States of Kentucky, North Carolina, South Carolina, and Tennessee.

Dated: April 6, 1993.

Patrick M. Tobin,

Acting Regional Administrator.

BILLING CODE 6560–50–F

[OPP–50737; FRL–4184–9]

Issuance of Experimental Use Permits

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA has granted experimental use permits to the following applicants. These permits are in accordance with, and subject to, the provisions of 40 CFR part 172, which defines EPA procedures with respect to the use of pesticides for experimental use purposes.

FOR FURTHER INFORMATION CONTACT: By mail: Registration Division (H7505C), Office of Pesticide Programs, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460. In person or by telephone: Contact the product manager at the following address at the office location or telephone number cited in each experimental use permit: 1921 Jefferson Davis Highway, Arlington, VA.

SUPPLEMENTARY INFORMATION: EPA has issued the following experimental use permits:

56336–EUP–2. Extension. Consep Membranes, Inc., 213 SW Columbia St., Bend, Oregon 97702–1013. This experimental use permit allows the use of 765 pounds of the pheromone (*E,E*)-8,10-dodecadien-1-o1 on 11,950 acres of apples, pears, and walnuts to evaluate the control of codling moth. The program is authorized in the States of Arizona, California, Colorado, Connecticut, Delaware, Georgia, Idaho, Illinois, Indiana, Kentucky, Maine, Maryland, Massachusettts, Michigan, Minnesota, New Hampshire, New Jersey, New York, New Mexico, North Carolina, Ohio, Oregon, Pennsylvania, Rhode Island, South Carolina, Texas, Utah, Vermont, Virginia, Washington, West Virginia, and Wisconsin. The experimental use permit is effective from November 19, 1992 to December 30, 1993. A temporary exemption from the requirement of a tolerance on all agricultural commodities has been extended until December 30, 1993. (Phil Hutton, PM 18, Rm. 213, CM #2, (703–305–7690)).

524–EUP–56. Renewal. Monsanto Company, 700 14th St., NW., Suite 1100, Washington, DC 20005. This experimental use permit allows the use of 8,000 pounds of the herbicide acetochlor on 4,000 acres of field corn to evaluate the control of various weeds. The program is authorized only in the States of Illinois, Indiana, Iowa, Kentucky, Minnesota, Nebraska, North Dakato, Ohio, South Dakota, and Wisconsin. The experimental use permit is effective from May 1, 1993 to May 1, 1995. A temporary tolerance for residues of the active ingredient in or on field corn (fodder and forage) and grain has been established. (Robert Taylor, PM 25, Rm. 247, CM #2, (703–305–6800))

63098–EUP–2. Mitsui Petrochemicals (America), Ltd., 250 Park Ave., Suite 950, New York, NY 10177. This experimental use permit allows the use of 49.95 pounds of the herbicide 1-methoxy-1-methyl-3-(4-(3,4-dihydro-2-methoxy-2,4,4-trimethyl-7-benzopyranyloxy)phenyl)urea on 450 acres of field corn grain forage, fodder, and silage to evaluate the control of various broadleaf weeds. The program is authorized only in the States of Colorado, Illinois, Indiana, Iowa, Minnesota, Missouri, Nebraska, Ohio, and Wisconsin. The experimental use permit is effective from December 22, 1992 to December 22, 1993. A temporary tolerance for residues of the active ingredient in or on field corn has been established. (Joanne Miller, PM 23, Rm. 237, CM #2, (703–305–7830))

707–EUP–125. Issuance. Rohm and Haas Company, Independence Mall West, Philadelphia, PA 19105. This experimental use permit allows the use of 200 pounds of the fungicide α-(2-[4-chlorophenyl)-ethyl]-α-phenyl-3-(1*H*-1,2,4-triazole)-1-propanenitrile on 200 acres of pecans to evaluate its performance and to define optium use rates. The program is authorized only in the States of Alabama, Georgia, Louisiana, Mississippi, Oklahoma, and Texas. The experimental use permit is effective from January 4, 1993 to December 31, 1993. A temporary tolerance for residues of the active ingredient in or on pecans has been established (Cynthia Giles-Parker, PM 22, Rm. 229, CM 2, (703–305–5540)).

Persons wishing to review these experimental use permits are referred to the designated product managers. Inquires concerning these permits should be directed to the persons cited above. It is suggested that interested persons call before visiting the EPA office, so that the appropriate file may be made available for inspection purposes from 8 a.m. to 4 p.m., Monday through Friday, excluding legal holidays.

Authority: 7 U.S.C. 136.

Dated: April 22, 1993.

Lawrence E. Culleen,

Acting Director, Registration Division, Office of Pesticide Programs.

BILLING CODE 6560–50–F

[OPP–180892; FRL 4584–6]

Receipt of Application for Emergency Exemption to Use Lindane; Solicitation of Public Comment

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA has received a specific exemption request from the Washington Department of Agriculture (hereafter referred to as the "Applicant") to use the pesticide lindane (CAS 58–89–9) to treat up to 4,500 acres of peas to control the pea leaf weevil (PLW). The Applicant proposes the use of an active ingredient which has been the subject of a Special Review, and is intended for a use that could pose a risk similar to the risk posed by any use of a pesticide which is or has been the subject of a Special Review; therefore, in accordance with 40 CFR 166.24, EPA is soliciting public comment before making the decision whether or not to grant the exemption.

DATES: Comments must be received on or before May 20, 1993.

ADDRESSES: Three copies of written comments, bearing the identification notation "OPP–180892," should be submitted by mail to: Public Docket and Freedom of Information Section, Field Operations Division (H7506C), Office of Pesticide Programs, Environmental Protection Agency, 401 M St., SW., Washington, D.C. 20460. In person, bring comments to: Rm. 1132, Crystal Mall #2, 1921 Jefferson Davis Highway, Arlington, VA.

Information submitted in any comment concerning this notice may be claimed confidential by marking any part or all of that information as "Confidential Business Information." Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2. A copy of the comment that does not contain Confidential Business Information must be provided by the submitter for inclusion in the public record. Information not marked confidential may be disclosed publicly by EPA without prior notice. All written comments filed pursuant to this notice will be available for public inspection in Rm. 1132, Crystal Mall #2, 1921 Jefferson Davis Highway, Arlington, VA, from 8 a.m. to 4 p.m., Monday through Friday, except legal holidays.

FOR FURTHER INFORMATION CONTACT: By mail: Libby Pemberton, Registration Division (H7505W), Office of Pesticide Programs, Environmental Protection Agency, 401 M St., SW., Washington, D.C. 20460. Office location and telephone number: Room 52, 6th Floor, Crystal Station 1, 2800 Jefferson Davis Highway, Arlington, VA, (703–308–8326).

SUPPLEMENTARY INFORMATION: Pursuant to section 18 of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) (7 U.S.C. 136p), the Administrator may, at his discretion, exempt a State agency from any registration provision of FIFRA if he determines that emergency conditions exist which require such exemption. The Applicant has requested the Administrator to issue a specific exemption for the use of Gamma-Mean 400 Insecticide (lindane) on peas to control the PLW. Information in accordance with 40 CFR part 166 was submitted as part of this request.

The pea leaf weevil is not a new insect in the pea growing areas of western Washington; however, it has never been an economic pest until the last few years. Although researchers are not sure of the reason for the significant increase in damage from the pea leaf weevil, they suspect that it may be tied to the loss of dinoseb. It appears that dinoseb provided some control of the pest. Since dinoseb use ended, the damage from the pea leaf weevil has increased dramatically. In 1992 yields were reduced by as much as 72 percent on many fields. In some instances, fields were not harvested due to severe yield loss. The Applicant estimates that without lindane, the loss in net revenue on the affected acres could be nearly $1 million.

The Applicant proposes to make a single application of Gamma-Mean 400 at a rate of 2 pints product (1 pound active ingredient) per acre on up to 4,500 acres of peas. This amounts to 1125 gallons of product, or 4,500 pounds of active ingredient. This is the first year that the Applicant has applied for this use.

Lindane was referred to Special Review in February of 1977, because risk criteria had been met or exceeded in three areas: (1) Acute toxicity to aquatic organisms [40 CFR 162.11(a)(3)(i)(B)(3)]; (2) oncogenic effects in test animals [40 CFR 162.11(a)(3)(ii)(A)], and (3) chronic and/or delayed toxicity causing reproductive or fetotoxic effects in test animals [40 CFR 162.11(a)(3)(ii)(B)]. In addition to these criteria, the RPAR Notice listed

four other possible adverse effects of

itself. The regulations governing section

The University of Texas Southwestern

this director is closed effective March

VOL
58
ISS
85
MY
5
19 93
UMI

four other possible adverse effects of lindane for which insufficient evidence existed to initiate a rebuttable presumption. The Agency requested registrants and other interested parties to submit data on the following effects: (1) Mutagenicity, (2) blood dyscrasias, (3) acute hazards to humans and domestic animals, and (4) population reduction in non-target avian species. Information was solicited also on the issue of the possible isomerization of lindane (gamma—BHC) to the alpha and beta isomers of BHC which have been shown to be oncogenic in rodents published in the **Federal Register** of July 21, 1978 (42 FR 31432). The Special Review process was completed and Notice published on October 19, 1983 (48 FR 48512), with the Agency announcing the Administrator's intent to cancel the registrations of lindane for two uses; to continue the registration of all other uses subject to certain label requirements and use practice prohibitions; and to deny applications for registration of lindane products not in accordance with the terms of that Notice.

This notice does not constitute a decision by EPA on the application itself. The regulations governing section 18 require publication of a notice of receipt of an application for a specific exemption proposing the use of an active ingredient which has been the subject of a Special Review, and is intended for a use that could pose a risk similar to the risk posed by any use of a pesticide which is or has been the subject of a Special Review. Such notice provides for opportunity for public comment on the application.

Accordingly, interested persons may submit written views on this subject to the Field Operations Division at the address above. The Agency will review and consider all comments received during the comment period in determining whether to issue the emergency exemption requested by the Washington Department of Agriculture.

Dated: April 20, 1993.

Lawrence E. Culleen,

Acting Director, Registration Division, Office of Pesticide Programs.

[FR Doc. 93–10079 Filed 5–4–93; 8:45 am]

BILLING CODE 6560–50–F

[OPP–180890; FRL 4584–1]

Receipt of Application for Emergency Exemption to Use Mancozeb; Solicitation of Public Comment

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA has received a specific exemption request from the Wisconsin Department of Agriculture, Trade and Consumer Protection (hereafter referred to as the "Applicant") for use of the fungicide mancozeb (trade name Dithane DF) (CAS 8018–01–7) to control foliar infection caused by *Phytophthora coctorum* and leaf and stem blight caused by *Alternaria panax* on up to 4,167 acres of ginseng in Wisconsin. The Applicant proposes the use of a pesticide which contains an active ingredient which has been the subject of a Special Review and is intended for a use that could pose a risk similar to the risk posed by any use of a pesticide which is or has been the subject of a Special Review; in addition, specific exemptions for this use have been granted for the past 6 years, and a complete application for registration of this use and/or a petition for tolerance for residues of mancozeb in or on ginseng has not been submitted to the Agency; therefore, in accordance with 40 CFR 166.24, EPA is soliciting public comment before making the decision whether or not to grant the exemption.

DATES: Comments must be received on or before May 20, 1993.

ADDRESSES: Three copies of written comments, bearing the identification notation "OPP–180890," should be submitted by mail to: Public Docket and Freedom of Information Section, Field Operations Division (H7506C), Office of Pesticide Programs, Environmental Protection Agency, 401 M St., SW., Washington, D.C. 20460. In person, bring comments to: Rm. 1132, Crystal Mall #2, 1921 Jefferson Davis Highway, Arlington, VA. Information submitted in any comment concerning this notice may be claimed confidential by marking any part or all of that information as "Confidential Business Information." Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2. A copy of the comment that does not contain Confidential Business Information must be provided by the submitter for inclusion in the public record. Information not marked confidential may be disclosed publicly by EPA without prior notice. All written comments filed pursuant to this notice will be available for public inspection in Rm. 1132, Crystal Mall #2, 1921 Jefferson Davis Highway, Arlington, VA, from 8 a.m. to 4 p.m., Monday through Friday, except legal holidays.

FOR FURTHER INFORMATION CONTACT: By mail: Libby Pemberton, Registration Division (H7505W), Office of Pesticide Programs, Environmental Protection Agency, 401 M St., SW., Washington, D.C. 20460. Office location and telephone number: Room 52, 6th Floor, Crystal Mall Station 1, 2800 Jefferson Davis Highway, Arlington, VA, (703–308–8326).

SUPPLEMENTARY INFORMATION: Pursuant to section 18 of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) (7 U.S.C. 136p), the Administrator may, at his discretion, exempt a State agency from any registration provision of FIFRA if he determines that emergency conditions exist which require such exemption. The Applicant has requested the Administrator to issue a specific exemption for the use of the fungicide, mancozeb, available as Dithane DF, EPA Reg. No. 707–180. Information in accordance with 40 CFR part 166 was submitted as part of this request. The Applicant has been granted emergency exemptions for use of mancozeb on ginseng to control Phytophthora and Alternaria since 1987. According to the Applicant, without effective control, ginseng growers could experience an 80 to 100 percent crop loss due to Phytophthora and Alternaria blights which are not effectively managed. Dithane DF will be applied at weekly intervals by ground application equipment at a rate of 1.5 pounds active ingredient (2 pounds product) per acre. A maximum of 12 applications will be made. A 14-day pre-harvest interval will be observed.

A Final Determination Action for the ethylene bisdithiocarbamate fungicides (EBDC's), which includes mancozeb, was issued February 13, 1992. The Agency took this action based on an assessment of the risks from exposure to ethylenethiourea (ETU) present in, or formed as a result of metabolic conversion from pesticide products containing the active ingredient mancozeb. ETU, a potential human carcinogen, teratogen, and thyroid toxicant, is present as a contaminant, degradation product, and metabolite of all the EBDC pesticides. The Agency concluded that the estimated cumulative risk of 10–5 from all current 55 food uses is unacceptable and, therefore, cancelled the following food uses of mancozeb: apricots, carrots, celery, collards, mustard greens, nectarines, peaches, rhubarb, spinach, succulent beans, and turnips. These cancellations reduce estimated lifetime dietary risk to 1.6 x 10–6 which the Agency has determined does not outweigh the benefits of the 45 retained uses.

This notice does not constitute a decision by EPA on the application

itself. The regulations governing section 18 require publication of a notice of receipt in the **Federal Register** and solicit public comment on an application for a specific exemption proposing the use of a pesticide which contains an active ingredient which has been the subject of a Special Review and is intended for a use that could pose a risk similar to the risk posed by any use of a pesticide which is or has been the subject of a Special Review; as well as, specific exemptions for which use has been granted for the past 3 years, and a complete application for registration of this use and/or a petition for tolerance for residues of the pesticide resulting from this use has not been submitted to the Agency. Such notice provides for opportunity for public comment on the application. Accordingly, interested persons may submit written views on this subject to the Field Operations Division at the address above.

The Agency, accordingly, will review and consider all comments received during the comment period in determining whether to issue the emergency exemption requested by the Wisconsin Department of Agriculture, Trade and Consumer Protection.

Dated: April 19, 1993.

Lawrence E. Culleen,

Acting Director, Registration Division, Office of Pesticide Programs.

Open Meeting, Board of Visitors for the Emergency Management Institute

AGENCY: Federal Emergency Management Agency (FEMA).

ACTION: Notice of open meeting.

SUMMARY: In accordance with section 10(a)(2) of the Federal Advisory

Committee Act, 5 U.S.C. app. 2, FEMA

VOL 58 ISS 85 MY 5 1993 UMI

Committee Act, 5 U.S.C. app. 2, FEMA announces the following committee meeting:

Name: Board of Visitors for the Emergency Management Institute.

Dates of Meeting: May 13–14, 1993.

Place: Federal Emergency Management Agency, National Emergency Training Center, Emergency Management Institute, Conference Room, Building N, Emmitsburg, MD 21727.

Time: May 13, 1993, 8:30 a.m.—5 p.m., May 14, 1993, 8:30 a.m.—3 p.m.

Proposed Agenda: May 13: The board will welcome 4 newly appointed members, discuss its recently submitted 1992 Annual Report with the EMI Superintendent and obtain feedback as necessary, and receive briefings on the status of various EMI/FEMA programs.

May 14: The board will receive a campus tour including EMI's Computer Lab and develop its 1993 Workplan.

Supplementary Information: The meeting will be open to the public with approximately 10 seats available on a first-come, first-served basis. Members of the general public who plan to attend the meeting should contact the Office of the Superintendent, Emergency Management Institute, 16825 South Seton Avenue, Emmitsburg, MD 21727, (301) 447–1251, on or before May 5, 1993.

Minutes of the meeting will be prepared and will be available for public viewing in the Office of the Superintendent, Emergency Management Institute, Federal Emergency Management Agency, Building N, National Emergency Training Center, Emmitsburg, MD 21727. Copies of the minutes will be available upon request 30 days after the meeting.

Dated: April 29, 1992.

Richard W. Krimm,

Deputy Associate Director, State and Local Programs and Support.

FEDERAL MARITIME COMMISSION

Agreement(s) Filed; USA–East Africa Discussion Agreement, et al.

The Federal Maritime Commission hereby gives notice of the filing of the following agreement(s) pursuant to section 5 of the Shipping Act of 1984.

Interested parties may inspect and obtain a copy of each agreement at the Washington, DC Office of Federal Maritime Commission, 800 North Capitol Street, NW., 9th Floor. Interested parties may submit comments on each agreement to the Secretary, Federal Maritime Commission, Washington, DC 20573, within 10 days after the date of the **Federal Register** in which this notice appears. The requirements for comments are found in § 572.603 of title 46 of the Code of Federal Regulations. Interested persons should consult this section before communicating with the Commission regarding a pending agreement.

Agreement No.: 203–011233–005.

Title: USA–East Africa Discussion Agreement.

Parties:

U.S. East Africa Conference
A.P. Moller-Maersk Line
The Bank Line Limited
CMB Transport N.V.
Compagnie Generale Maritime
Empresa de Navegacao Internacional
Lykes Bros. Steamship Co., Inc.
Mediterranean Shipping Company SA
P&O Containers Ltd.
Safbank Line, Ltd.

Synopsis: The proposed amendment (1) adds Southern Africa to the geographic scope; (2) changes the name of the Agreement to the USA/Southern and Eastern Africa Discussion Agreement; (3) adds Nedlloyd Lines and Wilhelmsen Lines AS as parties to the Agreement; (4) makes other technical and clarifying changes to the officials of the Agreement and the voting guidelines; and (5) restates the Agreement.

Dated: April 29, 1993.

By Order of the Federal Maritime Commission.

Joseph C. Polking,

Secretary.

BILLING CODE 6730–01–M

FEDERAL RESERVE SYSTEM

James Aubrey "Jack" Cardwell, et al.; Change in Bank Control Notices; Acquisitions of Shares of Banks or Bank Holding Companies

The notificants listed below have applied under the Change in Bank Control Act (12 U.S.C. 1817(j)) and § 225.41 of the Board's Regulation Y (12 CFR 225.41) to acquire a bank or bank holding company. The factors that are considered in acting on the notices are set forth in paragraph 7 of the Act (12 U.S.C. 1817(j)(7)).

The notices are available for immediate inspection at the Federal Reserve Bank indicated. Once the notices have been accepted for processing, they will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing to the Reserve Bank indicated for that notice or to the offices of the Board of Governors. Comments must be received not later than May 25, 1993.

A. Federal Reserve Bank of Dallas (W. Arthur Tribble, Vice President) 400 South Akard Street, Dallas, Texas 75222:

1. James Aubrey "Jack" Cardwell, El Paso, Texas; to retain 10.70 percent, and to acquire 3.31 percent of the voting shares of The Bank of El Paso, El Paso, Texas.

2. James Paul Kimble, El Paso, Texas; to acquire an additional 10.01 percent of the voting shares of The Bank of El Paso, El Paso, Texas, for a total of 21.61 percent.

3. Conrad Newton, Jr., Dawson, Texas; to acquire an additional 30.71 percent of the voting shares of Dawson Bancshares, Inc., Dawson, Texas, for a total of 47.4 percent, and thereby indirectly acquire First Bank & Trust Company, Dawson, Texas.

B. Federal Reserve Bank of San Francisco (Kenneth R. Binning, Director, Bank Holding Company) 101 Market Street, San Francisco, California 94105:

1. John B. Joseph, Orange, California; to acquire an additional 2.12 percent of the voting shares of West Coast Bancorp, Orange, California, for a total of 11.92 percent, and thereby indirectly acquire Sunwest Bank, Tustin, California; Heritage Thrift and Loan Association, Brea, California; and Sacramento First National Bank, Sacramento, California.

Board of Governors of the Federal Reserve System, April 29, 1993.

Jennifer J. Johnson,

Associate Secretary of the Board.

BILLING CODE 6210-01-F

Dresdner Bank AG, et al.; Acquisitions of Companies Engaged in Permissible Nonbanking Activities

The organizations listed in this notice have applied under § 225.23(a)(2) or (f) of the Board's Regulation Y (12 CFR 225.23(a)(2) or (f)) for the Board's approval under section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843(c)(8)) and § 225.21(a) of Regulation Y (12 CFR 225.21(a)) to acquire or control voting securities or assets of a company engaged in a nonbanking activity that is listed in § 225.25 of Regulation Y as closely related to banking and permissible for bank holding companies. Unless otherwise noted, such activities will be conducted throughout the United States.

Each application is available for immediate inspection at the Federal Reserve Bank indicated. Once the application has been accepted for processing, it will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Any request for a hearing on this question must be accompanied by a statement of the reasons a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of the proposal.

Unless otherwise noted, comments regarding each of these applications must be received at the Reserve Bank indicated for the application or the offices of the Board of Governors not later than May 28, 1993.

A. Federal Reserve Bank of New York (William L. Rutledge, Vice President) 33 Liberty Street, New York, New York 10045:

1. Dresdner Bank AG, Frankfurt am Main, Germany; to acquire Oechsle International Advisors, L.P., and thereby engage in acquiring 80 percent limited partnership interest in OSV Currency Advisors, L.P., a company engaged in investment advisory activities pursuant to § 225.25(b)(4) of the Board's Regulation Y.

B. Federal Reserve Bank of Cleveland (John J. Wixted, Jr., Vice President) 1455 East Sixth Street, Cleveland, Ohio 44101:

1. Cordinal Bancshares, Inc., Lexington, Kentucky; to acquire Mutual Federal Savings Bank, Somerset, Kentucky, and thereby engage in operating a savings association pursuant to § 225.25(b)(9) of the Board's Regulation Y.

Board of Governors of the Federal Reserve System, April 29, 1993.

Jennifer J. Johnson,

Associate Secretary of the Board.

BILLING CODE 6210-01-F

Keystone Financial, Inc., et al.; Notice of Applications to Engage de novo in Permissible Nonbanking Activities

The companies listed in this notice have filed an application under § 225.23(a)(1) of the Board's Regulation Y (12 CFR 225.23(a)(1)) for the Board's approval under section 4(c)(8) of the Bank Holding Company Act (12 U.S.C. 1843(c)(8)) and § 225.21(a) of Regulation Y (12 CFR 225.21(a)) to commence or to engage *de novo,* either directly or through a subsidiary, in a nonbanking activity that is listed in § 225.25 of Regulation Y as closely related to banking and permissible for bank holding companies. Unless otherwise noted, such activities will be conducted throughout the United States.

Each application is available for immediate inspection at the Federal Reserve Bank indicated. Once the application has been accepted for processing, it will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the question whether consummation of the proposal can "reasonably be expected to produce benefits to the public, such as greater convenience, increased competition, or gains in efficiency, that outweigh possible adverse effects, such as undue concentration of resources, decreased or unfair competition, conflicts of interests, or unsound banking practices." Any request for a hearing on this question must be accompanied by a statement of the reasons a written presentation would not suffice in lieu of a hearing, identifying specifically any questions of fact that are in dispute, summarizing the evidence that would be presented at a hearing, and indicating how the party commenting would be aggrieved by approval of the proposal.

Unless otherwise noted, comments regarding the applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than May 25, 1993.

A. Federal Reserve Bank of Philadelphia (Thomas K. Desch, Vice President) 100 North 6th Street, Philadelphia, Pennsylvania 19105:

1. Keystone Financial, Inc., Harrisburg, Pennsylvania; to engage *de novo* through its subsidiary, Keystone Financial Mortgage Corporation, Lancaster, Pennsylvania, in making, acquiring, and servicing loans for its account and the account of others, including Applicant's subsidiaries, pursuant to § 225.25(b)(1) of the Board's Regulation Y.

B. Federal Reserve Bank of Chicago (David S. Epstein, Vice President) 230 South LaSalle Street, Chicago, Illinois 60690:

1. Comerica Incorporated, Detroit, Michigan; to engage *de novo* in making an equity investment in a community investment project pursuant to § 225.25(b)(6) of the Board's Regulation Y.

Board of Governors of the Federal Reserve System, April 29, 1993.

BILLING CODE 6210-01-F

FEDERAL TRADE COMMISSION

Appliance Labeling Rule

AGENCY: Federal Trade Commission.

ACTION: Notice of application to OMB under the Paperwork Reduction Act (44 U.S.C. 3501–3518) for information collection requirements contained in proposed amendments to the Commission's Appliance Labeling Rule, 16 CFR part 305.

SUMMARY: The FTC is seeking OMB clearance for information collection requirements contained in proposed amendments to the Commission's Appliance Labeling Rule.

The Energy Policy Act of 1992 ("EPA"), Public Law 102–486, amends the Energy Policy and Conservation Act of 1975, which directed the Commission to issue the Appliance Labeling Rule. The Appliance Labeling Rule establishes standard procedures for energy conservation relating to eight appliance categories:

(1) Refrigerators, refrigerator-freezers and freezers;
(2) Dishwashers;
(3) Clothes washers;
(4) Water heaters;
(5) Room air conditioners;
(6) Furnaces;
(7) Central air conditioners and heat pumps; and
(8) Fluorescent lamp ballasts.

EPA 92 adds four new categories of plumbing products (showerheads, faucets, water closets, and urinals) to EPCA's list of covered products. It establishes maximum permissible water usage rates for each of these four plumbing products and specifies certain American Society of Mechanical Engineers ("ASME") test procedures as protocols for use in measuring the actual water usage rates of such products. The proposed amendments would require manufacturers to retain and submit to the Commission annually, the trade names, model numbers, and water usage rates of covered products.

Estimate of Information Collection Burden

On the basis of current industry figures, staff estimates that approximately 100–120 plumbing products manufacturers could be affected by the proposed recordkeeping and reporting requirements.

Staff estimates that it will take each of the manufacturers less than an additional half hour per year to comply with the proposed requirements, resulting in a total of less than 60 hours of paperwork burden. This estimate is small because manufacturers are already required by state plumbing and/or building codes to include in their reports to state authorities the same information as the records at issue (the manufacturer's name and address and the trade names, model numbers, and water usage rates of its covered products). Submitting an extra copy of these reports to the Commission should take each of the affected manufacturers less than an additional half hour per year. Further, records that are likely to be retained by industry members during the normal course of business are excluded from the "burden" for OMB purposes. See 5 CFR 1320.7(b)(1).

Commission staff believes that approximately 100 industry members currently are covered by the bookkeeping and reporting requirements of the Rule for the eight covered product categories. Unlike manufacturers of plumbing products, the manufacturers of the eight covered product categories are not required to submit this type of information to state authorities. However, for approximately 85% of the manufacturers of covered products, the reporting burden has been reduced to zero because these manufacturers submit product information for publication in trade association directories in the normal course of their business activities. Therefore, staff estimates that the maximum current total yearly burden of the Rule is 150 hours (10 hours per year times 15 industry members).

The Commission also has underway a proceeding to amend the existing Rule. The Department of Energy recently promulgated test procedures for pool heaters, instantaneous water heaters and heat pump water heaters, triggering the obligation under the Energy Policy and Conservation Act for the Commission to consider labeling requirements. See section 324(b)(1)(B) of EPCA (42 U.S.C. 6924(b)(1)(B). The Commission is therefore currently seeking comments on a proposal to cover such heaters under the Rule. 58 FR 7852 (Feb. 9, 1993). If the proposed amendments are implemented, Commission staff estimates that no more than 50 companies would be affected and that each company would expend less than 10 hours to comply. Of those 50 companies that might be affected, some may also produce other covered products. At this time, staff is seeking comments, particularly qualitative estimates, about the amount of time it would take to comply with these reporting requirements. While these comments may result in a change of the burden hours, under no scenario would the proposed amendment to add pool heaters increase the "information collection burden" by more than 500 hours.

Based on these figures, staff estimates that the current total yearly burden of the rule is 150 hours (10 hours per year times 15 industry members). The water heater amendment would add 10 hours per year times 50 industry members. Staff further estimates that the total additional yearly burden imposed by the proposed amendment to add plumbing products would be 60 hours (30 minutes per year times 120 industry members) for a new burden total of approximately 710 hours, which has been rounded up to 1,000 hours.

DATES: Comments on this application must be submitted on or before June 4, 1993.

ADDRESSES: Send comments both to Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, room 3228, Washington, DC 20503, ATN: Desk Officer for the Federal Trade Commission and to the Office of the General Counsel, Federal Trade Commission, Washington, DC 20580. Copies of the submission to OMB, including the application, may be obtained from the Public Reference Section, room 130, Federal Trade Commission, Washington, DC 20580.

FOR FURTHER INFORMATION CONTACT: Elaine W. Crockett, Attorney, Office of the General Counsel, Federal Trade Commission, Washington, DC 20580 (202) 326–2453.

[Dkt. C–3425]

B&J School Bus Service, Inc., et al.; Prohibited Trade Practices, and Affirmative Corrective Actions

AGENCY: Federal Trade Commission.

ACTION: Consent order.

SUMMARY: In settlement of alleged violations of federal law prohibiting unfair acts and practices and unfair methods of competition, this consent order prohibits, among other things, three school bus transportation companies (B&J, Ryder, and Mayflower) that provide bus service in the Kansas City Missouri School District from entering into agreements with each other or with any other school bus transportation provider or potential provider—with respect to school bus transportation services in the Kansas City area—to submit jointly determined bids; to refrain from bidding; to allocate or divide jobs, markets, customers, contracts, or territories; or to set prices or other terms and conditions. In addition, the order prohibits the companies, for three years, from communicating to each other or to past, present or likely future providers of school bus transportation service in the Kansas City area their plans to bid, or not to bid, for those services.

DATES: Complaint and Order issued April 22, 1993.[1]

FOR FURTHER INFORMATION CONTACT: Thomas Russell or Catherine Fuller, Chicago Regional Office, Federal Trade Commission, 55 East Monroe St., suite 1437, Chicago, IL 60603. (312) 353–8156.

SUPPLEMENTARY INFORMATION: On Tuesday, February 2, 1993, there was published in the **Federal Register**, 58 FR 6792, a proposed consent agreement with analysis In the Matter of B&J School Bus Service, Inc., et al., for the purpose of soliciting public comment. Interested parties were given sixty (60) days in which to submit comments, suggestions or objections regarding the proposed form of the order.

No comments having been received, the Commission has ordered the issuance of the complaint in the form contemplated by the agreement, made its jurisdictional findings and entered an order to cease and desist, as set forth in the proposed consent agreement, in disposition of this proceeding.

(Sec. 6, 38 Stat. 721; 15 U.S.C. 46. Interprets or applies sec. 5, 38 Stat. 719, as amended; 15 U.S.C. 45)

Commissioners: Janet D. Steiger, Chairman, Mary L. Azcuenaga, Deborah K. Owen, Roscoe B. Starek, III, Dennis A. Yao.

Final Order

This matter having been heard on the appeal of the respondents from the initial decision and on briefs and oral argument in support of and in opposition to the appeal, for the reasons stated in the attached opinion, the Commission has determined to deny the appeal. Accordingly,

It is ordered That the following order be and the same hereby is entered:

[1] Copies of the Complaint and the Decision and Orders are available from the Commission's Public Reference Branch, H–130, 6th Street & Pennsylvania Avenue, NW., Washington, DC 20580.

[1] Copies of the Complaint and the Decision and Order are available from the Commission's Public Reference Branch, H–130, 6th Street & Pennsylvania Avenue, NW., Washington, DC 20580.

[1] Copies of the Complaint, Initial Decision, Opinion of the Commission, and Statement of Commissioner Owen are available from the Commission's Public Reference Branch, H–130, 6th Street and Pennsylvania Avenue, NW., Washington, DC 20580.

I

It is Ordered That the following definitions apply:

A. "Occidental" means Occidental Petroleum Corporation and Occidental Chemical Corporation, two corporations organized under the laws of California with their principal places of business in Los Angeles, California, and their directors, officers, agents and employees and their subsidiaries, divisions, affiliates, successors and assigns;

B. "Tenneco" means Tenneco, Inc., and Tenneco Polymers Inc., two corporations organized under the laws of Delaware with their principal places of business in Houston, Texas, and their directors, officers, agents and employees and their subsidiaries, divisions, affiliates, successors and assigns;

C. "Acquired PVC assets" means the suspension PVC homopolymer manufacturing facility located at Pasadena, Texas, the suspension PVC and dispersion PVC manufacturing facility located at Burlington, New Jersey, and all assets, titles, properties, interests, rights and privileges, tangible and intangible, related to the PVC business that were acquired by Occidental from Tenneco on or about April 30, 1986, together with all improvements thereto;

D. "PVC" means any vinyl chloride homopolymer with the repeating unit $CH_2=CHCl$ and any copolymer of vinyl chloride with varying amounts of other chemicals, including vinyl acetate, ethylene, propylene, vinylidene chloride or acrylates;

E. "Mass PVC" means PVC produced from vinyl chloride by the mass (also referred to as "bulk") process;

F. "Suspension PVC homopolymer" means PVC homopolymer produced from vinyl chloride by the suspension process;

G. "Suspension PVC copolymer" means any copolymer of vinyl chloride and vinyl acetate produced by the suspension process and containing more than 50 percent by weight of vinyl chloride;

H. "Dispersion PVC" means PVC produced by the emulsion or dispersion process.

II

It is ordered That within twelve (12) months from the date this Order becomes final, Occidental shall divest, absolutely and in good faith, at no minimum price, the acquired PVC assets. The purpose of the divestiture is to establish the acquired PVC assets, either singly or separately, as a viable competitor in PVC, by ensuring the continuation of the assets as ongoing, viable enterprises in the PVC industry, and to remedy the lessening of competition resulting from the acquisition of the acquired PVC assets by Occidental. The divestiture(s) shall be made only to an acquirer or acquirers and only in a manner that receives the prior approval of the Federal Trade Commission.

Pending divestiture, Occidental shall take all measures necessary to maintain the acquired PVC assets in their present condition and to prevent any deterioration, except for normal wear and tear, of any part of the acquired PVC assets, so as not to impair the present operating viability and market value of the acquired PVC assets.

It is further ordered That at the time of the divestiture required by this Order, Occidental shall provide to the acquirer or acquirers of the acquired PVC assets, on a nonexclusive basis, all PVC technology (including patent licenses and know-how) used by Occidental or developed by Occidental for use in connection with the acquired PVC assets; and

For a period of one (1) year following the divestiture required by this Order, Occidental shall provide the acquirer or acquirers of the acquired PVC assets, if the acquirer(s) so requests, such additional know-how as may reasonably be required to enable the acquirer(s) to manufacture and sell PVC. Occidental shall charge the acquirer(s) no more than its own costs for providing such additional know-how.

IV

It is further ordered That at the time of the divestiture required by this Order, Occidental shall assign to the acquirer(s) of the acquired PVC assets, all supply agreements for VCM and other feedstocks for the manufacture of PVC, all PVC sales, toll or exchange agreements, and all PVC customer records and files relating to PVC produced in (or supplied by Occidental at any time since May 1, 1986, from) the acquired PVC assets.

V

It is further ordered That if Occidental has not divested the acquired PVC assets within the twelve-month period provided in Paragraph II of this Order, the Federal Trade Commission may appoint a trustee to effect the divestiture. The trustee shall be a person with experience and expertise in acquisitions and divestitures. Neither the appointment of a trustee nor a Commission decision not to appoint a trustee under this Paragraph V of the Order shall preclude the Commission from seeking civil penalties and other relief available to it, including a court-appointed trustee, for any failure by Occidental to comply with this Order.

Any trustee appointed by the Commission pursuant to this Paragraph V shall have the following powers, authority, duties and responsibilities:

A. The trustee shall have the exclusive power and authority, subject to the prior approval of the Commission, to divest the acquired PVC assets. The trustee shall have twelve (12) months from the date of appointment to accomplish the divestiture. If, however, at the end of the twelve month period, the trustee has submitted a plan of divestiture or believes that divestiture can be accomplished within a reasonable time, the divestiture period may be extended by the Commission.

B. The trustee shall have full and complete access to the personnel, books, records and facilities of the acquired PVC assets, and Occidental shall develop such financial or other information relevant to the acquired PVC assets as the trustee may reasonably request. Occidental shall cooperate with the trustee and shall take no action to interfere with or impede the trustee's accomplishment of the divestiture. Any delays in divestiture caused by Occidental shall extend the time for divestiture under this Paragraph V in an amount equal to the delay, as determined by the Commission.

C. The power and authority of the trustee to divest shall be at the most favorable price and terms available consistent with this Order's absolute and unconditional obligation to divest at no minimum price and with the purposes of the divestiture, as stated in Paragraph II of this Order, subject to the prior approval of the Commission.

D. The trustee shall serve without bond or other security and at the cost and expense of Occidental on such reasonable and customary terms and conditions as the Commission may set. The trustee shall have authority to retain, at the cost and expense of Occidental, such consultants, attorneys, investment bankers, business brokers, accountants, appraisers and other representatives and assistants as are reasonably necessary to assist in the divestiture. The trustee shall account for all monies derived from the divestiture and for all expenses incurred. After approval by the Commission of the account of the trustee, including fees for the trustee's services, all remaining monies shall be paid to Occidental, and the trustee's power shall be terminated. The trustee's compensation shall be based at least in significant part on a commission arrangement contingent on

VOL 58 ISS 85 MY 5 1993 UMI

the trustee divesting the acquired PCV assets.

E. Occidental shall indemnify the trustee and hold the trustee harmless against any losses, claims, damages or liabilities arising in any manner out of or in connection with the trustee's duties under this Order, unless the Commission determines that such losses, claims, damages or liabilities arose out of the misfeasance, gross negligence or the willful or wanton acts or bad faith of the trustee.

F. Promptly upon appointment of the trustee and subject to the approval of the Commission, Occidental shall, subject to the Federal Trade Commission's prior approval and consistent with the provisions of this Order, transfer to the trustee all rights and powers necessary to permit the trustee to effect the divestiture required by this Order.

G. If the trustee ceases to act or fails to act diligently, the Commission may appoint a substitute trustee.

H. The Commission may on its own initiative or at the request of the trustee issue such additional orders or directions as may be necessary or appropriate to accomplish the divestiture required by this Order.

I. The trustee shall have no obligation or authority to operate or maintain the acquired PVC assets.

J. The trustee shall report in writing to Occidental and to the Commission every sixty (60) days concerning the trustee's efforts to accomplish divestiture.

VI

It is further ordered That for a period of ten (10) years from the date this Order becomes final, Occidental shall not directly or indirectly acquire—other than the acquisition of manufactured product in the ordinary course of business—all or any part of the stock or assets of, or any interest in, any producer of PVC located in the United States without the prior approval of the Federal Trade Commission.

VII

It is further ordered That Occidental shall, within sixty (60) days after the date this Order becomes final and every sixty (60) days thereafter until it has fully complied with Paragraph II of this Order, submit in writing to the Commission a report setting forth in detail the manner and form in which it intends to comply, is complying or has complied with that paragraph. Such compliance reports shall include, among other things that may be required from time to time, a full description of all contacts and negotiations relating to the divestiture of the acquired PVC assets, including the name and address of all persons contacted, copies of all written communications to and from such persons and all internal memoranda, reports and recommendations concerning divestiture; and

Occidental shall submit such further written reports of its compliance as the staff of the Commission may from time to time request in writing.

VIII

It is further ordered That Occidental, upon written request and on reasonable notice, for the purpose of securing compliance with this Order, and subject to any legally recognized privilege, shall permit duly authorized representatives of the Commission:

A. Reasonable access during the office hours of Occidental, which may have counsel present, to inspect and copy books, ledgers, accounts, correspondence, memoranda, reports and other records and documents in the possession or control of Occidental that relate to any matter contained in this Order; and

B. Subject to the reasonable convenience of Occidental, an opportunity to interview officers or employees of Occidental, who may have counsel present, regarding such matters.

IX

It is further ordered That Occidental shall notify the Commission at least thirty (30) days prior to any proposed corporate change, such as dissolution, assignment or sale resulting in the emergence of a successor corporation, the creation or dissolution of subsidiaries or any other change in the corporation that may affect compliance with the obligations arising out of this Order.

By the Commission, Commissioner Owen dissenting,[2] and Commissioner Starek and Commissioner Yao not participating.

Donald S. Clark,

Secretary.

[FR Doc. 93-10554 Filed 5-4-93; 8:45 am]

BILLING CODE 6750-01-M

[2] Commissioner Owen concurs with the result reached in the Opinion of the Commission with respect to the markets for suspension PVC copolymer and dispersion PVC and with the relief ordered with respect to those two markets, including the divestiture of the Burlington, New Jersey plant.

OFFICE OF GOVERNMENT ETHICS

Proposed Revision to Information Collection Form Concerning Access to Public Financial Disclosure Reports of Executive Branch Officials

AGENCY: Office of Government Ethics (OGE).

ACTION: Notice of proposed revision to information collection form.

SUMMARY: The Office of Government Ethics has submitted to the Office of Management and Budget (OMB) for approval, in accordance with the Paperwork Reduction Act, a proposed revised version of an OGE form to be entitled (as revised) "Request to Inspect or Receive Copies of SF 278, Executive Branch Personnel Public Financial Disclosure Report," which collects information from the public.

DATES: Comments on this proposal should be received by June 4, 1993.

ADDRESSES: Comments should be sent to Joseph F. Lackey, Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, room 3002, Washington, DC 20503, telephone (202/FTS) 395-7316.

FOR FURTHER INFORMATION CONTACT: William E. Gressman, Office of Government Ethics, Suite 500, 1201 New York Avenue NW., Washington, DC 20005-3917, telephone (202/FTS) 523-5757, FAX (202/FTS) 523-6325. A copy of OGE's request for approval from OMB, including the proposed form, may be obtained by contacting Mr. Gressman.

SUPPLEMENTARY INFORMATION: The Office of Government Ethics is the supervising ethics office for the executive branch of the Federal Government, as defined under section 109(18)(D) of the Ethics in Government Act of 1978 as amended, 5 U.S.C. app. 109(18)(D). Section 105 (b) and (c) of the Ethics Act, 5 U.S.C. app. 105 (b) and (c), and 5 CFR 2634.603 (c) and (f) of OGE's implementing executive branch-wide regulation set forth certain requirements that must be met by a person requesting to inspect or obtain copies of Standard Form 278 Executive Branch Personnel Public Financial Disclosure Reports filed by high-level executive branch officials. These requirements relate to information identifying the requester and notification of prohibited uses of such reports under the law. For years, OGE has disseminated a locally reproducible uniform form (now OGE Form 201, which is not a standard form) to serve as the statutorily required written application to inspect or receive copies of SF 278 financial disclosure reports. Executive departments and agencies need not utilize the OGE form as long as they collect the information required under the Ethics Act and OGE's implementing regulation before granting access to the SF 278 reports they have on file, but they are invited to do so (alternatively, they can use their own agency forms). The access forms are publicly available themselves upon the proper filing of an access form.

This proposed revision to the OGE Form 201, "Request to Inspect or Receive Copies of SF 278, Executive Branch Personnel Public Financial Disclosure Report," will slightly revise the form title (as just indicated), add an optional business telephone information block to assist in contacting the requester regarding the processing of his or her request, amend the Privacy Act statement primarily to summarize the routine uses, change the public burden estimate and make a few other minor changes to the form. The Office of Government Ethics is seeking an additional three-year approval for the revised form from the OMB under the Paperwork Reduction Act, 44 U.S.C. chapter 35. Various members of the public use the access form, including the news media, public interest groups and private individuals.

In light of OGE experience over the past three years (1990–1992), the estimate of the total number of access forms expected to be filed annually at OGE has been adjusted down to 250 (from a prior estimate of 360). However, also in light of its experience as well as the additional time needed to review the expanded Privacy Act notice, OGE is increasing the average amount of time it is estimated to take to complete the form from three minutes to ten minutes. The overall estimated annual public burden for the OGE Form 201 for forms filed at OGE will thus increase from the current OMB paperwork inventory listing of 18 hours (360 forms × 3 minutes/form) to 42 hours (250 forms × 10 minutes/form). Finally, the Office of Government Ethics estimates that 1,000 access request forms will be filed each year at the other executive branch departments and agencies.

Approved: April 27, 1993.

Stephen D. Potts,

Director, Office of Government Ethics.

BILLING CODE 6345-01-M

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Health Resources and Services Administration

Amended Program Announcement and Final Funding Priority and Special Consideration for Grants for Residency Training and Advanced Education in the General Practice of Dentistry

The Health Resources and Services Administration (HRSA) announces the final funding priority and special consideration for fiscal year (FY) 1993 Grants for Residency Training and Advanced Education in the General Practice of Dentistry are being accepted under the authority of title VII, section 749 of the Public Health Service Act (the Act), as amended by the Health Professions Education Extension Amendments of 1992, Public Law 102-408.

This program was announced in the **Federal Register** at 57 FR 36102 on August 12, 1992. The announcement included a proposed funding priority and a proposed special consideration. A comment period of 30 days was established to allow public comment concerning the proposed funding priority and proposed special consideration. No comments were received. This notice includes the final funding priority and special consideration.

In addition, since this program was announced on August 12, 1992, the Health Professions Education Extension Amendments of 1992, Public Law 102-408, was enacted. These amendments resulted in changes in this program. (1) The section number has been changed from 785 to 749. (2) A program purpose has been added. (3) A statutory funding preference has been added. (4) Certain information is required to be submitted with the application. This notice will describe these changes.

Approximately $3,275,046 will be available in FY 1993 for this program. Total continuation support recommended is $869,572. It is anticipated that $2,405,474 will be available to support 17 competing awards averaging $140,000.

Purpose

Public Law 102-408 amends this program to include a purpose to fund innovative, nontraditional models for the provision of postdoctoral general dentistry training. Section 749 of the PHS Act authorizes the Secretary to make grants to any public or nonprofit private school of dentistry or accredited postgraduate dental training institution (e.g., hospitals and medical centers) (1) to plan, develop, and operate an approved residency program in the general practice of dentistry or an approved advanced educational program in the general practice of dentistry; (2) to provide financial assistance (in the form of traineeships and fellowships) to participants in such a program who are in need of financial assistance and who plan to specialize in the practice of general dentistry; and (3) to fund innovative, nontraditional models for the provision of postdoctoral general dentistry training.

To receive support, programs must meet the requirements of final regulations at 42 CFR part 57, subpart L. The period of Federal support should not exceed 3 years.

Information Requirements Provision

Under section 791(b) of the Act, the Secretary may make an award under the Grants for Residency Training and Advanced Education in the General Practice of Dentistry program only if the applicant for the award submits to the Secretary information regarding the programs of the applicant. These requirements will be provided in the application materials.

Statutory Funding Preference

Public Law 102-408 has amended this program to include a statutory funding preference which is new. As provided in section 791(a) of the PHS Act, preference will be given to qualified applicants that (a) have a high rate for placing graduates in practice settings having the principal focus of serving residents of medically underserved communities; or (2) have achieved, during the 2-year period preceding the fiscal year for which an award is sought, a significant increase in the rate of placing graduates in such settings. This preference will only be applied to applications that rank above the 20th percentile of proposals recommended for approval by the peer review group. Additional information concerning the implementation of this preference has been published in the **Federal Register** at 58 FR 9570, dated February 22, 1993.

Final Funding Priority

In determining the order of funding of approved applications, a funding priority will be given to applicants which demonstrate either substantial progress over the last three years or a significant experience of ten or more years in enrolling and graduating trainees from those minority or low-income populations identified as at risk of poor health outcomes. This priority is

VOL
58
ISS
85
MY
5
1993
UMI

consistent with a HRSA strategy to increase the number of health professionals from minority and other at risk populations, to assure equal access to health professions education for all population groups, and ultimately, to provide a greater volume of health care in underserved areas.

Final Special Consideration

Special consideration will be given to the extent to which applicants enroll and graduate trainees from underserved areas. This special consideration is intended to recognize programs that enroll and graduate trainees from underserved areas because health professionals who come from underserved areas are more likely to return there upon completion of training to provide needed health services.

If additional programmatic information is needed, please contact: Dr. Richard Weaver, Chief, Dental Health Branch, Division of Associated, Dental, and Public Health Professions, Bureau of Health Professions, Health Resources and Services Administration, 5600 Fishers Lane, room 8C–15, Rockville, Maryland 20857, Telephone: (301) 443–6837.

Grants for Residency Training and Advanced Education in the General Practice of Dentistry is listed at 93.897 in the Catalog of Federal Domestic Assistance. Applications submitted in response to this announcement are not subject to the provisions of Executive Order 12372, Intergovernmental Review of Federal Programs, (as implemented through 45 CFR part 100). This program is not subject to the Public Health System Reporting Requirements.

Dated: April 28, 1993.

Robert G. Harmon,

Administrator.

[FR Doc. 93–10504 Filed 5–4–93; 8:45 am]

BILLING CODE 4160–15–P

Amended Program Announcement for Public Health Traineeships to Schools of Public Health and Other Public and Nonprofit Private Institutions for Fiscal Year 1993

The Health Resources and Services Administration (HRSA) announced in the **Federal Register** on April 13, 1993 (58 FR 19272) that applications will be accepted for fiscal year (FY) 1993 Grants for Public Health Traineeships to Schools of Public Health and other Public and Nonprofit Private Institutions under the authority of section 761, title VII of the Public Health Service Act as amended by the Health Professions Education Extension Amendments of 1992, Public Law 102–408, dated October 13, 1992. This notice is published to clarify purpose and eligibility issues.

Purpose

Section 761 of the Public Health Service Act authorizes the Secretary to award Public Health Traineeship grants to accredited schools of Public Health and to other public or nonprofit private institutions accredited for the purpose of providing traineeships to individuals who are pursuing a course of study in a health professions field in which there is a severe shortage of health professionals. Section 761 identifies some health professions fields in which there is a severe shortage including epidemiology, environmental health, biostatistics, toxicology and public health nutrition.

In fiscal year 1993, for new public health trainees, support will be for students pursuing a graduate degree in:

1. Educational fields cited in section 761(b)(3) of the PHS Act as having a severe shortage of health professionals, including epidemiology, environmental health, toxicology, nutrition and biostatistics; or
2. Other educational fields/professions for which the applicant can (a) justify a severe shortage in the geographic/service area of the applicant to the satisfaction of peer reviewers, and (b) justify that such severe shortage would be lessened by having a trainee in the cited educational field/profession.

Ongoing traineeship commitments, i.e., reappointments, will be continued.

Eligible Applicants

Eligible applicants include (1) Schools of Public Health that have been accredited by the Council on Education for Public Health and (2) other public or nonprofit private institutions accredited by a body recognized for this purpose by the Secretary of the Department of Education. The recognized accrediting body for this grant program is the Council on Education for Public Health (CEPH). The accredited school or program must be located in a State, the District of Columbia, the Commonwealth of Puerto Rico, the Commonwealth of the Northern Mariana Islands, the Virgin Islands, Guam, American Samoa, or the Trust Territory of the Pacific Islands (the Republic of Palau), the Republic of the Marshall Islands, and the Federated States of Micronesia.

Application Requests

Requests for application materials and questions regarding grants policy and business management issues should be directed to: Grants Management Branch (A03), Bureau of Health Professions, Health Resources and Services Administration, Parklawn Building, room 8C–26, 5600 Fishers Lane, Rockville, Maryland 20857, Telephone: (301) 443–6857 FAX: (301) 443–6343.

Completed applications should be returned to the Grants Management Branch at the above address.

If additional programmatic information is needed, please contact: Public Health Branch, Division of Associated, Dental and Public Health Professions, Bureau of Health Professions, Health Resources and Services Administration, Parklawn Building, room 8C–09, 5600 Fishers Lane, Rockville, Maryland 20857, Telephone: (301) 443–6757, FAX: (301) 443–1164.

The standard application form PHS 6025–1, HRSA Competing Training Grant Application, General Instructions and supplement for this program have been approved by the Office of Management and Budget under the Paperwork Reduction Act. The OMB Clearance Number is 0915–0060.

To allow sufficient time for preparation of applications following the publication of this clarification notice, the deadline date for receipt of applications has been extended to May 21, 1993. Applications will be considered to be "on time" if they are either:

(1) Received on or before the established deadline date, or

(2) Sent on or before the established deadline date and received in time for orderly processing. (Applicants should request a legibly dated U.S. Postal Service postmark or obtain a legibly dated receipt from a commercial carrier or U.S. Postal Service. Private metered postmarks shall not be acceptable as proof of timely mailing.)

Late applications not accepted for processing will be returned to the applicant.

This program, Grants for Public Health Traineeships, is listed at 93.964 in the Catalog of Federal Domestic Assistance. It is not subject to the provisions of Executive Order 12372, Intergovernmental Review of Federal Programs (as implemented through 45 CFR part 100). This program is not subject to the Public Health System Reporting Requirements.

Dated: April 28, 1993.

Robert G. Harmon,

Administrator.

BILLING CODE 4160–15–P

National Institutes of Health

Meetings; Bionutrition Group

Notice is hereby given of the meeting of an ad hoc Bionutrition Group of the National Institutes of Health (NIH) on May 12, 1993. The meeting will be held from 9 a.m. to 5 p.m. in Conference Room 6, Building 31C, National Institutes of Health, 9000 Rockville Pike, Bethesda, Maryland 20892. The meeting is open to the public subject to space availability.

The purpose of this meeting is to announce the NIH Bionutrition Initiative, one of several initiatives advanced in the NIH Strategic Plan. Bionutrition, as the integrated discipline that links molecular and genetic techniques to modern nutrition science for the betterment of health, offers tremendous potential for optimizing individual health and well-being, preventing diet-related chronic diseases, and treating a broad range of diseases and disorders. The ad hoc Bionutrition Group is being convened to address the steps necessary to implement the NIH Bionutrition Initiative, including the activities of the planned NIH Bionutrition Advisory Council.

Individuals who plan to attend the meeting and need special assistance, such as sign language interpretation or other special accommodations, should contact the person named below in advance of the meeting.

For logistical information, contact Debra Steward, TRI, 301–770–3153. For programmatic information, contact Darla Danford, M.P.H., D.Sc., Director, Division of Nutrition Research Coordination, National Institutes of Health, Building 31, Room 4B63, 9000 Rockville Pike, Bethesda, Maryland 20892, 301–496–9281, 301–496–9942 (FAX).

Dated: April 30, 1993.

Susan K. Feldman,

NIH Committee Management Officer.

BILLING CODE 4140–01–M

Substance Abuse and Mental Health Services Administration

Current List of Laboratories Which Meet Minimum Standards To Engage In Urine Drug Testing for Federal Agencies and Laboratories That Have Withdrawn From the Program

AGENCY: Substance Abuse and Mental Health Services Administration, HHS (Formerly: National Institute on Drug Abuse, ADAMHA, HHS).

ACTION: Notice.

SUMMARY: The Department of Health and Human Services notifies Federal agencies of the laboratories currently certified to meet standards of Subpart C of Mandatory Guidelines for Federal Workplace Drug Testing Programs (53 FR 11979, 11986). A similar notice listing all currently certified laboratories will be published during the first week of each month, and updated to include laboratories which subsequently apply for and complete the certification process. If any listed laboratory's certification is totally suspended or revoked, the laboratory will be omitted from updated lists until such time as it is restored to full certification under the Guidelines.

If any laboratory has withdrawn from the National Laboratory Certification Program during the past month, it will be identified as such at the end of the current list of certified laboratories, and will be omitted from the monthly listing thereafter.

FOR FURTHER INFORMATION CONTACT: Denise L. Goss, Program Assistant, Division of Workplace Programs, room 9–A–54, 5600 Fishers Lane, Rockville, Maryland 20857; Tel.: (301) 443–6014.

SUPPLEMENTARY INFORMATION: Mandatory Guidelines for Federal Workplace Drug Testing were developed in accordance with Executive Order 12564 and section 503 of Public Law 100–71. Subpart C of the Guidelines, "Certification of Laboratories Engaged in Urine Drug Testing for Federal Agencies," sets strict standards which laboratories must meet in order to conduct urine drug testing for Federal agencies. To become certified an applicant laboratory must undergo three rounds of performance testing plus an on-site inspection. To maintain that certification a laboratory must participate in an every-other-month performance testing program plus periodic, on-site inspections.

Laboratories which claim to be in the applicant stage of certification are not to be considered as meeting the minimum requirements expressed in the HHS Guidelines. A laboratory must have its letter of certification from SAMHSA, HHS (formerly: HHS/NIDA) which attests that it has met minimum standards.

In accordance with Subpart C of the Guidelines, the following laboratories meet the minimum standards set forth in the Guidelines:

Aegis Analytical Laboratories, Inc., 624 Grassmere Park Road, suite 21, Nashville, TN 37211, 615–331–5300.

Alabama Reference Laboratories, Inc., 543 South Hull Street, Montgomery, AL 36103, 800–541–4931/205–263–5745.

Allied Clinical Laboratories, 201 Plaza Boulevard, Hurst, TX 76053, 817–282–2257.

American Medical Laboratories, Inc., 14225 Newbrook Drive, Chantilly, VA 22021, 703–802–6900.

Associated Pathologists Laboratories, Inc., 4230 South Burnham Avenue, suite 250, Las Vegas, NV 89119–5412, 702–733–7866.

Associated Regional and University Pathologists, Inc. (ARUP), 500 Chipeta Way, Salt Lake City, UT 84108, 801–583–2787.

Baptist Medical Center—Toxicology Laboratory, 9601 I–630, Exit 7, Little Rock, AR 72205–7299, 501–227–2783 (formerly: Forensic Toxicology Laboratory Baptist Medical Center).

Bayshore Clinical Laboratory, 4555 W. Schroeder Drive, Brown Deer, WI 53223, 414–355–4444/800–877–7016.

Bioran Medical Laboratory, 415 Massachusetts Avenue, Cambridge, MA 02139, 617–547–8900.

California Toxicology Services, 1925 East Dakota Avenue, suite 206, Fresno, CA 93726, 209–221–5655/800–448–7600.

Cedars Medical Center, Department of Pathology, 1400 Northwest 12th Avenue, Miami, FL 33136, 305–325–5810.

Centinela Hospital Airport Toxicology Laboratory, 9601 S. Sepulveda Blvd., Los Angeles, CA 90045, 310–215–6020.

Clinical Pathology Facility, Inc., 711 Bingham Street, Pittsburgh, PA 15203, 412–488–7500.

Clinical Reference Lab, 11850 West 85th Street, Lenexa, KS 66214, 800–445–6917.

CompuChem Laboratories, Inc., A Subsidiary of Roche Biomedical Laboratory, 3308 Chapel Hill/Nelson Hwy., Research Triangle Park, NC 27709, 919–549–8263/800–833–3984.

CompuChem Laboratories, Special Division, 3308 Chapel Hill/Nelson Hwy., Research Triangle Park, NC 27709, 919–549–8263.

BILLING CODE 4160–20–U

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

Receipt of Applications for Permit

The following applicants have applied for a permit to conduct certain activities with endangered species. This notice is provided pursuant to Section 10(c) of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531, *et seq.*):

PRT–778487

Applicant: Zoological Society of San Diego, San Diego, CA

Applicant requests a permit to import a male and female giant panda (*Ailuropoda melanoleuca*). The giant pandas were born in the wild and are presently held in captivity at Wolong Nature Reserve and Chengdu Zoo in Sichuan, China. In March 1992, they were rescued from the wild because of injuries and medical problems. The import is for enhancement of propagation and enhancement of survival through conservation education.

PRT–778186

Applicant: Wildlife Encounters, Kirkland, WA

The applicant requests a permit to purchase in interstate commerce one male captive-born orangutan (*Pongo pygmaeus*) from Mr. Bernie Levine of Miami, Florida, for enhancement of survival.

PRT–775311

Applicant: Center of Conservation Biology, Stanford, CA

The applicant requests a permit to take (capture, mark, release) Myrtle's silverspot butterflies (*speyeria zerene myrtleae*) and sacrifice no more than 40 post-reproductive specimens (no more than 5% from eight locations) for genetic analyses in Point Reyes National Seashore and coastal regions of Marin and Sonoma counties California, for the purpose of scientific research.

PRT–775427

Applicant: Michael Konecny, Enumclaw, WA

The applicant requests a permit to take (capture mark, radio collar, release) ocelot (*Felis pardalis*) and jagaurundi (*Felis yagouaroundi cacomitli*) in Texas, for enhancement of survival through biological surveys.

PRT–778184

Applicant: Birmingham Zoo, Birmingham, AL

The applicant requests a permit to purchase in interstate commerce one male and one female captive-hatched eastern indigo snakes (*Dyrmarchon corias couperi*) from Mr. Eric Skov, Wells, Nevada, for enhancement of propagation.

PRT–775321

Applicant: Denver Zoological Gardens, Denver, CO

The applicant requests a permit to import one pair of captive-born golden-lion tamarins from the Primate Center, Rio de Janeiro, Brazil, for enhancement of propagation.

PRT–778468

Applicant: Joseph Gerasolo, Goshen, NY

The applicant requests a permit to import a sport-hunted trophy of a male bontebok (*Damaliscus dorcas dorcas*) culled from the captive herd maintained by Mr. Luke Kock, Richmond, South Africa, for the purpose of enhancement of survival of the species.

PRT–778471

Applicant: Armando J. Garcia-Segovia, Victoria, TX

The applicant requests a permit to import a sport-hunted trophy of a male bontebok (*Damaliscus dorcas dorcas*) culled from the captive herd maintained by Mr. V. Z. Lubbe, Philippolis, South Africa, for the purpose of enhancement of survival of the species.

Written data or comments should be submitted to the Director, U.S. Fish and Wildlife Service, Office of Management Authority, 4401 North Fairfax Drive, room 432, Arlington, Virginia 22203 and must be received by the Director within 30 days of the date of this publication.

Documents and other information submitted with these applications are available for review by any party who submits a written request for a copy of such documents to the following office within 30 days of the date of publication of this notice: U.S. Fish and Wildlife Service, Office of Management Authority, 4401 North Fairfax Drive, room 432, Arlington, Virginia 22203. Phone: (703/358–2104); FAX: (703/358–2281).

Commission determines, pursuant to section 735(b) of the Tariff Act of 1930 (19 U.S.C. 1673d(b)) (the Act), that an industry in the United States is not materially injured or threatened with material injury, and the establishment of an industry in the United States is not materially retarded, by reason of imports from Japan of dry film photoresist, provided for in subheadings 3702.39.00, 3702.42.00, 3702.43.00, 3702.44.00, 3702.95.00, 3707.10.00, and/or 3707.90.30 of the Harmonized Tariff Schedule of the United States, that have been found by the Department of Commerce to be sold in the United States at less than fair value (LTFV).

Background

The Commission instituted this investigation effective December 30, 1992, following a preliminary determination by the Department of Commerce that imports of dry film photoresist from Japan were being sold at LTFV within the meaning of section 733(b) of the Act (19 U.S.C. 1673b(b)). Notice of the institution of the Commission's investigation and of a public hearing to be held in connection therewith was given by posting copies of the notice in the Office of the Secretary, U.S. International Trade Commission, Washington, DC, and by publishing the notice in the **Federal Register** of January 14, 1993 (56 FR 4443). The hearing was held in Washington, DC, on March 11, 1993, and all persons who requested the opportunity were permitted to appear in person or by counsel.

The Commission transmitted its determination in this investigation to the Secretary of Commerce on April 28, 1993. The views of the Commission are contained in USITC Publication 2630 (April 1993), entitled "Dry Film Photoresist from Japan: Determination of the Commission in Investigation No. 731–TA–622 (Final) Under the Tariff Act of 1930, Together With the Information Obtained in the Investigation."

Issued: April 29, 1993.

By order of the Commission

Paul R. Bardos,

Acting Secretary.

[Investigation 337–TA–348]

Certain In-Line Roller Skates With Ventilated Boots and In-Line Roller Skates With Axle Aperture Plugs and Component Parts Thereof; Initial Determination Terminating Respondent on the Basis of Settlement Agreement

AGENCY: U.S. International Trade Commission.

ACTION: Notice is hereby given that the Commission has received an initial determination from the presiding officer in the above captioned investigation terminating the following respondents on the basis of a settlement agreement: California Pro U.S.A. Corporation and Playmaker Company, Ltd.

SUPPLEMENTARY INFORMATION: This investigation is being conducted pursuant to section 337 of the Tariff Act of 1930 (19 U.S.C. 1337). Under the Commission's rules, the presiding officer's initial determination will become the determination of the Commission thirty (30) days after the date of its service upon the parties, unless the Commission orders review of the initial determination. The initial determination in this matter was served upon parties on April 30, 1993.

Copies of the initial determination, the settlement agreement, and all other nonconfidential documents filed in connection with this investigation are available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone (202) 205–2000. Hearing impaired individuals are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205–1810.

WRITTEN COMMENTS: Interested persons may file written comments with the Commission concerning termination of the aforementioned respondents. The original and 14 copies of all such documents must be filed with the Secretary to the Commission, 500 E Street SW., Washington, DC 20436, no later than 10 days after publication of this notice in the **Federal Register**. Any person desiring to submit a document (or portions thereof) to the Commission in confidence must request confidential treatment. Such requests should be directed to the Secretary to the Commission and must include a full statement of the reasons why confidential treatment should be granted. The Commission will either accept the submission in confidence or return it.

FOR FURTHER INFORMATION CONTACT: Ruby J. Dionne, Office of the Secretary, U.S. International Trade Commission, Telephone (202) 205–1802.

Issued: April 30, 1993.

By order of the Commission.

BILLING CODE 7020–02–P

[Inv. No. 603–TA–11]

Certain Recombinantly Produced Human Growth Hormones; Preliminary Investigation

AGENCY: International Trade Commission.

ACTION: Institution of a preliminary investigation under section 603(a) of the Trade Act of 1974 (19 U.S.C. 2482(a)) and deferral of a determination on whether to institute an investigation under section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337).

SUMMARY: Notice is hereby given that on April 26, 1993, the U.S. International Trade Commission voted to institute a preliminary investigation under section 603(a) of the Trade Act of 1974, 19 U.S.C. 2482(a), to investigate the alleged existence of unfair methods of competition and unfair acts in the importation into the United States, sale for importation into the United States, and sale within the United States after importation of certain recombinantly produced human growth hormones. At the same time, the Commission voted to defer institution of a section 337 investigation concerning recombinantly produced human growth hormones pursuant to 19 CFR 210.12 on the basis of exceptional circumstances. The request for a section 337 investigation was made by Genentech, Inc. of South San Francisco, California, in a complaint filed with the Commission (Docket No. 1750).

Authority: This preliminary investigation is being instituted pursuant to section 603(a) of the Trade Act of 1974 (19 U.S.C. 2482(a)) and section 201.7 of the Commission's Rules of Practice and Procedure (19 CFR 201.7). The authority for deferring a determination on whether to institute a section 337 (19 U.S.C. 1337) investigation is found in 19 CFR 210.12.

FOR FURTHER INFORMATION CONTACT: Kent R. Stevens, Esq., Office of Unfair Import Investigations, U.S. International Trade Commission, 500 E Street SW., suite 401, Washington, DC 20436, telephone (202) 205–2579.

SUPPLEMENTARY INFORMATION: A complaint was filed with the U.S. International Trade Commission on March 16, 1993, under section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, on behalf of Genentech, Inc., 460 Point San Bruno Boulevard, South San Francisco, California 94080. Letters supplementing the complaint were filed on March 30, March 31, April 5, April 6, April 9, April 12, and April 22, 1993. The complaint alleges violations of subsection (a)(1)(B) of section 337 in the importation into the United States, the sale for importation, and the sale within the United States after importation of recombinantly produced human growth hormones alleged to be manufactured abroad by methods covered by certain claims of United States Patent Nos. 4,366,246, 4,342,832, and 4,601,980. Named as proposed respondents are Novo-Nordisk A/S, Novo-Nordisk of North America, Inc., Novo-Nordisk Pharmaceuticals, Inc., Zymogenetics, Inc., Bio-Technology General Corp., and Bio-Technology (Israel) Ltd.

The complaint further alleges that there exists an industry in the United States as required by subsection (a)(2) of section 337 or that an industry is in the process of being established. The complaint requests that the Commission institute an investigation and, after an investigation, issue a permanent exclusion order and permanent cease and desist orders.

Under section 603(a) of the Trade Act of 1974, 19 U.S.C. 2482(a), the Commission has authority to conduct preliminary investigations. The Commission has decided to conduct a preliminary investigation prior to making a determination on whether to institute a section 337 investigation.

Scope of the Section 603 Investigation

The alleged unfair methods of competition and unfair acts to be investigated are the proposed respondents' importation, sales, and use of recombinantly produced human growth hormones that are alleged in Genentech's complaint, as supplemented, to be produced abroad by means of processes covered by United States Patent Nos. 4,366,246, 4,342,832, or 4,601,980.

Deadline

The Commission's Office of Unfair Import Investigations is directed to submit its report and recommendation to the Commission no later than ninety days following publication of this notice in the **Federal Register**.

Issued: April 30, 1993.

By order of the Commission.

Paul R. Bardos,

Acting Secretary.

Certain Sputtered Carbon Coated Computer Disks and Products Containing Same, Including Disk Drives; Investigation

AGENCY: U.S. International Trade Commission.

ACTION: Institution of investigation pursuant to 19 U.S.C. 1337.

SUMMARY: Notice is hereby given that a complaint was filed with the U.S. International Trade Commission on March 26, 1993, under section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, on behalf of Harry E. Aine, 570 J.D. Broome Road, Sumrall, Mississippi 39482. Two letters supplementing the complaint were filed on April 16, 1993, and two additional supplemental letters were filed on April 20, 1993. The complaint, as supplemented, alleges violations of subsections (a)(1)(B)(i) and (ii) of section 337 in the importation into the United States, the sale for importation, and the sale within the United States after importation of certain sputtered carbon coated computer disks and products containing the same, including disk drives, by reason of alleged infringement of claims 23, 24, 25, 26, and 29 of U.S. Letters Patent Re. 32,464, and that there exists an industry in the United States as required by subsection (a)(2) of section 337. The complainant requests that the Commission institute an investigation and, after a full investigation, issue a permanent exclusion order and permanent cease and desist orders.

ADDRESSES: The complaint, except for any confidential information contained therein, is available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street, SW., room 112, Washington, DC 20436, telephone 202–205–1802. Hearing-impaired individuals are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on 202–205–1810.

FOR FURTHER INFORMATION CONTACT: John M. Whealan, Esq., Office of Unfair Import Investigations, U.S. International Trade Commission, telephone 202–205–2574.

Authority: The authority for institution of this investigation is contained in section 337 of the Tariff Act of 1930, as amended, and in § 210.12 of the Commission's Interim Rules of Practice and Procedure, 19 CFR 210.12.

Scope of Investigation

Having considered the complaint, the U.S. International Trade Commission, on April 26, 1993, *Ordered that*—

(1) Pursuant to subsection (b) of section 337 of the Tariff Act of 1930, as amended, an investigation be instituted to determine whether there is a violation of subsection (a)(1)(B) of section 337 in the importation into the United States, the sale for importation, or the sale within the United States after importation of certain sputtered carbon coated computer disks or products containing same, including disk drives, by reason of infringement of claims 23, 24, 25, 26, or 29 of U.S. Letters Patent Re. 32,464, and whether there exists an industry in the United States as required by subsection (a)(2) of section 337.

(2) For the purpose of the investigation so instituted, the following are hereby named as parties upon which this notice of investigation shall be served:

(a) The complainant is—Harry E. Aine, 570 J.D. Broome Road, Sumrall, Mississippi 39482.

(b) The respondents are the following companies alleged to be in violation of section 337, and are the parties upon which the complaint is to be served:

Akashic Memories Corp., 305 West Tasman Drive, San Jose, California 95134
Asahi Komag Co., Ltd., 2–1–2 Marunouchi Chiyoda-Ku, Tokyo, Japan 0106
Conner Peripherals, Inc., 3081 Zanker Road, San Jose, California 95134
Denki Kagaku Kogyo, K.K., Saushin Bldg. 4–1, 4–1 Yuraku-cho 1-chome, Chiyoda-ku, Tokyo, Japan 0100
Digital Equipment Corp., 146 Main Street, Maynard, Massachusetts 01754
HMT Technology Corp., 1055 Page Avenue, Fremont, California 94538
Hoya Electronics Corp., 960 Rincon Circle, San Jose, California 95131
Komag, Inc., 275 South Hillview Drive, Milpitas, California 95035
Maxtor Corp., 150 River Oaks Parkway, San Jose, California 95134
Micropolis Corp., 21123 Nordhoff Street, Chatsworth, California 91311
Mitsubishi Kasei Corp. 5–2 Marunouchi, Chiyoda-ku, Tokyo, Japan 0100
Nashua Corp., 44 Franklin Street, Nashua, New Hampshire 03061
Nippon Sheet Glass Co., Ltd., Shimbashi Sumitomo Bldg., 11–3, 5–Chome, Shimbashi, Minato-ku, Tokyo, 105 Japan
Quantum Corp., 1804 McCarthy Boulevard, Milpitas, California 95035
Seagate Technology, Inc., 920 Disc Drive, Scotts Valley, California 95066
Toshiba Corp., 1–1–1 Shibaura, Minato-ku, Tokyo 105

VOL 58 ISS 85 MY 5 1993 UMI

Tosoh Corp., 7-7 Akasaka 1-chome, Minato-Ku, Tokyo, Japan 107
Trace Storage Technology Corp., #8 R&D First Road, Sci-based Ind. Park, Hsinchu, Taiwan
Western Digital Corp., 2445 McCabe Way, Irvine, California 92714
Yamaha Corp., Basic Research & Development Lab, 203 Matsunokijima, Toyooka, Mura, Iwatogun, Shizuokaken, 438-01 Japan.

(c) John M. Whealan, Esq., Office of Unfair Import Investigations, U.S. International Trade Commission, 500 E Street SW., room 401P, Washington, D.C. 20436, who shall be the Commission investigative attorney, party to this investigation; and

(3) For the investigation so instituted, Janet D. Saxon, Chief Administrative Law Judge, U.S. International Trade Commission, shall designate the presiding administrative law judge.

Responses to the complaint and the notice of investigation must be submitted by the named respondents in accordance with section 210.21 of the Commission's Interim Rules of Practice and Procedure, 19 CFR § 210.21. Pursuant to §§ 201.16(d) and 210.21(a) of the Commission's Rules, 19 CFR 201.16(d) and 210.21(a), such responses will be considered by the Commission if received not later than 20 days after the date of service of the complaint. Extensions of time for submitting responses to the complaint will not be granted unless good cause therefor is shown.

Failure of a respondent to file a timely response to each allegation in the complaint and in this notice may be deemed to constitute a waiver of the right to appear and contest the allegations of the complaint and this notice, and to authorize the administrative law judge and the Commission, without further notice to the respondent, to find the facts to be as alleged in the complaint and this notice and to enter both an initial determination and a final determination containing such findings, and may result in the issuance of a limited exclusion order or a cease and desist order or both directed against such respondent.

By order of the Commission.

Issued: April 26, 1993.

Paul R. Bardos,

Acting Secretary.

BILLING CODE 7020-02-P

[Investigation No. 731-TA-539-E (Final)]

Uranium From Ukraine

AGENCY: International Trade Commission.

ACTION: Continuation and scheduling of a final antidumping investigation.

SUMMARY: The Commission hereby gives notice of the continuation of final antidumping investigation No. 731-TA-539-E (Final) under section 735(b) of the Tariff Act of 1930 (19 U.S.C. 1673d(b)) (the Act) to determine whether an industry in the United States is materially injured, or is threatened with material injury, or the establishment of an industry in the United States is materially retarded, by reason of imports from Ukraine of uranium, provided for in subheadings 2612.10.00, 2844.10.10, 2844.10.20, 2844.10.50, and 2844.20.00 of the Harmonized Tariff Schedule of the United States.

For further information concerning the conduct of this investigation, hearing procedures, and rules of general application, consult the Commission's Rules of Practice and Procedure, part 201, subparts A through E (19 CFR part 201), and part 207, subparts A and C (19 CFR part 207).

EFFECTIVE DATE: April 19, 1993.

FOR FURTHER INFORMATION CONTACT: Tedford Briggs (202-205-3181), Office of Investigations, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436. Hearing-impaired persons can obtain information on this matter by contacting the Commission's TDD terminal on 202-205-1810. Persons with mobility impairments who will need special assistance in gaining access to the Commission should contact the Office of the Secretary at 202-205-2000.

SUPPLEMENTARY INFORMATION:

Background

This investigation is being continued as a result of notification by the Department of Commerce that the Government of Ukraine has terminated the suspension agreement on uranium from Ukraine and that Commerce has resumed its antidumping investigation (58 FR 21144, April 19, 1993). Consequently, the Commission is continuing its investigation.

Participation in the Investigation and Public Service List

Persons wishing to participate in the investigation as parties must file an entry of appearance with the Secretary to the Commission, as provided in § 201.11 of the Commission's rules, not later than twenty-one (21) days after publication of this notice in the **Federal Register**. The Secretary will prepare a public service list containing the names and addresses of all persons, or their representatives, who are parties to this investigation upon the expiration of the period for filing entries of appearance.

Limited Disclosure of Business Proprietary Information (BPI) Under an Administrative Protective Order (APO) and BPI Service List

Pursuant to § 207.7(a) of the Commission's rules, the Secretary will make BPI gathered in this final investigation available to authorized applicants under the APO issued in the investigation, provided that the application is made not later than twenty-one (21) days after the publication of this notice in the **Federal Register**. A separate service list will be maintained by the Secretary for those parties authorized to receive BPI under the APO.

Staff Report

The prehearing staff report in this investigation will be placed in the nonpublic record on June 18, 1993, and a public version will be issued thereafter, pursuant to § 207.21 of the Commission's rules.

Hearing

The Commission will hold a hearing in connection with this investigation beginning at 9:30 a.m. on July 1, 1993, at the U.S. International Trade Commission Building. Requests to appear at the hearing should be filed in writing with the Secretary to the Commission on or before June 17, 1993. A nonparty who has testimony that may aid the Commission's deliberations may request permission to present a short statement at the hearing. All parties and nonparties desiring to appear at the hearing and make oral presentations should attend a prehearing conference to be held at 9:30 a.m. on June 23, 1993, at the U.S. International Trade Commission Building. Oral testimony and written materials to be submitted at the public hearing are governed by §§ 201.6(b)(2), 201.13(f), and 207.23(b) of the Commission's rules. Parties are strongly encouraged to submit as early in the investigation as possible any requests to present a portion of their hearing testimony *in camera*.

Written Submissions

Each party is encouraged to submit a prehearing brief to the Commission. Prehearing briefs must conform with the provisions of § 207.22 of the Commission's rules; the deadline for filing is June 25, 1993. Parties may also file written testimony in connection with their presentation at the hearing, as provided in § 207.23(b) of the Commission's rules, and posthearing briefs, which must conform with the provisions of § 207.24 of the Commission's rules. The deadline for filing posthearing briefs is July 12, 1993; witness testimony must be filed no later than three (3) days before the hearing. In addition, any person who has not entered an appearance as a party to the investigation may submit a written statement of information pertinent to the subject of the investigation on or before July 12, 1993. All written submissions must conform with the provisions of § 201.8 of the Commission's rules; any submissions that contain BPI must also conform with the requirements of §§ 201.6, 207.3, and 207.7 of the Commission's rules.

In accordance with §§ 201.16(c) and 207.3 of the rules, each document filed by a party to the investigation must be served on all other parties to the investigation (as identified by either the public or BPI service list), and a certificate of service must be timely filed. The Secretary will not accept a document for filing without a certificate of service.

Authority: This investigation is being conducted under authority of the Tariff Act of 1930, title VII. This notice is published pursuant to § 207.20 of the Commission's rules.

Issued: April 26, 1993.

By order of the Commission.

Paul R. Bardos,

Acting Secretary.

INTERSTATE COMMERCE COMMISSION

Availability of Environmental Assessments

Pursuant to 42 U.S.C. 4332, the Commission has prepared and made available environmental assessments for the proceedings listed below. Dates environmental assessments are available are listed below for each individual proceeding.

To obtain copies of these environmental assessments contact Ms. Johnnie Davis or Ms. Tawanna Glover-Sanders, Interstate Commerce Commission, Section of Energy and Environment, room 3219, Washington, DC 20423, (202) 927-5750 or (202) 927-6245.

Comments on the following assessment are due 15 days after the date of availability:

AB-167 (Sub. No. 1114X), Consolidated Rail Corporation—Abandonment Exemption—Between London and South Charleston, Ohio. EA available 4/26/93.

Comments on the following assessment are due 30 days after the date of availability:

Sidney L. Strickland, Jr.,

Secretary.

[FR Doc. 93-10603 Filed 5-4-93; 8:45 am]

BILLING CODE 7035-01-M

[Finance Docket No. 32285]

Chicago Central & Pacific Railroad Co.; Trackage Rights Exemption; Illinois Central Railroad Co.

Illinois Central Rail Company (IC) and Chicago Central & Pacific Railroad Company (CCP) have agreed to amend their existing trackage rights agreement.[1] The first amendment provides for IC to grant CCP additional local trackage rights between Hawthorne and Plaines, in Will and Cook Counties, IL, and the second amendment will allow CCP to use a short IC connector track at LeMoyne Junction. The trackage rights were to become effective on April 23, 1993.

This notice is filed under 49 CFR 1180.2(d)(7). If the notice contains false or misleading information, the exemption is void *ab initio*. Petitions to revoke the exemption under 49 U.S.C. 10505(d) may be filed at any time. The filing of a petition to revoke will not stay the transaction. Pleadings must be filed with the Commission and served on: Myles L. Tobin, 455 North Cityfront Plaza Drive, Chicago, IL 60611-5504.

As a condition to the use of this exemption, any employees affected by the trackage rights will be protected pursuant to Norfolk and Western Ry. Co.—Trackage Rights—BN, 354 I.C.C. 605 (1978), as modified in Mendocino Coast Ry., Inc.—Lease and Operate, 360 I.C.C. 653 (1980).

Decided: April 28, 1993.

By the Commission, David M. Konschnik, Director, Office of Proceedings.

Sidney L. Strickland, Jr.,

Secretary.

[FR Doc. 93-10602 Filed 5-4-93; 8:45 am]

BILLING CODE 7035-01-M

[1] The existing trackage rights were acquired by CCP under an exemption granted in Finance Docket No. 30663, Chicago, Central & Pacific Railroad Company—Purchase (Portion), Trackage Rights, and Securities Exemption (not printed), served December 24, 1985, notice published December 30, 1985 (50 FR 53206).

[Finance Docket No. 32281]

Southern Electric Railroad Co.; Corporate Family Transaction Exemption; Southern Electric Generating Co.

Southern Electric Railroad Company (SERC) and Southern Electric Generating Company (SEGCO) have filed a verified notice to exempt a transaction whereby (1) SEGCO will convey to SERC all of its rights, title, and interest in certain properties, including the approximately 7.5-mile Gaston line between CSX Transportation Inc.'s main line near Westover, and the Ernest C. Gaston Electric Generating Plant near Wilsonville, in Shelby County, AL, and (2) SERC will convey said properties back to SEGCO, retaining an exclusive easement interest therein for purposes of rail carrier operations and rail line maintenance. The parties intend to consummate the transaction on or after the April 19, 1993, effective date of the exemption.

SERC, Alabama Power Company (APC), Georgia Power Company (GPC), and Savannah Electric and Power Company (SE&PC) are subsidiaries of The Southern Company (Southern), a public utility holding company. APC and GPC each owns 50 percent of the stock of SEGCO.

SERC and SEGCO were granted exemptions to construct lines of railroad, in Finance Docket No. 31972, Southern Electric Railroad Company—Construction Exemption—Jefferson County, AL (not printed), served March 17, 1992, Finance Docket No. 32195, Southern Electric Railroad Company—Construction Exemption—Effingham County, GA (not printed), served January 12, 1993, and Finance Docket No. 31498, Southern Electric Generating Co.—Petition for Exemption—Construction of a Rail Line in Shelby County, AL (not printed), served September 19, 1989. SERC and SEGCO are, therefore, carriers subject to Commission jurisdiction. Since Southern, a noncarrier, controls at least two carriers, the involved transaction requires Commission approval under 49 U.S.C. 11343(a)(4) or exemption under 49 U.S.C. 10505.

This is a transaction within a corporate family under 49 CFR 1180.2(d)(3) that will not result in adverse changes in service levels, significant operational changes, or a change in the competitive balance with carriers outside the corporate family.

As a condition to use of this exemption, any employees adversely affected by the transaction will be

VOL 58 ISS 85 MY 5 1993 UMI

protected by the conditions set forth in New York Dock Ry.—Control—Brooklyn Eastern Dist., 360 I.C.C. 60 (1979). Imposition of labor protective conditions is mandatory for transactions under 49 U.S.C. 11343.

Petitions to revoke the exemption under 49 U.S.C. 10505(d) may be filed at any time. The filing of a petition to revoke will not stay the exemption's effectiveness. Pleadings must be filed with the Commission and served on: John R. Molm, suite 5200, 600 Peachtree St., NE., Atlanta, GA 30308–2216.

Decided: April 29, 1993.

By the Commission, David M. Konschnik, Director, Office of Proceedings.

Sidney L. Strickland, Jr.,

Secretary.

NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

[Notice 93–034]

NASA Advisory Council (NAC), Space Science and Applications Advisory Committee, Solar System Exploration Subcommittee; Meeting

AGENCY: National Aeronautics and Space Administration.

ACTION: Notice of meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act, Public Law 92–463, the National Aeronautics and Space Administration announces a forthcoming meeting of the NAC, Space Science and Applications Advisory Committee, Solar System Exploration Subcommittee.

DATES: May 19, 1993, 9 a.m. to 5:45 p.m.; and May 20, 1993, 8:30 a.m. to noon.

ADDRESSES: National Aeronautics and Space Administration, room MIC–3, 300 E Street, SW., Washington, DC 20546.

FOR FURTHER INFORMATION CONTACT: Dr. Carl B. Pilcher, Code SL, National Aeronautics and Space Administration, Washington, DC 20546, 202/358–0290.

SUPPLEMENTARY INFORMATION: The meeting will be open to the public up to the seating capacity of the room. The agenda for the meeting is as follows:

—Reorganization Status
—Strategic Element Issues
—Mission Operations and Data Analysis Discussion

It is imperative that the meeting be held on these dates to accommodate the scheduling priorities of the key participants. Visitors will be requested to sign a visitor's register.

Dated: April 29, 1993.

Daniele Green,

Chief, Management Controls Office, National Aeronautics and Space Administration.

BILLING CODE 7510–01–M

NATIONAL COMMISSION FOR EMPLOYMENT POLICY

Meeting

ACTION: Notice of meeting.

SUMMARY: Pursuant to the provisions of the Federal Advisory Committee Act (Pub. L. 92–463; 86 Stat. 770) notice is hereby given of a public meeting to be held in Baltimore, Maryland, on Thursday and Friday at the Radisson Plaza Lord Baltimore, 20 West Baltimore Street, in the Royal Conference Room.

DATES: Thursday, May 20, 1993, 9 a.m.-12 noon Friday, May 21, 1993, 9 a.m.-12 noon.

STATUS: The meeting is to be open to the public.

MATTERS TO BE DISCUSSED: The purpose of this public meeting is to enable the Commission members to discuss progress on the research agenda, future research, and budget and administrative matters.

FOR FURTHER INFORMATION CONTACT: Barbara C. McQuown, Director, National Commission for Employment Policy, 1522 K Street, NW., suite 300, Washington, DC 20005. (202) 724–1545.

SUPPLEMENTARY INFORMATION: The National Commission for Employment Policy was established pursuant to title IV–F of the Job Training Partnership Act (Pub. L. 97–300). The Act charges the Commission with the broad responsibility of advising the President, and the Congress on national employment issues.

The meeting will be open to the public. Handicapped individuals wishing to attend should contact the Commission so that appropriate accommodations can be made.

Anyone wishing to submit comments prior to the meeting, should do so by C.O.B. May 17, and they will be included in the record. Minutes of the meeting will be available for public inspection at the Commission's headquarters, 1522 K Street, NW., suite 300, Washington, DC 20005.

Signed at Washington, DC, this 29th day of April 1993.

Barbara C. McQuown,

Director, National Commission for Employment Policy.

NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES

Agency Information Collection Activities Under OMB Review

AGENCY: National Endowment for the Arts.

ACTION: Notice.

SUMMARY: The National Endowment for the Arts (NEA) has sent to the Office of Management and Budget (OMB) a request for clearance of the following proposal for the collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. chapter 35).

DATES: Comments on this information collection must be submitted by June 4, 1993.

ADDRESSES: Send comments to Mr. Steve Semenuk, Office of Management and Budget, New Executive Office Building, 726 Jackson Place, NW., room 3002, Washington, DC 20503; (202–395–7316). In addition, copies of such comments may be sent to Ms. Judith E. O'Brien, National Endowment for the Arts, Administrative Services Division, room 203, 1100 Pennsylvania Avenue, NW., Washington, DC 20506; (202–682–5401).

FOR FURTHER INFORMATION CONTACT: Ms. Judith E. O'Brien, National Endowment for the Arts, Administrative Services Division, room 203, 1100 Pennsylvania Avenue, NW., Washington, DC 20506; (202–682–5401).

SUPPLEMENTARY INFORMATION: The Endowment requests the review of a revision of a currently approved collection of information. This entry is issued by the Endowment and contains the following information:

(1) The title of the form;

(2) How often the required information must be reported;

(3) Who will be required or asked to report;

(4) What the form will be used for;

(5) An estimate of the number of responses;

(6) The average burden hours per response;

(7) An estimate of the total number of hours needed to prepare the form. This entry is not subject to 44 U.S.C. 3504(h).

Title: FY 94 Support Through State Arts Agencies to Local Arts Agencies Serving Underserved Areas and Communities Application Guidelines.

Frequency of Collection: Annually.

Respondents: State and regional arts agencies.

Use: Guideline instructions and applications elicit relevant information from state and regional arts agencies that apply for funding in the Local Arts Agencies Program. This information is necessary for the accurate, fair and thorough consideration of competing proposal in the review process.

Estimated Number of Respondents: 35.

Average Burden Hours Per Response: 20.

Total Estimated Burden: 700.

NATIONAL SCIENCE FOUNDATION

Advisory Committee for Computer and Information Science and Engineering; Meeting

In accordance with the Federal Advisory Committee Act (Pub. L. 92–463, as amended), the National Science Foundation ann ·nces the following meeting:

Name: Advisory Committee for Computer and Information Science and Engineering.

Dates and Times: May 20, 1993; 8:30 a.m. to 5 p.m. May 21, 1993; 8:30 a.m. to 2:30 p.m.

Place: 1800 G Street, NW., Washington, DC 20550, May 20, 1993—Room 540; May 21, 1993—Room 543.

Type of Meeting: Open.

Contact Person: Odessa Dyson, Administrative Officer, Office of the Assistant Director, Directorate for Computer and Information Science and Engineering, National Science Foundation, 1800 G St., NW., Washington, DC 20550. Telephone: (202) 357–7936.

Minutes: May be obtained from the contact person listed above.

Purpose of Meeting: To advise NSF on the impact of its policies, programs and activities on the CISE community; to provide advice to the Assistant Director/CISE on issues related to long range planning, and to form ad hoc subcommittees to carry out needed studies and tasks.

Agenda: (1) Discuss HPCC (High Performance and Computing) and NII (National Information Infrastructure) program activities.

(2) Review status of the Blue Ribbon Panel on High Performance Computing.

Dated: April 30, 1993.

M. Rebecca Winkler,

Committee Management Officer.

BILLING CODE 7555–01–M

NUCLEAR REGULATORY COMMISSION

Final Memorandum of Understanding Between the U.S. Nuclear Regulatory Commission and the State of Arizona

AGENCY: U.S. Nuclear Regulatory Commission.

ACTION: Notice.

SUMMARY: This notice is to advise the public of the issuance of a final Memorandum of Understanding (MOU) between the U.S. Nuclear Regulatory Commission (NRC) and the State of Arizona. The MOU provides the basis for mutually agreeable procedures whereby the State of Arizona may utilize the NRC Emergency Response Data System (ERDS) to receive data during an emergency at a commercial nuclear power plant in Arizona. Public comments were addressed in conjunction with the MOU with the State of Michigan published in the **Federal Register** Vol. 57, No. 28, February 11, 1992.

EFFECTIVE DATE: This MOU is effective April 9, 1993.

ADDRESSES: Copies of all NRC documents are available for pubic inspection and copying for a fee in the NRC Public Document Room, 2120 L Street, NW. (Lower Level), Washington, DC.

FOR FURTHER INFORMATION CONTACT: John R. Jolicoeur or Eric Weinstein, Office for Analysis and Evaluation of Operational Data, U.S. Nuclear Regulatory Commission, Washington, DC 20555. Telephone (301) 492–4155 or (301) 492–7836.

This attached MOU is intended to formalize and define the manner in which the NRC will cooperate with the State of Arizona to provide data related to plant conditions during emergencies at commercial nuclear power plants in Arizona.

Dated at Rockville, Maryland, this 23rd day of April, 1993.

For the U.S. Nuclear Regulatory Commission.

James M. Taylor,

Executive Director for Operations.

Agreement Pertaining to the Emergency Response Data System Between the State of Arizona and the U.S. Nuclear Regulatory Commission

I. Authority

The U.S. Nuclear Regulatory Commission (NRC) and the State of Arizona enter into this Agreement under the authority of section 274i of the Atomic Energy Act of 1954, as amended.

Arizona recognizes the Federal Government, primarily the NRC, as having the exclusive authority and responsibility to regulate the radiological and national security aspects of the construction and operation of nuclear production or utilization facilities, except for certain authority over air emissions granted to States by the Clean Air Act.

II. Bockground

A. The Atomic Energy Act of 1954, as amended, and the Energy Reorganization Act of 1974, as amended, authorize the Nuclear Regulatory Commission (NRC) to license and regulate, among other activities, the manufacture, construction, and operation of utilization facilities (nuclear power plants) in order to assure common defense and security and to protect the public health and safety. Under these statutes, the NRC is the responsible agency regulating nuclear power plant safety.

B. NRC believes that its mission to protect the public health and safety can be served by a policy of cooperation with State governments and has formally adopted a policy statement on "Cooperation with States at Commercial Nuclear Power Plants and Other Nuclear Production or Utilization Facilities" (54 FR 7530, February 22, 1989). The policy statement provides that NRC will consider State proposals to enter into instruments of cooperation for certain programs when these programs have provisions to ensure close cooperation with NRC. This agreement is intended to be consistent with, and implement the provisions of the NRC's policy statement.

C. NRC fulfills its statutory mandate to regulate nuclear power plant safety by, among other things, responding to emergencies at licensee's facilities, monitoring the status and adequacy of the licensee's responses to emergency situations.

D. Arizona fulfills its statutory mandate to provide for preparedness, response, mitigation, and recovery in the event of an accident at a nuclear power plant through the State of Arizona/Maricopa County Fixed Nuclear Facility Emergency Response Off-Site Plan.

III. Scope

A. This Agreement defines the way in which NRC and Arizona will cooperate in planning and maintaining the capability to transfer reactor plant data via the Emergency Response Data System during emergencies at nuclear power plants, in the State of Arizona.

VOL 58 ISS 85 MY 5 1993 UMI

B. It is understood by the NRC and the State of Arizona that ERDS data will only be transmitted by a licensee during emergencies classified at the Alert level or above, during scheduled tests, or during exercises when available.

C. Nothing in this Agreement is intended to restrict or expand the statutory authority of NRC, the State of Arizona, or to affect or otherwise alter the terms of any agreement in effect under the authority of section 274b of the Atomic Energy Act of 1954, as amended; nor is anything in this Agreement intended to restrict or expand the authority of the State of Arizona on matters not within the scope of this Agreement.

D. Nothing in this Agreement confers upon the State of Arizona authority to (1) interpret or modify NRC regulations and NRC requirements imposed on the licensee; (2) take enforcement actions; (3) issue confirmatory letters; (4) amend, modify, or revoke a license issued by NRC; or (5) direct or recommend nuclear power plant employees to take or not to take any action. Authority for all such actions is reserved exclusively to the NRC.

IV. NRC's General Responsibilities

Under this agreement, NRC is responsible for maintaining the Emergency Response Data System (ERDS). ERDS is a system designed to receive, store, and retransmit data from in-plant data systems at nuclear power plants during emergencies. The NRC will provide user access to ERDS data to one user terminal for the State of Arizona during emergencies at nuclear power plants which have implemented an ERDS interface and for which any portion of the plant's 10 mile Emergency Planning Zone (EPZ) lies within the State of Arizona. The NRC agrees to provide unique software already available to NRC (not commercially available) that was developed under NRC contract for configuring the ERDS workstation.

V. State of Arizona General Responsibilities

A. Arizona will, in cooperation with the NRC, establish a capability to receive ERDS data. To this end, Arizona will provide the necessary computer hardware and commercially licensed software required for ERDS data transfer to users.

B. Arizona agrees not to use ERDS to access data from nuclear power plants for which a portion of the 10 mile Emergency Planning Zone does not fall within its State Boundary.

C. For the purpose of minimizing the impact on plant operators, clarification of ERDS data will be pursued through the NRC.

VI. Implementation

Arizona and the NRC agree to work in concert to assure that the following communications and information exchange protocol regarding the NRC ERDS are followed.

A. Arizona and the NRC agree in good faith to make available to each other information within the intent and scope of this Agreement.

B. NRC and Arizona agree to meet as necessary to exchange information on matters of common concern pertinent to this Agreement. Unless otherwise agreed, such meetings will be held in the NRC Operations Center. The affected utilities will be kept informed of pertinent information covered by this Agreement.

C. To preclude the premature public release of sensitive information, NRC and Arizona will protect sensitive information to the extent permitted by the Federal Freedom of Information Act, the State Freedom of Information Act, 10 CFR 2.790, and other applicable authority.

D. NRC will conduct periodic tests of licensee ERDS data links. A copy of the test schedule will be provided to Arizona by the NRC. Arizona may test its ability to access ERDS data during these scheduled tests, or may schedule independent tests of the State link with the NRC.

E. NRC will provide access to ERDS for emergency exercises with reactor units capable of transmitting exercise data to ERDS. For exercises in which the NRC is not participating, Arizona will coordinate with NRC in advance to ensure ERDS availability. NRC reserves the right to preempt ERDS use for any exercise in progress in the event of an actual event at any licensed nuclear power plant.

VII. Contacts

A. The principal senior management contacts for this Agreement will be the Director, Division of Operational Assessment, Office for Analysis and Evaluation of Operational Data, and the Director, Arizona Radiation Regulatory Agency. These individuals may designate appropriate staff representatives for the purpose of administering this Agreement.

B. Identification of these contacts is not intended to restrict communication between NRC and Arizona Radiation Regulatory Agency staff members on technical and other day-to-day activities.

VIII. Resolution of Disagreements

A. If disagreements arise about matters within the scope of this Agreement, NRC and Arizona will work together to resolve these differences.

B. Resolution of differences between the State and NRC staff over issues arising out of this Agreement will be the initial responsibility of the NRC Division of Operational Assessment management.

C. Differences which cannot be resolved in accordance with Sections VIII.A and VIII.B will be reviewed and resolved by the Director, Office for Analysis and Evaluation of Operational Data.

D. The NRC's General Counsel has the final authority to provide legal interpretation of the Commissions regulations.

IX. Effective Date

This Agreement will take effect after it has been signed by both parties.

X. Duration

A formal review, not less than 1 year after the effective date, will be performed by the NRC to evaluate implementation of the Agreement and resolve any problems identified. This Agreement will be subject to periodic reviews and may be amended or modified upon written agreement by both parties, and may be terminated upon 30 days written notice by either party.

XI. Separability

If any provision(s) of this Agreement, or the application of any provision(s) to any person or circumstances is held invalid, the remainder of this Agreement and the application of such provisions to other persons or circumstances will not be affected.

Dated: January 6, 1993.

For The U.S. Nuclear Regulatory Commission.

James M. Taylor,

Executive Director for Operations.

Dated: April 9, 1993.

For The State of Arizona.

Aubrey V. Godwin,

Director, Arizona Radiation Regulatory Agency.

BILLING CODE 7590-01-M

OFFICE OF PERSONNEL MANAGEMENT

Excepted Service

AGENCY: Office of Personnel Management.

ACTION: Notice.

SUMMARY: This gives notice of positions placed or revoked under Schedules A and B, and placed under Schedule C in the excepted service, as required by Civil Service Rule VI, Exceptions from the Competitive Service.

FOR FURTHER INFORMATION CONTACT: Sherry Turpenoff, (202) 606-0950.

SUPPLEMENTARY INFORMATION: The Office of Personnel Management published its last monthly notice updating appointing authorities established or revoked under the Excepted Service provisions of 5 CFR part 213 on April 12, 1993 (58 FR 19145). Individual authorities established or revoked under Schedules A and B and established under Schedule C between March 1 and March 31, 1993, appear in the listing below. Future notices will be published on the fourth Tuesday of each month, or as soon as possible thereafter. A consolidated listing of all authorities as of June 30, 1993, will also be published.

Schedule A

The following exceptions were established:

Department of Health and Human Services

Not to exceed 200 staff positions, GS-15 and below, in the Office of Refugee Health, Public Health Service, for an emergency staff to provide health related services to Haitian entrants. Effective March 8, 1993.

Department of Defense

Not to exceed 400 positions in the Central Imagery Office, Office of the Secretary of Defense. Effective March 29, 1993.

Schedule B

No Schedule B authorities were established or revoked during March 1993.

Schedule C

Action

Special Assistant for Congressional Liaison to the Director of ACTION. Effective March 15, 1993.

Arms Control and Disarmament Agency

Special Assistant to the Director. Effective March 22, 1993.

Special Assistant to the Director of Public Affairs. Effective March 22, 1993.

Commission on Civil Rights

Special Assistant to the Commissioner. Effective March 29, 1993.

Special Assistant to the Commissioner. Effective March 29, 1993.

Commission on National and Community Service

Staff Assistant to the Executive Director. Effective March 4, 1993.

Staff Assistant to the Executive Director. Effective March 4, 1993.

Staff Assistant to the Executive Director. Effective March 4, 1993.

Department of Agriculture

Speech Writer to the Director, Office of Public Affairs. Effective March 3, 1993.

Confidential Assistant to the Assistant Secretary for Congressional Relations. Effective March 11, 1993.

Confidential Assistant to the Director, Public Liaison. Effective March 11, 1993.

Confidential Assistant to the Deputy Director, Office of the Executive Secretariat. Effective March 18, 1993.

Staff Assistant to the Assistant Secretary for Congressional Relations. Effective March 23, 1993.

Confidential Assistant to the Deputy Director, Office of Public Affairs. Effective March 23, 1993.

Confidential Assistant to the Assistant Secretary for Congressional Relations. Effective March 23, 1993.

Staff Assistant to the Secretary of Agriculture. Effective March 23, 1993.

Confidential Assistant to the Assistant Secretary for Administration. Effective March 29, 1993.

Confidential Assistant to the Assistant Secretary for Congressional Relations. Effective March 29, 1993.

Confidential Assistant to the Director, Office of Public Affairs. Effective March 29, 1993.

Department of Commerce

Confidential Assistant to the Director of Public Affairs. Effective March 1, 1993.

Director of Scheduling to the Counselor to the Secretary and Chief of Staff. Effective March 1, 1993.

Executive Assistant to the Secretary. Effective March 1, 1993.

Private Chauffeur to the Secretary. Effective March 1, 1993.

Special Assistant to the Deputy Assistant Secretary for White House Liaison. Effective March 9, 1993.

Confidential Assistant to the Deputy Assistant Secretary for White House Liaison. Effective March 9, 1993.

Confidential Assistant to the Director, Office of Business Liaison. Effective March 11, 1993.

Speechwriter to the Director of Public Affairs. Effective March 15, 1993.

Special Assistant and Chief of Protocol to the Chief of Staff. Effective March 15, 1993.

Special Assistant to the Director of Public Affairs. Effective March 29, 1993.

Special Assistant to the Deputy Assistant Secretary for Intergovernmental Affairs. Effective March 31, 1993.

Department of Education

Special Assistant to the Secretary of Education. Effective March 16, 1993.

Special Assistant to the Secretary of Education. Effective March 16, 1993.

Confidential Assistant to the Assistant Secretary for Intergovernmental and Interagency Affairs. Effective March 29, 1993.

Special Assistant to the Assistant Secretary for Intergovernmental and Interagency Affairs. Effective March 29, 1993.

Confidential Assistant to the Assistant Secretary for Intergovernmental and Interagency Affairs. Effective March 29, 1993.

Department of Energy

Staff Assistant to the Chief of Staff. Effective March 31, 1993.

Staff Assistant to the Director, Office of Public Affairs. Effective March 31, 1993.

Special Assistant to the Chief of Staff. Effective March 31, 1993.

Director, Office of Scheduling and Logistics to the Secretary of Energy. Effective March 31, 1993.

Department of the Interior

Deputy Director to the Director of Communications. Effective March 29, 1993.

Special Assistant to the Assistant to the Secretary. Effective March 29, 1993.

Special Assistant to the Assistant to the Secretary. Effective March 29, 1993.

Special Assistant to the Assistant Secretary for Policy, Management and Budget. Effective March 29, 1993.

Deputy Scheduler to the Assistant to the Secretary. Effective March 29, 1993.

Deputy Director for Senate Liaison to the Assistant to the Secretary, Office of Congressional and Legislative Affairs. Effective March 30, 1993.

Deputy Director for House Liaison to the Assistant to the Secretary, Office of Congressional and Legislative Affairs. Effective March 31, 1993.

Department of Justice

Attorney Advisor to the Assistant Attorney General. Effective March 1, 1993.

Department of Labor

Special Assistant to the Chief Economist. Effective March 29, 1993.

VOL 58 ISS 85 MY 5 1993 UMI

Special Assistant to the Chief of Staff. Effective March 29, 1993.

Department of Transportation

Special Assistant to the Secretary of Transportation. Effective March 22, 1993.

Department of Treasury

Special Assistant to the Deputy Secretary of the Treasury. Effective March 1, 1993.

Confidential Assistant to the Deputy Secretary of the Treasury. Effective March 1, 1993.

Staff Assistant to the Director, Office of Public Affairs. Effective March 8, 1993.

Public Affairs Specialist to the Assistant Secretary for Public Affairs and Public Liaison. Effective March 8, 1993.

Director, Office of Business Liaison to the Deputy Assistant Secretary (Public Liaison). Effective March 8, 1993.

Executive Assistant to the Secretary of the Treasury. Effective March 18, 1993.

Confidential Assistant to the Secretary of the Treasury. Effective March 18, 1993.

Review Officer to the Executive Secretary. Effective March 22, 1993.

Public Affairs Specialist to the Assistant Secretary (Public Affairs and Public Liaison). Effective March 22, 1993.

Director, Scheduling and Advance to the Counselor to the Secretary and Chief of Staff. Effective March 23, 1993.

Special Assistant (Personnel) to the Counselor to the Secretary and Chief of Staff. Effective March 23, 1993.

Special Assistant to the Assistant Secretary for Legislative Affairs. Effective March 29, 1993.

Department of Veterans Affairs

Special Assistant to the Secretary of Veterans Affairs. Effective March 3, 1993.

Special Assistant to the Assistant Secretary for Congressional Affairs. Effective March 18, 1993.

Environmental Protection Agency

Special Assistant to the Administrator. Effective March 29, 1993.

Hispanic Federal Employment Advisory Group; Meeting

AGENCY: Office of Personnel Management.

ACTION: Notice of open meeting.

SUMMARY: According to the provisions of section 10 of the Federal Advisory Committee Act (Public Law 92–463), notice is hereby given that the second meeting of the Hispanic Federal Employment Advisory Group will be held at the time and place shown below:

Date: May 25, 1993, 1:30 p.m.

Place: Tarantella Ballroom, Holiday Inn—Riverwalk, 217 N. St. Mary's Street, San Antonio, Texas

Agenda: The focus of the May 25th meeting will be the discussion of recommendations made by the three subcommittees and presentation of proposals by National Image, Inc.

FOR FURTHER INFORMATION CONTACT:

Fran Lopes, Assistant Director for Affirmative Recruiting and Employment, Office of Personnel Management, room 6355, 1900 E Street, NW., Washington, DC 20415.

SUPPLEMENTARY INFORMATION: The meeting is open to the public. If time permits, an opportunity will be provided for members of the public in attendance at the meeting to provide their views. Persons wishing to address the Advisory Group orally at the meeting should submit a written request no later than the close of business on May 10, 1993.

The request must include the name and address of the person wishing to appear, the capacity in which the appearance will be made, a short summary of the intended presentation, and the amount of time desired.

Office of Personnel Management.

Patricia W. Lattimore,

Acting Deputy Director.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–32218; File No. SR–CSE–93–04)

Self-Regulatory Organizations; Filing and Immediate Effectiveness of Proposed Rule Change by the Cincinnati Stock Exchange, Inc., Relating to the Odd-Lot Transaction Fee Imposed on Exchange Members

April 26, 1993.

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"), 15 U.S.C. 78s(b)(1), notice is hereby given that on March 30, 1993, as amended on April 20, 1993, the Cincinnati Stock Exchange, Inc. ("CSE" or "Exchange") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I, II and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The CSE proposes to amend the Exchange's odd-lot fee Rule 11.10 (j), by providing members with credits for round-lot transactions which could lower their odd-lot fee to the minimum charge of $0.10 per odd-lot trade.

The following is the text of the proposed fee changes (new material italicized):

Rule 11.10 National Securities Trading System Fees

(a)–(c) No Change.

(j) The charge for any odd-lot trade shall be $0.50.[1]

A credit of $0.50 shall be earned against the odd-lot charge for every four round-lot transactions executed on the Exchange and printed by the CSE on the Consolidated Tape. Notwithstanding the foregoing credit, there shall be a minimum charge of $0.10 per odd-lot trade.

(k) through (l) No Change.

II. Self Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included

[1] The original CSE filing erroneously cited (j) as "The odd-lot charge shall be $0.50 per trade". This was corrected by way of telephone conversation between Robert P. Ackermann, Vice President Regulatory Services, CSE and Cheryl Evans-Dunfee, Attorney, Exchange Branch, Division of Market Regulation, Commission, April 20, 1993.

statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The self-regulatory organization has prepared summaries, set forth in Sections (A), (B), and (C) below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

(1) Purpose

The Board of Directors ("Board") determined that the imposition of the fee of $0.50 per odd-lot transaction implemented in August 1992 [2] was not in the best interests of the Exchange and that the fee should be modified to reflect the overall business each firm transacts on the Exchange. Therefore, the Board determined that a system of credits should be awarded to members based upon the amount of round-lot transactions they execute on the CSE. As a result of the credit system, for every four round-lot CSE CT [3] transactions that a member executes, the member will receive a credit of $0.50 that will be applied against the member's total odd-lot charge for that month. However, the minimum odd-lot charge for each month shall never be lower that $.10 per odd-lot transaction.

For example, assume the member executed 1,000 round-lot orders that were CSE CT transactions and also executed 300 odd-lot orders on the CSE during the month. Taking the 1,000 transactions divided by 4 equals 250 which is the number of $0.50 odd-lot credits applied to the member's total odd-lot charge. Therefore, the member has earned a credit of $125.00 for the month. The total odd-lot charge, pre-credits, is 300 trades times $0.50 or $150.00 for the month. After applying the credits, the members odd-lot charge would be $25.00, however, applying the minimum odd-lot charge of $0.10 per odd-lot makes the member's actual monthly charge $30.00 (300 odd-lot trades at $0.10 per odd lot).

The credits only apply for trades that month and do not accumulate. Credits will also be earned for any mixed-lot transactions.

(2) Statutory Basis

The proposed rule change is consistent with section 6(b) of the Act in general and furthers the objectives of section 6(b)(5) in particular in that it complies with the Exchange's ability to equitably allocate reasonable dues, fees and other charges among its members and other persons using its services.

B. Self-Regulatory Organization's Statement on Burden on Competition

The CSE does not believe that the proposed rule change will impose any inappropriate burden on competition.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change establishes or changes a due, fee, or other charge imposed by the Exchange and therefore has become effective pursuant to section 19(b)(3)(A) of the Act and subparagraph (e) of Rule 19b–4 thereunder. At any time within 60 days of the filing of such proposed rule change, the Commission may summarily abrogate such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street NW., Washington, DC 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Section, 450 Fifth Street NW., Washington, DC 20549. Copies of such filing will also be available for inspection and copying at the principal office of the CSE. All submissions should refer to File No. SR–CSE–93–04 and should be submitted by May 26, 1993.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority.[4]

Johnathan G. Katz,

Secretary.

[Release No. 34–32235; File No. SR–NASD–93–18]

Self-Regulatory Organizations; Proposed Rule Change by National Association of Securities Dealers, Inc., Relating to Autoquote Policy for the Nasdaq Market

April 29, 1993.

Pursuant to section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"), 15 U.S.C. 78s(b)(1), notice is hereby given that on April 19, 1993,[1] the National Association of Securities Dealers, Inc. ("NASD" or "Association") filed with the Securities and Exchange Commission ("Commission" or "SEC") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the NASD. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Association is extending a policy banning the automated update of quotations by market makers in the Nasdaq system. This policy prohibits systems known as "autoquote" systems from effecting automated quote updates or tracking of inside quotations in the Nasdaq system, with two exceptions. Automated updating of quotations is permitted when the update is in response to an execution in the security by that firm (such as execution of an

[1] The NASD originally filed the proposed rule change on March 25, 1993. On April 19, the NASD filed Amendment No. 1 to the proposal, which states that the Association's Policy Statement on autoquoting will be included in the NASD Manual at Schedule D to the ByLaws, Part VI, (CCH) ¶1816 and Part VII, (CCH) ¶1828.

VOL 58 ISS 85 MY 5 1993 UMI

order that partially fills a market maker's quotation size) or when it requires a physical entry (such as a manual entry to the market maker's internal system which then automatically forwards the update to the Nasdaq system). This ban is necessary to offset the negative impact on the capacity and operation of the Nasdaq system of certain autoquote techniques that track changes to the inside quotation in Nasdaq and automatically react by generating another quote to keep the market maker's quote away from the best market.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the NASD included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The NASD has prepared summaries, set forth in Sections (A), (B), (C) below, of the most significant aspects of such statements.

(A) Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In 1990, the Commission approved a policy banning autoquoting in the Nasdaq system for a period of one year, and subsequently extended the policy for another six months.[2] The policy prohibited systems known as "autoquote" systems from effecting automated quotation updates or tracking of inside quotations in the Nasdaq market with two exceptions: automated update of quotations has been permitted when the update is in response to an execution in the security by that firm; and automated update has been permitted when it requires a physical entry to the market maker's internal system which then automatically forwards the update to the Nasdaq system.

In effect this policy prohibits autoquote systems from effecting automated quote updates or the tracking away from the inside quotations in the Nasdaq system. There currently are a variety of autoquote systems employed in the securities industry and the NASD's policy seeks to curb the processing impact of such systems that track changes to the inside quotation on Nasdaq and automatically react to keep a market maker's quote away from the best market. The NASD proposes this policy because of the potential impact of additional quotation traffic on the capacity of the Nasdaq system.

Autoquote systems add to the number of quotations that Nasdaq must process because they automatically update quotes in reaction to any change to the inside quote, regardless of whether the change would necessitate an individual update to avoid executions. For example, if an autoquote system were set to keep the market maker's quote ½ point away from the inside, and the inside market of 40–40½ points changed throughout the day at intervals of ⅛, ¼, or ⅜ points, the excess quotes generated by the autoquote system would generate extraneous increased processing volume, because the quote at ½ point away would still not be the best price for the security. With these systems in place, quotation volatility and traffic would increase and the velocity with which quote updates would be generated in response to a change to the Nasdaq inside quote may have a deleterious impact on the operation of Nasdaq. The NASD proposal permits two exceptions to the interim ban on autoquoting—quote updates that require a physical entry of quotations and automated quote updates in response to an execution by that firm. For example, an automated quote update would be permissible if a market maker had executed an order that partially filled its published quote size, and the automated update reflected a different size.[3]

The NASD continues to be concerned about the serious negative impact on capacity of the network in the present environment if autoquoting were permitted, and since December 1991, when the formal policy expired, has asked members to comply voluntarily with the policy on autoquoting. The NASD conducted a study in 1991 on the impact of autoquoting upon the network and that study raised serious questions of network and system capacity and determined that it was not feasible to permit autoquoting within the current network architecture and band width. The NASD would need to substantially increase transmission speed and Workstation capacity to accommodate traffic levels that have been forecast for an autoquote environment. The addition of autoquote would be particularly problematic from a network capacity perspective during the planned transition to a new network architecture which will take approximately two years to phase in for all subscribers. The study also revealed that all members surveyed indicated strong objections to any kind of capability that would allow Nasdaq market makers to automatically track away from the Nasdaq inside quotation or another market maker's quotation. In the members' view, allowing automatic tracking could create a "fair-weather" market making environment that would not contribute to the depth or liquidity for trading the security. The NASD believes, however, that automation in the securities markets should be encouraged, and is therefore proposing to reevaluate the question of eventually allowing autoquoting in certain additional prescribed circumstances. For example, several members believe that an autoquoting capability that would keep a market maker's quotation at the inside Nasdaq quote, thus reducing the need for manual quote updates and ensuring depth and liquidity in the securities traded should be permitted as soon as the system is capable of processing the additional traffic. The current ban on autoquoting will provide the opportunity for additional consideration of autoquote functions that will facilitate member trading at the best market and for study of the technology required to process the additional traffic generated. The NASD has undertaken a major redesign of the technology that supports the Nasdaq system which will lead to significant long-term improvement to the infrastructure of that system. These improvements, when implemented, are believed capable of providing enhanced flexibility in the accommodation of automated quotation changes. During this interim period, however, allowing the potentially higher traffic rates as a result of autoquoting is believed to be imprudent and inconsistent with the NASD's obligation to assure the continuing integrity of the Nasdaq system. Accordingly, the NASD has determined to extend the autoquote policy until the migration effort to the new Nasdaq platforms has been completed, scheduled for fourth quarter 1995, at which time the application of autoquote technology can be reevaluated.

[2] See Securities Exchange Act Rel. No. 28338 (August 13, 1990), 55 FR 34636, approving File No. SR-NASD-90-5; and Securities Exchange Act Rel. No. 29304 (June 13, 1991), 56 FR 28207, notice of effectiveness of File No. SR-NASD-91-25.

[3] The Commission is presently reviewing a proposed rule change by the NASD that, in part, would allow a market maker to elect to have Nasdaq automatically "refresh" its quotation once its exposure limit has been exhausted on the Small Order Execution System ("SOES"). See Securities Exchange Act Rel. No. 32143 (April 14, 1993), 58 FR 21484 (April 21, 1993), providing notice of File No. SR-NASD-93-16. The NASD has represented that its computer network has the capacity to handle the increased volume of information necessary to process this new feature.

The NASD believes the proposed rule change is consistent with section 15A(b)(6) of the Act. Section 15A(b)(6) requires that the rules of a national securities association be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system and in general to protect investors and the public interest. A ban or autoquoting except in certain prescribed instances is necessary to control the negative effect of autoquoting on the capacity of the network and is a reasonable means to ensure the continued viability of the Nasdaq network and related systems.

(B) Self-Regulatory Organization's Statement on Burden on Competition

The NASD believes that the proposed rule change will not result in any burden on competition that is not necessary or appropriate in furtherance of purposes of the Act.

(C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received from Members, Participants, or Others

Comments were neither solicited nor received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 35 days of the date of publication of this notice in the Federal Register or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the NASD consents, the Commission will:

A. By order approve such proposed rule change, or

B. Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing. Persons making written submissions should file six copies thereof with the Secretary, Securities and Exchange Commission, 450 Fifth Street, NW., Washington, DC 20549. Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for inspection and copying in the Commission's Public Reference Room. Copies of such filing will also be available for inspection and copying at the principal office of the NASD. All submissions should refer to the file number in the caption above and should be submitted by May 26, 1993.

For the Commission, by the Division of Market Regulation, pursuant to delegated authority, 17 CFR 200.30–3(a)(12).

Jonathan G. Katz,

Secretary.

SMALL BUSINESS ADMINISTRATION

[Declaration of Disaster Loan Area #2640]

Pennsylvania; Declaration of Disaster Loan Area

Wyoming County and the contiguous counties of Bradford, Lackawanna, Luzerne, Sullivan and Susquehanna in Pennsylvania constitute a disaster area as a result of damages caused by flooding which occurred on April 9 through 11, 1993. Applications for loans for physical damage may be filed until the close of business on June 25, 1993 and for economic injury until the close of business on January 26, 1994 at the address listed below: U.S. Small Business Administration, Disaster Area 2 Office, One Baltimore Place, suite 300, Atlanta, GA 30308, or other locally announced locations.

The interest rates are:

	Percent
For physical damage:	
Homeowners with credit available elsewhere	8.000
Homeowners without credit available elsewhere	4.000
Businesses with credit available elsewhere	8.000
Businesses and non-profit organizations without credit available elsewhere	4.000
Others (including non-profit organizations) with credits available elsewhere	7.625
For economic injury:	
Businesses and small agricultural cooperatives without credit available elsewhere	4.000

The number assigned to this disaster for physical damage is 264006. For economic injury the number is 789100.

(Catalog of Federal Domestic Assistance Program Nos. 59002 and 59008)

Dated: April 26, 1993.

Dayton J. Watkins,

Acting Administrator.

DEPARTMENT OF STATE

[Public Notice No. 1800]

Secretary of State's Panel on El Salvador; Establishment of Panel

In accordance with the provisions of the Federal Advisory Committee Act (Pub. L. 92–463), the Department of State announces the formation of the Secretary of State's Panel on El Salvador. The purpose and objective of the Panel as stated in its charter are as follows:

Under the authority of the Secretary of State, this charter establishes the Panel on El Salvador (hereinafter called the "Panel"). The Panel will examine the conduct of the Department of State in dealing with the issues raised by the Truth Commission.* The Panel's review will include an examination of the Department's and embassy's human rights reporting, the degree to which full and objective inquiries into abuses by both sides in the conflict in El Salvador were conducted, and public inquiries on these issues. The Panel will take appropriate steps to deal with classified information and to protect personal privacy.

The Panel will report to the Secretary of State and make recommendations on appropriate steps by the Department to ensure that it functions in a manner consistent with the highest professional and ethical standards and with our nation's values.

* The full name of the Truth Commission is the United Nations Truth Commission.

The Panel will terminate not later than 120 days from the date of its first meeting, but the Secretary of State may extend the life of the Panel as he deems necessary. The number and frequency of meetings that will be required have not yet been established.

The Office of Management and Budget and the General Services Administration have approved the Panel's Charter. Copies of this Charter are being filed with the Committee on Foreign Relations in the Senate, the Committee on Foreign Affairs in the House of Representatives and the Library of Congress as provided by law.

Requests for further information on the Panel and its meetings should be directed to Mr. Edward C. Pope, Office of the Secretary of State's Panel on El Salvador, room 1208A, Department of State, Washington, DC 20520–7818. Mr. Pope can be reached by telephone at (202) 736–4525.

Dated: April 20, 1993.

B. Lynn Pascoe,

Executive Director, Secretary of State's Panel on El Salvador.

[AC No. 120–XX]

Proposed Advisory Circular on Crewmember Training on In-Flight Radiation Exposure

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Request for comments on proposed Advisory Circular (AC) for Crewmember Training on In-Flight Radiation Exposure.

SUMMARY: The proposed AC was developed by the Aviation Rulemaking Advisory Committee which is a formal industry committee developed to advise the FAA on assigned issues. The AC is intended to provide information regarding subjects that should be covered in air carrier programs designed to: (1) Inform crewmembers about radiation exposure and known associated health risks; and (2) assist crewmembers in making informed decisions with regard to their work on commercial air carriers.

DATES: Comments must be received on or before August 3, 1993.

ADDRESSES: Send all comments and requests for copies of the proposed AC to: Federal Aviation Administration, Air Transportation Division (attention: AFS–203), 800 Independence Avenue, SW., Washington, DC 20591).

FOR FURTHER INFORMATION CONTACT: Donell Pollard, AFS–203, at the above address; telephone: (202) 267–3735 (7 a.m. to 3:30 p.m. e.d.t.).

SUPPLEMENTARY INFORMATION: The guidance material in this AC provides information about the kind of information which could be useful to crewmembers regarding radiation.

Issued in Washington, DC, on April 22, 1993.

Thomas C. Accadi,

Director, Flight Standards Service.

[Summary Notice No. PE–93–20]

Petitions for Exemption; Summary of Petitions Received; Dispositions of Petitions Issued

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of petitions for exemption received and of dispositions of prior petitions.

SUMMARY: Pursuant to FAA's rulemaking provisions governing the application, processing, and disposition of petitions for exemption (14 CFR part 11), this notice contains a summary of certain petitions seeking relief from specified requirements of the Federal Aviation Regulations (14 CFR chapter I), dispositions of certain petitions previously received, and corrections. The purpose of this notice is to improve the public's awareness of, and participation in, this aspect of FAA's regulatory activities. Neither publication of this notice nor the inclusion or omission of information in the summary is intended to affect the legal status of any petition of its final disposition.

DATES: Comments on petitions received must identify the petition docket number involved and must be received on or before May 25, 1993.

ADDRESSES: Send comments on any petition in triplicate to: Federal Aviation Administration, Office of the Chief Counsel, Attn: Rule Docket (AGC–10), Petition Docket No. _____, 800 Independence Avenue, SW., Washington, DC 20591.

The petition, any comments received, and a copy of any final disposition are filed in the assigned regulatory docket and are available for examination in the Rules Docket (AGC–10), room 915G, FAA Headquarters Building (FOB 10A),

800 Independence Avenue, SW., Washington, DC 20591; telephone (202) 267–3132.

FOR FURTHER INFORMATION CONTACT: Mr. Frederick M. Haynes, Office of Rulemaking (ARM–1), Federal Aviation Administration, 800 Independence Avenue, SW., Washington, DC 20591; telephone (202) 267–3939.

This notice is published pursuant to paragraphs (c), (e), and (g) of § 11.27 of part 11 of the Federal Aviation Regulations (14 CFR part 11).

Issued in Washington, DC, on April 28, 1993.

Donald P. Byrne,

Assistant Chief Counsel for Regulations.

Petitions for Exemption

Docket No.: 26989.
Petitioner: Basin Electric Power Cooperative.
Sections of the FAR Affected: 14 CFR 65.101.
Description of Relief Sought: To grant Basin Electric Power Cooperative's Chief Pilot, Mr. Fred Adams, airframe and powerplant privileges for one specific Citation 550, which he pilots and maintains, though he does not hold an A&P certificate.

Docket No.: 27207.
Petitioner: Universal West Indies, S.A.R.L.
Sections of the FAR Affected: 14 CFR 91.9.
Description of Relief Sought: To allow Universal West Indies, S.R.A.L. to operate its own DC–6A cargo airplane, N4163Q, ser. no. 43681, at increased zero fuel weights and landing weights.

Docket No.: 27221.
Petitioner: Aircraft Fuel Tanks, Incorporated.
Sections of the FAR Affected: 14 CFR 145.37(b).
Description of Relief Sought: To allow Aircraft Fuel Tanks, Inc. to inspect and repair integral fuel tanks at its customer's facilities instead of the facilities of Aircraft Fuel Tanks, Inc.

Dispositions of Petitions

Docket No.: 24446.
Petitioner: Air Transport Association of America.
Sections of the FAR Affected: 14 CFR 121.485(b).
Description of Relief Sought/ Disposition: To extend the termination date of Exemption No. 4317 to allow members of Air Transport Association of America to conduct flights of less than 12 hours duration, with an airplane having a crew of three or more pilots and an additional flight crewmember, without requiring the rest period following that flight to be twice the hours flown, since the last rest period at his/her home base.
Grant, April 15, 1993, Exemption No. 4317D

Docket No.: 26372.
Petitioner: The Goodyear Tire & Rubber Company.
Sections of the FAR Affected: 14 CFR 21.325(b)(3).
Description of Relief Sought/ Disposition: To allow the issuance of United States Export airworthiness approvals for Class II and Class III products manufactured and located in Bangkok, Thailand at a facility operated by the petitioner in connection with its U.S. Technical Standard Order (TSO) authorization.
Denial, April 21, 1993, Exemption No. 5644

Docket No.: 26575.
Petitioner: Design Ideas, Inc.
Sections of the FAR Affected: 14 CFR 141.65.
Description of Relief Sought/ Disposition: To allow purchasers of Design Idea's AvTEST Written Examination System of computerized testing to exercise their self examining authority for flight instructor (CFI) and airline transport pilot (ATP) written tests.
Denial, April 19, 1993, Exemption No. 5643

Docket No.: 26877.
Petitioner: General Motors Air Transport Section.
Sections of the FAR Affected: 14 CFR 61.55(b).
Description of Relief Sought/ Disposition: To permit General Motors Air Transport Section pilots, who serve as second in command (SIC), to meet SIC qualifications requirements every 24 months instead of every 12 months.
Grant, April 23, 1993, Exemption No. 5647

Docket No.: 27161.
Petitioner: Southern Air Transport.
Sections of the FAR Affected: 14 CFR 121.358(b) and (c).
Description of Relief Sought/ Disposition: To permit Southern Air Transport to operate Boeing 707–300C (B–707 cargo only aircraft and McDonnell Douglas DC8–70F (DC–8) cargo only aircraft after December 30, 1993, without being equipped with an approved airborne windshear warning system.
Denial, April 20, 1993, Exemption No. 5642

Docket No.: 27180.
Petitioner: Eva Airways Corporation.
Sections of the FAR Affected: 14 CFR 61.77(a) and (b) and 63.23(a) and (b).
Description of Relief Sought: To permit the issuance of U.S. special purpose pilot and flight engineer certificates to Eva' airmen, without meeting the requirement that they hold a current foreign certificate or license issued by a foreign contracting State to the Convention on International Civil Aviation (ICAO).
Grant, April 26, 1993, Exemption No. 5646

Docket No.: 27196.
Petitioner: Tower Air, Inc.
Sections of the FAR Affected: 14 CFR 121.434(e).
Description of Relief Sought: To permit Tower Air, Inc. (Tower), on certain flights, to use flight attendants, who have not completed operating experience (OE), under part 121 of the FAR.
Grant, March 30, 1993, Exemption No. 5628

Docket No.: 27263.
Petitioner: Southern Air Transport.
Sections of the FAR Affected: 14 CFR part 121, Appendix H.
Description of Relief Sought: To allow CAE, Inc. (CAE) to train Southern Air Transport's (SAT) initial cadre of B–747 pilots and flight engineers (FE) in initial, transition, upgrade, differences and recurrent training in an approved simulator, using an approved advanced simulator training program (ASTP), for a six month period, without CAE instructors meeting the employment requirements of Part 121, Appendix H.
Partial Grant, April 23, 1993, Exemption No. 5645

[FR Doc. 93–10567 Filed 5–4–93; 8:45 am]

BILLING CODE 4910–13–M

Aviation Rulemaking Advisory Committee Meeting on Air Carrier Operations

AGENCY: Federal Aviation Administration (FAA) DOT.

ACTION: Notice of meeting.

SUMMARY: The FAA is issuing this notice to advise the public of a meeting of the Federal Aviation Administration Aviation Rulemaking Advisory Committee to discuss air carrier operations issues.

DATES: The meeting will be held on May 20, 1993, at 9 a.m.

ADDRESSES: The meeting will be held at Air Transport Association, 11th Floor Conference Room C, 1301 Pennsylvania Avenue, NW., Washington, DC.

FOR FURTHER INFORMATION CONTACT: Mrs. Marlene Vermillion, Flight Standards Service, Air Transportation

VOL 58 ISS 85 MY 5 1993 UMI

Division (AFS–200), 800 Independence Avenue, SW., Washington, DC 20591, telephone (202) 267–8166.

SUPPLEMENTARY INFORMATION: Pursuant to section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92–463, 5 U.S.C. App II), notice is hereby given of a meeting of the Aviation Rulemaking Advisory Committee to be held on May 20, 1993, at Air Transport Association, 11th Floor Conference Room C, Pennsylvania Avenue, NW., Washington, DC. The agenda for this meeting will include progress reports from the Fuel Requirements Working Group, Autopilot Engagement Working Group, and Flight Crewmember Flight/Duty/Rest Requirements Working Group. Each working group Chair will report on the progress of the working group. Attendance is open to the interested public but may be limited to the space available. The public must make arrangements in advance to present oral statements at the meeting or may present written statements to the committee at any time. Arrangements may be made by contacting the person listed under the heading **FOR FURTHER INFORMATION CONTACT.**

Sign and oral interpretation can be made available at the meeting, as well as an assistive listening device, if requested 10 calendar days before the meeting.

Issued in Washington, DC, on April 26, 1993.

Gary E. Davis,

Acting Assistant Executive Director for Air Carrier Operations, Aviation Rulemaking Advisory Committee.

[FR Doc. 93–10574 Filed 5–4–93; 8:45 am]

BILLING CODE 4910–13–M

Existence of Proposed Microlite Class Design Standards for Acceptance Under the Primary Category Rule

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Request for comments.

SUMMARY: This notice announces the existence of and request for comments on proposed microlite class design standards for acceptance under the primary category rule. The proposed design standards are identical to Transport Canada TP101–41 Ultralight design standards. The applicability is two-place maximum and 1,200 pound maximum weight. The 1,200 pound maximum weight and the 39 knot maximum stall speed are applicable to both one- and two-place configurations.

DATES: Comments must be received on or before June 7, 1993.

ADDRESSES: Send all comments to: Federal Aviation Administration, Small Airplane Directorate, Aircraft Certification Service, Standards Office (ACE–110), 601 East 12th Street, Kansas City, Missouri 64106.

FOR FURTHER INFORMATION CONTACT: Jim Griswold, Aerospace Engineer, Standards Staff (ACE–110), Small Airplane Directorate, Aircraft Certification Service, Federal Aviation Administration; telephone number (816) 426–6941.

SUPPLEMENTARY INFORMATION: Any person may obtain a copy of this information by contracting the person named above under **FOR FURTHER INFORMATION CONTACT.**

Comments Invited

Interested parties are invited to submit comments on the proposed design standards. Commenters must identify the design standards (microlite class) and submit comments to the address specified above. All communications received on or before the closing date for comments will be considered by the FAA before issuing the final acceptance. The proposed design standards and comments received may be inspected at the Standards Office (ACE–110), suite 900, 1201 Walnut, Kansas City, Missouri, between the hours of 7:30 a.m. and 4 p.m. weekdays, except Federal holidays.

Background

Sport aviation, essentially a fly-for-fun activity, is dependent upon simple, low performance, low cost aircraft. The FAA recognized this in the creation of primary category, which establishes simpler processes for certification, production control, and establishment of design standards. This Notice proposes design standards for sport airplanes with 1,200 pounds maximum weight or less to be accepted under primary category as the microlite class.

The value of this class of airplane is demonstrated by the number of part 103 Ultralight and amateur-built designs currently active. However, a review of the type certificate records reveals that virtually no airplanes under 1,200 pound maximum weight have been certified in the United States since the 1930's. This is indicative that part 23 of the FAR and its Civil Air Regulations predecessors have been at the service of higher performance transportation airplanes. Accordingly, the FAA is proposing and requesting comments on these design standards intended specifically for the simple, low performance sport airplane.

Issued in Kansas City, Missouri, April 28, 1993.

Gerald W. Pierce,

Acting Manager, Small Airplane Directorate, Aircraft Certification Service.

DEPARTMENT OF THE TREASURY

Fiscal Service

[Dept. Circ. 570, 1992—Rev., Supp. No. 20]

Surety Companies Acceptable on Federal Bonds Termination of Authority: Michigan Mutual Insurance Co.

Notice is hereby given that the Certificate of Authority issued by the Treasury to Michigan Mutual Insurance Company, of Southfield, Michigan, under the United States Code, title 31, sections 9304–9308, to qualify as an acceptable surety on Federal bonds is terminated effective today.

The Company was last listed as an acceptable surety on Federal bonds at 57 FR 29381, July 1, 1992.

With respect to any bonds currently in force with Michigan Mutual Insurance Company, bond-approving officers may let such bonds run to expiration and need not secure new bonds. However, no new bonds should be accepted from the Company. In addition, bonds that are continuous in nature should not be renewed.

Questions concerning this notice may be directed to the Department of the Treasury, Financial Management Service, Funds Management Division, Surety Bond Branch, Washington, DC 20227, telephone (202/FTS) 874–6696.

Dated: April 29, 1993.

Charles F. Schwan III,

Director, Funds Management Division, Financial Management Service.

BILLING CODE 4810–35–M

UNITED STATES INFORMATION AGENCY

Convention on Cultural Property Implementation Act (Pub. L. 97–446); Import Restriction on Ethnological Material (Antique Textiles) From Bolivia

AGENCY: United States Information Agency.

ACTION: Determination to extend emergency import restriction on antique ceremonial textiles of Coroma, Bolivia.

Pursuant to the authority vested in me under Executive Order 12555 and Delegation Order No. 86–3 of March 18, 1986 (51 FR 10137),

I hereby find:

Pursuant to the requirements of section 304(c)(3) of the Act, 19 U.S.C. 2603(c)(3), with respect to the extension of an emergency import ban on the Aymara antique ceremonial textiles of Coroma, Bolivia, and pursuant to the emergency provision under section 304(a)(3), 19 U.S.C. 2603(a)(3),—

(1) That the material is ethnological and represents part of the remains of the Aymara Indians of the Andean village of Coroma, Bolivia, and is central to the historic traditions as well as to the continuing religious, social and economic life of the Coromans;

(2) That the record of the Aymara Indian of Coroma continues to be in jeopardy from the pillage and dispersal of its antique ceremonial textiles; that an ambience conducive to further pillage continues to exist relative to these textiles, thereby posing a continuing threat of crisis proportions to the Aymara clans of Coroma who have absolute reliance on these textiles for religious, social and economic purposes;

(3) That the emergency import restriction would continue, on a temporary basis, in whole or in part, to reduce the incentive for pillage for it has been established that the emergency import restriction that has been in effect since 1989 has resulted in an apparent stop, for the time being, to the systematic pillage of the textiles.

Determination

Now, therefore, in accordance with the aforementioned authority vested in me, and pursuant to section 304(c)(3) of the Act, 19 U.S.C. 2603(c)(3), I hereby determine:

(1) That the emergency condition continues to apply with respect to the antique ceremonial textiles of Coroma, Bolivia;

(2) That the emergency import restriction that went into effect on March 7, 1989, is extended for a period of three more years effective May 6, 1993.

Dated: April 27, 1993.

John Condayan,

Acting Director, United States Information Agency.

PLACE: Room 600, 1730 K Street NW., Washington, DC.

STATUS: Closed [Pursuant to 5 U.S.C. § 552b(c)(10)].

MATTERS TO BE CONSIDERED: In addition to the matter previously announced, the Commission will consider and act upon the following:

2. *Peabody Coal Company,* Docket No. KENT 91–179, etc. (Issues include Peabody's petition for reconsideration and for stay of Commission's decision issued in this matter on March 25, 1993.)

No earlier announcement of the addition of this matter to the previously scheduled meeting was possible. It was determined by a unanimous vote of the Commissioners that this matter be discussed in closed session.

CONTACT PERSON FOR MORE INFORMATION: Jean Ellen (202) 653–5629/(202) 708–9300 for TDD Relay/1–800–877–8339 for toll free.

Dated: April 29, 1993.

SECURITIES AND EXCHANGE COMMISSION

Agency Meeting

"FEDERAL REGISTER" CITATION OF PREVIOUS ANNOUNCEMENT: [58 FR 26184 April 30, 1993].

STATUS: Open meeting.

PLACE: 450 Fifth Street NW., Washington, DC.

DATE PREVIOUSLY ANNOUNCED: Tuesday, April 27, 1993.

CHANGE IN THE MEETING: Additional item.

The following item will be considered at an open meeting scheduled for Tuesday, May 4, 1993, at 2:30 p.m., in Room 6059.

Consideration of whether to adopt Rule 15b7–1 under the Securities and Exchange Act of 1934, which was proposed for comment on March 19, 1993. The release would adopt a rule that would prohibit registered broker-dealers from effecting any securities transaction unless the associated person effecting such transaction is in compliance with the qualification requirements established under the rules of any self-regulatory organization of which the broker-dealer is a member or to which it is subject. For further information, please contact Andrew S. Margolin at (202) 504–2418.

Commissioner Schapiro, as duty officer, determined that Commission business required the above change and that no earlier notice thereof was possible.

At times, changes in Commission priorities require alterations in the scheduling of meeting items. For further information and to ascertain what, if any, matters have been added, deleted or postponed, please contact: Steve Luparello at (202) 272–2100.

Dated: April 20, 1993.

Jonathan G. Katz,

Deputy Secretary

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Office of Assistant Secretary for Housing—Federal Housing Commissioner

24 CFR Part 890

[Docket No. R-93-1651; FR-3406-I-01]

RIN 2502-AF97

Supportive Housing for Persons With Disabilities

AGENCY: Office of Assistant Secretary for Housing—Federal Housing Commissioner, HUD.

ACTION: Interim rule.

SUMMARY: This interim rule amends the Supportive Housing for Persons With Disabilities Program (24 CFR part 890) by adding amendments made by sections 603 and 913 of the Housing and Community Development Act of 1992 and by simplifying the application and selection process. These revisions are necessary in order to permit the funding of supportive housing for persons with disabilities in FY1993 and effectuate the purposes of the HCD Act of 1992. A companion Notice of Funding Availability (NOFA) is also published today elsewhere in this issue.

DATES: Effective date: June 4, 1993.

Comments due date: July 6, 1993.

ADDRESSES: Interested persons are invited to submit comments regarding this rule to the Rules Docket Clerk, Office of the General Counsel, room 10276, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410–0500. Communications should refer to the above docket number and title. A copy of each communication submitted will be available for public inspection during regular business hours (weekdays 7:30 a.m. to 5:30 p.m.) at the above address.

Hearing or speech impaired individuals may call the Rules Docket Clerks's TDD number (202) 708–3259.

FOR FURTHER INFORMATION CONTACT: Robert Wilden, Director, Housing for Elderly and Handicapped People Division, Department of Housing and Urban Development, 451 Seventh Street SW., room 6116, Washington, DC 20410, telephone (202) 708–2730. (This is not a toll free number).

Hearing or speech impaired individuals may call HUD's TDD number (202) 708–4594. (This is not a toll free number).

SUPPLEMENTARY INFORMATION:

I. Paperwork Burden

The information collection requirements contained in this interim rule have been approved by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1980 (44 U.S.C. 3501–3520), and assigned OMB control number 2502–0462.

II. Background

A. Part 890

The new Supportive Housing for Persons With Disabilities Program has been the subject of interim rules, published on June 12, 1991 at 56 FR 27070, and published on August 12, 1992 at 57 FR 36330. The June 12, 1991 interim rule enabled supportive housing for persons with disabilities to be funded for FY1991, added a new part 890 to establish the new Supportive Housing for Persons With Disabilities Program and covered application procedures and program requirements, selection of applications and duration of fund reservation requirements. The August 12, 1992 interim rule provided for the development related requirements (closing of capital advances and requirements related to project rental assistance contracts) of the Supportive Housing for Persons With Disabilities Program. The Supportive Housing for Persons With Disabilities Program is authorized by section 811 of the Cranston-Gonzalez National Affordable Housing Act (the NAHA Act) and by the Housing and Community Development Act of 1992, Public Law 102–550, 106 Stat. 3672, enacted October 28, 1992, (HCD Act of 1992) and is to enable persons with disabilities to live with dignity and independence within their communities by expanding the supply of supportive housing that is designed to accommodate the special needs of disabled persons and provides supportive services that address the individual health, mental health, and other needs of disabled persons.

Under part 890, assistance will be provided to nonprofit organizations to expand the supply of supportive housing for persons with disabilities. Such assistance will be provided as (1) capital advances and (2) project rental assistance contracts. Capital advances may be used to finance the construction, rehabilitation, or acquisition with or without rehabilitation, including acquisition from the Resolution Trust Corporation (RTC), of structures to be developed into a variety of housing options ranging from group homes and independent living facilities, to dwelling units in multifamily housing developments, condominium housing and cooperative housing. Acquisition without rehabilitation is permitted only for group homes or properties acquired from the RTC. This assistance may also cover the cost of real property acquisition, site improvement, conversion, demolition, relocation, and other expenses that the Secretary determines are necessary to expand the supply of supportive housing for persons with disabilities.

An overview and section-by-section summary of part 890 (subparts A, B, C, D and G) were included in the preamble to the June 12, 1991 interim rule. The August 12, 1992 interim rule amended subpart D and added subpart E which was previously reserved in part 890.

B. Revisions to Part 890

Section 603 of the Housing and Community Development Act of 1992 (HCD Act of 1992) amended section 811 of the NAHA by expanding the definition of private nonprofit organization in section 811(k)(6) of NAHA to include public and unincorporated institutions or foundations. It also requires such private nonprofit organizations to have received, or have temporary clearance to receive, tax-exempt status under section 501(c)(3) of the Internal Revenue Code of 1986. The Section 811 Program was not previously limited to non-profits with section 501(c)(3) tax-exempt status. It is the Department's understanding that the Internal Revenue Code and regulations do not provide for temporary clearance under section 501(c)(3).

Section 913 of the HCD Act of 1992 amended section 811's labor standards. The labor standards, as amended, require all laborers and mechanics employed by contractors and subcontractors in the construction of housing with 12 or more units assisted under section 811 (the previous labor standard applied to 811 housing designed for dwelling use by 12 or more persons with disabilities) to be paid wages at rates not less than those prevailing in the locality, as determined by the Secretary of Labor in accordance with the Davis-Bacon Act. A group home will not be covered by the labor standards because a group home is considered to be one unit. Section 913 also provides for an exemption for any individual who (a) performs services for which the individual volunteered; (b) (1) does not receive compensation for such services; or (2) is paid expenses, reasonable benefits, or a nominal fee for such services; and (c) is not otherwise

employed at any time in the construction work. This interim rule implements the labor standards amendment at § 890.260(d).

Minor editorial changes have been made to the definitions. The definition of Owner is clarified by the requirement that no "Board" member of the Owner may benefit from the net earnings of the corporation. An identical amendment is made to § 890.235, Prohibited relationships. The restriction also applies so long as the individual is serving on the Board and for a period of three years following resignation or final closing, whichever occurs later.

The notice of fund availability requirements (§ 890.205) is amended by eliminating the former requirement to publish Invitations for Applications (§ 890.205(a)(2) and (b)). The NOFA will serve as the invitation and the Field Office shall notify media for persons with disabilities and minority media, all persons and organizations on their mailing lists and minority and other organizations involved in housing and community development within their jurisdiction, and groups with a special interest in housing for persons with disabilities, of the NOFA.

The Virgin Islands are added as a high construction cost area in § 890.245, Development cost limits.

Additional changes have been made to application content, the selection process and selection criteria to simplify the process and reduce paperwork. For example, a new form HUD–92016–CA, simplifies, standardizes and condenses the information formerly required by 890.270(b). The CHAS certification has been revised to reflect recent changes to the CHAS regulation. Standard certifications have been grouped together and authorities cited have been updated (*e.g.*, addition of Americans with Disabilities Act).

The selection process has been simplified to include only initial screening and technical process. Applications will be initially reviewed to determine if all parts of the application are included. HUD will not review the content of the application as part of initial screening. Deficiency letters will be sent informing Sponsors of any missing parts of the application. Sponsors must correct such deficiencies within 14 calendar days from the date of the deficiency letter. All applications will be placed in technical processing upon receipt of the response to the deficiency letter or at the end of the 14-day period. All applications will undergo a complete analysis. All applications will be either rated or technically rejected at the end of technical processing. The Secretary will not reject an application based on technical processing without giving notice of that rejection will all rejection reasons, and affording the applicant an opportunity to appeal. Technical processing will also include civil rights compliance.

The selection criteria have been regrouped to follow the statutory selection criteria and no longer include the financial capacity of the Sponsor. HUD will review financial capacity at the time of conditional or firm commitment (where project proceeds directly to firm commitment).

The Department plans to issue this fiscal year a final rule for the Supportive Housing for Persons with Disabilities Program which will incorporate public comment received to date on the part 890 interim rules, including this interim rule.

The interim rule furthers the legislative mandate of the HCD Act of 1992 and allows the program to continue operation in FY 1993. The Department is publishing this rule as interim because it will increase efficiency, reduce unnecessary requirements, combine or simplify current requirements, and provide new flexibility for HUD and program applicants. Many of the changes are of a technical/clarifying nature. The major changes made by this interim rule are statutorily required by the HCD Act of 1992, but do not affect the types of projects funded. These changes involve minor interpretation of the HCD Act of 1992. Publishing this rule as interim also ensures a timely and simplified funding round for FY 1993.

III. Other Matters

A Finding of No Significant Impact with respect to the environment has been made in accordance with HUD regulations at 24 CFR part 50 implementing section 102(2)(C) of the National Environmental Policy Act of 1969, 42 U.S.C. 4332. The Finding of No Significant Impact is available for public inspection and copying between 7:30 a.m. and 5:30 p.m. weekdays at the Office of the Rules Docket Clerk, 451 Seventh Street, SW., room 10276, Washington, DC 20410–0500.

This rule does not constitute a "major rule" as that term is defined in section 1(b) of the Executive Order on Federal Regulations issued on February 17, 1989. Analysis of the rule indicates that it does not:

(1) Have an annual effect on the economy of $100 million or more;

(2) Cause a major increase in costs or prices for consumers, individual industries, Federal, State or local government agencies, or geographic regions; or

(3) Have a significant adverse effect on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.

Under 5 U.S.C. 605(b), (the Regulatory Flexibility Act), the undersigned hereby certifies that this rule does not have a significant economic impact on a substantial number of small entities. The rule would provide capital advances to nonprofit organizations to expand the supply of supportive housing for persons with disabilities. Although small entities will participate in the program, the rule would not have a significant impact on them.

On February 26, 1990, the Department published an interim rule (24 CFR part 87) advising recipients and subrecipients of Federal contracts, grants, cooperative agreements and loans of a new prohibition recently mandated by Congress. Section 319 of the Department of the Interior Appropriations Act (Pub. L. 101–121, approved October 23, 1989) generally prohibits recipients of Federal contracts, grants, and loans from using appropriated funds for lobbying the Executive or Legislative branches of the Federal Government in connection with a specific contract, grant, or loan. The interim rule generally prohibits the awarding of contracts, grants, cooperative agreements, or loans unless the recipient has made an acceptable certification regarding lobbying. In addition, the recipient must also file a disclosure if it has made or has agreed to make any payment with nonappropriated funds that would be prohibited, if paid with appropriated funds.

Family Impact

The General Counsel, as the Designated Official for Executive Order 12606, the Family, has determined that the provisions of this rule will not have a significant impact on family formation, maintenance or well being.

Federalism Impact

The General Counsel, as the Designated Official under section 6(a) of Executive Order 12611—Federalism, has determined that this rule does not involve the preemption of State law by Federal statute or regulation and does not have federalism impacts.

This interim rule was listed as item 1483 in the Department's Semiannual Agenda of Regulations published on April 26, 1993 (58 FR 24382, 24418)

under Executive Order 12291 and the

of the community in which such

under Executive Order 12291 and the Regulatory Flexibility Act.

The Catalog of Federal Domestic Assistance Program title and number is 14.181, Supportive Housing for Persons with Disabilities.

List of Subjects in 24 CFR Part 890

Civil rights, Capital advance programs, Grant programs—housing and community development, Individuals with disabilities, Loan programs—housing and community development, Low and moderate income housing, Mental health programs, Reporting and recordkeeping requirements.

Accordingly, the Department amends 24 CFR part 890, as set forth below.

1. The authority citation for part 890 continues to read as follows:

Authority: 42 U.S.C. 3535(d), 8013.

2. In § 890.100, paragraph (b) is revised to read as follows:

§ 890.100 Purpose and policy.

* * * * *

(b) *General policy.* A capital advance made under this part shall be used to finance the construction, rehabilitation or acquisition with or without rehabilitation, including acquisition from the Resolution Trust Corporation (RTC) of structures to be used as supportive housing for persons with disabilities and may include real property acquisition, site improvement, conversion, demolition, relocation, and other expenses of supportive housing for persons with disabilities. Acquisition without rehabilitation is permitted only for group homes or RTC properties.

3. In § 890.105, the definitions for "Owner" and "Sponsor" are revised to read as follows:

§ 890.105 Definitions.

* * * * *

Owner means a single-purpose nonprofit organization established by the Sponsor and which will receive a capital advance and project rental assistance payments to develop and operate, as its legal owner, supportive housing for persons with disabilities under this part. Nonprofit organization means any institution or foundation:

(1) That has tax-exempt status under section 501(c)(3) of the Internal Revenue Code of 1986;

(2) No part of the net earnings of which inures to the benefit of any Board member, founder, contributor, or individual;

(3) Which has a governing board

(i) The membership of which is selected in a manner to assure that there is significant representation of the views of the community in which such housing is located (including persons with disabilities), and

(ii) Which is responsible for the operation of the housing assisted under this part; and

(4) Which is approved by the Secretary as to financial responsibility.

The purposes of the Owner must include the promotion of the welfare of persons with disabilities. The Owner may not be controlled by or under the direction of persons or firms seeking to derive profit or gain therefrom. Because of the nonprofit nature of the section 811 program, no officer or director, or trustee, Board member, stockholder or authorized representative of the Owner is permitted to have any financial interest in any contract in connection with the rendition of services, the provision of goods or supplies, project management, procurement of furnishings and equipment, construction of the project, procurement of the site or other matters whatsoever.

* * * * *

Sponsor means any nonprofit entity:

(1) That has tax-exempt status under section 501(c)(3) of the Internal Revenue Code of 1986;

(2) No part of the net earnings of which inures to the benefit of any private shareholder, member, founder, contributor or individual;

(3) Which entity is not controlled by, or under the direction of persons or firms seeking to derive profit or gain therefrom;

(4) Which has a governing board the membership of which is selected in a manner to assure that there is significant representation of the views of persons with disabilities; and

(5) Which is approved by the Secretary as to administrative and financial capacity and responsibility. Because of the nonprofit nature of the section 811 program, no officer or director of the Sponsor is permitted to have any financial interest in any contract with the Owner in connection with the rendition of services, the provision of goods or supplies, project management, procurement of furnishings or equipment, construction of the project, procurement of the site or other matters whatsoever. The prohibition in the preceding sentence does not apply to any management contracts (including the management fees associated therewith) entered into by the Owner with the Sponsor or its nonprofit affiliate. In the case of a Sponsor or its nonprofit affiliate managing the project where persons are in a paid capacity with either the Sponsor or nonprofit affiliate, only two such persons would be permitted to serve as directors of the nonprofit organization (Owner) and only in a non-voting capacity.

* * * * *

4. Section 890.205 is revised to read as follows:

§ 890.205 Notice of fund availability.

(a) *Announcement of fund availability.* Following an allocation of authority under § 890.200, HUD shall publish a Notice of Fund Availability (NOFA) in the **Federal Register** indicating:

(1) The amount of capital advance authority (and approximate number of units) being made available for housing for disabled households within each allocation area;

(2) The deadline date for receipt of applications; and

(3) Other appropriate guidance to prospective Sponsors.

(b) *Other notifications.* Immediately after the NOFA is published, the Field Office shall notify minority media and media for persons with disabilities, all persons and organizations on their mailing lists and minority and other organizations involved in housing and community development within their jurisdiction, and groups with a special interest in housing for persons with disabilities, including the applicable state single point of contact (Executive Order 12372).

5. Section 890.235 is amended by revising paragraphs (a) and (d) to read as follows:

§ 890.235 Prohibited relationships.

(a) *Conflicts of interest.* Officers, directors, trustees, Board members, stockholders and authorized representatives of the Sponsor, and officers and directors of the Owner may not have any financial interest in any contract in connection with the rendition of services, the provision of goods or supplies, project management, procurement of furnishings or equipment, construction of the project, procurement of the site or other matters related to the development and operation of the project. This restriction applies so long as the individual is serving on the Board and for a period of three years following resignation or final closing, whichever occurs later. Management contracts (including associated management fees) entered into by the Owner with the Sponsor or the Sponsor's nonprofit affiliate will not constitute a conflict of interest if no more than two persons salaried by the Sponsor or management affiliate serve as nonvoting directors on the Owner's board of directors.

* * * * *

(d) *Identity of interest.* A person or an entity (including an affiliated entity) may not provide technical services to a project in more than one of the following capacities: Attorney, architect, contractor, housing consultant, management agent, or seller of the site for the project, except that the same person or entity may serve a project as management agent and housing consultant. The prohibition of an identity on interest between development team members applies until two years after final closing.

§ 890.245 [Amended]

6. Section 890.245(d) is amended by redesignating paragraphs (d)(i) and (ii) as (d) (1) and (2), and in paragraph (d)(2) by adding "Virgin Islands," after "Guam".

7. Section 890.260(d) is revised to read as follows:

§ 890.260 Other Federal requirements.

* * * * *

(d) *Labor standards.*

(1) All laborers and mechanics (other than volunteers under the conditions set out in 24 CFR part 70) employed by contractors and subcontractors in the construction (including rehabilitation) of housing with 12 or more units assisted under this part shall be paid wages at rates not less than those prevailing in the locality, as determined by the Secretary of Labor in accordance with the Davis-Bacon Act (40 U.S.C. 276a–276a–5). A group home is not covered by the labor standards.

(2) Contracts involving employment of laborers and mechanics shall be subject to the provisions of the Contract Work Hours and Safety Standards Act (40 U.S.C. 327–333).

(3) Sponsors, Owners, contractors and subcontractors must comply with all related rules, regulations and requirements.

* * * * *

8. Section 890.265 is revised to read as follows:

§ 890.265 Application contents.

(a) *Application.* Each application shall include all of the information, materials, forms, and exhibits listed in paragraph (b) of this section. The Field Office will base its determination of the eligibility of the Sponsor for a reservation of section 811 capital advance funds on the information provided in the application.

(b) *General application requirements.* Each application shall include:

(1) Application for Section 811 Supportive Housing Capital Advance.

(2) Evidence of each Sponsor's legal status as a nonprofit organization, including the following:

(i) Articles of Incorporation, constitution, or other organizational documents;

(ii) By-laws;

(iii) IRS section 501(c)(3) tax exemption ruling (this must be submitted by all Sponsors, including churches). A nonprofit organization organized in the Commonwealth of Puerto Rico and exempt from income taxation under Puerto Rico law, has never been liable for payment of Federal income taxes, and does not pay patronage dividends may be exempt from the requirement set out in the previous sentence if they are not eligible for tax exemption; and

(iv) Resolution of the board, duly certified by an officer, that no officer or director of the Sponsor or Owner has or will have any financial interest in any contract with the Owner or in any firm or corporation which has or will have a contract with the Owner and which includes a current listing of all duly qualified and sitting officers and directors by title and the beginning and ending date of each person's term.

(3) The Sponsor must submit a certification by the jurisdiction in which the proposed project will be located that the Sponsor's application is consistent with the jurisdiction's HUD-approved CHAS. The certification must be made by the unit of general local government or the State, pursuant to the CHAS regulations at 24 CFR 91.1(b)(1)(ii), and as may be further described in the NOFA. The CHAS certification is not required where the proposed project will be located in the Insular Area of Guam, the U.S. Virgin Islands, American Samoa or the Northern Mariana Islands. Unless otherwise set forth in the NOFA, the required certification must be submitted by the application submission deadline announced in the NOFA. The jurisdiction required to make the certification must therefore get its CHAS approved by HUD in time for the certification to be submitted by the applicable deadline, *i.e.*, the application deadline announced in the NOFA or if the NOFA permits a later submission date for the certification, the later date. (HUD has 60 days to approve a CHAS.) However, in no event will an application be considered for funding if the required CHAS has not been submitted for HUD approval by the application deadline. All certifications must be signed by the public official responsible for submitting the CHAS to HUD, and must meet the requirements of the CHAS regulations at 24 CFR 91.80 (a) or (b), "Consistency certifications."

(4) A certification that the Sponsor has submitted a copy of its application, if required, to the State agency (single point of contact) for State review in accordance with Executive Order 12372.

(5) A certification from the appropriate State or local agency identified in the application package that the provision of supportive services is well designed to serve the special needs of persons with disabilities and the proposed facility is consistent with State or local plans and policies governing the development operation of such facilities.

(6) A certification on Application for Federal Assistance form that the Sponsor(s) is not delinquent on the repayment of any Federal debt.

(7) Anti-lobbying Certification for Contracts, Grants, Loans and Cooperative Agreements for grants exceeding $100,000. Disclosure of Lobbying Activities if other than federally appropriated funds will be or have been used to lobby the Executive or Legislative branches of the Federal Government regarding specific contracts, grants, loans or cooperative agreements. The applicant determines if the submission is warranted.

(8) A statement that:

(i) Identifies all persons (families, individuals, businesses and nonprofit organizations (identified by race/minority group, and status as owners or tenants) occupying the property on the date of submission of the application for a capital advance (or date of initial site control, if later);

(ii) Indicates the estimated cost of relocation payments and other services; and

(iii) Identifies the staff organization that will carry out the relocation activities.

[Note: If any of the relocation costs will be funded from sources other than the section 811 Capital Advance, the sponsor must provide evidence of a firm commitment of these funds. When evaluating applications, HUD will consider the total cost of proposals (i.e., cost of site acquisition, relocation, construction and other project costs).]

(9)(i) A certification of the Sponsor(s)' intent to comply with section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) and the implementing regulations at 24 CFR Part 8; the Fair Housing Act (42 U.S.C. 3600–3619) and the implementing regulations at 24 CFR part 100, 108, 109, and 110; Title VI of the Civil Rights Act of 1964 (42 U.S.C. 2000d) and the implementing regulations at 24 CFR part 1; section 3 of the Housing and Urban Development Act of 1968 (12 U.S.C. 1701u) and the implementing regulations at 24 CFR part 135; the Age Discrimination Act of 1975 (42 U.S.C. 6101–6107) and the implementing regulations at 24 CFR part

146; Executive Order 11246 (as

to serve the project, minority support

of such services as evidenced by data

[Note: A proposed project site may not be

146; Executive Order 11246 (as amended) and the implementing regulations at 41 CFR chapter 60; the regulations implementing Executive Order 11063 (Equal Opportunity in Housing) at 24 CFR part 107; the Americans with Disabilities Act (42 U.S.C. 12101 *et seq.*) to the extent applicable; the Affirmative fair housing marketing requirements at 24 CFR part 200, subpart M; and other applicable Federal, State and local laws prohibiting discrimination and promoting equal opportunity.

(ii) A certification that the Sponsor(s) will comply with the requirements of the Drug-Free Workplace Act.

(iii) A certification that the project will comply with HUD's design and cost standards, the Uniform Federal Accessibility Standards and HUD's implementing regulations at 24 CFR part 40, Section 504 of the Rehabilitation Act of 1973 and HUD's implementing regulations at 24 CFR part 8, and for new construction requirements of the Fair Housing Act and HUD's implementing regulations at 24 CFR part 100.

(iv) A certification by the Sponsor(s) that it will comply (or has complied) with the acquisition and relocation requirements of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as amended (URA), implemented by regulations at 49 CFR part 24, and 24 CFR 890.260(e).

(v) A certification by the Sponsor(s) that it will form an Owner (as defined in § 890.105) after the issuance of the capital advance, will cause the Owner to file a request for determination of eligibility and a request for capital advance under § 890.300, and will provide sufficient resources to the Owner to insure the development and long-term operation of the project.

(vi) A certification that the Sponsor will comply with the requirements of the Lead-Based Paint Poisoning Prevention Act (42 U.S.C. 4821–4846) and implementing regulations at 24 CFR part 35 (except as superseded in § 890.260(f)(2)). In the case of a structure built or rehabilitated prior to 1978 that is proposed to be developed as an independent living facility, a statement from the Sponsor indicating that it has inspected the structure for defective paint surfaces.

(10) A description of Sponsor's purposes and activities, ties to the community (including local disability community), any statements of support for the proposed project from non-governmental organizations familiar with the needs of the population it would serve, any sources of local funds to serve the project, minority support and how long it has been in existence (include any additional related information).

(11) A description of any other rental housing projects and/or medical facilities, sponsored, owned and operated by the Sponsor including a description of experience in providing housing and/or medical facilities to persons with disabilities and minorities.

(12) A description of the Sponsor's past or current involvement in any programs other than housing (including its provision of services) that demonstrates the Sponsor's management capabilities and experience, including a description of the Sponsor's experience in serving persons with disabilities and minorities.

(13) A description of the Sponsor's experience in contracting with minority and women-owned businesses, including amounts awarded.

(14) A certified Board Resolution, acknowledging responsibilities of sponsorship, long-term support of the project(s), willingness of Sponsor to assist the Owner to develop, own, manage and provide appropriate services in connection with the proposed project, and that it reflects the will of its membership. Also, evidence, in the form of a certified Board Resolution, of the Sponsor's willingness to fund the Minimum Capital Investment (one-half of one-percent of the HUD-approved capital advance, not to exceed $10,000) (see § 890.250).

(15) A list of the applications, if any, the Sponsor has submitted or is planning to submit to any other Field Office in response to current NOFAs under 24 CFR part 889 or part 890. Indicate by Field Office, the proposed location by city and State, and the number of units requested for each application. A list of all prior year projects to which the Sponsor(s) is a party, identified by project number and Field Office, which have not been finally closed.

(16) Applicant/Recipient Disclosure/ Update Report, including Social Security Numbers and Employee Identification Numbers.

(17) An identification of the proposed population and evidence demonstrating sustained effective demand for the housing for the proposed population in the area to be served; such as a description of market conditions in existing Federally assisted housing for persons with disabilities (occupancy, waiting lists, etc.), state or local needs assessments of persons with disabilities in the area, the types of supportive services arrangements currently available in the area, and the utilization of such services as evidenced by data from local social service agencies.

(18) Evidence of control of an approvable site, or identification of a site for which the Sponsor provides reasonable assurances that it will obtain control within 6 months from the date of fund reservation (if Sponsor is approved for funding):

(i) If the Sponsor has control of the site, it must submit the following information:

(A) Evidence that the Sponsor has entered into a legally binding option agreement to purchase or lease the proposed site; or has a copy of the contract of sale for the site, a deed, long-term leasehold, a request with all supporting documentation, submitted either prior to or with the Application for Capital Advance, for a partial release of a site covered by a mortgage under a HUD program or other evidence of legal ownership of the site (including properties to be acquired from the RTC). The option agreement period should extend through the end of the current fiscal year and contain a renewal provision so that the option can be renewed for at least an additional six months. The Sponsor must also identify any restrictive covenants, including reverter clauses. In the case of a site to be acquired from a public body, evidence that the public body possesses clear title to the site, and has entered into a legally binding agreement to lease or convey the site to the Sponsor after it receives and accepts a notice of section 811 Capital Advance and identification of any restrictive covenants, including reverter clauses. However, in localities where HUD determines that the time constraints of the funding round will not permit all of the required official actions (*e.g.*, approval of Community Planning Boards) which are necessary to convey publicly-owned sites, a letter in the application from the Mayor or Director of the appropriate local agency indicating their approval of conveyance of the site contingent upon the necessary approval action is acceptable and may be approved by the Field Office if it has satisfactory experience with timely conveyance of sites from that public body. In such cases, documentation shall also include a copy of the public body's evidence of ownership and identification of any restrictive covenants, including reverter clauses. For properties to be acquired from the RTC, include a copy of the RTC prepared Transaction Screen Checklist or Phase I Environmental Site Assessment, and applicable documentation, per the RTC Environmental Guidelines.

[Note: A proposed project site may not be acquired or optioned from a general contractor (or its affiliate) which will construct the section 811 project or from any other development team member.]

(B) Evidence that the project as proposed is permissible under applicable zoning ordinances or regulations, or a statement of the proposed action required to make the proposed project permissible and the basis for the belief that the proposed action will be completed successfully before the submission of the commitment application (*e.g.*, a summary of the results of any recent requests for rezoning on land in similar zoning classifications and the time required for such rezoning, preliminary indications of acceptability from zoning bodies, *etc.*).

(C) Narrative description of site and area surrounding the site, characteristics of neighborhood, how the site will promote greater housing opportunities for minorities, and any other information that impacts on the suitability of the site for persons with disabilities and including:

(*1*) Photographs of the site;

(*2*) If acquisition, evidence that the structure has been constructed or occupied for at least three years (other than RTC properties);

(*3*) A statement that the Sponsor is willing to seek a different site if the preferred site is unapprovable and site control will be obtained within six months of notification of fund reservation; and

(*4*) A map showing the location of the site and the racial composition of the neighborhood, with the area of racial concentration delineated.

(ii) If the Sponsor has identified a site, but does not have it under control, it must submit the following information:

(A) A description of the location of the site, including its address, neighborhood/community characteristics (to include racial and ethnic data), amenities, adjacent housing and/or facilities, how the site will promote greater housing opportunities for minorities, and any other information that impacts on the suitability of the site for persons with disabilities;

(B) A description of the activities undertaken to identify the site as well as what actions must be taken and the estimated time necessary to obtain control of the site, if approved for funding;

(C) An indication as to whether the site is properly zoned. If it is not, an indication of the actions/time necessary for proper zoning;

(D) A status of the sale of the site; and

(E) An indication as to whether the site would involve relocation.

(19) Supportive Service plan that includes:

(i) A detailed description of whether the housing is intended to serve persons with physical, mental or emotional impairments, developmental disabilities, or chronic mental illness. Include how and from where persons will be referred and admitted to the project. The Sponsor may, with the approval of the Secretary, limit occupancy within housing developed under this part to persons with disabilities who have similar disabilities and require a similar set of supportive services in a supportive housing environment.

(ii) A detailed description of the service needs of the proposed population.

(iii) A detailed description of the supportive services proposed to be provided to the anticipated occupancy, including:

(A) The name(s) of the agency(s) which will be responsible for providing supportive services and evidence of the service provider's capability and experience in providing such supportive services;

(B) The manner in which such services will be provided (i.e., how, when and how often, where (on/off-site), including assurances that the proposed residents will receive supportive services based on their individual needs).

(C) The staffing plan, including a description of the qualifications of residential staff, if any, and other staff necessary to provide the proposed services.

(iv) Identification of the extent of state and local funds available to assist in the provision of supportive services.

(v) Letters of intent from service providers or funding sources, indicating commitments to fund or provide the supportive services or that a particular service will be available to project residents.

(vi) If the Sponsor will be the sole service provider using its own funds, a letter indicating its capability and commitment to either provide the supportive services or ensure their provision for the life of the project.

(vii) If any state or local government funds will be provided, a description of the state/local agency's philosophy/ policy concerning residential facilities for the population to be served as well as a demonstration by the Sponsor that the application is consistent with state or local plans and policies governing the development and operation of facilities for the same disabled population.

(viii) Identify all supportive services, if any, to be provided to the persons occupying such housing.

(20) A written description of the design of the proposed housing, including:

(i) The development method;

(ii) Identification of the number and type of structure(s), and for an independent living facility, the number of units by bedroom type and the number of residents with disabilities, and for a group home, the number of bedrooms and number of residents with disabilities;

(iii) An identification of all community spaces, amenities or features planned for the housing. A description of how the spaces, amenities, or features will be utilized and of the extent to which they are necessary to accommodate any special needs of the proposed residents and the provision of any on-site supportive services also must be included. If these community spaces, amenities, or features would not comply with the design and cost standards of § 890.220, the Sponsor must demonstrate its ability and willingness to contribute both the incremental development cost and continuing operating cost associated with the community spaces, amenities or features;

(iv) Describe if and how the project will promote energy efficiency and if applicable, innovative construction or rehabilitation methods or technologies to be used that will promote efficient construction; and

(v) If proposing a group home that exceeds eight persons with disabilities or an independent living facility that exceeds 24 residents the following must be demonstrated:

(A) The increased number of people is necessary for the economic feasibility of the project;

(B) The project is compatible with residential development and population density of the area;

(C) The project can be integrated into the neighborhood and community; and

(D) The project is marketable.

(21) For group homes to be licensed as intermediate care facilities (in which funding for the intermediate care is provided under Title XIX of the Social Security Act) that serve persons with developmental disabilities, the following must be submitted:

(i) evidence demonstrating that the proposed project will primarily provide housing rather than medical facilities, and is or will be licensed by appropriate State agencies;

(ii) description of the medical training of the staff of the proposed facility and

any nursing services that will be

assessment of the Sponsor's application

VOL 58 ISS 85 MY 5 1993 UMI

any nursing services that will be required by the residents on-site;

(iii) description of the services that will be funded by Medicaid for residents of the proposed project, including their nature, frequency and where the services are to be provided;

(iv) description of any special design features proposed for the group home that are not common to other section 811 group homes for the proposed population and the Sponsor's rationale for including them; and,

(v) written evidence that the State Medicaid Office recognizes the need for a tenant contribution to rent and has agreed to pay the cost of the tenant contribution in the Medicaid payment to the Owner.

(Approved by the Office of Management and Budget under control number 2502–0462).

9. Section 890.300 is revised to read as follows:

§ 890.300 Review of applications for capital advance.

(a) *Initial screening.* Applications for section 811 Capital Advances for housing for persons with disabilities that are received by HUD at the appropriate address within the time period specified in the NOFA will be reviewed to determine if all parts of the application are included. HUD will not review the content of the application as part of initial screening.

(b) *Deficiency letters.* Deficiency letters will be sent informing Sponsors of any missing parts of the application. Sponsors must correct such deficiencies within 14 calendar days from the date of the deficiency letter. All applications will be placed in technical processing upon receipt of the response to the deficiency letter or at the end of the 14-day period.

(c) *Technical processing.*

(1) *General.* All applications will undergo a complete analysis. All applications will be either rated or technically rejected at the end of technical processing. The Secretary will not reject an application based on technical processing without giving notice of that rejection with all rejection reasons, and affording the applicant an opportunity to appeal. An applicant will be afforded 14 calendar days from the date of HUD's written notice to appeal a technical rejection The Field Office. the Field Office must respond within 5 working days to the Sponsor. The Field Office shall make a determination on an appeal prior to making its selection recommendations.

(2) *Civil rights compliance.* Technical processing will also assure that if the Sponsor has been found by a court or by a Federal, State, or local agency, in noncompliance with any of the statutes, regulations, or other requirements listed in the civil rights certification (§ 890.265(b)(9)(i)), HUD will obtain from the Sponsor a statement of the actions taken to correct that noncompliance. There must be no pending civil rights suits against the Sponsor instituted by the Department of Justice and no pending administrative actions for civil rights violations instituted by HUD (including a charge of discrimination under the Fair Housing Act). Moreover, there must not be a deferral of the processing of applications from the Sponsor imposed by HUD under Title VI of the Civil Rights Act of 1964, the Department's implementing regulations (24 CFR 1.8), procedures (HUD Handbook 8040.1), and the Attorney General's Guidelines (28 CFR 50.3); or under section 504 of the Rehabilitation Act of 1973 and the Department's implementing regulations (24 CFR 8.57).

(3) The need for supportive housing for persons with disabilities in the area to be served;

(4) Based on the factors set forth in paragraph (c) of this section, the field office will determine the applications which, in its judgment, are approvable. Selection will be made in accordance with paragraph (e) of the section.

(d) *Selection criteria.* The selection criteria for assistance include:

(1) The Sponsor's ability to develop and operate the proposed housing on a long-term basis, considering the following:

(i) The scope, extent and quality of the Sponsor's experience in providing housing or related services to those proposed to be served by the project and the scope of the proposed project (*i.e.*, number of units, services, relocation costs, development, and operation) in relationship to the Sponsor's demonstrated development and management capacity;

(ii) The scope, extent and quality of the Sponsor's experience in providing housing or related services to minority persons or families;

(iii) The scope, extent and quality of the Sponsor's experience in providing opportunities for minority and women-owned business enterprises participation; and

(iv) The extent of local community support for the Sponsor's activities, including previous experience in serving the area where the project is to be located, and Sponsor's demonstrated ability to enlist volunteers and local funds;

(2) The need for supportive housing for persons with disabilities in the area to be served, the extent to which the Sponsor has site control, and the suitability of the site, considering:

(i) The extent of the need for the project in the area based on a determination by the Field Office. This determination will be made by taking into consideration the Sponsor's evidence of need in the area based on the guidelines in § 890.265(b)(18), as well as other economic, demographic and housing market data available to the Field Office. The data could include the availability of existing Federal assisted housing (HUD and FmHA) for persons with disabilities and current occupancy in such facilities, Federally assisted housing for persons with disabilities under construction or for which fund reservations have been issued and, in accordance with an agreement between HUD and FmHA, comments from the FmHA on the demand for additional assisted housing and the possible harm to existing projects in the same housing market area;

(ii) The proximity or accessibility of the site to shopping, medical facilities, transportation, places of worship, recreational facilities, and other necessary services to the intended occupants, adequacy of utilities and streets (site control projects only), and freedom of the site from adverse environmental conditions, and compliance with site and neighborhood standards (site control projects only);

(iii) Suitability of the site from the standpoint of promoting a greater choice of housing opportunities for minority persons with disabilities; and

(iv) Likelihood that Sponsor will have site control (if not already in control of an approvable site) within six months of fund reservation;

(3) The adequacy of the provision of supportive services and of the proposed facility considering:

(i) The extent to which the Sponsor demonstrated that the identified supportive services will be provided on a consistent, long-term basis (considering any limitations imposed by State or local governments)—strength of commitments to fund or providing the supportive services, or indications of the availability of supportive services to project residents;

(ii) The quality of the services implementation plan; and

(iii) The extent to which the proposed design will meet any special needs of persons with disabilities the housing is intended to serve and will accommodate the provision of any necessary on-site supportive services for the proposed residents.

(e) The Field Office shall rate each application on the basis of its assessment of the Sponsor's application using the selection criteria. The Field Office shall also calculate the capital advance and the PRAC amounts to be reserved for each project. The Regional Office shall identify for selection the highest ranking applications in descending order which most reasonably approximate the estimated maximum number of units which can be funded within two categories. Category A shall consist of all approvable applications that contain evidence of control of an approvable site(s). Category B shall consist of all other approvable applications in which a site(s) has been identified but is not under control. An approvable application containing evidence of site control in which the site or the evidence is found not approvable shall be ranked in Category B, provided the Sponsor has indicated in the application a willingness to seek a different site and an assurance that site control will be obtained within six months of fund reservation, if approved.

(f) *Selection.* (1) Based on the ranking under paragraphs (d) and (e) of this section, HUD first shall select applications in the descending order of funding priority from Category A that most closely approximate the capital advance authority allocated to the Region.

(2) If capital advance authority remains after selecting all approvable applications from Category A, HUD shall then select applications in the descending order of funding priority from Category B that most closely approximate the capital advance authority remaining for each Field Office.

(3) If, after completing paragraph (f)(1) of this section and, if necessary, paragraph (f)(2) of this section, the amount of capital advance authority allocated to a Field Office exceeds the amount necessary to fund all approvable applications in that area, the Department shall transfer the unused capital advance authority from the area to another area or areas in which there is insufficient capital advance authority for all approvable applications.

§§ 890.305 and 890.310 [Amended]

10. Sections 890.305 and 890.310 are amended by removing the term "fund reservation" wherever it appears in the sections, and by adding in its place the term "capital advance".

Dated: April 2, 1993.

James E. Schoenberger,

Associate General Deputy, Assistant Secretary.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Office of Assistant Secretary for Housing—Federal Housing Commissioner

[Docket No. N-93-3560; FR-3409-N-01]

Fund Availability (NOFA) for Supportive Housing for Persons with Disabilities

AGENCY: Office of Assistant Secretary for Housing—Federal Housing Commissioner, HUD.

ACTION: Notice of fund availability for FY 93.

SUMMARY: This NOFA announces HUD's funding for supportive housing for persons with disabilities. In the body of this document is information concerning the following: (a) The purpose of the NOFA and information regarding eligibility, submission requirements, available amounts, and selection criteria and (b) application processing, including how to apply and how selections will be made. A checklist of steps and exhibits involved in the application process will be included in the application package which can be obtained from the appropriate Field Office identified in appendix A.

DATES: The deadline date for receipt of applications in response to this NOFA is 4 p.m. local time on July 8, 1993.

ADDRESSES: Applications must be delivered to the Director of the Housing Development Division in the HUD Field Office for your jurisdiction. A listing of HUD Field Offices, their addressed and telephone numbers (including TDD telephone numbers) are attached as appendix A to this NOFA. HUD will date and time stamp incoming applications to evidence timely receipt, and upon request, provide the applicant with an acknowledgement of receipt. Applications submitted by facsimile are not acceptable.

FOR FURTHER INFORMATION CONTACT: The HUD Field Office for your jurisdiction.

SUPPLEMENTARY INFORMATION:

Paperwork Reduction Act Statement

In accordance with the Paperwork Reduction Act of 1980 (44 U.S.C. 3501–220), the information collection requirements have been assigned OMB Control Number 2502–0462.

I. Purpose and Substantive Description

A. Authority

Section 811 of the Cranston-Gonzalez National Affordable Housing Act (the NAHA) authorized a new supportive housing program for persons with disabilities and replaced assistance for persons with disabilities previously covered by section 202 of the Housing Act of 1959 (section 202 continues, as amended by section 801 of the NAHA, and the Housing and Community Development Act of 1992 (HCD Act of 1992) to authorize supportive housing for the elderly). The assistance is provided as capital advances and contracts for project rental assistance in accordance with 24 CFR part 890. Capital advances may be used to finance the construction, rehabilitation, or acquisition with or without rehabilitation, including acquisition from the Resolution Trust Corporation (RTC), of structures to be developed into a variety of housing options ranging from group homes and independent living facilities, to dwelling units in multifamily housing developments, condominium housing and cooperative housing. Acquisition without rehabilitation is permitted only for group homes or properties acquired from the RTC. This assistance may also cover the cost of real property acquisitions, site improvement, conversion, demolition, relocation, and other expenses that the Secretary determines are necessary to expand the supply of supportive housing for persons with disabilities.

Sections 601, 603 and 913 of the HCD Act of 1992 amended section 811 of the NAHA. These amendments and simplification of the application and selection process are the subject of an interim rule published today elsewhere in this issue. These amendments are reflected in this NOFA. Of special interest are the amendment to the definition of private nonprofit organization (no longer required to be incorporated or private) and the amendment relating to labor wage rates. The amended labor standards require all laborers and mechanics employed by contractors and subcontractors in the construction of housing with 12 or more units assisted under section 811 (the previous labor standard applied to section 811 housing designed for dwelling use by 13 or more persons with disabilities) to be paid wages at rates not less than those prevailing in the locality, as determined by the Secretary of Labor in accordance with the Davis-Bacon Act. A group home is not covered by the labor standards because a group home is considered to be one unit. Section 913 and the 811 interim rule published today elsewhere in this issue provide for an exemption for any individual who (a) performs services for which the individual volunteered; (b) (1) does not receive compensation for such services; or (2) is paid expenses, reasonable benefits, or a nominal fee for such services; and (c) is not otherwise employed at any time in the construction work.

For supportive housing for persons with disabilities, the Departments of Veterans Affairs and Housing and Urban Development, and Independent Agencies Appropriations Act, 1993 (Pub. L. 102–389, enacted October 6, 1992, (Fiscal Year 1993 Appropriations Act) provides $193,754,000 for capital advances, for supportive housing for persons with disabilities, as authorized by section 811 of the NAHA, and for project rental assistance, and amendments to contracts for project rental assistance, for supportive housing for persons with disabilities as authorized by section 811 of the NAHA. It should be noted that although section 623 of the HCD Act of 1992 authorizes tenant-based assistance for persons with disabilities, appropriations have not been provided.

In accordance with an agreement between HUD and the Farmers Home Administration (FmHA) which facilitates the coordination between the two agencies in administering their respective rental assistance programs, HUD is required to notify FmHA of applications for housing assistance it receives. The purpose of this notification is to give FmHA the opportunity to comment if it has concern about the demand for additional assisted housing and possible harm to existing projects in the same housing market area. HUD will consider the FmHA comments in its review and project selection process.

B. Allocation Amounts

In accordance with 24 CFR part 791, the Assistant Secretary will allocate the amounts available for capital advances for supportive housing for persons with disabilities. The Department reserves project rental assistance funds sufficient for 20-year project rental assistance contracts in support of the units selected for capital advances, consistent with current operating cost standards.

The allocation formula for section 811 funds consists of the following two data elements:

1. A measure of the number of persons identified as having a public transportation disability; and

2. A measure of the number of persons identified as having a work disability.

Based on this formula, the Department has allocated the available capital advance funds as shown on the following chart:

FISCAL YEAR 1993 ALLOCATIONS FOR SUPPORTIVE HOUSING FOR PERSONS WITH DISABILITIES

Region	Units	Capital advance	PRAC required	Per unit cost
1	121	8,756,828	9,978,432	72,141
2	267	20,257,582	22,139,731	75,680
3	273	16,354,643	18,837,272	59,873
4	514	25,917,193	28,213,351	50,454
5	400	24,175,882	26,309,706	60,361
6	233	11,118,141	12,926,664	47,671
7	84	4,353,977	5,114,699	52,113
8	51	2,537,260	2,975,250	49,587
9	328	22,870,247	24,209,913	69,675
10	55	3,298,293	3,514,618	59,977
Total	2,326	139,640,050	154,219,636	60,023

C. Eligibility

The only eligible applicants under this program are nonprofit organizations. A single Sponsor shall not request more units in a given Region than permitted for that Region in the Invitation.

D. Initial Screening, Technical Processing and Selection Criteria

1. Initial Screening

Applications for section 811 capital advances that are received by HUD at the appropriate address by 4 p.m. local time on July 8, 1993 will be reviewed to determine if all parts of the application are included. HUD will not review the content of the application as part of initial screening. Deficiency letters will be sent informing Sponsors of any missing parts of the application. Sponsors must correct such deficiencies within 14 calendar days from the date of the deficiency letter.

2. Technical Processing

All applications will be placed in technical processing upon receipt of the response to the deficiency letter or at the end of the 14-day period. All applications will undergo a complete analysis. As part of this analysis, HUD will conduct its environmental review in accordance with 24 CFR part 50. Examples of reasons for technical processing rejection include an ineligible Sponsor, ineligible population to be served, lack of legal capacity and insufficient commitments or indications that supportive services will be available. The Secretary will not reject an application based on technical processing without giving notice of that rejection with all rejection reasons, and affording the applicant an opportunity to appeal. An applicant will be afforded 14 calendar days from the date of HUD's written notice to appeal a technical rejection to the Field Office. The Field Office must respond within 5 working days to the Sponsor. The Field Office shall make a determination on an appeal prior to making its selection recommendations. All applications will be either rated or technically rejected at the end of technical processing.

Technical processing will also assure that if the Sponsor has been found by a court or by a Federal, State, or local agency, in noncompliance with any of the statutes, regulations, or other requirements listed in the civil rights certification (§ 890.265(b)(9)(i)), HUD will obtain from the Sponsor a statement of the actions taken to correct that noncompliance. There must be no pending civil rights suits against the Sponsor instituted by the Department of Justice and no pending administrative actions for civil rights violations instituted by HUD (including a charge of discrimination under the Fair Housing Act). Moreover, there must not be a deferral of the processing of applications from the Sponsor imposed by HUD under Title VI of the Civil Rights Act of 1964, the Department's implementing regulations (24 CFR 1.8), procedures (HUD Handbook 8040.1), and the Attorney General's Guidelines (28 CFR 50.3); or under section 504 of the Rehabilitation Act of 1973 and the Department's implementing regulations (24 CFR 8.57).

Under completion of technical processing, all acceptable applications will be rated according to the selection criteria in § 890.300(d) (also below in I.D.3). Applications which have a total score of 50 points or more will be eligible for selection and will be placed in rank order.

3. Selection Criteria

Applications for section 811 capital advances that successfully complete technical processing will be rated using the following selection criteria:

(a) The Sponsor's ability to develop and operate the proposed housing on a long-term basis, considering the following (50 points maximum):

(1) The scope, extent and quality of the Sponsor's experience in providing housing or related services to those proposed to be served by the project and the scope of the proposed project (*i.e.*, number of units, services, relocation costs, development, and operation) in relationship to the Sponsor's demonstrated development and management capacity. (32 points);

(2) The scope, extent and quality of the Sponsor's experience in providing housing or related services to minority persons or families (5 points);

(3) The scope, extent and quality of the Sponsor's experience in providing opportunities for minority and women-owned business enterprises participation (3 points); and

(4) The extent of local community support for the Sponsor's activities, including previous experience in serving the area where the project is to be located, and Sponsor's demonstrated ability to enlist volunteers and local funds (10 points);

(b) The need for supportive housing for persons with disabilities in the area to be served, the extent to which the Sponsor has site control, and the suitability of the site, considering (25 points):

(1) The extent of the need for the project in the area based on a determination by the Field Office. This determination will be made by taking into consideration the Sponsor's evidence of need in the area based on the guidelines in § 890.265(b)(18), as

well as other economic, demographic published in the **Federal Register**.

In preparing applications, applicants

submitting the CHAS to HUD. All CHAS funds will be or have been used to lobby

VOL 58 ISS 85 MY 5 1993 UMI

well as other economic, demographic and housing market data available to the Field Office. The data could include the availability of existing Federally assisted housing (HUD and FmHA) for persons with disabilities and current occupancy in such facilities, Federally assisted housing for persons with disabilities under construction or for which fund reservations have been issued and, in accordance with an agreement between HUD and FmHA, comments from the FmHA on the demand for additional assisted housing and the possible harm to existing projects in the same housing market area (8 points);

(2) The proximity or accessibility of the site to shopping, medical facilities, transportation, places of worship, recreational facilities, and other necessary services to the intended occupants, adequacy of utilities and streets, freedom of the site from adverse environmental conditions, and compliance with the site and neighborhood standards (10 points);

(3) Suitability of the site from the standpoint of promotion a greater choice of housing opportunities for minority persons with disabilities (7 points); and

(4) Likelihood that Sponsor will have site control (if not already in control of an approvable site) within six months of fund reservation (yes or no);

(c) The adequacy of the provision of supportive services and of the proposed facility considering (25 points maximum):

(1) The extent to which the Sponsor demonstrated that the identified supportive services will be provided on a consistent long-term basis (considering any limitations imposed by State or local governments)—strength of commitments to fund or providing the supportive services, or indications of the availability of supportive services to project residents (10 points);

(2) The quality of the services implementation plan (10 points);

(3) The extent to which the proposed design will meet any special needs of persons with disabilities the housing is intended to serve and will accommodate the provision of any necessary on-site supportive services for the proposed residents (5 points).

II. Application Process

All applications for Section 811 capital advances submitted by eligible Sponsors must be filed with the appropriate HUD Field Office receiving an allocation and must meet the requirements of this Notice. No application will be accepted after 4 p.m. local time on July 8, 1993, unless that date and time is extended by a Notice published in the **Federal Register**. Applications received after that date and time will not be accepted, even if postmarked by the deadline date. Applications submitted by facsimiles are not acceptable.

Immediately upon publication of this NOFA, Field Offices shall notify minority media and media for persons with disabilities, all persons and organizations on their mailing lists and minority and other organizations within their jurisdiction involved in housing and community development and groups with special interest in housing for disabled households.

Organizations interested in applying for a section 811 capital advance should provide the appropriate Field Office with their names, addresses and telephone numbers, and advise the Field Office whether they wish to attend the workshop described below. HUD encourages minority organizations to participate in this program as Sponsors. Field Offices will advise all organizations on their mailing list of the date, time and place of workshops at which the Section 811 Program will be explained.

HUD strongly recommends that prospective applicants attend the local Field Office workshop. Interested persons with disabilities should contact the Field Office to assure that any necessary arrangements can be made for them to enable their attendance and participation in the workshop. While strongly urged to do so, if Sponsors cannot attend a workshop, Application Packages and handbooks can also be obtained from the Field Offices. Contact the appropriate Field Office with any questions regarding the submission of applications.

At the workshops, Application Packages will be distributed, application procedures and requirements will be explained. Also, concerns such as local market conditions, building codes, historic preservation, floodplain management, displacement and relocation, zoning, housing costs and service plan requirements will be addressed.

III. Application Submission Requirements

A. Application

Each application shall include all of the information, materials, forms, and exhibits listed in section III. B. below and must be indexed and tabbed. The Field Office will base its determination of the eligibility of the Sponsor for a reservation of section 811 capital advance funds on the information provided in the application.

In preparing applications, applicants will be able to utilize information and exhibits previously prepared for prior applications under section 811, section 202 or other funding programs. Examples of exhibits that may be readily adapted or amended to decrease the burden of application preparation include, among others, those on previous participation in the section 202 or section 811 programs; applicant experience in the provision of housing and services; supportive services plan; community ties, and experience serving minorities.

B. General Application Requirements

1. Form HUD–92016–CA, Application for Section 811 Supportive Housing Capital Advance.

2. Evidence of each Sponsor's legal status as a nonprofit organization, including the following:

(a) Articles of Incorporation, constitution, or other organizational documents;

(b) By-laws;

(c) IRS section 501(c)(3) tax exemption ruling (this must be submitted by all Sponsors, including churches). A nonprofit organization organized in the Commonwealth of Puerto Rico and exempt from income taxation under Puerto Rico law, has never been liable for payment of Federal income taxes, and does not pay patronage dividends may be exempt from the requirement set out in the previous sentence if they are not eligible for tax exemption; and

(d) Resolution of the board, duly certified by an officer, that no officer or director of the Sponsor or Owner has or will have any financial interest in any contract with the Owner or in any firm or corporation which has or will have a contract with the Owner and which includes a current listing of all duly qualified and sitting officers and directors by title and the ending date of each person's term.

3. CHAS certification. The Sponsor must submit a certification by the jurisdiction in which the proposed project will be located that the Sponsor's application is consistent with the jurisdiction's HUD-approved CHAS for FY 1993. The certification must be made by the unit of general local government if it is required to have, or has, a complete CHAS. Otherwise the certification may be made by the State, or if the project will be located in a unit of general local government authorized to use an abbreviated CHAS, by the unit of general local government if it is willing to prepare such a CHAS.

All CHAS certifications must be made by the public official responsible for

submitting the CHAS to HUD. All CHAS certifications must be submitted as part of the application by the application submission deadline set forth in this NOFA, except as provided in the next parsgraph. The required CHAS must therefore have been submitted more than 60 days before the application submission deadline, since HUD has 60 days to review and approve the CHAS. Where the certification of consistency is permitted to be submitted after the Application submission deadline, as described in the next paragraph, the CHAS must be submitted for approval in time for the certification to be made by the later date. In no event will an application be considered if the CHAS has not been submitted for approval by the application submission deadline.

If the required certification will be made by a unit of general local government with respect to an abbreviated CHAS, and such CHAS has been submitted by the application submission deadline but has not yet been approved by HUD, the deadline will not be applied to the certification for consistency. Instead, the application must include a written statement from the public official responsible for submitting the CHAS that the jurisdiction has submitted an abbreviated CHAS for FY 1993 for HUD approval and that the application is consistent with the CHAS. If HUD approved the CHAS, the required certification that the application is consistent with a HUD-approved CHAS for FY 1993 must be submitted before August 31, 1993. An application will not be selected for funding unless the CHAS is approved and the required certification is made by August 31, 1993. The CHAS regulations are published in 24 CFR part 91.

4. E.O. 12372. A certification that the Sponsor has submitted a copy of its application, if required, to the State agency (single point of contact) for State review in accordance with Executive Order 12372.

5. Supportive Services certification. A certification from the appropriate State or local agency identified in the application package that the provision of supportive services is well designed to serve the special needs of persons with disabilities.

6. SF–424. A certification on SF–424, Application for Federal Assistance, that the Sponsor(s) is not delinquent on the repayment of any Federal debt.

7. Anti-lobbying Certification for Contracts, Grants, Loans and Cooperative Agreements for grants exceeding $100,000. Disclosure of Lobbying Activities (Standard Form–LLL) if other than federally appropriated funds will be or have been used to lobby the Executive or Legislative branches of the Federal Government regarding specific contracts, grants, loans or cooperative agreements. The applicant determines if the submission of the SF–LLL is warranted.

8. A statement that (a) identifies all persons (families, individuals, businesses and nonprofit organizations (identified by race/minority group, and status as owners or tenants) occupying the property on the date of submission of the application for a capital advance (or date of initial site control, if later); (b) indicates the estimated cost of relocation payments and other services, and (c) identifies the staff organization that will carry out the relocation activities.

Note: If any of the relocation costs will be funded from sources other than the section 811 capital advance, the sponsor must provide evidence of a firm commitment of these funds. When evaluating applications, HUD will consider the total cost of proposals (i.e., cost of site acquisition, relocation, construction and other project costs).

9. Additional Certifications.

(a) A certification of the Sponsor(s)' intent to comply with section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) and the implementing regulations at 24 CFR part 8; the Fair Housing Act (42 U.S.C. 3600–3619) and the implementing regulations at 24 CFR part 100, 108, 109, and 110; title VI of the Civil Rights Act of 1964 (42 U.S.C. 2000d) and the implementing regulations at 24 CFR part 1; section 3 of the Housing and Urban Development Act of 1968 (12 U.S.C. 1701u) and the implementing regulations at 24 CFR part 135; the Age Discrimination Act of 1975 (42 U.S.C. 6101–6107) and the implementing regulations at 24 CFR part 146; Executive Order 11246 (as amended) and the implementing regulations at 41 CFR chapter 60; the regulations implementing Executive Order 11063 (Equal Opportunity in Housing) at 24 CFR part 107; the Americans with Disabilities Act (42 U.S.C. 12101 *et seq.*) to the extent applicable; the affirmative fair housing marketing requirements at 24 CFR part 200, subpart M; and other applicable Federal, State and local laws prohibiting discrimination and promoting equal opportunity.

(b) A certification that the Sponsor(s) will comply with the requirements of the Drug-Free Workplace Act.

(c) A certification that the project will comply with HUD's design and cost standards, the Uniform Federal Accessibility Standards and HUD's implementing regulations at 24 CFR part 40, Section 504 of the Rehabilitation Act of 1973 and HUD's implementing regulations at 24 CFR part 8, and for new construction of covered multifamily dwellings, the design and construction requirements of the Fair Housing Act and HUD's implementing regulations at 24 CFR part 100.

(d) A certification by the Sponsor(s) that it will comply (or has complied) with the acquisition and relocation requirements of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as amended (URA), implemented by regulations at 40 CFR part 24, and 24 CFR § 890.260(e).

(e) A certification by the Sponsor(s) that it will form an Owner (as defined in § 890.105) after the issuance of the capital advance, will cause the Owner to file a request for determination of eligibility and a request for capital advance under § 890.300, and will provide sufficient resources to the Owner to insure the development and long-term operation of the project.

(f) A certification that the Sponsor will comply with the requirements of the Lead-Based Paint Poisoning Prevention Act (42 U.S.C. 4821–4846) and implementing regulations at 24 CFR part 35 (except as superseded in § 890.260(f)(2)). In the case of a structure built or rehabilitated prior to 1978 that is proposed to be developed as an independent living facility, a statement from the Sponsor indicating that it has inspected the structure for defective paint surfaces.

10. A description of Sponsor's purposes and activities, ties to the community (including local disability community), any statements of support for the proposed project from non-governmental organizations familiar with the needs of the population it would serve, any sources of local funds to serve the project, minority support and how long it has been in existence (include any additional related information).

11. A description of any other rental housing projects and/or medical facilities, sponsored, owned and operated by the Sponsor including a description of experience in providing housing and/or medical facilities to persons with disabilities and minorities.

12. A description of the Sponsor's past or current involvement in any programs other than housing (including its provision of services) that demonstrates the Sponsor's management capabilities and experience, include a description of the Sponsor's experience in serving persons with disabilities and minorities.

13. A description of the Sponsor's experience in contracting with minority

and women-owned businesses.

14. Certification of consistency with the approved Consolidated Plan. A certification by the unit of general local government that the proposed project is consistent with the approved Consolidated Plan.

15. Site Information. Information about the proposed site, including:

(a) Evidence of site control, such as a copy of the option to purchase, sales contract, deed, or lease;

(b) Zoning status of the site and, if the proposed project will require rezoning, evidence that the process has been initiated and a statement of the timetable for completion of the rezoning;

(c) Information about the availability of sewer, water, streets, and other infrastructure;

(d) Environmental information about the impact of the project on the site and vice versa, including information about compliance with applicable requirements set forth at 24 CFR part 50;

(e) Information about the suitability of the site for housing for persons with disabilities, including its proximity to services and facilities for persons with disabilities and to public transportation;

(f) Information about the topography, soil and subsoil conditions sufficient to indicate the absence of problems that would significantly increase the cost of development or maintenance of the project; and

(g) Information about the presence of floodplains, wetlands, or other natural features.

16. Neighborhood Information. Information about the neighborhood, including:

(a) Information about the availability of public facilities and services, such as water and sewer service, schools, public transportation, parks and recreational facilities, fire protection services, and libraries;

(b) Information about the availability of shopping facilities, services, employment opportunities, and housing for persons with disabilities;

(c) Information about the suitability of the neighborhood for housing for persons with disabilities, including its proximity to services and facilities for persons with disabilities and to public transportation;

(d) Information about the topography, soil and subsoil conditions sufficient to indicate the absence of problems that would significantly increase the cost of development or maintenance of the project; and

(e) Information about the presence of floodplains, wetlands, or other natural features.

17. Market Information. Information about the housing market, including:

(a) Current occupancy level for apartments in the area;

(b) Number of comparable housing units in the area and the availability of assisted housing generally;

(c) Extent to which unique physical characteristics in the housing market area (such as historic districts and buildings, views, or proximity to services) will be reflected in the housing;

(d) Description of the neighborhood, including the location of the site, its proximity to existing housing, and the impact the proposed housing will have on existing housing in the neighborhood;

(e) Description of the site, including its proximity to existing housing, and the impact the proposed housing will have on existing housing in the neighborhood;

(f) Description of the site, including its proximity to existing housing, and the impact the proposed housing will have on existing housing in the neighborhood;

(g) Description of the site, including its proximity to existing housing, and the impact the proposed housing will have on existing housing in the neighborhood;

(h) Description of the site, including its proximity to existing housing, and the impact the proposed housing will have on existing housing in the neighborhood;

(i) Description of the site, including its proximity to existing housing, and the impact the proposed housing will have on existing housing in the neighborhood;

(j) Description of the site, including its proximity to existing housing, and the impact the proposed housing will have on existing housing in the neighborhood;

(k) Description of the site, including its proximity to existing housing, and the impact the proposed housing will have on existing housing in the neighborhood;

(l) Description of the site, including its proximity to existing housing, and the impact the proposed housing will have on existing housing in the neighborhood;

(m) Description of the site, including its proximity to existing housing, and the impact the proposed housing will have on existing housing in the neighborhood;

(n) Description of the site, including its proximity to existing housing, and the impact the proposed housing will have on existing housing in the neighborhood;

(o) Description of the site, including its proximity to existing housing, and the impact the proposed housing will have on existing housing in the neighborhood;

(p) Description of the site, including its proximity to existing housing, and the impact the proposed housing will have on existing housing in the neighborhood;

(q) Description of the site, including its proximity to existing housing, and the impact the proposed housing will have on existing housing in the neighborhood;

(r) Description of the site, including its proximity to existing housing, and the impact the proposed housing will have on existing housing in the neighborhood;

(s) Description of the site, including its proximity to existing housing, and the impact the proposed housing will have on existing housing in the neighborhood;

(t) Description of the site, including its proximity to existing housing, and the impact the proposed housing will have on existing housing in the neighborhood;

(u) Description of the site, including its proximity to existing housing, and the impact the proposed housing will have on existing housing in the neighborhood;

(v) Description of the site, including its proximity to existing housing, and the impact the proposed housing will have on existing housing in the neighborhood;

(w) Description of the site, including its proximity to existing housing, and the impact the proposed housing will have on existing housing in the neighborhood;

(x) Description of the site, including its proximity to existing housing, and the impact the proposed housing will have on existing housing in the neighborhood;

(y) Description of the site, including its proximity to existing housing, and the impact the proposed housing will have on existing housing in the neighborhood;

(z) Description of the site, including its proximity to existing housing, and the impact the proposed housing will have on existing housing in the neighborhood;

services in a supportive housing

bedrooms and number of residents with

IV. Additional Information

VOL 58 ISS 85 MY 5 1993 UMI

and women-owned businesses, including amounts awarded.

14. A certified Board Resolution, acknowledging responsibilities of sponsorship, long-term support of the project(s), willingness of Sponsor to assist the Owner to develop, own, manage and provide appropriate services in connection with the proposed project, and that it reflects the will of its membership. Also, evidence, in the form of a certified Board Resolution, of the Sponsor's willingness to fund the Minimum Capital Investment (one-half of one-percent of the HUD-approved capital advance, not to exceed $10,000) (see 890.250).

15. A list of the applications, if any, the Sponsor has submitted or is planning to submit to any other Field Office in response to this NOFA or the NOFA for Supportive Housing for the Elderly (published elsewhere in today's **Federal Register**). Indicate by Field Office, the number of units requested, the proposed location by city and State for each application. A list of all FY 1992 and prior year projects to which the Sponsor(s) is a party, identified by project number and Field Office, which have not been finally closed.

16. HUD–2880, Applicant/Recipient Disclosure/Update Report including Social Security Numbers and Employee Identification Numbers.

17. Evidence of need for supportive housing. An identification of the proposed population and evidence demonstrating sustained effective demand for the housing for the proposed population in the area to be served, such as a description of market conditions in existing Federally assisted housing for persons with disabilities (occupancy, waiting lists, etc.), state or local needs assessments of persons with disabilities in the area, the types of supportive services arrangements currently available in the area, and the utilization of such services as evidenced by data from local social service agencies.

18. Evidence of control of an approvable site, or identification of a site for which the Sponsor provides reasonable assurances that it will obtain control within 6 months from the date of fund reservation (if Sponsor is approved for funding):

(1) If the Sponsor has control of the site, it must submit the following information:

(a) Evidence that the Sponsor has entered into a legally binding option agreement to purchase or lease the proposed site; or has a copy of the contract of sale for the site, a deed, long-term leasehold, a request with all supporting documentation, submitted either prior to or with the Application for Capital Advance, for a partial release of a site covered by a mortgage under a HUD program or other evidence of legal ownership of the site (including properties to be acquired from the RTC). The option agreement period must extend through the end of the current fiscal year and contain a renewable provision so that the option can be renewed for at least an additional six months. The Sponsor must also identify any restrictive covenants, including reverter clauses. In the case of a site to be acquired from a public body, evidence that the public body possesses clear title to the site, and has entered into a legally binding agreement to lease or convey the site to the Sponsor after it receives and accepts a notice of section 811 capital advance and identification of any restrictive covenants, including reverter clauses. However, in localities where HUD determines that the time constraints of the funding round will not permit all of the required official actions (*e.g.*, approval of Community Planning Boards) which are necessary to convey publicly-owned sites, a letter in the application from the Mayor or Director of the appropriate local agency indicating their approval of conveyance of the site contingent upon the necessary approval action is acceptable and may be approved by the Field Office if it has satisfactory experience with timely conveyance of sites from that public body. In such cases, documentation shall also include a copy of the public body's evidence of ownership and identification of any restrictive covenants, including reverter clauses. For properties to be acquired from the RTC, include a copy of the RTC prepared Transaction Screen Checklist or Phase I Environmental Site Assessment, and applicable documentation, per the RTC Environmental Guidelines.

Note: A proposed project site may not be acquired or optioned from a general contractor (or its affiliate) which will construct the Section 811 project or from any other development team member.

(b) Evidence that the project as proposed is permissible under applicable zoning ordinances or regulations, or a statement of the proposed action required to make the proposed project permissible and the basis for the belief that the proposed action will be completed successfully before the submission of the commitment application (*e.g.*, a summary of the results of any recent requests for rezoning on land in similar zoning classifications and the time required for such rezoning, preliminary indications of acceptability from zoning bodies, *etc.*).

(c) Narrative description of site and area surrounding the site, characteristics of neighborhood, how the site will promote greater housing opportunities for minorities, and any other information that impacts on the suitability of the site for persons with disabilities and including:

(1) Photographs of the site (four directional views);

(2) If acquisition, evidence that the structure has been constructed or occupied for at least three years (other than RTC properties);

(3) A statement that the Sponsor is willing to seek a different site if the preferred site is unapprovable and site control will be obtained within six months of notification of fund reservation; and

(4) A map showing the location of the site and the racial composition of the neighborhood, with the area of racial concentration delineated.

(2) If the Sponsor has identified a site, but does not have it under control, it must submit the following information:

(a) A description of the location of the site, including its address, neighborhood/community characteristics (to include racial and ethnic data), amenities, adjacent housing and/or facilities, how the site will promote greater housing opportunities for minorities, and any other information that impacts on the suitability of the site for persons with disabilities;

(b) A description of the activities undertaken to identify the site as well as what actions must be taken and the estimated time necessary to obtain control of the site, if approved for funding;

(c) An indication as to whether the site is properly zoned. If it is not, an indication of the actions/time necessary for proper zoning;

(d) A status of the sale of the site; and

(e) An indication as to whether the site would involve relocation.

19. Supportive Service plan that includes:

(a) A detailed description of whether the housing is intended to serve persons with physical, mental or emotional impairments, developmental disabilities, or chronic mental illness. Include how and from where persons will be referred and admitted to the project. The Sponsor may, with the approval of the Secretary, limit occupancy within housing developed under this part to persons with disabilities who have similar disabilities and require a similar set of supportive services in a supportive housing environment.

(b) A detailed description of the service needs of the proposed population.

(c) A detailed description of the supportive services proposed to be provided to the anticipated occupancy, including:

(1) The name(s) of the agency(s) which will be responsible for providing supportive services and evidence of the service provider's capability and experience in providing such supportive services;

(2) The manner in which such services will be provided (i.e., how, when and how often, where (on/off-site), including assurances that the proposed residents will receive supportive services based on their individual needs.

(3) The staffing plan, including a description of the qualifications of residential staff, if any, and other staff necessary to provide the proposed services.

(d) Identification of the extent of state and local funds available to assist in the provision of supportive services.

(e) Letters of intent from service providers or funding sources, indicating commitments to fund or provide the supportive services or that a particular service will be available to project residents.

(f) If the Sponsor will be the sole service provider using its own funds, a letter indicating its capability and commitment to either provide the supportive services or ensure their provision for the life of the project.

(g) If any state or local government funds will be provided, a description of the state/local agency's philosophy/policy concerning residential facilities for the population to be served as well as a demonstration by the Sponsor that the application is consistent with state or local plans and policies governing the development and operation of facilities for the same disabled population.

(h) Form HUD 92013E, Supplemental Application Processing Form—Housing for Persons with Disabilities. Identify all supportive services, if any, to be provided to the persons occupying such housing.

20. A written description of the design of the proposed housing, including:

(a) The development method;

(b) Identification of the number and type of structure(s), and for an independent living facility, the number of units by bedroom type and the number of residents with disabilities, and for a group home, the number of bedrooms and number of residents with disabilities;

(c) An identification of all community spaces, amenities or features planned for the housing. A description of how the spaces, amenities or features will be utilized and of the extent to which they are necessary to accommodate any special needs of the proposed residents and the provision of any on-site supportive services also must be included. If these community spaces, amenities, or features would not comply with the design and cost standards of § 890.220, the Sponsor must demonstrate its ability and willingness to contribute both the incremental development cost and continuing operating cost associated with the community spaces, amenities or features; and

(d) Describe if and how the project will promote energy efficiency and if applicable, innovative construction or rehabilitation methods or technologies to be used that will promote efficient construction.

21. For group homes to be licensed as intermediate care facilities (in which funding for the intermediate care is provided under Title XIX of the Social Security Act) that serve persons with developmental disabilities, the following must be submitted:

(a) Evidence demonstrating that the proposed project will primarily provide housing rather than medical facilities, and is or will be licensed by appropriate State agencies;

(b) Description of the medical training of the staff of the proposed facility and any nursing services that will be required by the residents on-site;

(c) Description of the services that will be funded by Medicaid for residents of the proposed project, including their nature, frequency and where the services are to be provided;

(d) Description of any special design features proposed for the group home that are not common to other section 811 group homes for the proposed population and the Sponsor's rationale for including them;

(e) Written evidence that the State Medicaid Office recognizes the need for a tenant contribution to rent and has agreed to pay the cost of the tenant contribution in the Medicaid payment to the Owner; and

(f) Statement certifying that the Individual Program Plan for each resident will include participation in an out-of-the-home activity program for at least 6 hours each workday.

IV. Additional Information

A. Sites

The National Affordable Housing Act requires Sponsors submitting applications for section 811 fund reservations to provide either (a) evidence of site control, or (b) reasonable assurances that it will have control of a site within 6 months of notification of fund reservation. Accordingly, if a Sponsor has control of a site at the time it submits its application, it must include evidence of such as described in § 890.265. If it does not have site control, it must provide the information required in § 890.265 as a reasonable assurance that site control will be obtained within 6 months of fund reservation notification.

Sponsors may select a site different from the one(s) submitted in their original applications if the original site is not approvable. Selection of a different site will require HUD performance of an environmental review on the new site, which could result in rejection of that site. However, if a Sponsor does not have site control for any reason 12 months after notification of fund reservation, the assistance will be recaptured and reallocated.

Sponsors submitting satisfactory evidence of an approvable site (*i.e.*, site control) will compete against each other in Category A. Sponsors submitting proper identification of a site will compete against each other in Category B. HUD first shall select applications in the descending order of funding priority from Category A that most closely approximates the capital advance authority provided to the allocation area. If capital advance authority remains after selecting all approvable applications from Category A, HUD shall then select applications in the descending order of funding priority from Category B that most closely approximates the capital advance authority remaining in the allocation area.

Applications containing evidence of site control where either the evidence or the site is not approvable will *not* be rejected provided the application indicates the Sponsor's willingness to select another site and an assurance that site control will be obtained within 6 months of fund reservation notification. Such applications will compete for selection in Category B. However, only those applications where the evidence of site control was not approvable will be eligible to receive any of the possible 17 points under selection criteria (b)(2) and (3) (see I.D.3.(b)(2) and (3) above). Applications where the site was rejected

will receive 0 points under selection criteria (b)(2) and (3).

V. Other Matters

A. Environmental Impact

A Finding of No Significant Impact with respect to the environment has been made in accordance with HUD regulations that implement section 101(2)(C) of the National Environmental Policy Act of 1969, 42 U.S.C. 4332. The Finding of No Significant Impact is available for public inspection during business hours in the Office of the Rules Docket Clerk, Office of General Counsel, room 10276, Department of Housing and Urban Development, 451 Seventh Street, Southwest, Washington, DC 20410.

B. Federalism Executive Order

The General Counsel, as the Designated Official under section 6(a) of Executive Order No. 12612, Federalism, has determined that this NOFA does not have substantial direct effects on States or their political subdivisions, or on the relationship between the Federal government and the States, or on the distribution of power and responsibilities among the various levels of government. This NOFA merely notifies the public of the availability of capital advances for supportive housing for persons with disabilities.

C. Family Executive Order

The General Counsel, as the Designated Official under Executive Order No. 12606, The Family, has determined that this NOFA does not significantly affect family formation, maintenance, or general well-being, and, thus, is not subject to review under the order.

D. Documentation and Public Access Requirements: HUD Reform Act

HUD will ensure that documentation and other information regarding each application submitted pursuant to this NOFA are sufficient to indicate the basis upon which assistance was provided or denied. This material, including any letters of support, will be made available for public inspection for a five-year period beginning not less than 30 days after the award of the assistance. Material will be made available in accordance with the Freedom of Information Act (5 U.S.C. 552) and HUD's implementing regulations at 24 CFR part 15. In addition, HUD will include the recipients of assistance pursuant to this NOFA in its quarterly **Federal Register** notice of all recipients of HUD assistance awarded on a competitive basis. (See CFR 12.14(a) and 12.16(b), and the notice published in the **Federal Register** on January 16, 1992 (57 FR 1942), for further information on these requirements.)

E. HUD Reform Act

HUD's regulation implementing section 103 of the Department of Housing and Urban Development Reform Act of 1989 was published May 13, 1991 (56 FR 22088) and became effective on June 12, 1991. That regulation, codified as 24 CFR part 4, applies to the funding competition announced today. The requirements of the rule continue to apply until the announcement of the selection of successful applicants.

HUD employees involved in the review of applications and in the making of funding decisions are restrained by part 4 from providing advance information to any person (other than an authorized employee of HUD) concerning funding decisions, or from otherwise giving any applicant an unfair competitive advantage. Persons who apply for assistance in this competition should confine their inquiries to the subject areas permitted under 24 CFR part 4.

Applicants who have questions should contact the HUD Office of Ethics (202) 708–3815 (TDD/Voice). (This is not a toll-free number.) The Office of Ethics can provide information of a general nature to HUD employees, as well. However, a HUD employee who has specific program questions, such as whether particular subject matter can be discussed with persons outside the Department, should contact his or her Regional or Field Office Counsel, or Headquarters counsel for the program to which the question pertains.

F. Lobbying

Section 13 of the Department of Housing and Urban Development Act (42 U.S.C. 3537b) contains two provisions dealing with efforts to influence HUD's decisions with respect to financial assistance. The first imposes disclosure requirements on those who are typically involved in these efforts—those who pay others to influence the award of assistance or the taking of a management action by the Department and those who are paid to provide the influence. The second restricts the payment of fees to those who are paid to influence the award of HUD assistance, if the fees are tied to the number of housing units received or are based on the amount of assistance received, or if they are contingent upon the receipt of assistance.

Section 13 was implemented by final rule published in the **Federal Register** on May 17, 1991 (56 FR 22912). If readers are involved in any efforts to influence the Department in these ways, they are urged to read the final rule, particularly the examples contained in Appendix A of the rule.

Any questions regarding the rule should be directed to the Director, Office of Ethics, room 2158, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410. Telephone: (202) 708–3815 TDD/Voice). (This is not a toll-free number.) Forms necessary for compliance with the rule may be obtained from the local HUD office.

G. Prohibition Against Lobbying Activities

The use of funds awarded under this NOFA is subject to the disclosure requirements and prohibitions of Section 319 of the Department of Interior and Related Agencies Appropriations Act for Fiscal Year 1990 (31 U.S.C. 1352) and the implementing regulations at 24 CFR part 87. These authorities prohibit recipients of federal contracts, grants or loans from using appropriated funds for lobbying the Executive or Legislative Branches of the Federal Government in connection with a specific contract, grant or loan. The prohibition also covers the awarding of contracts, grants, cooperative agreements or loans unless the recipient has made an acceptable certification regarding lobbying. Under 24 CFR part 87, applicants, recipients and subrecipients of assistance exceeding $100,000 must certify that no federal funds have been or will be spent on lobbying activities in connection with the assistance.

H. Catalog of Federal Domestic Assistance Program

The Catalog of Federal Domestic Assistance Program title and number is 14.181, Supportive Housing for Persons with Disabilities.

Authority: Section 811, National Affordable Housing Act, as amended (42 U.S.C. 8013), section 7(d), Department of Housing and Urban Development Act (42 U.S.C. 3535(d)).

Dated: April 2, 1993.

James E. Schoenberger,

Associate General Deputy, Assistant Secretary.

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Office of the Assistant Secretary for Housing; Federal Housing Commissioner

24 CFR Part 889

[Docket No. R-93-1652; FR-3407-I-01]

RIN 2502-AF98

Supportive Housing for the Elderly

AGENCY: Office of Assistant Secretary for Housing—Federal Housing Commissioner, HUD.

ACTION: Interim rule.

SUMMARY: This interim rule amends the Supportive Housing for the Elderly Program (24 CFR part 889) by adding amendments made by sections 602 (b), (c), (d), (f) and (g) and 913 of the Housing and Community Development Act of 1992 and by simplifying the application and selection process. These revisions are necessary in order to permit the funding of supportive housing for the elderly in FY1993 and effectuate the purposes of the HCD Act of 1992. A companion Notice of Funding Availability (NOFA) is also published today elsewhere in this issue.

DATES: *Effective date:* June 4, 1993.

Comments due date: July 6, 1993.

ADDRESSES: Interested persons are invited to submit comments regarding this rule to the Rules Docket Clerk, Office of the General Counsel, room 10276, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410–0500. Communications should refer to the above docket number and title. A copy of each communication submitted will be available for public inspection during regular business hours (weekdays 7:30 a.m. to 5:30 p.m.) at the above address.

Hearing or speech impaired individuals may call the Rules Docket Clerk's TDD number (202) 708–3259.

The telephone numbers listed are not toll-free.

FOR FURTHER INFORMATION CONTACT: Robert Wilden, Director, Housing for Elderly and Handicapped People Division, Department of Housing and Urban Development, 451 Seventh Street SW., room 6116, Washington, DC 20410, telephone (202) 708–2730. (This is not a toll free number).

Hearing or speech impaired individuals may call HUD's TDD number (202) 708–4594. (This is not a toll free number).

SUPPLEMENTARY INFORMATION:

I. Paperwork Burden

The information collection requirements contained in this interim rule have been approved by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1980 (44 U.S.C. 3501–3520), and assigned OMB control number 2502–0267).

II. Background

A. Part 889

The new Supportive Housing for the Elderly Program has been the subject of interim rules, published on June 12, 1991 at 56 FR 27104, and published on August 12, 1992 at 57 FR 36338. The June 12, 1991 interim rule enabled supportive housing for the elderly to be funded for FY 1991, added a new part 889 to establish the new Supportive Housing for the Elderly Program and covered application procedures and program requirements, selection of applications and duration of fund reservation requirements. The August 12, 1992 interim rule provided for the development related requirements (closing of capital advances and requirements related to project rental assistance contracts) of the Supportive Housing for the Elderly Program.

The Supportive Housing for the Elderly Program is authorized by section 202 of the Housing Act of 1959, as amended by section 801 of the Cranston-Gonzalez National Affordable Housing Act (the NAHA Act) and by the Housing and Community Development Act of 1992, Public Law 102–550, 106 Stat. 3672, enacted October 28, 1992 (HCD Act of 1992) and is to enable elderly persons to live with dignity and independence by expanding the supply of supportive housing that is designed to accommodate the special needs of elderly persons and provides a range of services that are tailored to the needs of elderly persons occupying such housing.

Under part 889, assistance is provided to private nonprofit organizations and nonprofit consumer cooperatives to expand the supply of supportive housing for the elderly. Such assistance will be provided as (1) capital advances and (2) project rental assistance contracts. Capital advances may be used to finance the construction or rehabilitation of a structure, or acquisition of a structure from the Resolution Trust Corporation (RTC), to be used as supportive housing for the elderly. This assistance may also cover the cost of real property acquisition, site improvement, conversion, demolition, relocation, and other expenses that the Secretary determines are necessary to expand the supply of supportive housing for the elderly.

An overview and section by section summary of part 889 (subparts A, B, C, D, and G) were included in the preamble to the June 12, 1991 interim rule. An overview and section by section summary of part 889 (subparts D (revised) and E) were included in the preamble to the August 12, 1992 interim rule.

B. Revisions to Part 889

Sections 601, 602 and 913 of the Housing and Community Development Act of 1992 (HCD Act of 1992) amended section 202 of the Housing Act of 1959. This interim rule incorporates amendments made by section 602 (b), (c), (d), (f) and (g) and 913 of the HCD Act of 1992 and revises Part 889 by simplifying the application and selection process.

Of special interest is the repeal of the requirement for State and local certification of services (former section 202(e)(5) of the Housing Act of 1959, and former § 889.270(c)(20)), the additional consideration in the selection criteria of the availability of public housing for the elderly and vacancy rates in such facilities (see revised § 889.300(d)(2)(i) which considers the availability and vacancy rates of public housing within the selection criteria of the availability of Federally assisted housing, HUD and FmHA, for the elderly and the occupancy and vacancy situation in such facilities), the reduction in the owner deposit in the case of nonprofit applicant that is not affiliated with a national sponsor (see revised § 889.250(b)), and the reduction to the nonmetropolitan allocation (reduced from 20 percent to 15 percent (see revised § 889.300(e)).

Pursuant to section 602(d) of the HCD Act of 1992, a new Subpart H—Elder Cottage Housing Demonstration Program is added to part 889 and provides that the Secretary shall carry out a program to determine the feasibility of including, as an eligible development cost under section 202 of the Housing Act of 1959, the cost of purchasing and installing elder cottage housing opportunity units that are small, free-standing, barrier-free, energy efficient, removable, and designed to be installed adjacent to existing 1- to 4-family dwellings. In conducting the demonstration the Secretary shall determine whether the durability of such units is appropriate for making such units generally eligible for assistance under the Supportive Housing for the Elderly Program. The Secretary will publish within the next few months, a NOFA with guidelines for this demonstration program.

Section 913 of the HCD Act of 1992 amended section 202's labor standards. The labor standards, as amended, require all laborers and mechanics employed by contractors and subcontractors in the construction of housing with 12 or more units assisted under section 202 to be paid wages at rates not less than those prevailing in the locality, as determined by the Secretary of Labor in accordance with the Davis-Bacon Act.

Minor editorial changes have been made to the definitions. The definition of Owner is clarified by describing the nonprofit as a "single purpose private nonprofit organization" and clarifying the requirement that no "Board" member of the Owner may benefit from the net earnings of the corporation. The definition of Sponsor is amended by excluding supportive services contracts from the conflict of interest prohibition. Identical amendments are made to § 889.235, Prohibited relationships.

The notice of fund availability requirements (§ 889.205) is amended by eliminating the former requirement to publish Invitations for Applications (§ 889.205 (a)(2) and (b)). The NOFA will serve as the invitation and the Field Office shall notify elderly and minority media, all persons and organizations on their mailing lists and minority and other organizations involved in housing and community development within their jurisdiction, end groups with a special interest in housing for the elderly, including the State and area agencies on aging and the applicable state single point of contact, of the NOFA.

The Virgin Islands are added as a high construction cost area in § 889.245, Development cost limits.

Additional changes have been made to application content, the selection process and selection criteria to simplify the process and reduce paperwork. For example, a new form HUD–92015–CA, simplifies, standardizes and condenses the information formerly required by § 889.270(b). The CHAS certification has been revised to reflect recent changes to the CHAS regulation. Standard certifications have been grouped together and authorities cited have been updated (e.g., addition of Americans with Disabilities Act).

The selection process has been simplified to include only initial screening and technical process. Applications will be initially reviewed to determine if all parts of the application are included. HUD will not review the content of the application as part of initial screening. Deficiency letters will be sent informing Sponsors of any missing parts of the application. Sponsors must correct such deficiencies within 14 calendar days from the date of the deficiency letter. All applications will be placed in technical processing upon receipt of the response to the deficiency letter or at the end of the 14-day period. All applications will undergo a complete analysis. All applications will be either rated or technically rejected at the end of technical processing. The Secretary will not reject an application based on technical processing without giving notice of that rejection with all rejection reasons, and affording the applicant an opportunity to appeal. Technical processing will also include civil rights compliance.

The selection criteria have been regrouped to follow the statutory selection criteria and no longer include the financial capacity of the Sponsor. HUD will review financial capacity at the time of conditional or firm commitment (where project proceeds directly to firm commitment.)

The Department plans to issue this fiscal year a final rule for the Supportive Housing for the Elderly Program which will incorporate public comment received to date on the part 889 interim rules, including this interim rule.

This interim rule furthers the legislative mandate of the HCD Act of 1992 and allows the program to continue operation in FY 1993. The Department is publishing this rule as interim because it will increase efficiency, reduce unnecessary requirements, combine or simplify current requirements, and provide new flexibility for HUD and program applicants. Many of the changes are of a technical/clarifying nature. The major changes made by this interim rule are statutorily required by the HCD Act of 1992, but do not affect the types of projects funded. These changes involve minor interpretation of the HCD Act of 1992. Publishing this rule as interim also ensures a timely and simplified funding round for FY 1993.

III. Other Matters

A Finding of No Significant Impact with respect to the environment has been made in accordance with HUD regulations at 24 CFR part 50 implementing section 102(2)(C) of the National Environmental Policy Act of 1969, 42 U.S.C. 4332. The Finding of No Significant Impact is available for public inspection and copying between 7:30 a.m. and 5:30 p.m. weekdays at the Office of the Rules Docket Clerk, 451 Seventh Street, SW., room 10276, Washington, DC 20410–0500.

This rule does not constitute a "major rule" as that term is defined in section 1(b) of the Executive Order on Federal Regulations issued on February 17, 1989. Analysis of the rule indicates that it does not:

(1) Have an annual effect on the economy of $100 million or more;

(2) Cause a major increase in costs or prices for consumers, individual industries, Federal, State or local government agencies, or geographic regions; or

(3) Have a significant adverse effect on competition, employment, investment, productivity, innovation, or on the ability of United States-based enterprises to compete with foreign-based enterprises in domestic or export markets.

Under 5 U.S.C. 605(b), (the Regulatory Flexibility Act), the undersigned hereby certifies that this rule does not have a significant economic impact on a substantial number of small entities. The rule would provide capital advances to private nonprofit organizations and nonprofit consumer cooperatives to expand the supply of supportive housing for the elderly. Although small entities will participate in the program, the rule would not have a significant impact on them.

On February 26, 1990, the Department published an interim rule (24 CFR part 87) advising recipients and subrecipients of Federal contracts, grants, cooperative agreements and loans of a new prohibition recently mandated by Congress. Section 319 of the Department of the Interior Appropriations Act (Pub. L. 101–121, approved October 23, 1989) generally prohibits recipients of Federal contracts, grants, and loans from using appropriated funds for lobbying the Executive or Legislative branches of the Federal Government in connection with a specific contract, grant, or loan. The interim rule generally prohibits the awarding of contracts, grants, cooperative agreements, or loans unless the recipient has made an acceptable certification regarding lobbying. In addition, the recipient must also file a disclosure if it has made or has agreed to make any payment with nonappropriated funds that would be prohibited, if paid with appropriated funds.

Family Impact

The General Counsel, as the Designated Official for Executive Order 12606, the Family, has determined that the provisions of this rule will not have a significant impact on family formation, maintenance or well being.

Federalism Impact

(i) The membership of which is

nonprofit affiliate, only two such

affiliate serve as nonvoting directors on

materials, forms, and exhibits listed in

deadline announced in the NOFA or if

VOL 58 ISS 85 MY 5 1993 UMI

Federalism Impact

The General Counsel, as the Designated Official under section 6(a) of Executive Order 12611—Federalism, has determined that the rule does not involve the preemption of State law by Federal statute or regulation and does not have federalism impacts.

This interim rule was listed as item 1481 in the Department's Semiannual Agenda of Regulations published on April 26, 1993 (58 FR 24382, 24418) under Executive Order 12291 and the Regulatory Flexibility Act.

The Catalog of Federal Domestic Assistance Program title and number is 14.157, Housing for the Elderly or Handicapped.

List of Subjects in 24 CFR Part 889

Aged, Capital advance programs, Grant programs—housing and community development, Loan programs—housing and community development, Low and moderate income housing, Rent subsidies, Reporting and recordkeeping requirements.

Accordingly, the Department amends 24 CFR part 889 as set forth below:

PART 889—[AMENDED]

1. The authority citation for part 889 continues to read as follows:

Authority: 12 U.S.C. 1701q, 42 U.S.C. 3535(d).

2. Section 889.105 is amended by adding a new definition for "National sponsor" in alphabetical order; and by revising the definitions for "Owner" and "Sponsor", to read as follows:

§ 889.105 Definitions.

* * * * *

National sponsor means a Sponsor which has one or more section 202 (24 CFR part 885 or 889) or one or more section 811 (24 CFR part 890) project(s) under reservation, construction or management in two or more different HUD Regions.

* * * * *

Owner means a single purpose private nonprofit organization which may be established by the Sponsor and which will receive a capital advance and project rental assistance payments to develop and operate supportive housing for the elderly as its legal owner. Private nonprofit organization means any incorporated private institution or foundation:

(1) No part of the net earnings of which inures to the benefit of any member, founder, contributor, or individual;

(2) Which has a governing board.

(i) The membership of which is selected in a manner to assure that there is significant representation of the views of the community in which such housing is located, and

(ii) Which is responsible for the operation of the housing assisted under this part; and

(3) Which is approved by the Secretary as to administrative and financial responsibility.

Owner does not mean a public body or the instrumentality of any public body. The purpose of the Owner must include the promotion of the welfare of the elderly. The Owner may not be controlled by or under the direction of persons or firms seeking to derive profit or gain therefrom. Because of the nonprofit nature of the section 202 program, no office or director, or trustee, Board member, stockholder or authorized representative of the Owner is permitted to have any financial interest in any contract in connection with the rendition of services, the provision of goods or supplies, project management, procurement of furnishings and equipment, construction of the project, procurement of the site or other matters whatsoever.

* * * * *

Sponsor means any private nonprofit entity:

(1) No part of the net earnings of which inures to the benefit of any private shareholder, member, founder, contributor or individual;

(2) Which entity is not controlled by, or under the direction of persons or firms seeking to derive profit or gain therefrom; and

(3) Which is approved by the Secretary as to administrative and financial capacity and responsibility.

"Sponsor" does not mean a public body or the instrumentality of a public body. Because of the nonprofit nature of the section 202 program, no officer or director of the Sponsor is permitted to have any financial interest in any contract with the Owner in connection with the rendition of services, the provision of goods or supplies, procurement of furnishings and equipment, construction of the project, procurement of the site or other matters whatsoever. The prohibition in the preceding sentence does not apply to any management contracts and/or supportive services contracts (including the management fees associated therewith) entered into by the Owner with the Sponsor or its nonprofit affiliate. In the case of a Sponsor or its nonprofit affiliate managing or servicing the project where persons are in a paid capacity with either the Sponsor or nonprofit affiliate, only two such persons would be permitted to serve as directors of the nonprofit organization (Owner) and only in a non-voting capacity.

* * * * *

3. Section 889.205 is revised to read as follows:

§ 889.205 Notice of fund availability.

(a) *Announcement of fund availability.* Following an allocation of authority under § 889.200, HUD shall publish a Notice of Fund Availability (NOFA) in the **Federal Register** indicating:

(1) The amount of capital advance authority (and approximate number of units) being made available for housing for elderly households within the Field Office;

(2) The deadline date for receipt of applications; and

(3) Other appropriate guidance to prospective Sponsors.

(b) *Other notifications.* Immediately after the NOFA is published, the Field Office shall notify elderly and minority media, all persons and organizations on their mailing lists and minority and other organizations involved in housing and community development within their jurisdiction, and groups with a special interest in housing for the elderly, including the State and area agencies on aging and the applicable state single point of contact (Executive Order 12372).

4. Section 889.235 is amended by revising paragraphs (a) and (d) to read as follows:

§ 889.235 Prohibited relationships.

(a) *Conflicts of interest.* Officers, directors, trustees, Board members, stockholders and authorized representatives of the Sponsor, and officers and directors of the Owner may not have any financial interest in any contract in connection with the rendition of services, the provision of goods or supplies, project management, procurement of furnishings or equipment, construction of the project, procurement of the site or other matters related to the development and operation of the project. This restriction applies so long as the individual is serving on the Board and for a period of three years following resignation or final closing, whichever occurs later. Management contracts and/or supportive services contracts (including associated management or service fees) entered into by the Owner with the Sponsor or the Sponsor's nonprofit affiliate will not constitute a conflict of interest if no more than two persons salaries by the Sponsor or management

affiliate serve as nonvoting directors on the Owner's board of directors.

* * * * *

(d) *Identity of interest.* A person or an entity may not provide services to a project in more than one of the following capacities: attorney, architect, contractor, housing consultant, management agent service provider, or seller of the site for the project, except that the same person or entity may serve a project as management agent and housing consultant. The prohibition of an identity of interest between development team members applies until two years after final closing.

§ 889.245 [Amended]

5. Section 889.245(a)(3)(ii) is amended by adding "Virgin Islands" after "Guam".

6. Section 889.250 is amended by designating the existing text as paragraph (a) and adding a heading and a new paragraph (b) to read as follows:

§ 889.250 Owner deposit (Minimum Capital Investment).

(a) *General.* * * *

(b) *Reduction in owner deposit.* If an Owner does not have a National Sponsor or does not have a National Sponsor as a co-Sponsor, the Minimum Capital Investment shall be one-half of one percent (0.5%) of the HUD-approved capital advance, but not to exceed $10,000.

7. Section 889.265(d) is revised to read as follows:

§ 889.255 Other Federal requirements.

* * * * *

(d) *Labor standards.*

(1) All laborers and mechanics (other than volunteers under the conditions set out in 24 CFR part 70) employed by contractors and subcontractors in the construction of housing with 12 or more units assisted under this part shall be paid wages at rates not less than those prevailing in the locality, as determined by the Secretary of Labor in accordance with the Davis-Bacon Act (40 U.S.C. 276a–276a–5).

(2) Contracts involving employment of laborers and mechanics shall be subject to the provisions of the Contract Work Hours and Safety Standards Act (40 U.S.C. 327–333).

(3) Sponsors, Owners, contractors and subcontractors must comply with all related rules, regulations and requirements.

8. Section 889.270 is revised to read as follows:

§ 889.270 Application contents.

(a) *Application.* Each application shall include all of the information, materials, forms, and exhibits listed in paragraph (b) of this section. The Field Office will base it determination of the eligibility of the Sponsor for a reservation of section 202 capital advance funds on the information provided in the application.

(b) *General application requirements.* Each application shall include:

(1) Application for Section 202 Supportive Housing Capital Advance.

(2) Evidence of *each* Sponsor's legal status as a private, nonprofit organization or nonprofit consumer cooperative, including the following:

(i) Articles of Incorporation, constitution, or other organizational documents;

(ii) By-laws;

(iii) IRS tax exemption ruling (this must be submitted by all Sponsors, including churches). A nonprofit organization organized in the Commonwealth of Puerto Rico and exempt from income taxation under Puerto Rico law, or a consumer cooperative that is tax exempt under State law, has never been liable for payment of Federal income taxes, and does not pay patronage dividends may be exempt from the requirement set out in the previous sentence if they are not eligible for tax exemption; and

(iv) Resolution of the board, duly certified by an officer, that no officer or director of the Sponsor or Owner has or will have any financial interest in any contract with the Owner or in any firm or corporation which has or will have a contract with the Owner and which includes a current listing of all duly qualified and sitting officers and directors by title and the beginning and ending date of each person's term.

(3) The Sponsor must submit a certification by the jurisdiction in which the proposed project will be located that the Sponsor's application is consistent with the jurisdiction's HUD-approved CHAS. The certification must be made by the unit of general local government or the State, pursuant to the CHAS regulations at 24 CFR 91.1(b)(1)(ii), and as may be further described in the NOFA. The CHAS certification is not required where the proposed project will be located in the Insular Area of Guam, the U.S. Virgin Islands, American Samoa or the Northern Mariana Islands. Unless otherwise set forth in the NOFA, the required certification must be submitted by the application submission deadline announced in the NOFA. The jurisdiction required to make the certification must therefore get its CHAS approved by HUD in time for the certification to be submitted by the applicable deadline, i.e., the application deadline announced in the NOFA or if the NOFA permits a later submission date for the certification, the later date. (HUD has 60 days to approve a CHAS.) However, in no event will an application be considered for funding if the required CHAS has not been submitted for HUD approval by the application deadline. All certifications must be signed by the public official responsible for submitting the CHAS to HUD, and must meet the requirements of the CHAS regulations at 24 CFR 9.180 (a) or (b), "Consistency certifications."

(4) A certification that the Sponsor has submitted a copy of its application, if required, to the State agency (single point of contact) for State review in accordance with Executive Order 12372.

(5) A certification on the Application for Federal Assistance form that the Sponsor(s) is not delinquent on the repayment of any Federal debt.

(6) Anti-lobbying Certification for Contracts, Grants, Loans and Cooperative Agreements for grants exceeding $100,000. Disclosure of Lobbying Activities if other than federally appropriated funds will be or have been used to lobby the Executive or Legislative branches of the Federal Government regarding specific contracts, grants, loans or cooperative agreements. The applicant determines if the submission is warranted.

(7) A statement that:

(i) Identifies all persons (families, individuals, businesses and nonprofit organizations) (identified by race/minority group, and status as owners or tenants) occupying the property on the date of submission of the application for capital advance;

(ii) Indicates the estimated cost of relocation payments and other services; and

(iii) Identifies the staff organization that will carry out the relocation activities.

[**Note:** If any of the relocation costs will be funded from sources other than the Section 202 Capital Advance, the Sponsor must provide evidence of firm commitment of these funds. When evaluating applications, HUD will consider the total cost of proposals (*i.e.*, cost of site acquisition, relocation, construction and other project costs).]

(8)(i) A certification of the Sponsor(s)' intent to comply with section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) and the implementing regulations at 24 CFR part 8; the Fair Housing Act (42 U.S.C. 3600–3619) and the implementing regulations at 24 CFR parts 100, 108, 109, and 110; title VI of the Civil Rights Act of 1964 (42 U.S.C. 2000d) and the implementing regulations at 24 CFR part 1; section 3 of the Housing and Urban Development

Act of 1968 (12 U.S.C. 1701u) and the

(11) A description of the Sponsor's

the contract of sale for the site, a deed,

rezoning on land in similar zoning

of any missing parts of the application

(FEMA) as having special flood hazards

VOL 58 ISS 85 MY 5 1993 UMI

Act of 1968 (12 U.S.C. 1701u) and the implementing regulations at 24 CFR part 135; the Age Discrimination Act of 1975 (42 U.S.C. 6101–6107) and the implementing regulations at 24 CFR part 146; Executive Order 11246 (as amended) and the implementing regulations at 41 CFR chapter 60; the regulations implementing Executive Order 11063 (Equal Opportunity in Housing) at 24 CFR part 107; the Americans with Disabilities Act (42 U.S.C. 12101 *et seq.*) to the extent applicable; the affirmative fair housing marketing requirements at 24 CFR part 200, subpart M; and other applicable Federal, State and local laws prohibiting discrimination and promoting equal opportunity.

(ii) A certification that the Sponsor(s) will comply with the requirements of the Drug-Free Workplace Act.

(iii) A certification that the project will comply with HUD's design and cost standards, the Uniform Federal Accessibility Standards and HUD's implementing regulations at 24 CFR part 40, section 504 of the Rehabilitation Act of 1973 and HUD's implementing regulations at 24 CFR part 8, and for covered multifamily dwellings for first occupancy after March 31, 1991, the design and construction requirements of the Fair Housing Act and HUD's implementing regulations at 24 CFR part 100.

(iv) A certification by the Sponsor(s) that it will comply (or has complied) with the acquisition and relocation requirements of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as amended (URA), implemented by regulations at 49 CFR part 24, and 24 CFR 889.265(e).

(v) A certification by the Sponsor(s) that it will form an Owner (as defined in § 889.105) after the issuance of the capital advance, will cause the Owner to file a request for determination of eligibility and a request for capital advance under § 889.300, and will provide sufficient resources to the Owner to ensure the development and long-term operation of the project.

(9) A description of Sponsor's purposes and activities, ties to the community and minority support and how long it has been in existence (include any additional related information).

(10) A description of any other rental housing projects and/or medical facilities, sponsored, owned and operated by the Sponsor including a description of experience in providing housing and/or medical facilities to the elderly and/or families and minorities.

(11) A description of the Sponsor's past or current involvement in any programs other than housing (including its provision of services) that demonstrates the Sponsor's management capabilities and experience, including a description of the Sponsor's experience in serving the elderly and/or families and minorities.

(12) A description of the Sponsor's experience in contracting with minority and women-owned businesses, including amounts awarded.

(13) A certified Board Resolution, acknowledging responsibilities of sponsorship, long-term support of the project(s), willingness of Sponsor to assist the Owner to develop, own, manage and provide appropriate services in connection with the proposed project, and that it reflects the will of its membership. Also, evidence, in the form of a certified Board Resolution, of the Sponsor's willingness to fund the Minimum Capital Investment.

(14) A list of the applications, if any, the Sponsor has submitted or is planning to submit to any other Field Office in response to current NOFAs under part 889 or 24 CFR part 890. Indicate by Field Office, the number of units requested for each application. A list of all prior year projects to which the Sponsor(s) is a party, identified by project number and Field Office, which has not been finally closed.

(15) Applicant/Recipient Disclosure/Update Report, including Social Security Numbers or Employee Identification Numbers.

(16) A description of the category or categories of elderly persons the housing is intended to serve and evidence demonstrating sustained effective demand for supportive housing for that population in the market area to be served; taking into consideration the occupancy and vacancy conditions in existing Federally assisted housing for the elderly (HUD and FmHA) (e.g., public housing), state or local data on the limitations in activities of daily living among the elderly in the area, aging in place in existing assisted rentals, trends in demographic changes in elderly population and households, the numbers of income eligible elderly households by size, tenure and housing condition, and the types of supportive services arrangements currently available in the area and the utilization of such services as evidenced by data from local social service agencies or agencies on aging.

(17) Include evidence that the Sponsor has entered into a legally binding option agreement to buy or lease the proposed site; or has a copy of the contract of sale for the site, a deed, long-term leasehold, a request with all supporting documentation, submitted either prior to or with the Application for Capital Advance, for a partial release of a site covered by a mortgage under a HUD program or other evidence of legal ownership of the site (including properties to be acquired from the RTC). The option agreement period must extend through the end of the current fiscal year and contain a renewal provision so that the option can be renewed for at least an additional six months. The Sponsor must also identify any restrictive covenants, including reverter clauses. In the case of a site to be acquired from a public body, evidence that the public body possesses clear title to the site, and has entered into a legally binding agreement to lease or convey the site to the Sponsor after it receives and accepts a notice of section 202 capital advance and identification of any restrictive covenants, including reverter clauses. However, in localities where HUD determines the time constraints of the funding round will not permit all of the required official actions (e.g., approval of Community Planning Boards) which are necessary to convey publicly-owned sites, a letter in the application from the Mayor or Director of the appropriate local agency indicating approval of conveyance of the site contingent upon the necessary approval action is acceptable and may be approved by the Field Office if it has had satisfactory experience with timely conveyance of sites from that public body. In such cases, documentation shall also include a copy of the public body's evidence of ownership and identification of any restrictive covenants, including reverter clauses. For properties to be acquired from the RTC, include a copy of the RTC prepared Transaction Screen Checklist or Phase I Environmental Site Assessment, and applicable documentation, per the RTC Environmental Guidelines.

Note: A proposed project site may not be acquired or optioned from a general contractor (or its affiliate) which will construct the section 202 project or from any other development team member.

Include evidence that the project as proposed is permissible under applicable zoning ordinances or regulations, or a statement of the proposed action required to make the proposed project permissible and the basis for belief that the proposed action will be completed successfully before the submission of the commitment application (e.g., a summary of the results of any recent requests for

rezoning on land in similar zoning classifications and the time required for such rezoning, preliminary indications of acceptability from zoning bodies).

(18) Narrative description of site and area surrounding the site, characteristics of neighborhood, how the site will promote greater housing opportunities for minorities, and any other information that impacts on the suitability of the site for the elderly.

(19) A map showing the location of the site and the racial composition of the neighborhood, with the area of racial concentration delineated.

(20) Provision of supportive services and proposed facility.

(i) A detailed description of the supportive services proposed to be provided to the anticipated occupancy.

(ii) Supplemental Application Processing Form—Housing for the Elderly. Identify all supportive services, if any, to be provided to the persons occupying such housing.

(iii) A description of public or private sources of assistance that reasonably could be expected to fund the proposed services.

(iv) The manner in which such services will be provided to such persons (i.e., on- or off-site), including, whether a service coordinator will facilitate the adequate provision of such services, and how the services will meet the identified needs of the residents.

(v) Narrative description of the building design including a description of any special design features and community space, and how this design will facilitate the delivery of services in an economical fashion and accommodate the changing needs of the residents over the next 10–20 years.

(vi) Describe if and how the project will promote energy efficiency and if applicable, innovative construction or rehabilitation methods or technologies to be used that will promote efficient construction.

(Approved by the Office of Management and Budget under control number 2502–0267).

9. Section 889.300 is revised to read as follows:

§ 889.300 Review of applications for capital advance.

(a) *Initial Screening.* Applications for section 202 Capital Advances for housing for the elderly that are received by HUD at the appropriate address within the time period specified in the NOFA will be reviewed to determine if all parts of the application are included. HUD will not review the content of the application as part of initial screening.

(b) *Deficiency letters.* Deficiency letters will be sent informing Sponsors of any missing parts of the application. Sponsors must correct such deficiencies within 14 calendar days from the date of the deficiency letter. All applications will be placed in technical processing upon receipt of the response to the deficiency letter or at the end of the 14-day period.

(c) *Technical processing.*

(1) All applications will undergo a complete analysis. All applications will be either rated or technically rejected at the end of technical processing. The Secretary will not reject an application based on technical processing without giving notice of that rejection with all rejection reasons, and affording the applicant an opportunity to appeal. An applicant will be afforded 14 calendar days from the date of HUD's written notice to appeal a technical rejection to the Field Office. The Field Office must respond within 5 working days to the Sponsor. The Field Office shall make a determination on an appeal prior to making its selection recommendations.

(2) Technical processing will also assure that if the Sponsor has been found by a court or by a Federal, State, or local agency, in noncompliance with any of the statutes, regulations, or other requirements listed in the civil rights certification (§ 889.270(b)(8)(i)), HUD will obtain from the Sponsor a statement of the actions taken to correct that noncompliance. There must be no pending civil rights suits against the Sponsor instituted by the Department of Justice and no pending administrative actions for civil rights violations instituted by HUD (including a charge of discrimination under the Fair Housing Act). Moreover, there must not be a deferral of the processing of applications from the Sponsor imposed by HUD under Title VI of the Civil Rights Act of 1964, the Department's implementing regulations (24 CFR 1.8), procedures (HUD Handbook 8040.1), and the Attorney General's Guidelines (28 CFR 50.3); or under section 504 of the Rehabilitation Act of 1973 and the Department's implementing regulations (24 CFR 8.57).

(3)(i) Before project selection, the Field Office shall complete an environmental review in compliance with the National Environmental Policy Act of 1969 and the related authorities in 24 CFR part 50.

(ii) No financial assistance shall be approved for construction or rehabilitation of a structure or portion of a structure or acquisition from the Resolution Trust Corporation of a structure located in an area that has been identified by the Federal Emergency Management Agency (FEMA) as having special flood hazards unless:

(A)(*1*) The community in which the area is situated is participating in the National Flood Insurance Program in accordance with the regulations thereunder (44 CFR parts 59 through 79); or

(*2*) Less than a year has passed since FEMA notification regarding such hazards, and

(B) Flood insurance on the structure is obtained in compliance with section 102(a) of the Flood Disaster Protection Act of 1973 (42 U.S.C. 4001).

(iii) Pursuant to the Coastal Barrier Resources Act (16 U.S.C. 3601), HUD will not approve Applications for properties in the Coastal Barrier Resources System.

(4) Based on the factors set forth in this paragraph (c), the field office shall determine the Applications which, in its judgment, are approvable. Selections then shall be made in accordance with paragraph (e) of this section.

(d) *Selection criteria.* The selection criteria for assistance include:

(1) The Sponsor's ability to develop and operate the proposed housing on a long-term basis, considering the following:

(i) The scope, extent and quality of the Sponsor's experience in providing housing or related services to those proposed to be served by the project, and the scope of the proposed project (i.e., number of units, services, relocation costs, development, and operation) in relationship to the Sponsor's demonstrated development and management capacity;

(ii) The scope, extent and quality of the Sponsor's experience in providing housing or related services to minority persons or families;

(iii) The Scope, extent and quality of the Sponsor's experience in providing opportunities for minority and women-owned business enterprises participation; and

(iv) The extent of local community support for the Sponsor's activities, including previous experience in serving the area where the project is to be located, and Sponsor's demonstrated ability to enlist volunteers and local funds;

(2) The need for supportive housing for the elderly in the area to be served and the suitability of the site, considering:

(i) The extent of the need for the project in the area based on a determination by the Field Office, taking into consideration the Sponsor's evidence of need in the area based on the guidelines in § 889.270(b)(17), as well as other economic, demographic

and housing market data available, to

(iv) The extent to which the proposed

amended by removing the terms "Fund

DEPARTMENT OF HOUSING AND

and housing market data available, to the Field Office including, the availability of existing Federally assisted housing (HUD and FmHA) (e.g., considering the availability and vacancy rates of public housing) for the elderly and current occupancy in such facilities, Federally assisted housing for the elderly under construction or for which fund reservations have been issued, and in accordance with an agreement between HUD and the FmHA, comments from the FmHA on the demand for additional assisted housing and the possible harm to existing projects in the same housing market area;

(ii) The proximity or accessibility of the site to shopping, medical facilities, transportation, places of worship, recreational facilities, and other necessary services to the intended occupants, adequacy of utilities and streets, freedom of the site from adverse environmental conditions, compliance with site and neighborhood standards; and

(iii) Suitability of the site from the standpoint of promoting a greater choice of housing opportunities for minority elderly persons/families;

(3) The adequacy of the provision of supportive services and of the proposed facility considering:

(i) The extent to which the proposed design will meet the special physical needs of elderly persons;

(ii) The extent to which the proposed size and unit mix of the housing will enable the Sponsor to manage and operate the housing efficiently and ensure that the provision of supportive services will be accomplished in an economical fashion;

(iii) The extent to which the proposed design of the housing will accommodate the provision of supportive services that are expected to be needed, initially and over the useful life of the housing, by the category or categories of elderly persons the housing is intended to serve;

(iv) The extent to which the proposed supportive services meet the identified needs of the residents; and

(v) The extent to which the Sponsor demonstrated that the identified supportive services will be provided on a consistent long-term basis.

(e) The Field Office shall rate each Application on the basis of its assessment of the Sponsor's Application using the selection criteria set forth on the FOFA. The Field Office shall also calculate the capital advance and PRAC amounts to be reserved for each project. The Regional Office shall identify for selection the highest ranking Applications in descending order which most reasonably approximate the estimated maximum number of units which can be funded in each Field Office by metropolitan/nonmetropolitan jurisdictions, under the allocation of fund authority. Not less than 15 percent of the funds made available shall be allocated on a national basis for nonmetropolitan areas.

(f) Unused funds within a competitive area, if available fund authority exceeds selections, may be reallocated by combining metropolitan and nonmetropolitan funds in order to fund another project in either category. If there are excess funds which are not allocable to any application within the original competitive area, the funds may be reallocated from one competitive area to another within the same State. If there are excess funds which are not allocable in the above methods, the funds may be reallocated from one competitive area to another within the Region. When the Regional Office aggregates residual funds from the competitive areas, the original metro/nonmetro breakdown must be retained initially to determine whether there are any approvable applications in either category prior to making any transfers of funds. Remaining unused funds must be returned to Headquarters.

§ 889.305 [Amended]

10. In § 889.305, paragraphs (a) introductory text, (a)(1), and (d) are amended by removing the terms "Fund Reservation" or "fund reservation" wherever it appears, and by adding in its place "capital advance".

§ 889.310 [Amended]

10a. In § 889.310, paragraphs (a) introductory text, (a)(1), (a)(2), (a)(3), (b)(1), (b)(1)(ii), (b)(2), (b)(3)(i), and (b)(3)(ii) are amended by removing the term "fund reservation" whenever it appears, and by adding in its place "capital advance".

11. A new subpart H, consisting of §§ 889.800 and 889.805, is added to part 889, to read as follows:

Subpart H—Elder Cottage Housing Demonstration Program

889.800 Purpose and policy.
889.805 Implementation.

Subpart H—Elder Cottage Housing Demonstration Program

§ 889.800 Purpose and policy.

The Secretary shall carry out a program to determine the feasibility of including, as an eligible development cost under section 202 of the Housing Act of 1959, the cost of purchasing and installing elder cottage housing opportunity units that are small, free-standing, barrier-free, energy efficient, removable, and designed to be installed adjacent to existing 1- to 4-family dwellings. In conducting the demonstration, the Secretary shall determine whether the durability of such units is appropriate for making such units generally eligible for assistance under the Supportive Housing for the Elderly Program.

§ 889.805 Implementation.

The Secretary shall publish a NOFA with guidelines for this demonstration program.

Dated: April 2, 1993.

James E. Schoenberger,

Associate General Deputy Assistant Secretary.

BILLING CODE 4210-27-M

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

Office of Assistant Secretary for Housing; Federal Housing Commissioner

[Docket No. N-93-3591, FR-3408-N-01]

Fund Availability (NOFA) for Supportive Housing for the Elderly

AGENCY: Office of Assistant Secretary for Housing—Federal Housing Commissioner, HUD.

ACTION: Notice of fund availability for FY 93.

SUMMARY: This NOFA announces HUD's funding for supportive housing for the elderly. In the body of this document is information concerning the following: (a) The purpose of the NOFA and information regarding eligibility, submission requirements, available amounts, and selection criteria and (b) application processing, including how to apply and how selections will be made. A checklist of steps and exhibits involved in the application process will be included in the application package which can be obtained from the appropriate Field Office identified in appendix A.

DATES: The deadline date for receipt of applications in response to this NOFA is 4 p.m. local time on July 8, 1993.

ADDRESSES: Applications must be delivered to the Director of the Housing Development Division in the HUD Field Office for your jurisdiction. A listing of HUD Field Offices, their addresses and telephone numbers (including TDD telephone numbers) are attached as appendix A to this NOFA. HUD will date and time stamp incoming applications to evidence timely receipt, and upon request, provide the applicant with an acknowledgement of receipt. Applications submitted by facsimile are not acceptable.

FOR FURTHER INFORMATION CONTACT: The HUD Field Office for your jurisdiction.

SUPPLEMENTARY INFORMATION:

Paperwork Reduction Act Statement

In accordance with the Paperwork Reduction Act of 1980 (44 U.S.C. 3501–220), the information collection requirements have been assigned OMB Control Number 2502–0267.

I. Purpose and Substantive Description

A. Authority

Section 801 of the Cranston-Gonzalez National Affordable Housing Act (NAHA) amended section 202 of the Housing Act of 1959. It authorized the Secretary to provide assistance to private nonprofit organizations and nonprofit consumer cooperatives to expand the supply of supportive housing for the elderly. The assistance is provided as capital advances and contracts for project rental assistance in accordance with 24 CFR part 889. This assistance may be used to finance the construction or rehabilitation of a structure, or acquisition of a structure from the Resolution Trust Corporation (RTC), to be used as supportive housing for the elderly in accordance with part 889.

Sections 601, 602 and 913 of the Housing and Community Development Act of 1992 (HCD Act of 1992) amended section 202 of the Housing Act of 1959. These amendments and simplification of the application and selection process are the subject of an interim rule published today elsewhere in this issue. These amendments are reflected in this NOFA. Of special interest are the repeal of the requirement for State and local certification of services (former section 202(e)(5)), the additional consideration in the selection criteria of the availability of public housing for the elderly and vacancy rates in such facilities (included within the revised selection criteria of the availability of Federally assisted housing (HUD and FmHA) for the elderly and the occupancy and vacancy situation in such facilities, § 889.300(d)(2)(i)), the reduction in the owner deposit in the case of a nonprofit applicant that is not affiliated with a national sponsor, the reduction to the nonmetropolitan allocation (reduced from 20 percent to 15 percent), and the amendment relating to labor wage rates.

The amended labor standards require all laborers and mechanics employed by contractors and subcontractors in the construction of housing with 12 or more units assisted under section 202 to be paid wages at rates not less than those prevailing in the locality, as determined by the Secretary of Labor in accordance with the Davis-Bacon Act.

For supportive housing for the elderly, the Departments of Veterans Affairs and Housing and Urban Development, and Independent Agencies Appropriations Act, 1993, (Pub. L. 102–389), enacted October 6, 1992, (Fiscal Year 1993 Appropriations Act) provides $1,116,099,000 for capital advances, including amendments to capital advance contracts (not procurement contracts), for housing for the elderly as authorized by section 202 of the Housing Act of 1959, (as amended by section 801 of the NAHA and sections 601 and 602 of the HCD Act of 1992), and for project rental assistance, and amendments to contracts for project rental assistance, for supportive housing for the elderly under section 202(c)(2) of the Housing Act of 1959, as amended. Any unreserved balances provided in prior years for such purposes are to be merged with amounts provided in the Fiscal Year 1993 Appropriations Act.

In accordance with an agreement between HUD and the Farmers Home Administration (FmHA) which facilitates the coordination between the two agencies in administering their respective rental assistance programs, HUD is required to notify FmHA of applications for housing assistance it receives. The purpose of this notification is to give FmHA the opportunity to comment if it has concern about the demand for additional assisted housing and possible harm to existing projects in the same housing market area. HUD will consider the FmHA comments in its review and project selection process.

B. Allocation Amounts

In accordance with 24 CFR part 791, the Assistant Secretary will allocate the amounts available for capital advances for supportive housing for the elderly. The Department reserves project rental assistance funds sufficient for 20-year project rental assistance contracts in support of the units selected for capital advances, consistent with current operating cost standards.

The allocation formula for section 202 funds consists of the following two data elements:

1. A measure of the total number of elderly renter households.

2. A measure of number of one- and two-person elderly renter households with incomes at or below the very low income standard with housing deficiencies, consisting primarily of households paying more than 30 percent of their incomes for rent.

As a result of a computer error in the Boston Regional Office, the application of The First Baptist Church, Beverly, Massachusetts, was not selected and funded under the Fiscal Year 1992 Supportive Housing for the Elderly Program. Since this was a HUD error, this application will be funded from the Fiscal Year 1993 allocation to the Boston Regional Office.

Based on this formula, the Department has allocated the available capital advance funds as shown on the following chart:

FISCAL YEAR 1993 ALLOCATIONS FOR SUPPORTIVE HOUSING FOR THE ELDERLY—Continued

VOL 58 ISS 85 MY 5 1993 UMI

FISCAL YEAR 1993 ALLOCATIONS FOR SUPPORTIVE HOUSING FOR THE ELDERLY

FISCAL YEAR 1993 ALLOCATIONS FOR SUPPORTIVE HOUSING FOR THE ELDERLY—Continued

[Fiscal year 1993 section 202 allocations]

*This amount includes Capital Advance Authority of $5,259,500 to fund The Baptist Church, Beverly Massachusetts. Since this project was not selected in Fiscal Year 1992 by HUD error, this application will be funded from the Fiscal Year 1993 Allocation to the Boston Regional Office.

C. Eligibility

The only eligible applicants under this program are private, nonprofit organizations and nonprofit consumer cooperatives. Neither a public body nor an instrumentality of a public body is eligible to participate in the program. No organization shall participate as Sponsor or Co-sponsor in the filing of application(s) for a capital advance in a single region in this fiscal year in excess of that necessary to finance the construction, rehabilitation or acquisition (acquisition permitted only with RTC properties) of 300 units of housing and related facilities for the elderly. This limit shall apply to organizations that participate as Co-sponsors regardless of whether the Co-sponsors are affiliated or non-affiliated entities. In addition, the national limit for any one applicant is 10 percent of the total units allocated in all Regions. Affiliated entities which submit separate applications shall be deemed to be a single entity for the purposes of these limits. No single application may propose more than the number of units permitted by a Field Office or 125 units, whichever is less. Reservations for projects in metropolitan areas will not be approved for less than 40 units.

D. Initial Screening, Technical Processing and Selection Criteria

1. Initial Screening

Applications for section 202 capital advances that are received by HUD at the appropriate address by 4 p.m. local time on July 8, 1993 will be reviewed to determine if all parts of the application are included. HUD will not review the content of the application as part of initial screening. Deficiency letters will be sent informing Sponsors of any missing parts of the application. Sponsors must correct such deficiencies within 14 calendar days from the date of the deficiency letter.

2. Technical Processing

All applications will be placed in technical processing upon receipt of the response to the deficiency letter or at the end of the 14-day period. All applications will undergo a complete analysis. As part of this analysis, HUD will conduct its environmental review in accordance with 24 CFR part 50. Examples of reasons for technical processing rejection include an ineligible Sponsor, ineligible population to be served, lack of legal capacity, lack of site control and unacceptable site based upon a site visit. The Secretary will not reject an application based on technical processing without giving notice of that rejection with all rejection reasons, and affording the applicant an opportunity to appeal. An applicant will be afforded 14 calendar days from the date of HUD's written notice to appeal a technical rejection to the Field Office. The Field Office must respond within 5 working days to the Sponsor. The Field Office shall make a determination on an appeal prior to making its selection recommendations. All applications will be either rated or technically rejected at the end of technical processing.

Technical processing will also assure that if the Sponsor has been found by a court or by a Federal, State, or local agency, in noncompliance with any of the statutes, regulations, or other requirements listed in the civil rights certification (§ 889.270(b)(8)(i)), HUD will obtain from the Sponsor a statement of the actions taken to correct that noncompliance. There must be no pending civil rights suits against the Sponsor instituted by the Department of Justice and no pending administrative actions for civil rights violations instituted by HUD (including a charge of discrimination under the Fair Housing Act). Moreover, there must not be a deferral of the processing of applications from the Sponsor imposed by HUD under title VI of the Civil Rights Act of 1964, the Department's implementing regulations (24 CFR 1.8), procedures (HUD Handbook 8040.1), and the Attorney General's Guidelines (28 CFR 50.3); or under section 504 of the Rehabilitation Act of 1973 and the Department's implementing regulations (24 CFR 8.57).

Upon completion of technical processing, all acceptable applications will be rated according to the selection criteria in § 889.300(d) (also below in I.D.3). Applications which have a total score of 50 points or more will be eligible for selection and will be placed in rank order.

3. Selection Criteria

Applications for section 202 capital advances that successfully complete technical processing will be rated using the following selection criteria:

(a) In determining the Sponsor's ability to develop and operate the proposed housing on a long-term basis, consider the following (50 points maximum):

(1) The scope, extent and quality of the Sponsor's experience in providing housing or related services to those proposed to be served by the project and the scope of the proposed project (i.e., number of units, services, relocation costs, development, and operation) in relationship to the Sponsor's demonstrated development and management capacity. (32 points);

(2) The scope, extent and quality of the Sponsor's experience in providing housing or related services to minority persons or families (5 points);

(3) The scope, extent and quality of the Sponsor's experience in providing

opportunities for minority and women-owned business enterprises

the provision of supportive services that

At the workshops, Application

contract with the Owner or in any firm

1993. The CHAS regulations are

Americans with Disabilities Act (42

VOL 58 ISS 85 MY 5 1993 UMI

opportunities for minority and women-owned business enterprises participation (3 points); and

(4) The extent of local community support for the Sponsor's activities, including previous experience in serving the area where the project is to be located, and Sponsor's demonstrated ability to enlist volunteers and local funds (10 points);

(b) In determining the need for supportive housing for the elderly in the area to be served and the suitability of the site, consider (25 points maximum):

(1) The extent of the need for the project in the area based on a determination by the Field Office. This determination will be made taking into consideration the Sponsor's evidence of need in the area based on the guidelines in § 889.270(b)(17), as well as other economic, demographic and housing market data available, to the Field Office. The data could include the availability of existing Federally assisted housing (HUD and FmHA) (e.g., considering availability and vacancy rates of public housing) for the elderly and current occupancy in such facilities, Federally assisted housing for the elderly under construction or for which fund reservations have been issued, and in accordance with an agreement between HUD and the FmHA, comments from the FmHA on the demand for additional assisted housing and the possible harm to existing projects in the same housing market area (8 points).

(2) The proximity or accessibility of the site to shopping, medical facilities, transportation, places of worship, recreational facilities, and other necessary services to the intended occupants, adequacy of utilities and streets, freedom of the site from adverse environmental conditions, compliance with site and neighborhood standards (10 points); and

(3) Suitability of the site from the standpoint of promoting a greater choice of housing opportunities for minority elderly persons/families (7 points);

(c) In determining adequacy of the provision of supportive services and of the proposed facility consider (25 points maximum):

(1) The extent to which the proposed design will meet the special physical needs of elderly persons (4 points);

(2) The extent to which the proposed size and unit mix of the housing will enable the Sponsor to manage and operate the housing efficiently and ensure that the provision of supportive services will be accomplished in an economical fashion (4 points);

(3) The extent to which the proposed design of the housing will accommodate the provision of supportive services that are expected to be needed, initially and over the useful life of the housing, by the category or categories of elderly persons the housing is intended to serve (2 points);

(4) The extent to which the proposed supportive services meet the identified needs of the residents (8 points); and

(5) The extent to which the Sponsor demonstrated that the identified supportive services will be provided on a consistent long-term basis (7 points).

II. Application Process

All applications for section 202 capital advances submitted by eligible Sponsors must be filed with the appropriate HUD Field Office receiving an allocation and must meet the requirements of this Notice. No application will be accepted after 4 p.m. local time on July 8, 1993, unless that date and time is extended by a Notice published in the Federal Register. Applications received after that date and time will not be accepted, even if postmarked by the deadline date. Applications submitted by facsimile are not acceptable.

Immediately upon publication of this NOFA, Field Offices shall notify elderly and minority media, all persons and organizations on their mailing lists and minority and other organizations within their jurisdiction involved in housing and community development and groups with special interest in housing for elderly households.

Organizations interested in applying for a section 202 capital advance should provide the appropriate Field Office with their names, addresses and telephone numbers, and advise the Field Office whether they wish to attend the workshop described below. HUD encourages minority organizations to participate in this program as Sponsors. Field Offices will advise all organizations on their mailing list of the date, time and place of workshops at which the Section 202 Program will be explained.

HUD strongly recommends that prospective applicants attend the local Field Office workshop. Interested persons with disabilities should contact the Field Office to assure that any necessary arrangements can be made for them to enable their attendance and participation in the workshop. While strongly urged to do so, if Sponsors cannot attend a workshop, Application Packages and handbooks can also be obtained from the Field Offices. Contact the appropriate Field Office with any questions regarding the submission of applications.

At the workshops, Application Packages will be distributed, and application procedures and requirements will be explained. Also, concerns such as local market conditions, building codes, historic preservation, floodplain management, displacement and relocation, zoning and housing costs will be addressed.

III. Application Submission Requirements

A. Application

Each application shall include all of the information, materials, forms, and exhibits listed in section III. B. below and must be indexed and tabbed. The Field Office will base its determination of the eligibility of the Sponsor for a reservation of section 202 capital advance funds on the information provided in the application.

In preparing applications, applicants will be able to utilize information and exhibits previously prepared for prior applications under section 202, section 811 or other funding programs. Examples of exhibits that may be readily adapted or amended to decrease the burden of application preparation include, among others, those on previous participation in the section 202 or section 811 programs; applicant experience in provision of housing and services; supportive services plan; community ties, and experience serving minorities.

B. General Application Requirements

1. Form HUD–92015–CA, Application for Section 202 Supportive Housing Capital Advance.

2. Evidence of each Sponsor's legal status as a private, nonprofit organization or nonprofit consumer cooperative, including the following:

(a) Articles of Incorporation, constitution, or other organizational documents;

(b) By-laws;

(c) IRS tax exemption ruling (this must be submitted by all Sponsors, including churches). A nonprofit organization organized in the Commonwealth of Puerto Rico and exempt from income taxation under Puerto Rico law, or a consumer cooperative that is tax exempt under State law, has never been liable for payment of Federal income taxes, and does not pay patronage dividends may be exempt from the requirement set out in the previous sentence if they are not eligible for tax exemption; and

(d) Resolution of the board, duly certified by an officer, that no officer or director of the Sponsor or Owner has or will have any financial interest in any

contract with the Owner or in any firm or corporation which has or will have a contract with the Owner and which includes a current listing of all duly qualified and sitting officers and directors by title and the beginning and ending date of each person's term.

3. CHAS certification. The Sponsor must submit a certification by the jurisdiction in which the proposed project will be located that the Sponsor's application is consistent with the jurisdiction's HUD-approved CHAS for FY 1993. The certification must be made by the unit of general local government if it is required to have, or has, a complete CHAS. Otherwise the certification may be made by the State, or if the project will be located in a unit of general local government authorized to use an abbreviated CHAS, by the unit of general local government if it is willing to prepare such a CHAS.

All CHAS certifications must be made by the public official responsible for submitting the CHAS to HUD. All CHAS certifications must be submitted as part of the application by the application submission deadline set forth in this NOFA, except as provided in the next paragraph. The required CHAS must therefore have been submitted more than 60 days before the application submission deadline, since HUD has 60 days to review and approve the CHAS. Where the certification of consistency is permitted to be submitted after the application submission deadline, as described in the next paragraph, the CHAS must be submitted for approval in time for the certification to be made by the later date. In no event will an application be considered if the CHAS has not been submitted for approval by the application submission deadline.

If the required certification will be made by a unit of general local government with respect to an abbreviated CHAS, and such CHAS has been submitted by the application submission deadline but has not yet been approved by HUD, the deadline will not be applied to the certification for consistency. Instead, the application must include a written statement from the public official responsible for submitting the CHAS that the jurisdiction has submitted an abbreviated CHAS for FY 1993 for HUD approval and that the application is consistent with the CHAS. If HUD approved the CHAS, the required certification that the application is consistent with a HUD-approved CHAS for FY 1993 must be submitted before August 31, 1993. An application will not be selected for funding unless the CHAS is approved and the required certification is made by August 31, 1993. The CHAS regulations are published in 24 CFR part 91.

4. Executive Order 12372. A certification that the Sponsor has submitted a copy of its applications, if required, to the State agency (single point of contact) for State review in accordance with Executive Order 12372.

5. SF–424. A certification on SF–424, Application for Federal Assistance, that the Sponsor(s) is not delinquent on the repayment of any Federal debt.

6. Anti-lobbying Certification for Contracts, Grants, Loans and Cooperative Agreements for grants exceeding $100,000. Disclosure of Lobbying Activities (Standard Form–LLL) if other than federally appropriated funds will be or have been used to lobby the Executive or Legislative branches of the Federal Government regarding specific contracts, grants, loans or cooperative agreements. The applicant determines if the submission of the SF–LLL is warranted.

7. A statement that (a) identifies all persons (families, individuals, businesses and nonprofit organizations (identified by race/minority group, and status as owners or tenants) occupying the property on the date of submission of the application for a capital advance; (b) indicates the estimated cost of relocation payments and other services, and (c) identifies the staff organization that will carry out the relocation activities.

[Note: If any of the relocation costs will be funded from sources other than the section 202 Capital Advance, the sponsor must provide evidence of a firm commitment of these funds. When evaluating applications, HUD will consider the total cost of proposals (*i.e.*, cost of site acquisition, relocation, construction and other project costs).]

8. Additional Certifications.

(a) A certification of the Sponsor(s)' intent to comply with section 504 of the Rehabilitation Act of 1973 (29 U.S.C. 794) and the implementing regulations at 24 CFR part 8; the Fair Housing Act (42 U.S.C. 3600–3619) and the implementing regulations at 24 CFR parts 100, 108, 109, and 110; title VI of the Civil Rights Act of 1964 (42 U.S.C. 2000d) and the implementing regulations at 24 CFR part 1; section 3 of the Housing and Urban Development Act of 1968 (12 U.S.C. 1701u) and the implementing regulations at 24 CFR part 135; the Age Discrimination Act of 1975 (42 U.S.C. 6101–6107) and the implementing regulations at 24 CFR part 146; Executive Order 11246 (as amended) and the implementing regulations at 41 CFR chapter 60; the regulations implementing Executive Order 11063 (Equal Opportunity in Housing) at 24 CFR part 107; the Americans with Disabilities Act (42 U.S.C. 12101 et seq.) to the extent applicable; the affirmative fair housing marketing requirements at 24 CFR part 200, subpart M; and other applicable Federal, State and local laws prohibiting discrimination and promoting equal opportunity.

(b) A certification that the Sponsor(s) will comply with the requirements of the Drug-Free Workplace Act.

(c) A certification that the project will comply with HUD's design and cost standards, the Uniform Federal Accessibility Standards and HUD's implementing regulations at 24 CFR part 40, section 504 of the Rehabilitation Act of 1973 and HUD's implementing regulations at 24 CFR part 8, and for new construction of covered multifamily dwellings, the design and construction requirements of the Fair Housing Act and HUD's implementing regulations at 24 CFR part 100.

(d) A certification by the Sponsor(s) that it will comply (or has complied) with the acquisition and relocation requirements of the Uniform Relocation Assistance and Real Property Acquisition Policies Act of 1970, as amended (URA), implemented by regulations at 49 CFR part 24, and 24 CFR 889.265(e).

(e) A certification by the Sponsor(s) that it will form an Owner (as defined in § 889.105) after the issuance of the capital advance, will cause the Owner to file a request for determination of eligibility and a request for capital advance under § 889.300, and will provide sufficient resources to the Owner to insure the development and long-term operation of the project.

9. A description of Sponsor's purposes and activities, ties to the community and minority support and how long it has been in existence (include any additional related information).

10. A description of any other rental housing projects and/or medical facilities, sponsored, owned and operated by the Sponsor including a description of experience in providing housing and/or medical facilities to the elderly and/or families and minorities.

11. A description of the Sponsor's past or current involvement in any programs other than housing (including its provision of services) that demonstrates the Sponsor's management capabilities and experience, including a description of the Sponsor's experience in serving the elderly and/or families and minorities.

12. A description of Sponsor's experience in contracting with minority and women-owned businesses, including amounts awarded.

13. A certified Board Resolution, acknowledging responsibilities of

for the site, a deed, long-term leasehold,

rezoning on land in similar zoning

VOL
58
ISS
85
MY
5
19 93
UMI

13. A certified Board Resolution, acknowledging responsibilities of sponsorship, long-term support of the project(s), willingness of Sponsor to assist the Owner to develop, own, manage and provide appropriate services in connection with the proposed project, and that it reflects the will of its membership. Also, evidence, in the form of a certified Board Resolution, of the Sponsor's willingness to fund the Minimum Capital Investment (one-half of one percent of the HUD-approved capital advance, not to exceed $10,000, if non-affiliated with National Sponsor; one-half of one percent of the HUD-approved capital advance, not to exceed $25,000, for all other Sponsors; see 889.250).

14. A list of the applications, if any, the Sponsor has submitted or is planning to submit to any other Field Office in response to this NOFA or the NOFA for Supportive Housing for Persons with Disabilities (published elsewhere in today's **Federal Register**). Indicate by Field Office, the proposed location by city and State, the number of units requested for each application. A list of all FY 1992 and prior year projects to which the Sponsor(s) is a party, identified by project number and Field Office, which have not been finally closed.

15. HUD–2880, Applicant/Recipient Disclosure/Update Report, including Social Security Numbers and Employee Identification Numbers.

16. Evidence of need for supportive housing. A description of the category or categories of elderly persons the housing is intended to serve and evidence demonstrating sustained effective demand for supportive housing for that population in the market area to be served, taking into consideration the occupancy and vacancy conditions in existing Federally assisted housing for the elderly (HUD and FmHA) (e.g., public housing), state or local data on the limitations in activities of daily living among the elderly in the area, aging in place in existing assisted rentals; trends in demographic changes in elderly population and households; the numbers of income eligible elderly households by size, tenure and housing condition, and the types of supportive services arrangements currently available in the area and the utilization of such services as evidenced by data from local social service agencies or agencies on aging.

17. Evidence of site control and permissive zoning.

(a) Evidence that the Sponsor has entered into a legally binding option agreement to buy or lease the proposed site; or has a copy of the contract of sale for the site, a deed, long-term leasehold, a request with all supporting documentation, submitted either prior to or with the Application for Capital Advance, or a partial release of a site covered by a mortgage under a HUD program or other evidence of legal ownership of the site (including properties to be acquired from the Resolution Trust Corporation). The option agreement period must extend through the end of the current fiscal year and contain a renewal provision so that the option can renewed for at least an additional six months. The Sponsor must also identify any restrictive covenants, including reverter clauses. In the case of a site to be acquired from a public body, evidence that the public body possesses clear title to the site, and has entered into a legally binding agreement to lease or convey the site to the Sponsor after it receives and accepts a notice of Section 202 capital advance and identification of any restrictive covenants, including reverter clauses. However, in localities where HUD determines the time constraints of the funding round will not permit all of the required official actions (e.g., approval of Community Planning Boards) which are necessary to convey publicly-owned sites, a letter in the application from the Mayor or Director of the appropriate local agency indicating approval of conveyance of the site contingent upon the necessary approval action is acceptable and may be approved by the Field Office if it has satisfactory experience with timely conveyance of sites from that public body. In such cases, documentation shall also include a copy of the public body's evidence of ownership and identification of any restrictive covenants, including reverter clauses. For properties to be acquired from the RTC, include a copy of the RTC prepared Transaction Screen Checklist or Phase I Environmental Site Assessment, and applicable documentation, per the RTC Environmental Guidelines.

Note: A proposed project site may not be acquired or optioned from a general contractor (or its affiliate) which will construct the section 202 project or from any other development team member.

(b) Evidence that the project as proposed is permissible under applicable zoning ordinances or regulations, or a statement of the proposed action required to make the proposed project permissible and the basis for belief that the proposed action will be completed successfully before the submission of the commitment application (e.g., a summary of the results of any recent requests for rezoning on land in similar zoning classifications and the time required for such rezoning, preliminary indications of acceptability from zoning bodies, *etc.*).

18. Narrative description of site and area surrounding the site, characteristics of neighborhood, how the site will promote greater housing opportunities for minorities, and any other information that impacts on the suitability of the site for the elderly.

19. A map showing the location of the site and the racial composition of the neighborhood, with the area of racial concentration delineated.

20. Provision of supportive services and proposed facility.

(a) A detailed description of the supportive services proposed to be provided to the anticipated occupancy.

(b) Form HUD 92013E, Supplemental Application Processing Form—Housing for the Elderly. Identify all supportive services, if any, to be provided to the persons occupying such housing.

(c) A description of public or private sources of assistance that reasonably could be expected to fund the proposed services.

(d) The manner in which such services will be provided to such persons (i.e., on or off-site), including, whether a service coordinator will facilitate the adequate provision of such services, and how the services will meet the identified needs of the residents.

(e) Narrative description of the building design including a description of any special design features and community space, and how this design will facilitate the delivery of services in an economical fashion and accommodate the changing needs of the residents over the next 10–20 years.

(f) Describe if and how the project will promote energy efficiency and if applicable, innovative construction or rehabilitation methods or technologies to be used that will promote efficient construction.

IV. Other Matters

A. Environmental Impact

A Finding of No Significant Impact with respect to the environment has been made in accordance with HUD regulations that implement section 101(2)(C) of the National Environmental Policy Act of 1969, 42 U.S.C. 4332. The Finding of No Significant Impact is available for public inspection during business hours in the Office of the Rules Docket Clerk, Office of General Counsel, room 10276, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410.

B. Federalism Executive Order

The General Counsel, as the Designated Official under section 6(a) of Executive Order No. 12612, Federalism, has determined that this NOFA does not have substantial direct effects on States or their political subdivisions, or on the relationship between the Federal government and the States, or on the distribution of power and responsibilities among the various levels of government. This NOFA merely notifies the public of the availability of capital advances and project rental assistance for supportive housing for the elderly.

C. Family Executive Order

The General Counsel, as the Designated Official under Executive Order No. 12606, The Family, has determined that this NOFA does not significantly affect family formation, maintenance, or general well-being, and, thus, is not subject to review under the order.

D. Documentation and Public Access Requirements: HUD Reform Act

HUD will ensure that documentation and other information regarding each application submitted pursuant to this NOFA are sufficient to indicate the basis upon which assistance was provided or denied. This material, including any letters of support, will be made available for public inspection for a five-year period beginning not less than 30 days after the award of the assistance. Material will be made available in accordance with the Freedom of Information Act (5 U.S.C. 552) and HUD's implementing regulations at 24 CFR part 15. In addition, HUD will include the recipients of assistance pursuant to this NOFA in its quarterly **Federal Register** notice of all recipients of HUD assistance awarded on a competitive basis. (See CFR 12.14(a) and 12.16(b), and the notice published in the **Federal Register** on January 16, 1992 (57 FR 1942), for further information on these requirements.)

E. HUD Reform Act

HUD's regulation implementing section 103 of the Department of Housing and Urban Development Reform Act of 1989 was published May 13, 1991 (56 FR 22088) and became effective on June 12, 1991. That regulation, codified as 24 CFR part 4, applies to the funding competition announced today. The requirements of the rule continue to apply until the announcement of the selection of successful applicants.

HUD employees involved in the review of applications and in the making of funding decisions are restrained by part 4 from providing advance information to any person (other than an authorized employee of HUD) concerning funding decisions, or from otherwise giving any applicant an unfair competitive advantage. Persons who apply for assistance in this competition should confine their inquiries to the subject areas permitted under 24 CFR part 4.

Applicants who have questions should contact the HUD Office of Ethics (202) 708–3815 (TDD/Voice). (This is not a toll-free number.) The Office of Ethics can provide information of a general nature to HUD employees, as well. However, a HUD employee who has specific program questions, such as whether particular subject matter can be discussed with persons outside the Department, should contact his or her Regional or Field Office Counsel, or Headquarters counsel for the program to which the question pertains.

F. Lobbying

Section 13 of the Department of Housing and Urban Development Act (42 U.S.C. 3537b) contains two provisions dealing with efforts to influence HUD's decisions with respect to financial assistance. The first imposes disclosure requirements on those who are typically involved in these efforts—those who pay others to influence the award of assistance or the taking of a management action by the Department and those who are paid to provide the influence. The second restricts the payment of fees to those who are paid to influence the award of HUD assistance, if the fees are tied to the number of housing units received or are based on the amount of assistance received, or if they are contingent upon the receipt of assistance.

Section 13 was implemented by final rule published in the **Federal Register** on May 17, 1991 (56 FR 22912). If readers are involved in any efforts to influence the Department in these ways, they are urged to read the final rule, particularly the examples contained in Appendix A of the rule.

Any questions regarding the rule should be directed to the Director, Office of Ethics, room 2158, Department of Housing and Urban Development, 451 Seventh Street, SW., Washington, DC 20410. Telephone: (202) 708–3815 (TDD/Voice). (This is not a toll-free number.) Forms necessary for compliance with the rule may be obtained from the local HUD office.

G. Prohibition Against Lobbying Activities

The use of funds awarded under this NOFA is subject to the disclosure requirements and prohibitions of section 319 of the Department of Interior and Related Agencies Appropriations Act for Fiscal Year 1990 (31 U.S.C. 1352) and the implementing regulations at 24 CFR part 87. These authorities prohibit recipients of federal contracts, grants or loans from using appropriated funds for lobbying the Executive or Legislative Branches of the Federal Government in connection with a specific contract, grant or loan. The prohibition also covers the awarding of contracts, grants, cooperative agreements or loans unless the recipient has made an acceptable certification regarding lobbying. Under 24 CFR part 87, applicants, recipients and subrecipients of assistance exceeding $100,000 must certify that no federal funds have been or will be spent on lobbying activities in connection with the assistance.

H. Catalog of Federal Domestic Assistance Program

The Catalog of Federal Domestic Assistance Program title and number is 14.181, Housing for the Elderly or Handicapped.

Authority: Section 202, Housing Act of 1959, as amended (12 U.S.C. 1701q), Section 7(d), Department of Housing and Urban Development Act (42 U.S.C. 3535(d)).

Dated: April 2, 1993.

James E. Schoenberger,

Associate General Deputy, Assistant Secretary.

[OPP–190000; FRL–3847–1]

RIN No. 2070–AB95

Pesticide Management and Disposal

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: This document proposes procedures for mandatory and voluntary recall actions taken under section 19(b) of the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA), 7 U.S.C. 136 et seq., and would establish criteria for acceptable storage and disposal plans which registrants may submit to the Agency to become eligible for reimbursement of storage costs under section 19(c) of FIFRA. In addition, this proposal would establish procedures for the indemnification of owners of suspended and canceled pesticides as authorized by section 15 of FIFRA. Finally, this document proposes to amend current regulations which address the Agency's responsibility for accepting for disposal suspended and canceled pesticides, to reflect changes made by the 1988 amendments to FIFRA.

DATES: Comments must be submitted on or before July 6, 1993.

ADDRESSES: Submit written comments, bearing the document identification number OPP-190000, by mail to: Public Docket and Freedom of Information Section, Field Operations Division (H-7506C), Office of Pesticide Programs, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460. In person deliver comments to: Rm. 1128, CM #2, 11921 Jefferson Davis Hwy., Arlington, VA.

Information submitted in any comment concerning the proposal may be claimed as confidential by marking any or all of that information as "Confidential Business Information" (CBI). Information so marked will not be disclosed except in accordance with procedures set forth in 40 CFR part 2. A copy of the comment that does not contain CBI must be submitted for inclusion in the public record. Information not marked confidential may be disclosed publicly by EPA without prior notice to the submitter. Comments will be available for public inspection in Room 1128 at the address given above, from 8 a.m. to 4 p.m., Monday through Friday, except legal holidays.

FOR FURTHER INFORMATION CONTACT: By mail: David Stangel, Office of Compliance Monitoring (EN-342W), U. S. Environmental Protection Agency, 401 M St., SW., Washington, DC 20460, (703)-308-8295.

SUPPLEMENTARY INFORMATION:

Electronic Availability: This document is available as an electronic file on *The Federal Bulletin Board* at 9 a.m. the day of publication in the **Federal Register**. By modem dial 202-512-1387 or call 202-512-1530 for disks or paper copies. This file is available in Postscript, Wordperfect 5.1, and ASCII.

The preamble to this proposed rule is organized into four units. Unit I provides the authority and background of this proposed rule. Unit II discusses the proposed changes to the current Acceptance Regulations found at 40 CFR part 165, subpart B. Unit III discusses the proposed approach for the recall regulations. Unit IV discusses the proposed criteria which would have to be met by registrants seeking reimbursement for storage costs incurred as a result of recall of a suspended and canceled pesticide. Unit V discusses the proposed procedures that would have to followed by owners of suspended and canceled pesticides in order to be indemnified for losses suffered as a result of suspension and cancellation.

I. Authority and Background

These proposed rules are issued pursuant to the authority given the Administrator of EPA in sections 8, 19 and 25 of FIFRA, 7 U.S.C. 136f, 136q and 136w.

Section 6 of FIFRA authorizes EPA to take certain actions to prohibit sale, distribution and use of pesticides that cause unreasonable adverse effects on the environment. An "unreasonable adverse effect" determination involves the weighing of the risks of using the pesticide against the benefits of that use. If a pesticide poses a risk that outweighs the benefits of continued use, the pesticide's registration may be canceled. A pesticide's registration is canceled by operation of law 30 days after the date the registrant receives a notice of the intent to cancel or the date of its publication in the **Federal Register**, whichever is later, unless by that date an adversely affected person requests a hearing. If action is necessary to prevent an imminent hazard to human health or the environment during the time required for cancellation, EPA may suspend a pesticide registration under FIFRA section 6(c), and at the same time issue a Notice of Intent to Cancel the registration. A suspension order may immediately prohibit all use, sale, and distribution of the pesticide.

Prior to amendment of FIFRA in 1988, section 19 of FIFRA authorized EPA to establish procedures and regulations for the disposal or storage of packages and containers of pesticides and for disposal or storage of excess amounts of such pesticides. Section 19 also required the Agency to accept pesticides suspended and canceled under section 6(c) for safe disposal if requested by the owner of the pesticide. Recommended procedures for storage and disposal, and acceptance regulations were promulgated in 1974 and are codified at 40 CFR part 165.

The 1988 amendments to FIFRA amended section 19 of the Act to give the Agency clearer and broader authority to regulate the storage, disposal, and transportation of registered pesticides as well as the storage, disposal, transportation, and recall of suspended and canceled pesticides. The amendments also eliminated the Agency's responsibility to conduct disposal activities, and limited payments of indemnification.

The rules being proposed today are the first segment of rules EPA is considering in implementing the 1988 amendment to section 19. At a later date, EPA intends to propose rules adding data requirements to part 158 regarding storage and disposal, and amending part 165 to add regulations on container design and residue removal. EPA is also considering rulemaking under section 19 on the storage and transportation of pesticides, and management of excess pesticides. Section 19 also grants EPA the authority to require registrants to show proof of their financial ability to carry out a recall. EPA, however, has decided not to propose financial responsibility requirements at this time. EPA does not have sufficient information to establish a workable financial responsibility scheme. After EPA has gained experience with the new provisions of section 19 concerning recall, EPA may consider proposing rules on demonstration of financial responsibility.

II. Acceptance

Prior to its amendment in 1988, FIFRA section 19 required EPA to accept suspended and subsequently canceled pesticides for safe disposal, upon request by the owner. For the past several years, EPA has been in the process of carrying out this statutory responsibility for ethylene dibromide (EDB), dinoseb, 2,4,5-T and silvex. The Agency has recently completed the disposal of EDB stock accepted under the previous section 19 and is no longer

accepting stocks of EDB for disposal. EPA is currently accepting for disposal those suspended and canceled pesticides containing the chemicals dinoseb, 2,4,5-T and silvex. The Agency has published notices in the **Federal Register** requesting holders of dinoseb, 2,4,5-T and silvex to identify themselves to the Agency and present any requests for disposal, so that orderly disposal of these pesticides may be completed.

The 1988 amendments to section 19 relieved EPA of its responsibility to accept suspended and subsequently canceled pesticides for safe disposal, instead leaving this responsibility with owners and registrants who hold such pesticides. The proposed regulations amend the language describing this responsibility. The principal revision would clarify that the Agency's obligation to accept pesticides for disposal is limited to the three pesticides suspended and canceled prior to 1988 for which it is completing its disposal obligations, namely dinoseb, 2,4,5-T and silvex. EPA's intent is to amend the Acceptance regulations only to the extent necessary to clarify EPA's remaining legal obligations under pre-1988 section 19. EPA is not soliciting comments on other aspects of the Acceptance regulations.

The Agency proposes to redesignate the current 40 CFR part 165 as subpart A with the intention of removing sections as new regulations are promulgated which would supersede the current requirements. After all identified stocks of dinoseb, 2,4,5-T and silvex have all been accepted for disposal, the Agency intends to delete this section from 40 CFR part 165.

III. Recalls

A. Overview

For the purposes of section 19, a recall is the process of moving stocks of a suspended and canceled pesticide, other than those owned by the registrant, from the owner of the pesticide back to the custody or control of the registrant of the pesticide and all the activities necessary to accomplish this in a safe and effective manner. A registrant would not be recalling his own inventory of a suspended and canceled pesticide because the registrant already has custody or control over these pesticides.

In addition to establishing requirements for recalling pesticides, this proposal would establish reporting and recordkeeping requirements for suspended and canceled pesticides owned by the registrant. This will assure that EPA can oversee the movement of suspended and canceled pesticides, including those that are outside the scope of the recall because they are owned by the registrant and also provide information that would assist EPA in evaluating claims for reimbursement of storage costs and indemnification.

B. Statutory provisions

Section 19(b) of FIFRA authorizes EPA to require, by order or by regulation, the recall of pesticides suspended and canceled under section 6 of the Act. If EPA finds that a recall of a pesticide is necessary to protect health or the environment, EPA shall order a recall of the pesticide. Section 19(b)(2) requires EPA to request a registrant to submit a voluntary recall plan for suspended and canceled pesticides if the Administrator finds that a voluntary recall may be as safe and effective as a mandatory recall. The registrant of the affected pesticide has 60 days from the date of the request to submit a voluntary recall plan. If EPA approves the plan, EPA would then order the registrant to conduct the recall in accordance with the plan unless the Administrator determines, after an informal hearing, that the plan is inadequate to protect health or the environment.

Under section 19(b)(3) of FIFRA, if EPA does not request a voluntary recall or finds a voluntary recall plan to be inadequate, EPA must issue a regulation that prescribes a plan for the mandatory recall of the pesticide. The regulation may apply to any person who is or was a registrant, distributor, or seller of the pesticide prior to its suspension and cancellation, or any successor in interest to such a person. Section 19(a)(2) and (a)(3) authorize EPA, by order or regulation, to issue requirements and procedures to be followed by any person who stores, transports, or disposes of stocks of a suspended and canceled pesticide, or containers or other materials containing the pesticide.

C. Approach

EPA considered several options for conducting recalls under section 19 and is proposing this rule taking into consideration the statutory mandate and the needs of both EPA and the regulated community.

EPA considered two options for voluntary recalls. The first option would be to prescribe the elements of a voluntary recall plan each time EPA requests a registrant to conduct one. This option would allow the Agency to be very specific about how the recall is to be conducted and tailor the terms of the recall to the pesticides being recalled. This option would leave registrants uncertain of their obligations when conducting any recalls, until the last minute.

The second option is to propose a rule prescribing the elements of a voluntary recall plan. This option would allow the registrant to know with greater certainty what is required of him when conducting a recall and would allow him to plan ahead so that he could meet the 60 day time limit for submission of a recall plan. This option would also benefit EPA by speeding up the voluntary recall process.

EPA is proposing the second option because it allows the registrant to know what would be required of him in the event of a voluntary recall, while still addressing all the elements the Agency considers necessary to conduct a safe and effective recall. This option would enable EPA to implement voluntary recalls more efficiently since EPA would not have to create program elements for the voluntary recall action each time one is requested. EPA may request that the registrant include special conditions for storage or handling of the recalled pesticide in the plan, as required by the physical or chemical properties of the pesticide, e.g., if the pesticide were corrosive or the pesticide containers were deteriorating.

The Agency considered two options for mandatory recalls. The first option would be to conduct rulemaking prescribing a plan for recall each time EPA determined that a mandatory recall was necessary. This option would save Agency resources until rulemaking was necessary to issue a regulation ordering a mandatory recall. The chief disadvantage of this option is that rulemaking would probably not be carried out in a timely manner when the necessity of a prompt recall of a suspended and canceled pesticide is taken into account. Further, EPA believes that registrants would want to know the terms of a mandatory recall to plan for one if it were to occur. The second option would be to propose generic regulations for mandatory recalls which would be applicable to all mandatory recalls. If a mandatory recall should be necessary, EPA would issue a rule that incorporates the generic provisions, and any special provisions of that particular mandatory recall. The Agency would allow an abbreviated comment period on the specific recall rule, since the major provisions of the recall would have already undergone notice and comment rulemaking. The primary advantage of this option is that it would afford the registrant the opportunity to develop in advance procedures to conduct a mandatory

VOL

1993
UMI

recall should one be necessary. Also, having generic provisions would provide the Agency with a framework for issuing recall regulations and so enable EPA to proceed more quickly with rules on a particular recall. The disadvantage is that this option may require a greater expenditure of EPA's resources and would be the most time consuming. Not only would EPA be issuing the generic provisions in the rules proposed today, but each time EPA determined a mandatory recall is necessary, EPA would be involved in an additional rulemaking process.

EPA has chosen to propose the second option for mandatory recalls. This would allow the registrant to establish procedures for conducting mandatory recalls with a degree of certainty that the requirements will not change, while speeding up the rulemaking process by allowing a shorter comment period on the proposed rule for a particular recall.

1. *Voluntary Recall*

As proposed, § 165.167 describes the elements that would have to be addressed in a voluntary recall plan for the plan to be protective of human health and the environment. When EPA requests submission of a voluntary recall plan, registrants would have to address all the elements found in § 165.167 in the recall plan they submit to EPA. EPA would then evaluate the adequacy of the plan in accordance with the criteria found in § 165.170 and, if approved, order the registrant to conduct the recall in accordance with the plan. In evaluating the plan EPA would determine if, among other things, the plan assures that a registrant would be able to:

a. Identify all holders of the suspended and canceled pesticide and obtain the necessary information concerning the holder's pesticides.

b. Provide holders of the registrant's pesticide with information on the recall.

c. Encourage holders to participate in the recall.

d. Recall the pesticide from the holders in a safe and timely manner.

e. Provide for proper transportation of the pesticide to the storage facility.

f. Provide storage for the recalled pesticides.

The Agency's primary objective in developing the elements of a recall plan was to develop a program for the safe and effective recall of suspended and canceled pesticides and allow for the oversight necessary to ensure that recalls are carried out according to the plans submitted. The Agency drew on its recent experience with registrants conducting recalls for the pesticides EDB, 2,4,5-T, silvex, and dinoseb. Based on this experience, EPA has determined that to be adequate, a plan should address a number of objectives. The plan should identify contacts within the registrant's company (§ 165.167(a)); identify holders of suspended and canceled pesticides (§ 165.167(b)); locate and inventory stocks of the suspended and canceled pesticides (§ 165.167(c)); provide information to holders on how to store and transport the pesticides in accordance with applicable law (§ 165.167(d)); transport and store recalled pesticides safely (§ 165.167(e), (f), (g)); and maintain and submit records necessary for the oversight of any recall action (§§ 165.172 and 165.174). In addition, § 165.167(h) would require registrants to evaluate management options for the recalled pesticides.

Under § 165.167(j), EPA would allow the registrant the opportunity to apply innovative strategies for conducting a voluntary recall. Where the circumstances of a particular voluntary recall action would not fit all the elements in § 165.167, a registrant may propose an alternative in the recall plan. However, the recall plan must demonstrate that it accomplishes the same objectives as the elements in § 165.167(a) through (i).

Registrants may wish to join together to develop and submit a joint recall plan for approval. EPA would encourage registrants to do this wherever possible. Once approved by EPA, the recall plan is binding for all the parties involved.

Section 19(b)(2) states that the Administrator shall approve a voluntary recall plan unless the Administrator determines, after an informal hearing, that the plan is inadequate to protect health or the environment. Neither the statute nor the legislative history indicate the specific congressional intent regarding procedures for the informal hearing. Generally, the informal procedures necessary to satisfy due process vary according to the circumstances of the case and the interest to be protected. In the absence of congressional guidance, EPA has discretion to determine what procedures are appropriate. Here, EPA considers procedures which provide registrants notice and an opportunity to present their views as adequate to satisfy due process. Accordingly, before EPA determines that a voluntary recall plan is inadequate to protect health or the environment, § 165.170(c) provides that the registrant will be notified of the plan's inadequacies and the basis for the inadequacies. Registrants will then have 15 days after receipt of the notification to present comments or arguments either orally or in writing to the Agency official responsible for making the final determination. If, after this informal hearing, EPA makes a final determination that the plan does not adequately protect health or the environment, it will notify the registrant by certified mail.

EPA intends to determine the adequacy of the plan by reviewing the plan submitted by the registrant and judging whether a recall conducted according to the plan is likely to be safe and effective in recalling suspended and canceled pesticides in a timely manner. The only issue for an informal hearing would be whether the plan is adequate to protect public health or the environment. EPA believes that providing a registrant the opportunity to present its views to the Agency before the Agency makes a final determination on the matter provides a satisfactory informal procedure.

In addition, EPA may, at any time, decide to reevaluate the adequacy of the plan to protect health or the environment. One example of circumstances that could lead to EPA reevaluating a plan would be the situation of a significant number of holders of the suspended and canceled pesticides failing to return their stocks to the registrant. Section 19(b) does not explicitly address the situation where a registrant cannot successfully carry out the recall according to its plan. However, section 19(b) does not preclude the Agency from reevaluating the adequacy of the plan, after approval of the plan. Based on quarterly and final reports, EPA expects to monitor the continued effectiveness and adequacy of the recall. Accordingly, as provided in § 165.170(d), upon such reevaluation, if EPA determines that the plan is inadequate to protect health or the environment, EPA may require a mandatory recall. Prior to finding the plan inadequate to protect health or the environment, EPA will follow the informal procedures as set forth at § 165.170(b) and (c). EPA believes that it is a reasonable interpretation of section 19(b)(2) that the Agency has authority to reevaluate plans if such action is necessary to achieve a safe and effective recall.

2. *Mandatory Recall*

As set forth in § 165.186, if EPA finds that a mandatory recall is appropriate, he would require the recall by issuance of a proposed rule in the **Federal Register**. Such a proposed rule would provide that the recall be carried out in accordance with requirements of § 165.190, the level in the distribution chain to which the recall is to extend, and any special terms of the recall that

EPA finds necessary for safe and effective recall of the pesticide, in addition to the generic requirements in § 165.190. The proposed rule would allow a brief comment period before EPA published a final regulation applicable to the particular suspended and canceled pesticide.

The final recall regulation would establish a date for initiation of the recall. Section 19(d)(2) of FIFRA waives the 60-day congressional review period under section 25(a)(4) for the final recall regulation. EPA may decide to delay the date for initiation of the mandatory recall until after the date for cessation of sales of existing stocks of the suspended and canceled pesticide. If the pesticide has already been suspended and canceled, the Administrator would issue a proposed rule requiring a recall for the pesticide in accordance with the published regulations. The proposed rule would allow a comment period before EPA published a final regulation applicable to the particular suspended and canceled pesticide.

Section 165.190 prescribes the steps which would have to be carried out in a mandatory recall and provides persons responsible for conducting these recalls the opportunity to create an infrastructure within their company for conducting a recall should one become necessary. Section 165.190 and the other generic regulations being proposed also provide a degree of certainty for registrants and others regarding the requirements for conducting a recall. The generic regulations also allow EPA to streamline the process for requiring a mandatory recall and assure that suspended and canceled pesticides are removed from the sale, distribution, and use chain in a timely manner.

EPA plans to make information collected under section 6(g) of FIFRA available to registrants to help them locate holders of their pesticides. Section 6(g) of FIFRA requires any producer or exporter of pesticides, registrant of a pesticide, applicant for registration of a pesticide, applicant for or holder of an experimental use permit, commercial applicator, or any person who distributes or sells a pesticide which is suspended or canceled under section 6 to report the amount of the pesticide they hold and the location of the pesticide. EPA has proposed a policy which will:

(1) Clarify the responsibilities of persons required to submit information under FIFRA section 6(g);

(2) Establish procedures that must be followed in order to comply with FIFRA section 6(g); and

(3) Clarify when FIFRA section 6(g) information must be submitted. EPA anticipates receiving this information prior to issuing a recall order or final recall regulation. In addition to section 6(g) information, registrants could also use the information they are required to maintain under section 8 of FIFRA to locate holders of their pesticides.

D. Recall Procedures

1. *General*

As previously discussed, voluntary recall plans cover the same elements as mandatory recall plans; however, two major differences between voluntary and mandatory recalls are who is responsible for conducting the recall and the deadlines for completing the mandatory recall. In voluntary recalls, EPA will request the registrant of a suspended and canceled pesticide to submit a voluntary recall plan and then order the registrant to conduct the recall in accordance with the approved plan. The registrant sets his own timetable for completion of the recall action, subject to EPA approval. For mandatory recalls, registrants must still develop a recall plan, but after EPA issues the regulation requiring implementation of the recall, any person who is or was a registrant, distributor or seller of the suspended or canceled pesticide prior to suspension and cancellation, or any successor in interest to such a person, could be required to conduct or participate in a mandatory recall action. EPA would specify the level in the chain of distribution to which the recall would extend, either at the time of the voluntary recall request or in the **Federal Register** notice proposing a mandatory recall of a suspended and canceled pesticide. In addition, the mandatory recall must be completed within 6 months of initiation.

EPA would normally request a voluntary recall plan or propose to require a mandatory recall in the Notice of Intent to Cancel a pesticide. There may be instances, however, where EPA would request a voluntary recall or require a mandatory recall of a pesticide which has been suspended and canceled for some time, or which has been the subject of an earlier voluntary recall. For instance, EPA may have allowed, at the time the pesticide was canceled, sales and use of existing stocks of the canceled pesticide for a specific period of time, anticipating that the existing stocks would be sold and used by a certain date based upon information known at the time. If EPA later learns or has information indicating that there may be large amounts of the pesticide still left in the distribution/use chain due to diminished use after the time period has expired, EPA may require a recall of the pesticide.

The Agency expects that registrants would begin developing procedures for recalling suspended and canceled pesticides well in advance of an actual recall request. This would allow the registrant to evaluate its ability to conduct both a voluntary and a mandatory recall and make any changes necessary in its operations enabling it to conduct a recall in the most efficient manner possible.

2. *Conducting a Recall*

In the voluntary recall plan, under § 165.167(a), the registrant can designate persons who will act as its agents (i.e., distributors, dealers, or retailers) in contacting persons who may be holders of the suspended and canceled pesticide. However, the registrant remains ultimately responsible for the actions of its agents and compliance with the terms of the recall.

Pursuant to §§ 165.167(b)(2) and 165.190(e), registrants would have an obligation to accept their own suspended and canceled pesticides from persons other than those identified in the recall plan.

A recall conducted under subpart I or J of part 165 would be considered complete when the registrant has recalled all its pesticides from those persons who have offered the pesticide for recall and the pesticides have either been placed in storage or a management option chosen for the pesticide has been completed.

EPA recognizes the possibility that some quantities of suspended and canceled pesticides may not be discovered until after a recall is completed, particularly in the case of mandatory recalls which must be completed in 6 months. EPA's experience with its disposal program has been that these late discoveries are typically by end users holding small quantities of the material. These holders either failed to hear about EPA's disposal operations or discovered additional material previously overlooked. The recall regulations being proposed today put the burden on registrants and, in the case of mandatory recalls, on distributors and retailers to identify and contact their customers. This should help assure that everyone who is involved in the recall is notified. Nevertheless, despite best efforts, someone may for legitimate reasons not hear about the recall until it is over. EPA solicits comments on whether the regulations should provide for

VOL 58 ISS 85 MY 5 1993 UMI

extending the recall for a period of time upon receipt of information showing that some holders may not be aware of the recall or have not participated in the recall in a timely manner despite the registrant's best efforts.

As proposed, registrants, distributors and dealers who sold and distributed the suspended and canceled pesticide prior to its suspension and cancellation, and any successors in interest to such persons, could be subject to a regulation requiring a mandatory recall. EPA has determined that because of the nature of the mandatory recall and the circumstances under which the Agency anticipates a mandatory recall would be required, (i.e., registrants unwilling or unable to conduct a voluntary recall, an inadequate voluntary recall plan is submitted, or compelling reasons for requiring a mandatory recall without first affording registrants the opportunity to submit a voluntary recall plan), requiring registrants, distributors and dealers to participate is generally the most effective means of conducting a mandatory recall.

As set forth in § 165.190, registrants would be responsible for contacting their customers within 20 days of the effective date of the recall, advising them of the terms of the recall, providing them with the name, address and telephone number of the person responsible for conducting the recall, providing them with a copy of the recall plan and determining whether their customers are holding stocks of the recalled pesticide. By customers, EPA means persons to whom a registrant's pesticide was sold or distributed. If the registrant's customer is holding stocks of the recalled pesticide, the registrant would have to determine the types, amount and location of the pesticide being held and provide his customer with the information listed in § 165.190(d).

The registrant's customer (if he is a distributor or seller and not an end-user) in turn would be responsible, as a recaller himself, for contacting his customers and determining whether they are holding stocks of the pesticide to be recalled. If they are, the registrant's customer would determine the types, amount and location of the pesticide being held, and provide the holder with the information listed in § 165.190(f). Additionally, the registrant's customer would either offer to assist in collecting and storing the holder's recalled pesticide himself, or after determining the types, amount and location of the recalled pesticide being held, refer the holder to the registrant with the information collected and have the registrant provide for transportation to the registrant's designated storage facility as specified in the registrant's plan. If his customer is a distributor or seller, the registrant's customer would be required to provide the distributor or seller with a copy of the registrant's recall plan. This process would continue down the chain of distribution and sale to the level required by the rule. Each person in the chain would be responsible for contacting all his customers who may be holding the recalled pesticide. Distributors and dealers would be responsible for providing the registrant with all the recordkeeping information necessary for the registrant to submit interim and final reports as required.

The proposed regulations under § 165.190 require that certain deadlines be met in the conduct of the mandatory recall. Section 165.190(c) requires registrants to develop a written plan for conducting a recall within 10 days of the effective date for initiation of the recall and to distribute the plan to their customers within 20 days of the effective date for the recall. In addition, § 165.190(d)(1), requires all persons responsible for conducting a recall provide EPA with their name, address and telephone number within 10 days after receipt of the recall plan. Section 165.190(j) requires that the registrant have recalled all pesticides offered for recall within 6 months after the effective date for initiation of the recall. EPA is very concerned that mandatory recalls be completed in a timely manner. Because the pesticides have been suspended and canceled for risk reasons, the length of time to conclude the cancellation and rulemaking for a mandatory recall makes it necessary to conduct the recall as swiftly as possible in order to consolidate and safely store the stocks of the pesticide. The notice given the affected community through the rulemaking process allows those persons responsible for conducting the recall sufficient time to plan their recall activities; thus six months after the regulation is effective is a reasonable time for conducting the recall. However, with the ample notice given the affected community through the rulemaking process in regard to their responsibilities in the event of a mandatory recall, persons responsible for conducting a recall should be able to comply with these deadlines.

3. *Transportation and Storage of Recalled Pesticides*

Under section 19(b)(4)(C) of the Act, EPA may require that any person subject to a recall regulation must "provide for proper transportation of the pesticide to a storage facility," if transportation is requested by the holder. EPA interprets "provide for proper transportation" to include paying the cost of transportation.

Section 165.167(e) requires the registrant to include in the recall plan a description of how the registrant intends to provide for transportation. The description must inform EPA of the method of transportation, who is bearing the cost of transportation, and, if someone other than the registrant is paying transportation costs, why. EPA will review this portion of the plan to assure that registrants are meeting the requirement for providing transportation upon request. Failure to meet this requirement could result in EPA finding that the plan is inadequate to protect health or the environment.

For mandatory recalls, EPA is proposing in § 165.190(e) that registrants must provide for transportation, if requested by a holder of the registrant's pesticide. EPA considered proposing that all persons subject to the recall regulation must provide for transportation, but decided that having the registrant alone responsible for providing for transportation should result in more efficient transfer of the pesticides to the registrant, and avoid unnecessary movement of the materials. In those instances where persons subject to the recall regulation other than the registrant provide transportation for a holder, as specified in the registrant's recall plan, such persons may seek reimbursement of transportation costs from the registrant.

EPA considers it reasonable to interpret section 19(b)(4)(C) of the Act as requiring the registrant to pay transportation costs because such requirement will help promote safe and effective recalls. It has been EPA's past experience with its disposal operations that the cost of transportation has been a disincentive to participation by holders. For example, some holders of the suspended and canceled pesticide chose to continue to store the pesticide rather than ship it to the EPA for disposal. To assist holders that were unable or unwilling to transport their stocks of suspended and canceled pesticides to EPA, several states spent considerable money, time and manpower to set up programs for collection and transport of the material to EPA. The Maine Board of Pesticides Control collected, packed and shipped over 2,200 gallons of dinoseb. Texas, New York and Wisconsin have collected and shipped 2,4,5-T and silvex. Washington developed a program to collect dinoseb. State officials feel strongly that the cost of transportation is a disincentive to participation in EPA's disposal program, especially in the case of small holders. Collection by the recaller or local and State governments increases participation.

Requiring registrants to provide for transportation at no cost to holders (when requested to provide transportation) should make the recall more effective in achieving return of all stocks. Also, transferring technical and financial responsibility for handling the material to the pesticide registrant who knows best how to manage the material safely should aid in achieving a safe recall.

The legislative history on section 19 of the Act supports the interpretation that "providing for" transportation includes payment for transportation and that registrants should bear transportation costs, if requested. According to the Report from the Senate Committee on Agriculture, Nutrition, and Forestry, Congress amended section 19 of the Act so as to shift the burden for transporting, storing, and disposing of suspended and canceled pesticides to the pesticide registrant. S. Rept. 100-346, 100 Cong. 2nd Sess. 8 (May 13, 1988). "The registrants have the greatest knowledge of how to handle the chemical safely and possess the technical expertise and the funds to deal with the products under agency oversight." Id.

The requirement in § 165.190(a) for a registrant to provide for transportation upon request of any holder of his pesticide is subject to section 19(d)(1) of the Act, which provides that sellers and buyers may make any agreement regarding the ultimate allocation of the costs of transportation. Registrants could show in comments on a proposed rule for a particular recall that they have such agreements, or could provide other evidence showing that payment of transportation would not be necessary for a safe and effective recall. Section 165.190(a)(5) would require the registrant to inform, in writing, any end-user who has declined to participate in the recall because of transportation costs, that the registrant will pay for transportation if requested to do so. End-users may not be aware that they can ask the recaller to provide transportation and its been EPA's experience that endusers are the holders most seriously at risk of not participating due to the cost of transportation.

EPA believes that requiring registrants to pay transportation costs, if requested, will also help promote safe and effective voluntary recalls. However, EPA intends that registrants will have greater flexibility in carrying out voluntary recalls than mandatory recalls. Also, EPA recognizes that allowing flexibility for working out provisions for transportation may be desirable, since registrants are only required to provide transportation if requested and registrants may enter into voluntary agreements concerning the ultimate allocation of costs. Section 165.167(e) provides the registrant such flexibility. However, EPA is concerned about end-users refusing to participate in a recall because of transportation costs. Therefore, in determining the adequacy of a plan under § 165.16, EPA will scrutinize the plan to determine what steps the registrant will take to address this problem.

Proposed § 165.167(d) would require the recall plan to describe the information to be furnished to the holder on the provision for transportation, and such information must include a description of the registrant's responsibilities and planned activities with respect to transportation of the pesticide. Among other things, registrants may inform holders that they will provide for transportation, that holders may furnish their own transportation and seek reimbursement from the registrant, or that transportation costs are negotiable and provide steps the holders can take to negotiate such costs.

Transportation and storage of the recalled pesticide under both voluntary and mandatory recalls must be in accordance with applicable DOT regulations, and all other applicable Federal regulations, and State or local hazardous and solid waste regulations. Under the Resource Conservation and Recovery Act (RCRA) regulations, commercial chemical products such as pesticides become "solid wastes" (and thus, potentially, hazardous wastes) at the point where the pesticide's holder (i.e., end-user, dealer, distributor, or registrant) decides to discard them. If a suspended and canceled pesticide is listed in 40 CFR 261.31 or 261.33, or exhibits a hazardous waste characteristic identified in 40 CFR 261.21 through 261.24, it becomes a hazardous waste at the point when its holder decides to discard it.

Section 19(b)(4) of the Act also provides that EPA may require any person subject to a recall regulation to "accept and store" the recalled pesticides. EPA interprets this language to include the responsibility for payment of storage costs. For similar reasons discussed above concerning transportation costs, EPA is proposing that the registrant be responsible for the costs of storage, subject, of course, to section 19(d)(1) of the Act concerning voluntary agreements between buyers and sellers. EPA believes that interpreting "accept and store" to include responsibility for storage costs accords with the congressional intent of placing the burden on registrants because they have the technical expertise and the funds to handle the pesticides. Section 165.190(b) of the CFR provides that any recaller in the distribution chain that assists the registrant in making storage facilities available and storing pesticides, if specified in the recall plan or requested by the registrant, may seek reimbursement of storage costs for the recalled pesticides from the registrant. EPA's interpretation of section 19(b)(4) of the Act in requiring the registrant to pay all storage costs incurred as a result of the recall also fits the congressional scheme in section 19 of the Act because Congress, in section 19(c) of the Act, provided for only registrants and no one else to be reimbursed for a portion of the storage costs incurred as a result of a recall under section 19(b) of the Act.

EPA is considering requiring that registrants include in the recall plan for both voluntary and mandatory recalls, a statement as to whether the Emergency Planning and Community Right-to-Know Act (EPCRA), 42 U.S.C. 11002, applies to the storage of the suspended and canceled pesticide. A recent report completed by the EPA Office of Inspector General cited as a problem that few of the storage facilities used for storage of EDB and dinoseb had notified their local emergency planning committee (LEPC) that suspended and canceled pesticides which were hazardous wastes were being stored in the facility. Persons storing the pesticide may have been unaware of EPCRA's requirements. A suspended and canceled pesticide must be reported to an LEPC by a storage facility only when the material has been declared a waste and the pesticide is either a listed or characteristic waste under RCRA. Sections 165.167(f) and 165.190(h) of the CFR would require that the registrant include a statement in the recall plan on the applicability of EPCRA and a description of the notification requirement. The Agency solicits comment on this proposed requirement of the regulations or any alternatives to this requirement which could help inform persons storing the pesticide about EPCRA's applicability.

4. *Management Options.*

The holder who makes the decision to discard controls the point at which the pesticide becomes a solid waste; if the pesticide is a hazardous waste, RCRA regulations govern its transportation and

VOL 58 ISS 85 MY 5 1993 UMI

storage from that point on. Thus, if an enduser decides to dispose of the suspended and canceled pesticides in his possession instead of returning them to the registrant through a recall program, the pesticide would be considered a solid waste subject to RCRA. The end-user may decide to participate in the recall program relying on the registrant's selection of management options for determining the status of the recalled pesticide. When registrants initially notify holders about the recall, registrants must also provide information to holders on the management options being considered. Then, after the registrant takes possession of the recalled pesticides, the proposed regulations at §§ 165.167 and 165.190 require the registrant to evaluate the options for management of the recalled pesticide and to provide such information on the options being pursued in an update of the recall plan. EPA recognizes that in certain cases the registrant may elect to have the pesticide picked up from the end-user and taken directly to a disposal facility instead of collecting such material at one or more central storage areas. In those situations where the end-user agrees to participate in a recall and the material is to go directly to a disposal site, the recalled pesticide, if it is a hazardous waste, would be subject to RCRA regulations.

Ultimately, EPA expects that more pesticides will be collected during the recall if the registrant makes the decision about whether to discard the material at some point after taking possession of the pesticide from the holder. If an end-user becomes subject to RCRA regulations prior to the recall because of a registrant's decision as to the waste status of the recalled pesticide, EPA is concerned that less material will be collected during the recall and that pesticides subject to the recall may be disposed of improperly. However, EPA would like comments on whether determinations that suspended and canceled pesticides are hazardous wastes in fact cause end-users to improperly dispose of them, rather than participating in the recall. EPA also requests commenters to provide information on instances where they believe improper disposal has occurred under these circumstances. EPA has recently proposed (58 FR 8102; Feb. 11, 1993) a set "special collection system" regulations under RCRA subtitle C that would apply to suspended and canceled pesticides that are recalled under FIFRA section 19(b), where the pesticides are hazardous wastes. These regulations, in combination with the forthcoming technical standards for section 19(b) recalled pesticides, would ensure the safe handling of such pesticides as they are returned up the distribution chain. Once they reach a RCRA-permitted or interim status facility, their management is fully controlled under the current RCRA regulations.

Pesticides owned by the registrant, as well as those recalled by the registrant must be stored in accordance with the terms of the cancellation notice, and all applicable State, Federal, and local laws and regulations. The registrant's obligation to manage its suspended and canceled pesticides in accordance with all applicable requirements does not end when the recall is completed, but rather for as long as the pesticides are in the registrant's control.

If the pesticides are hazardous wastes under the RCRA, a permit is required for storage. Under the Land Disposal Restrictions program, restricted hazardous wastes may be stored solely for the purpose of accumulating sufficient quantities of waste to facilitate proper treatment, recovery or disposal (see 40 CFR 268.50). For storage of less than 1 year, the burden of proof that storage is solely for the purpose stated above lies with EPA. After 1 year the burden of proof shifts to the facility owner or operator.

Under both § 165.167(h) (voluntary recalls) and § 165.190(i) (mandatory recalls), registrants would be responsible for evaluating the management options to be implemented for their suspended and canceled pesticides after the pesticides are recalled and in their custody and would be required to report to EPA on the options being considered (§§ 165.174(b)(4) and 165.194(e)(4)). EPA intends registrants to evaluate available management options. Distributors and dealers in a mandatory recall action would not be responsible for evaluating management options.

The "management options" EPA expects registrants to consider encompass activities to manage the pesticide after it has been recalled, including, but not limited to, legal pesticide or nonpesticide use, recycling (e.g., recovery), treatment (e.g., neutralization, deactivation of the active ingredient, degradation), burning for energy or materials recovery, as well as disposal. EPA invites comment on the definition of the term "management options" in §§ 165.163 and 165.183.

The purpose of requiring consideration of a range of management options is to encourage the development and consideration of alternatives to disposal. Use, reuse and other forms of recycling may be beneficial because they are more likely to result in resource conservation and pollution prevention compared to treatment and disposal. Registrants may be able to minimize the amount of pesticides requiring disposal by recycling or selling the material for nonpesticidal use. If a registrant wishes to export a suspended and canceled pesticide, he should be advised that any export must be in compliance with section 17 of FIFRA, the Agency's export policy and the terms and conditions of the cancellation notice. Such exporters will be closely scrutinized by the Agency.

5. *Recordkeeping*

The recordkeeping requirements proposed in § 165.172 is similar to that requested by EPA in the past when it requested registrants to conduct recalls of 2,4,5-T, silvex, EDB, and dinoseb and EPA has determined that the recordkeeping is necessary for the registrant to be able to verify the effectiveness of the recall as required by section 19(b)(5)(B) of the Act. The recordkeeping would also provide the Agency with the information it needs to be able to track the suspended and canceled pesticide (both recalled pesticides and pesticides owned by the registrant) throughout the recall process to disposal or other management options. The proposed rule would not require the records to be kept or reported in a specified format. EPA solicits comments on whether a suggested format or reporting form should be used to report this information. The information would have to be available and readily accessible in the event of an inspection by EPA or its designated representative and presented in a clear and legible format when reported to EPA.

EPA anticipates providing information regarding the conduct and outcome of the recall to the States so that the States may be able to monitor not only the recall, if they have a cooperative enforcement agreement with EPA, but also any storage and disposal activities taking place in their State.

Section 19(b)(5)(B) of the Act requires that the registrant be able to verify the effectiveness of the recall. The recordkeeping proposed in §§ 165.172 and 165.192 is necessary for the registrant to verify the effectiveness of the recall. EPA expects that the registrant could analyze the information set forth in these provisions to determine, among other things, how many persons identified by the registrant were contacted, how many persons outside those identified by the registrant offered their pesticide for

recall, how many persons who held suspended and canceled pesticides refused recall, and any problems encountered during the recall.

The reporting proposed by §§ 165.174 and 165.194 is necessary for EPA to carry out its mandate to assure the safe and effective recall of suspended and canceled pesticides. Review of the progress reports of the recall will allow the Agency to monitor the recall and identify any problems that may arise during the course of the recall, such as lack of participation in the recall by holders or problems arranging for transportation which make it likely that a registrant may not be able to complete the recall as scheduled. Reporting on the outcome of a recall is the final step in the recall procedure and assures EPA that the recall has been carried out according to plan and that pesticides are being stored and managed safely.

IV. Storage and Disposal Plans

A. Background

In 1988, Congress amended FIFRA section 19 to eliminate EPA's responsibility for disposal of suspended and canceled pesticides, and shifted the responsibility to registrants. When EPA takes action under section 6 of FIFRA to suspend registrations of a pesticide, and such registrations are subsequently canceled, EPA may determine under section 19(b) that a recall of the pesticides is necessary to protect health or the environment. If the Agency determines that a recall is necessary, section 19(c) requires the Agency to share in a portion of the costs of storing the pesticides recalled under section 19(b). The Agency will reimburse the registrant for part of the storage costs incurred for the recalled pesticide in accordance with the statutory allocation of FIFRA section 19(c)(2). Only registrants are eligible for cost sharing under section 19(c); other persons who are required to recall pesticides under a mandatory recall or who participate in a recall are not eligible for cost sharing.

Registrants who wish to become eligible for reimbursement of storage costs must submit a storage and disposal plan to EPA that meets criteria established in this regulation. Only registrants with an approved storage and disposal plan will be eligible for reimbursement. EPA is proposing to establish criteria which storage and disposal plans must meet and set out procedures for registrants to follow in submitting claims for reimbursement of storage costs. Registrants who recall a pesticide under section 19(b) of FIFRA but do not elect to claim reimbursement do not have to submit a storage and disposal plan.

B. Cost-Sharing Schedule

Section 19(c)(2) establishes a schedule for sharing storage costs with the intent of providing incentives to both manufacturers and EPA to expedite the safe disposal of the materials. The Agency must reimburse the registrant, on request, as follows:

1. None of the costs incurred by the registrant before the date of submission of the plan to the Agency.
2. All of the costs (100%) incurred by the registrant after the date of submission of the plan to the Agency or the date of cancellation of the registration of the pesticide, whichever is later, but before the approval of the plan by the Administrator.
3. Half of the costs (50%) incurred by the registrant during the 1-year period beginning on the date of the approval of the plan by the Agency or the date of cancellation of the registration of the pesticide, whichever is later.
4. None of the costs incurred by the registrant during the 3-year period beginning on the 366th day following approval of the plan by the Agency or the date of cancellation of the registration of the pesticide, whichever is later.
5. One quarter of the costs (25%) incurred by the registrant during the period beginning on the first day of the 5th year following the date of approval of the plan by the Agency or the date of cancellation of the registration of the pesticide, whichever is later, and ending on the date that a disposal permit for the pesticide is issued by a State or EPA region, or an alternative plan for disposal of the pesticide in accordance with applicable law has been developed.

C. Storage and Disposal Plans

Section 19(c)(1) states that under certain circumstances registrants may be reimbursed for a portion of the storage costs incurred as a result of a recall; it does not provide for reimbursement of storage costs for dealers, distributors or end users.

The statute also makes clear that only recalls carried out under section 19(b) will qualify the registrant for reimbursement. Recalls initiated by the registrant other than pursuant to section 19(b) will not entitle the registrant to reimbursement of storage costs.

Registrants would also not be reimbursed for storage costs incurred for their own inventory of suspended and canceled pesticides. Only costs incurred for storing pesticides received from others by the registrant through the recall process are reimbursable. Pesticides which are owned by the registrant at the time of initiation of the recall, even if the pesticide is in the possession of someone other than the registrant, are not eligible for reimbursement claims.

Under section 19(c) of the Act, registrants must submit a storage and disposal plan for recalled pesticides "as soon as practicable after the suspension." In § 165.205(c), EPA is proposing that registrants submit a storage and disposal plan no later than either the date the voluntary recall plan is requested to be submitted; or 60 days after publication in the **Federal Register** of a proposed rule prescribing a mandatory recall. EPA decided that it is more appropriate to link submission of a storage and disposal plan to a recall than to specify a time period after the suspension because pesticides suspended under section 6(c) of FIFRA may be canceled at varying times, depending in part on whether a registrant challenges the cancellation. Requiring registrants to submit a storage and disposal plan before the registrant actually begins recalling pesticides will help assure that the registrant has planned in advance for the storage and management of the pesticides to be recalled. Also, the registrant should have more specific information to submit in a storage and management plan as a result of beginning to plan for a recall.

If EPA allows sale and distribution of existing stocks after cancellation, and EPA delays ordering a recall until after cessation of the existing stocks period, registrants will also be able to delay submission of a storage and disposal plan. In such situations, registrants would submit a plan no later than the two dates mentioned above.

D. Criteria for Storage and Disposal Plans

Congress directed EPA to establish minimum criteria for storage and disposal plans in order to judge the adequacy of the plan. The criteria must be designed so that EPA can reject a plan that clearly does not provide a scheme for safe storage and safe, practicable disposal of the recalled pesticides that is reasonable in its general approach. (Sen. Rept. 100-346, 100th Cong. 2d Sess. 76 (May 9, 1988); H. Rept. 100-339, 100th Cong. 2d Sess. 53 (Sept. 16, 1988)).

Based on its own experience with arranging for safe disposal of pesticides, EPA has developed minimum criteria against which the registrant's plan will be judged. As a general matter, the plan must provide a framework for

VOL 58 ISS 85 MY 5 1993 UMI

accomplishing safe storage and disposal of the pesticides. Section 165.207 lists the criteria for evaluating whether a storage and disposal plan provides this framework.

First, the plan must show that storage will be in accordance with applicable laws and regulations. EPA may set out specific requirements for storage in the cancellation order. State law that applies to storage of the pesticides will vary, and the Federal law that applies will depend on the circumstances and the material to be stored. Section 165.207(a) requires a registrant to indicate what Federal and State laws apply to the registrant's storage of the materials and the steps the registrant would take to meet those requirements. If the suspension or cancellation order prescribes additional conditions for storage, these must also be addressed by the registrant in the plan. EPA expects a fairly detailed discussion concerning the registrant's plans for storage and will examine the sections of the plan addressing the elements in § 165.208(a), (d), (e), and (f) for this discussion.

Second, § 165.207(b) requires that the plan must also show that the registrant will consider available management options for handling the recalled pesticides. As discussed in the preamble to subpart I (Unit III. C. of this preamble), management options encompass activities to manage the pesticide after it has been recalled, including, but not limited to, legal pesticide or non-pesticide use, recycling (e.g., recovery), treatment (e.g., neutralization, deactivation of the active ingredient, degradation), burning for energy or materials recovery, and disposal. Requiring registrants to consider all management options in a disposal plan is supported by the legislative history. See 134 Cong. Rec. S13454 (Sept. 28, 1988) (statement by Sen. Leahy). The purpose of requiring consideration of a range of management options is to encourage the development and consideration of alternatives to disposal. Use, reuse and other forms of recycling may be beneficial because they generally result in resource conservation and reduced pollution compared to treatment and disposal. Registrants may be able to minimize the amount of pesticides requiring disposal by recycling or selling the material for nonpesticidal use.

The third criteria requires that the plan adequately address each required element of a storage and disposal plan as described in § 165.208. (§ 165.208 is discussed more fully in the next unit, E.) A plan "adequately" addresses each element if the registrant has made a good faith effort to discuss each element. A response that the registrant "has no information" on a particular element would not be a good faith effort in preparing a storage and disposal plan. Another example of a plan inadequately addressing all elements would be where the information provided in addressing one element contradicts other information in the plan. In such cases, EPA would reject the plan and request that the registrant resubmit a corrected plan.

Finally, § 165.207(d) would require that a plan must be signed by the registrant or an authorized representative.

E. Storage and Disposal Plan Contents

Essential elements of planning for storage and disposal include the determination of conditions necessary to ensure safe storage of the recalled material, assignment of persons responsible for storage and disposal, identification of recalled pesticides (amount, formulation, container size and type), location of suitable and available storage facilities, and identification of management options for the material.

Section 165.208(a) requires that the plan must include a general discussion of the registrant's scheme for accomplishing safe storage of the pesticide. In addition to a discussion of the requirements of applicable law and how the registrant will meet these requirements, registrants must provide information they have on the particular storage needs for the recalled material. The registrant is in the best position to know how the materials can be safely stored. If the pesticides and their containers require particular precautions with regard to storage, the plan must address the precautions that must be taken.

The plan must include the names of the person employed by the registrant who will be responsible for overseeing the storage of the pesticide and the disposal of the pesticide (§ 165.208(c)). This person would be the contact for questions the Agency has concerning the pesticides or the plan. The registrant is responsible for keeping the Agency informed of any changes in the contact person.

Section 165.208(d) requires that the plan describe the registrant's own inventory of suspended and canceled pesticides as well as recalled stocks. EPA considers information on the registrant's own inventory necessary for later evaluation of storage reimbursement claims.

In identifying recalled stocks the registrant anticipates collecting, EPA would allow the registrant to estimate the quantities for each formulation and container type if the plan is submitted before the recall is complete. Until the recall is complete, registrants may not have exact information. If registrants have completed a recall before submitting a storage and disposal plan, then the registrant must provide the exact information, rather than estimates.

EPA requires storage and disposal plans to identify each storage facility and their locations, and to provide the storage capacity for each listed facility (§ 165.208(e)). The storage capacity estimates are to be in units of gallons or pounds. This standardization of units of measure will facilitate quick review of the plans. These units of measure were chosen based on the Agency's past experience with solicitation of contracts for storage and disposal of pesticides. Registrants must indicate whether they believe that the stated storage capacity will be sufficient to handle the amount of pesticides to be recalled. If the storage capacity is less than needed to accommodate the recalled pesticides, then the plan must set out the steps the registrant will take to either locate additional storage capacity or manage the recalled pesticides so that storage capacity will not be exceeded. If the registrant plans to store recalled stocks alongside the registrant's own inventory, the registrant should provide this information.

Additionally, § 165.208(e) asks for information on anticipated storage costs. This information will be used by the Agency in evaluating claims for reimbursement of storage costs as well as preparing requests for reimbursement funds from Congress. EPA realizes that the plan will only provide cost estimates, but in order to have meaningful estimates, the Agency asks the registrant to provide the basis for calculating the estimated storage costs.

Section 165.208(f) requires the registrant to describe the available management options or the steps being taken to determine the options for handling the recalled pesticides. As described elsewhere in this preamble, the registrants are required to update the plans. With each update of the storage and disposal plan, the registrant must describe the progress made in the management or disposal of the recalled pesticide. Pesticides which will be disposed of as waste may be subject to applicable RCRA regulations relating to storage, transportation and disposal.

Section 165.208(g) requires that the plan list the location where records will be stored. This will facilitate the inspection of records by the Agency. To the extent the registrant has already provided any of the above information

to EPA in a recall plan, the registrant may refer to appropriate sections of the recall plan instead of resubmitting information.

F. Approval, Notification, and Updating Plans

Storage and disposal plans submitted by the registrant will have to meet the criteria listed in this regulation in order to be approved by EPA and make the registrant eligible for reimbursement of storage costs. Congress intended that EPA be able to reject a plan that does not provide a scheme for safe storage and disposal or that has not been submitted in good faith. (See Sen. Rept. 100-346, 100th Cong. 2d Sess. 76 (May 9, 1988); H. Rept. 100-339, 100th Cong. 2d Sess. 53 (Sept. 16, 1988)).

The Agency will approve plans that meet the minimum criteria and notify registrants of the date of approval. The Agency's approval of a storage and disposal plan establishes the end of the period for reimbursement of storage costs at the 100% level.

The Agency anticipates that there will be cases where the contents of a plan indicate that the plan was submitted in good faith, but that corrections need to be made. In such cases, instead of rejecting a plan, the Agency would conditionally approve a plan and require that the registrant submit a corrected plan within 30 days. If the plan is corrected and resubmitted in 30 days, the date of conditional approval would be the date that establishes the end of the 100% reimbursement period.

If the registrant fails to correct and resubmit the plan within 30 days, or the plan is unacceptable for another reason, the plan would be rejected and the registrant would not be entitled to reimbursement of storage costs for this period. In such situations, the date the registrant submits a corrected plan would establish the beginning of the 100% reimbursement period. In other words, until the registrant submits a corrected plan, the Agency's liability for the 100% reimbursement period does not begin.

The registrant must update or modify the plan as the information submitted in the plan changes, particularly for significant changes such as completion of the recall (so that estimates can be replaced with exact amounts) or changes in the contact persons or storage sites. An updated plan would be required with each claim for reimbursement of storage costs. Additionally, after reviewing and approving the plans, the Agency may ask for modifications. These modifications must be reflected in the updated plan submitted with a claim for reimbursement of storage costs. Failure to modify the plan may result in a denial of the reimbursement claim.

G. Reimbursement of Storage Costs

Section 165.212 provides that the Agency would only reimburse storage costs which are reasonable and necessary, and consistent with the approved storage and disposal plan. The claims would be reviewed by the Agency and any unreasonable costs would be rejected. The Agency requests comments describing the storage costs a registrant might incur. Costs not considered reimbursable include: cost incurred for the acquisition of permits, transportation of recalled pesticides to a storage facility, transportation from one storage facility to another, repackaging costs, the cleanup of spills, structural expansion, or remediation of site contamination.

H. Procedures for Submission of Storage Reimbursement Claims

Section 165.214 sets forth the proposed procedures for submitting a storage cost reimbursement claim to the Agency and describes the documentation that must accompany a claim. Section 165.214(d) would require proof of quantities of recalled pesticides. Registrants must present documentation showing that they recalled and stored the pesticides for which they seek storage costs. For the 50% reimbursement period, the registrant would submit evidence showing the exact quantity being stored during the first year. For example, the registrant could submit routine business records kept on the storage facilities which itemize quantities being stored. If, during the first year, some quantity of the pesticides has been recycled, exported, used for some lawful use, or disposed of, the registrant must submit documentation showing the quantities which left the storage facilities, the date of its departure, and the disposition of the recalled pesticides. Such evidence could include waste manifests, bills of sale, or contracts.

Section 165.214(e) would require the registrant to provide evidence supporting all claimed storage costs. The costs must be itemized so that the Agency can evaluate the reasonableness and necessity of costs. The registrant could consolidate the supporting information required to accompany the claim form and verify the contents of the claim by submitting an independent auditor's or accountant's report or schedule. If a registrant chooses to submit an independent audit, the auditor must review and independently determine the validity of each element of the claim covered by the audit. The Agency retains the right to request submission of the information that formed the basis for the audits or reports in order to verify the validity of the information submitted.

The registrant would submit a separate claim for storage costs incurred for each reimbursement period. Section 165.214(i) directs that claims be submitted after expiration of the appropriate period; i.e., 100% reimbursement, 50% reimbursement, and 25% reimbursement period. Annual claims may be submitted during the 25% reimbursement period.

Section 165.214(g) would require claimants to substantiate any claims of confidentiality asserted for information submitted with the claim at the time the confidentiality claim is made. EPA will determine whether the information is entitled to confidentiality under 40 CFR part 2, subpart B. Since suspended and canceled pesticides can no longer be distributed and sold as pesticides in the United States, EPA anticipates that most information submitted with claims for reimbursement of storage costs would not be entitled to confidential treatment. Section 165.214(g) includes procedures for substantiating claims of confidentiality. Failure to assert a claim of confidentiality at the time the claim is submitted would result in a waiver of any confidentiality claim for the information submitted. If a confidentiality claim is made, but no supporting documentation is received, the claim would be considered incomplete and returned to the submitter.

Each claim submitted must be certified by the registrant that, among other things, all statements and information provided are true and correct to the best of the registrant's knowledge. Registrants may be liable for civil and criminal penalties for any false statements in the reimbursement claim as provided in 31 U.S.C. 3729, and 18 U.S.C. 287 and 1001.

The Agency encourages registrants to join together to arrange for storage and/or disposal of suspended and canceled pesticides. Thus, the Agency solicits comments on whether registrants find that the procedures as proposed in § 165.214 present any obstacles for registrants considering such arrangements.

I. Additional Requirements for Claims Submitted After the 5th Year

Section 165.216 would require registrants to submit additional information with their reimbursement claim for storage during the 25% reimbursement period. The Agency

VOL
58
ISS
85
MY
5
19 93
UMI

expects that the registrant, in most instances, would have disposed of the pesticides by the fifth year. Congress established a storage cost reimbursement scheme to encourage this by making registrants completely responsible for storage costs in years 2, 3, and 4. The lack of commercial treatment or disposal technology could be a reason that the registrant is still storing recalled pesticides in the fifth year,. For example, in the case of 2,4,5-T and silvex pesticides, EPA suspended many uses of 2,4,5-T and silvex pesticides in 1979 and registrations of these pesticides were canceled over a period of several years. EPA has a statutory responsibility for safe disposal of these materials under FIFRA prior to amendment in 1988. However, currently there is no commercial disposal capacity available for 2,4,5-T and silvex. Congress may have been mindful of this situation when it provided for the Agency to again share in the storage costs, if the registrant is still storing the recalled pesticides after the fifth year.

At the point the registrant determines that there are no facilities with appropriate permits to dispose the recalled pesticides, and that there is no facility in the process of obtaining a disposal permit from a State or EPA Regional Administrator, the registrant should begin developing an alternative plan for disposal of the recalled pesticides. Registrants may consult with the Agency in developing an alternative disposal plan.

If there are facilities with appropriate permits to dispose of the recalled pesticides, registrants will not be eligible for reimbursement of storage costs. EPA's responsibility for 25% reimbursement of storage costs ends on the date that a disposal permit for the pesticide is issued, section 19(c)(2)(E). Therefore, in addition to the information required in § 165.216 and the claim form, registrants, as part of their reimbursement claim for the 25% period, must provide evidence that there is no facility permitted for disposal of the recalled pesticides and there are no alternatives to disposal. Such evidence could include documentation of registrants' search for facilities capable of disposing of the pesticide, such as copies of advertisements for disposal bids and all responses to the advertisements, and correspondence with state agencies concerning facilities permitted to dispose of the pesticide, or similar documents. The registrant must also list the various alternatives to disposal considered and explain why these alternatives were found unsuitable. This information and documentation should be included as part of an updated storage and disposal plan

If the registrant is storing recalled pesticides for some reason other than lack of commercially available treatment or disposal capacity, the registrant must justify the continued need for storage in order to be eligible for reimbursement.

If the pesticides are hazardous wastes under the Resource Conservation and Recovery Act, a permit is required for storage. Under the Land Disposal Restrictions program, restricted hazardous wastes may be stored solely for the purpose of accumulating sufficient quantities of waste to facilitate proper treatment, recovery or disposal (see 40 CFR 268.50). For storage of less than 1 year, the burden of proof that storage is solely for the purpose stated above lies with EPA. After 1 year the burden of proof shifts to the facility.

V. Indemnification

A. Background

Prior to 1988, if the registration of a pesticide was suspended and subsequently canceled under FIFRA section 6, the Agency was required to indemnify owners of the pesticide for losses suffered, not to exceed the cost of the pesticide. Any person who owned a pesticide on the date of suspension and suffered losses by reason of the suspension and cancellation was eligible for indemnification.

Due to past suspension and cancellation actions, the Agency has handled indemnification claims for four pesticides: ethylene dibromide (EDB), 2,4,5-T, silvex, and dinoseb. Prior to 1988, claims were paid from Agency funds, or from the Judgment Fund when a claimant obtained a judgment from the U. S. Court of Claims. To prevent indemnification payments from draining the Agency's budget, Congress ordered in the 1988 Continuing Appropriations Act, Public Law 100-202, Dec. 22, 1987, that indemnification claims be referred to the Department of Justice for settlement under 28 U.S.C. 2414 and payment be made from the Judgment Fund, 31 U.S.C. 1304. Congress directed that this payment arrangement be continued until all the Government's obligations under section 15 of FIFRA, prior to amendment in 1988, are satisfied.

In 1988, the FIFRA amendments revised section 15 to restrict who could get paid indemnification from the Judgment Fund in the event of future suspension and cancellation actions. Under section 15 as amended, most owners of pesticides suspended and canceled will only get indemnified if Congress specifically appropriates funds for that purpose. More specifically, section 15 provides as follows:

1. Eligible owners of suspended and canceled pesticides suffering losses will receive indemnification only if Congress provides a line item appropriation for indemnification.

2. Registrants, wholesalers, dealers, and distributors (i.e., sellers) must reimburse purchasers, other than end users, for any quantity of pesticide remaining unused or unsold as a result of the suspension or cancellation of the pesticide, unless the seller provided a written notice at the time of distribution or sale that the pesticide is not subject to reimbursement. Section 15(b)(2)(A).

3. As an exception to the requirement for a line item appropriation, end users, and certain dealers and distributors who could not get reimbursed due to their seller's bankruptcy or insolvency, may be indemnified from the Judgment fund.

In the past, EPA has provided guidance on submitting indemnification claims in Federal Register Notices addressing the particular suspended and canceled pesticide. The 1988 FIFRA amendments did not change the eligibility requirements for indemnification so that many of the procedures for submitting claims are still applicable and have been incorporated into this proposed rule.

B. The Proposed Rule

1. *Definitions—Special Status Seller*

Section 15 of FIFRA requires sellers to reimburse those to whom they have distributed or sold the pesticide, unless the seller provided a written notification at the time of sale or distribution that it would not reimburse purchaser. Those dealers or distributors who did not receive advance notification of nonreimbursement and who are unable to get reimbursement due to their seller's bankruptcy or insolvency are referred to in the proposed rule as special status sellers.

2. *Eligibility Requirements for Indemnification*

a. *Eligible pesticides.* Section 15 of FIFRA is straightforward in providing that only pesticides suspended and subsequently canceled under FIFRA section 6 are eligible for indemnification. Section 165.225(a) would simply restate this eligibility requirement. FIFRA section 24(c) registrations are deemed to be Federal registrations and thus subject to FIFRA provisions on suspension and cancellation. Accordingly, suspension and cancellation of section 24(c) registrations make the pesticides eligible for indemnification.

Section 15 of FIFRA provides for indemnification for losses suffered "by reason of suspension and cancellation of the registration." This phrase has not changed from prior law. EPA has consistently interpreted this language as limiting indemnification to registered pesticide products. Pesticides which are not packaged, labeled and released for shipment as of the date of suspension are not eligible for indemnification. Release for shipment is the point at which the registered pesticide is ready for distribution or sale. Prior to this point, samples taken by the producer could show that a batch was off-specification and therefore not suitable for sale or distribution. Additionally, it is at this point that EPA has authority to inspect the labeling and composition of the pesticide.

b. *Eligibility of persons.* FIFRA section 15 states that the person who owned the pesticide at the time of suspension may seek indemnification. Section 165.225(b) tracks section 15 of the Act in setting forth the criteria for persons who are eligible for indemnity. Under the statute it is clear that anyone who acquires the pesticide after the suspension is not eligible for indemnification. An example of a lawful acquisition after suspension and cancellation that would not entitle the holder to indemnification would be acquisition for use under an existing stocks provision of a final cancellation order. Any person acquiring the pesticide for such use from the person owning it at the time of suspension, would not be eligible for indemnification for any leftover pesticide. However, the purchaser could try to return it to the person who owned it at the time of suspension and who would be eligible for indemnification.

Additionally, a claim may be filed by a person holding a power of attorney for the owner. A seller who has received an assignment from the person who owned the pesticide at the time of suspension will not be eligible for indemnification unless the Government waives the Anti-Assignment of Claims Act, 31 U.S.C. 3727(b). The Act prohibits assignment of a claim against the Government before the "claim is allowed, the amount of the claim is decided, and a warrant for payment of the claim has been issued." Thus, unless the Government expressly waives its prohibition against early assignment, the Act would bar payment of indemnification claims acquired from an eligible individual by assignment and submitted to the government for payment. The Act was intended to protect the government from:

(i) The buying by influential persons of numerous claims against the federal government and the improper urging of them upon governmental officers;

(ii) Possible multiple payment of claims, the necessity of investigating the validity of assignments, and the inability to deal with the original claimant; and

(iii) The loss to the government of defenses to an assignor's claim not applicable to an assignee.

Although in the past, to encourage recall of suspended and canceled pesticides, the Government has waived the prohibition against early assignment provided certain conditions were met, with the 1988 amendment of FIFRA sections 15 and 19, waiver may be less appropriate. Section 15 of the Act requires sellers to reimburse their purchasers. Those purchasers who are reimbursed have not suffered losses by reason of the suspension and cancellation and therefore have no right to claim indemnification under section 15 of the Act. The sellers will bear the loss for reimbursement paid. If sellers provide advance written notification of no reimbursement, then the purchasers may have suffered losses for which they could file for indemnification under section 15(A) of the Act. Of course, claims filed under section 15(a) of the Act would not be paid unless Congress appropriates funds. However, if, in such a situation, the purchaser were to assign his right to indemnification to the seller, the seller would, in effect, be avoiding the intent of section 15 that sellers absorb the loss for reimbursements paid to their purchasers. Secondly, EPA now has the authority under section 19 to require recall of suspended and canceled pesticides, therefore, EPA does not need to take extraordinary steps, such as waiver of the prohibition against early assignment, to encourage registrants to recall their pesticides.

For future suspension and cancellation actions, if EPA determines that a recall is necessary under section 19(b) of the Act, the Government will consider whether circumstances warrant waiver of the Act's prohibition against early assignment and whether it is in the Government's interest. If EPA notifies registrants and other potential claimants that the Government may waive the prohibition against early assignment, such waiver would be subject to limitations. Namely, only assignments to the person from whom the pesticide was purchased in the chain of distribution would be acceptable. Secondly, all assignments would have to include a statement that any defenses the Government has against the assignor (including set-off) would be applicable to the assignee. Section 165.234(j)(9) requires registrants submitting assigned claims to certify that the United States may assert against the assignee any defenses, or right of set-off or counterclaim applicable against the person who assigned the claim.

3. *Limitation on Amount of Indemnification*

Section 15(c) of the Act limits the amount of indemnification to the cost of the pesticide (other than the cost of transportation) at the time of suspension, not to exceed fair market value. EPA has consistently interpreted this statutory limitation to cost of the pesticide to mean that manufacturers and registrants can recover for their own inventory of suspended and canceled pesticides only production costs, which include properly allocated overhead. Others can recover only the purchase price, less any sales tax or transportation. Any discounts received must be subtracted from the purchase price. Section 165.227 incorporates this interpretation of section 15(c).

Section 165.227(b) refers to a duty to mitigate losses. FIFRA section 15 directs that owners of pesticides can recover only for losses. If, after suspension or cancellation, an owner is able to lawfully sell or use the pesticide, then the owner has the responsibility to make a reasonable effort to do so before seeking indemnification from the government.

4. *Payment of Indemnification*

Section 165.230 describes the groups of pesticide owners that may receive indemnity from the Judgment Fund: (a) Qualified end users; and (b) special status sellers. Persons who are sellers of pesticides (i.e., dealers) who also apply pesticides will be treated as sellers only. Persons who are applicators who only sell the service of applying registered pesticides without delivering any unapplied pesticide to any person so served will be treated as an end-user. The legislative history of the 1988 amendment to section 15 of the Act indicates that Congress intended to restrict the end-users that could be paid from the Judgment Fund in such a manner. In discussing subsection 15(b), the Senate Committee on Agriculture, Nutrition, and Forestry stated that "The Committee intends to authorize indemnification for a person who owned the pesticide only for the purpose of applying or using it, and does not intend to authorize indemnification for a person who owned the pesticide for the purpose of selling or applying it***. The

Committee intends to exclude persons who sell the service of applying pesticides from indemnification under this subsection." S. Rept. 100-346, 100th Cong. 2d Sess. 67 (May 13, 1988). Such persons, if they are eligible under section 15(a), would receive payment only if Congress makes a specific line item appropriation of funds, just as eligible registrants, distributors, and dealers. Owners of suspended and canceled pesticides could fall in the category of both those who are entitled to payment from the Judgment Fund, and those who will only get indemnified if Congress provides a line item appropriation. For example, dealers and distributors may get indemnified because of their status as a purchaser owed, but not paid, reimbursement by an insolvent or bankrupt seller (i.e., special status sellers). The same dealers and distributors may have inventory on hand for which they received advance written notice of no reimbursement and be seeking to recover indemnification for these pesticides.

5. *Seller's Requirement to Reimburse Purchasers*

In the event of suspension and cancellation, section 15(b) of FIFRA requires registrants, wholesalers, dealers, and distributors, referred to as "sellers," to reimburse purchasers other than end users "for any quantity of the pesticide that such person cannot use or resell as a result of the suspension or cancellation***." Section 15(b) provides two options—sellers must provide advance written notification that they are not going to reimburse or they must reimburse their purchasers. If a seller does not wish to reimburse purchasers, he must provide the written notification at the time of purchase. Section 165.232 incorporates the statutory requirement for reimbursement by sellers.

In the event of suspension and cancellation, sellers should notify purchasers on how to present their claims for reimbursement. Such notification could also aid the sellers in securing a thorough and prompt recall in accordance with section 19 of FIFRA.

Section 15(b)(2)(A) of FIFRA does not specifically address whether people who receive advance notice of non-reimbursement are themselves eligible for indemnification from the government. However, section 15(a) provides that any owner of pesticides suffering losses by reason of the Agency's suspension and cancellation action may seek indemnification. Purchasers who suffered losses by reason of the suspension and cancellation, and who were not reimbursed by their seller because of the advance written notice, would seem to fall within the scope of section 15(a). EPA therefore considers that such purchasers can file indemnification claims and, if eligible, may be indemnified through a line item appropriation.

6. *Procedures for Submission of Claims*

Section 165.234 of the proposed rule sets forth a list of items which must be supplied by claimants, including a completed claim form, proof of ownership and cost, and certification of the claim.

a. *Proof of cost.* Claimants must submit documentary evidence, such as purchase receipts or invoices, supporting the claimed cost of the pesticide. Manufacturers, registrants, distributors, and any other claimants that normally maintain business records are permitted to verify the contents of the claim by submitting an independent auditor's or accountant's report or schedule. Each element of the claim, such as cost per unit of pesticide or quantity of pesticide owned at the time of suspension, must be reviewed and independently determined by the auditor or accountant to be valid if verification for the complete contents of the claim is being provided through the report or statement. If the independent review is being conducted for only one element of the claim, such as a manufacturer's cost of production per unit of pesticide, supporting documentation must be submitted for all other elements of the claim. EPA retains the right to request submission of the information that formed the basis for the audits or reports in order to verify the validity of the information submitted.

Often the evidence submitted on proof of cost will also serve to verify ownership on date of suspension.

b. *Proof of status.* Under § 165.234(f), a person who qualifies both as (i) an end user, or a special status seller, and (ii) a seller or applicator, must separate the quantities of pesticides according to the appropriate category, and file claims for the end user or special status seller and the seller or applicator category separately. End users and special status sellers must certify to their eligibility for payment from the Judgment Fund.

Under section 15(b)(2)(B), dealers or distributors are entitled to indemnification from the Judgment Fund if they are unable to obtain reimbursement due to the bankruptcy or insolvency of their seller. Further, section 15(b)(2)(B)(iv) provides that payment from the Judgment Fund is appropriate where a bankrupt or insolvent seller "is and will continue to be unable to provide reimbursement." EPA considered what evidence would be necessary for a claimant to be able to show that its bankrupt or insolvent seller continues "to be unable to provide reimbursement." EPA concluded that dealers or distributors must provide evidence of their attempt to recover through bankruptcy or insolvency proceedings before they are entitled to payment from the Judgment Fund.

If a seller is bankrupt, the dealer or distributor can seek to recover through the bankruptcy proceedings as a creditor. If the dealer or distributor cannot recover cost completely, then it may have a claim for indemnification. Since bankruptcy proceedings may continue several years before resolution, the dealer or distributor can file a claim with EPA while pursuing relief through bankruptcy proceedings. Accordingly, § 165.234(f)(2)(iii) requires that the claimant provide evidence of participation in bankruptcy proceedings, such as a copy of the proof of claim, and, at termination of the proceedings, evidence of the distribution.

Insolvency usually means that the aggregate of the debtor's property, at a fair market value, is not sufficient to pay debts. (See, e.g., the Bankruptcy Act, 11 U.S.C. 101). However, because the definition varies from state to state, the rule does not set out a particular definition for insolvency. Note that a person could be in bankruptcy proceedings, but not be insolvent. A person may file an indemnification claim with EPA while seeking relief through insolvency proceedings.

Section 165.234(f)(2)(ii) requires the claimant seeking indemnification due to the seller's insolvency to submit evidence of the seller's insolvency such as a court order declaring the seller insolvent, a judgment against the seller and evidence that the claimant has been unable to recover, or some other documentation showing the seller's insolvency. EPA considered allowing claimants to prove their seller's insolvency by providing copies of the seller's financial records that establish the insolvency. EPA decided not to propose this alternative, however, because the Agency does not have the resources to make insolvency determinations and because the burden of proving insolvency should be on the claimant. EPA solicits comments on what other evidence could be submitted to demonstrate the seller's insolvency.

If a dealer or distributor cannot provide sufficient proof of his seller's bankruptcy or insolvency, the indemnification claim could be processed under section 15(a) instead of for payment from the Judgment Fund under section 15(b).

c. *Confidential business information (CBI).* In § 165.234(i) the Agency is proposing that claimants be required to substantiate any claims of confidentiality asserted for information submitted through the claim form at the time they assert the CBI claim. Section 165.234(i) sets out the procedures for substantiating confidentiality claims. EPA may need to disclose this information to contractors, and must be able to provide information in the claim to the other Federal agencies involved in processing indemnification claims, including the Department of Justice and the General Accounting Office (GAO). In processing claims for payment from the Judgment Fund, EPA reviews the claim to determine whether claimant meets the statutory eligibility requirements and has provided adequate documentation for the amount claimed; then EPA certifies the claim to the Department of Justice. The Department of Justice reviews the claim, then certifies the claim to the GAO for payment from the Judgment Fund. Processing claims with CBI is administratively cumbersome and time consuming. So that claims can be handled as expeditiously as possible, EPA will need to know at the time the claim is submitted what information, if any, may be subject to claims for confidential treatment.

d. *Certification of claim form.* In submitting a claim to the government for money, claimants must certify that all statements made and information provided are true and correct. Additionally, in signing the claim, among other things, a claimant attests that it has received no other payment for the cost of the pesticides for which indemnification is sought, that acceptance by the claimant of any payment made by the Federal government constitutes full satisfaction and final settlement of the claim, and that a claimant filing as an end user or special status seller meets the criteria for those categories. Claimants may be liable for civil and criminal penalties for any false statements in the claim as provided in 31 U.S.C. 3729 and 18 U.S.C. 287, 1001.

VI. Economic Analysis

EPA has evaluated the potential costs to registrants, distributors and dealers of suspended and canceled pesticides resulting from the recall of the pesticide. EPA's complete economic analysis is available in the public docket for this proposed rule (OPP-190000).

VII. Rulemaking Record

EPA has established a docket of this rulemaking (Docket control number OPP-190000). This record presently contains the following information:

1. Current rule
2. Proposed rule.
3. The economic analysis of this proposed rule.
4. A compilation of documents concerning participation of holders in EPA's disposal program.

As comments are received on this proposed rule they will be added to this record. In addition, upon publication, the final rule will be added to this record. A public version of this record is available for review and copying from 8 a.m. to 4 p.m., Monday through Friday, except holidays, in the Public Docket and Freedom of Information Section, Rm. 246, Crystal Mall #2, 1921 Jefferson Davis Hwy., Arlington, VA.

VIII. Statutory Review

A. U.S. Department of Agriculture

As required by FIFRA section 25(a), a copy of this proposed rule was provided to the Secretary of Agriculture. On February 21, 1992, Nancy N. Ragsdale, Director, National Agricultural Pesticide Impact Assessment Program, provided written comments on behalf of the Secretary. Following is a summary of the comments, together with the Agency's response.

Comment 1: If the recall plan does not work, through no fault of the registrant, EPA should take direct action on those who do comply rather than reevaluate the plan.

Response: Under section 19 of FIFRA, only registrants can be compelled to comply with a voluntary recall. Other persons (dealers and distributors) may be required to participate in a recall only if the Agency requires a mandatory recall by regulation. There is no requirement that holders who are endusers participate in a recall. EPA expects that, given a reasonable opportunity to return a canceled and suspended pesticide to the registrant, most holders would be anxious to participate in a recall rather than bear the costs of disposing of the pesticide themselves. The fact that a voluntary recall is not working is reason enough for EPA to review the recall plan to see if modifications are necessary or if a mandatory recall is necessary.

Comment 2: The following statement is unclear. USDA recommends that it be rephrased.

The statutory requirement for rulemaking for a mandatory recall action may make it difficult for a mandatory recall to be conducted within a reasonable timeframe, there are other factors that mitigate this effect.

Response: EPA agree with USDA's comment. EPA proposes that the last two sentences of the paragraph in question be deleted and the following language be inserted.

Because the pesticides have been suspended and canceled for risk reasons, the length of time to conclude the cancellation and rulemaking for a mandatory recall makes it necessary to conduct the recall as swiftly as possible in order to consolidate and safely store the stocks of the pesticide. The notice given the affected community through the rulemaking process allows those persons responsible for conducting the recall sufficient time to plan their recall 1activities; thus six months after the regulation is effective is a reasonable time for conducting the recall.

Comment 3: USDA proposed that the following sentence in the preamble reading: "In those instances where persons subject to the recall regulation other than the registrant provide transportation for a holder, such persons may seek reimbursement of transportation costs from the registrant.", be clarified to conform with § 165.188(b)(5) to indicate the circumstances under which a holder subject to recall may expect reimbursement by the registrant. The registrant should not be held responsible for the cost of transportation performed by a third party unless such transportation has been authorized by the registrant.

Response: EPA agrees with the comment and will revise the sentence to read:

In those instances where persons subject to the recall regulation other than the registrant provide transportation for a holder, as specified in the registrant's recall plan, such persons may seek reimbursement of transportation costs from the registrant.

Comment 4: Please clarify the following sentence in the preamble to indicate whether "(upon request)" refers to a request for payment or a request for the provision of transportation: "Requiring registrants to pay for transportation (upon request) should make the recall more effective...".

Response: The sentence in question has been amended to read: "Requiring registrants to provide for transportation at no cost to holders (when requested to provide transportation) should make the recall more effective in achieving return of all stocks."

Comment 5: With regard to applicability of EPCRA, 42 U.S.C. 11002, the Agency should bear in mind the chemicals are no more hazardous after being canceled/suspended than they were prior to this action.

VOL 58 ISS 85 MY 5 1993 UMI

Response: EPA agree with USDA's statement regarding the relative hazard of a pesticide. This section is intended to address a finding that facilities were sometimes unaware of their responsibilities under EPCRA. Whether a pesticide is suspended and canceled has no bearing on a facility's responsibility to report. EPA have revised the preamble to clarify this.

Comment 6: USDA questions whether it is appropriate for an agency to "strongly discourage" a legal use such as export of a suspended and canceled pesticide, especially when the statute makes explicit the circumstances under which such exports are permitted. The statement appears to be intimidating and thus diminishes the ability of a registrant to mitigate the cost of the recall.

Response: The statement in question reflects the Agency's policy regarding the export of suspended and canceled pesticides to foreign countries. EPA has encountered situations where suspended and canceled pesticides were being exported without the foreign government's knowledge and in some cases in violation of that country's laws. In addition, if a pesticide was not produced solely for export, it may be illegal to export the product. We are not telling registrants they cannot export suspended and canceled pesticides, just that there are alternatives and that all exports will be closely scrutinized. We have deleted this sentence and revised the preamble to read: "If a registrant wishes to export a suspended and canceled pesticide, he should be advised that any export must be in compliance with section 17 of FIFRA, the Agency's export policy and the terms and conditions of the cancellation notice. Such exporters will be closely scrutinized by the Agency."

Comment 7: A suggested format could help registrants provide EPA the needed information in a form that is consistent and easy to follow. However, this format should not be a requirement.

Response: The Agency did not require a specified reporting format in order to allow the registrant some latitude in devising an accountability system which best suited their needs. We can see the utility of a suggested reporting format. A suggested reporting format would certainly make it easier for the Agency to manipulate and utilize the information. The preamble will be revised to ask for comment on the advisability of a suggested reporting format.

Comment 8: It should be made clear what the responsibility of the registrant is, if asked to modify a plan which has been previously approved by the Agency.

Response: Modifications in a storage and disposal plan requested by EPA must be reflected in the updated plan submitted with a reimbursement claim. Failure to modify the plan may result in a denial of the reimbursement claim. The preamble will be amended by adding the following:

These modifications must be reflected in the updated plan submitted with a claim for reimbursement of storage costs. Failure to modify the plan may result in a denial of the reimbursement claim.

Comment 9: USDA recommends that the following sentence, "If there are facilities with appropriate permits to dispose of the recalled pesticides, registrants would not be eligible for storage costs.", in the preamble be revised to read: "If there are facilities within reasonable distance with appropriate capacity and permits to immediately dispose of the recalled pesticides, registrants would not be eligible for storage costs."

Response: The preamble will be amended to reflect the issue of adequate capacity at a disposal facility. The Agency always intended for lack of capacity at a permitted facility to be a valid reason for continued storage. EPA is, however, unwilling to add a provision that a disposal facility be within reasonable distance to a storage facility. Registrants, if so inclined, could claim that any facility is not within a reasonable distance. Additionally, there may be only one facility in the country permitted to dispose of a given chemical. Provided the facility has sufficient capacity, the registrant should dispose of the product since he has no other options for disposition of the pesticide.

Comment 10: USDA recommends that the following statement in the preamble and § 165.230(a)(2) be clarified to indicate that applicators who sell the pesticides they apply but do not deliver unapplied pesticides to any person so served will be treated as an end-user.

EPA is proposing that applicators who sell the pesticide in addition to the service of applying the pesticide are not end-users that may receive indemnification from the Judgement Fund.

Response: The second sentence under Payment of Indemnification will be deleted and the following text will be inserted:

Persons who are sellers of pesticides (i.e., dealers) who also apply pesticides will be treated as sellers only. Persons who are applicators who only sell the service of applying registered pesticides without delivering any unapplied pesticide to any person so served will be treated as an end-user. The legislative history of the***.

Comment 11: In § 165.234(h), the requirement that an independent auditor or certified accountant verify claims is an unnecessary burden on the company or organization. Since the reimbursement of storage costs section does not include such a stipulation, it should not be included in the indemnification section.

Response: The intent of the regulation is to allow an independent auditor or certified accountant to verify claims in lieu of the claimant submitting all documentation to the Agency. This option is intended to lessen the burden on the registrant and speed processing of the claims by EPA. The first sentence under § 165.234(h) will be amended to read: "In lieu of submitting all documentation to EPA, a person who normally maintains business records may consolidate the supporting information***." EPA does not feel it is necessary for the storage cost reimbursement section to be consistent with the indemnification section in this particular case.

Comment 12: What would EPA's course of action be if a holder did not hear about the recall and had material after the recall period had ended?

Response: The proposed rule requires the registrant and others conducting a recall to take steps to try to reach every holder. Based on EPA's experience in conducting disposal programs, it is likely that there will be holders who do not hear about the recall until the recall is completed. The holder then has two options in this situation: (1) Contact the registrant and see if the registrant would take the product off their hands, or (2) dispose of the product himself.

Comment 13: A timeframe of 20 days is an unreasonably short time for a registrant to contact customers and determine if stocks are held. A timeframe of 45-60 days is more reasonable. A timeframe of 10 days is unreasonable. The purpose of the recall is to eliminate the material from use and to have it under control. The process does not have to be completed in a short timeframe.

Response: EPA agrees that the timeframes are very tight. However, the timeframes were purposely kept tight for a number of reasons. The timeframes for conducting a mandatory recall create an incentive for the registrant to conduct a voluntary recall. The Agency fully anticipates using voluntary recall provisions for most situations and requiring mandatory recalls only as necessary. In addition, a mandatory recall doesn't occur until after cancellation proceedings are complete. By the time mandatory recalls occur, the Agency believes there is a need for

completing the recall given the length of time such products have been in storage. The Agency is very concerned that the suspended and canceled pesticide get into the hands of the persons who have the technical knowledge and capability to safely handle and store the pesticide as soon as possible. Finally, the registrants have ample notice of the Agency's intentions to conduct a mandatory recall for a particular pesticide, since the Agency must go through notice and comment rulemaking to conduct a mandatory recall and therefore have sufficient opportunity to prepare for a recall.

Comment 14: USDA was unable to find in the summary of the RIA any allocation for the cost of the seller's reimbursement to purchasers of the cost of recalled pesticides; nonindemnifiable sales taxes and delivery costs; unreimburseable cost of storage of the registrant's inventory; costs incurred in the acquisition of transportation and storage permits; transportation of recalled pesticides to storage and/or disposal facilities; repackaging costs; the cleanup of spills; remediation of site contamination; the shortfall under 50 percent and 25 percent reimbursement schedules; disposal costs; registrant's loss of revenue; and increased agricultural production costs.

Response: The cost of a seller's reimbursement to purchasers of the cost of recalled pesticides is required by FIFRA section 15(b)(2) and therefore not attributable to the rule. The cost of nonindemnifiable sales taxes may be subject to consideration in the RIA; however delivery costs are excluded by statute from indemnification. The statute only provides for recalled pesticides, stocks that are under the registrant's control are not defined as recalled pesticides and not subject to reimbursement. The rule does not require that recalled pesticides be handled as hazardous wastes, and therefore does not require the acquisition of transportation and storage permits, except when the holder (or registrant) decides that it is a waste; then the RCRA RIA would cover this. The costs of transportation to a storage facility have always been paid by the registrant and are not new or extra costs. There is no requirement that disposal be undertaken and therefore costs of transportation to a disposal facility are not attributable to the rule. Repackaging costs at the user level are incurred only when the container is leaking or damaged, are part of the costs of shipping in accordance with DOT specifications and therefore should be considered as a cost under the DOT regulations: The costs of cleanup of spills and remediation of site contamination are not requirements of this rule, and therefore not attributable to this rule. The cost of the shortfall under 50 percent and 25 percent reimbursement schedules are statutory, and therefore not subject to consideration under the RIA. The costs associated with the registrant's loss of revenue and increased agricultural production costs are part of the costs associated with suspension and cancellation of a pesticide and not a subject of this rule.

B. Congressional Committees

As required by FIFRA section 25(a), a copy of this proposed rule was provided to the Committee on Agriculture, Nutrition and Forestry of the U.S. Senate and the Committee on Agriculture of the U.S. House of Representatives. No comments were received.

C. Scientific Advisory Panel

Pursuant to FIFRA section 25(d), a copy of the proposed rule was provided to the Scientific Advisory Panel (SAP). The SAP waived formal review of the proposed rule.

IX. Other Regulatory Requirements

A. Executive Order 12291

Under Executive Order 12291, EPA must judge whether a rule is "major" and therefore requires a Regulatory Impact Analysis. EPA has determined that this proposed rule is not a "major" rule because it will not have an effect on the economy of $100 million or more, and will not have a significant effect on competition, costs, or prices.

B. Regulatory Flexibility Act

Under the Regulatory Flexibility Act [5 U.S.C. 605(b)], EPA has determined that this proposed rule will not have a significant impact on a substantial number of small businesses. In the instances where a small business may hold a registration for a suspended and canceled pesticide, the distribution of the pesticide is usually limited and the costs of recalling the pesticide are less. In most cases, small businesses are distributors of pesticides produced by larger companies and may therefore pass the recalled pesticide to the registrant for storage and management.

C. Paperwork Reduction Act

This proposed rule and associated information collection request (ICR) amend a previously approved ICR (OMB Clearance No. 2070-0110) and imposes additional burden hours as a result. The information collection requirements in this proposed rule have been submitted for approval to the Office of Management and Budget(OMB) under the Paperwork Reduction Act, 40 U.S.C. 3501 et seq. An Information Collection Request document has been prepared by EPA (ICR No. 1520.01) and a copy may be obtained from Chief, Information Policy Branch, PM-223, Environmental Protection Agency, 401 M St., SW., Washington, DC 20460.

Public reporting burden for collection of information under this proposed rule is estimated to average 287 hours per response, including time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

Send comments regarding the burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Chief, Information Policy Branch, PM-223, U.S. Environmental Protection Agency, 401 M St., SW., Washington, DC 20460; and to the Office of Information and Regulatory Affairs, Office of Management and Budget, Washington, DC 20503, marked "Attention: Desk Officer for EPA."

List of Subjects in 40 CFR Part 165

Environmental protection, Pesticides, Pesticide management, Indemnification, Reimbursement, Reporting and recordkeeping requirements.

Dated: April 21, 1993.

Carol M. Browner,

Administrator.

Therefore it is proposed that 40 CFR chapter I, subchapter E, part 165 be amended as follows:

1. The authority citation for part 165 continues to read as follows:

Authority: 7 U.S.C. 136q and 136w.

2. The table of contents for part 165 is revised, to read as follows:

PART 165—REGULATIONS FOR THE ACCEPTANCE OF CERTAIN PESTICIDES AND RECOMMENDED PROCEDURES FOR THE DISPOSAL AND STORAGE OF PESTICIDES AND PESTICIDES CONTAINERS

Subpart A—General

Sec.
165.1 Authorization and scope.
165.3 Definitions.
165.5 Acceptable pesticides.
165.7 Request for acceptance
165.8 Delivery.
165.10 Disposal
165.11 Recommended procedures for the disposal of pesticides.
165.12 Procedures not recommended.
165.14 Recommended procedures for the disposal of pesticide containers and residues.

VOL 58 ISS 85 MY 5 1993 UMI

Sec.
165.16 Recommended procedures and criteria for storage of pesticides and pesticide containers.
165.18 Procedures for disposal and storage of pesticide-related wastes.

165.196 Enforcement.
165.198 Pesticides subject to mandatory recall. [Reserved]

Subpart K—Storage And Disposal Plans; Reimbursement Of Storage Costs

165.200 Scope and applicability.
165.203 Definitions.
165.205 Submission of storage and disposal plan.
165.207 Criteria for the evaluation of storage and isposal plans.
165.208 Contents of storage and disposal plans.
165.210 Agency action.
165.212 Reimbursement of storage costs.
165.214 Procedures for submission of storage reimbursement claims.
165.216 Additional requirements for 25-percent reimbursement claims.
165.217 Final Agency decision.
165.218 Recordkeeping.

Subpart L—Indemnification

165.220 General.
165.223 Definitions.
165.225 Eligibility criteria.
165.227 Limitations on amount of indemnification.
165.230 Payment of indemnification.
165.232 Seller's requirement to reimburse.
165.234 Procedures for submission of claims.
165.236 Agency review of claim.

Subpart A—General

3. Part 165 is amended by redesignating existing §§ 165.1 through 165.11 (subparts A through D) as subpart A and by renumbering those sections as follows:

Old section	New section
165.1	165.3
165.2	165.1
165.3	165.5
165.4	165.7
165.5	165.8
165.6	165.10
165.7	165.12
165.8	165.11
165.9	165.14
165.10	165.16
165.11	165.18

Subparts B—H [Reserved]

4. By reserving subparts B through D and by adding and reserving subparts E through H.

§ 165.1 [Amended]

5. In newly designated § 165.1, paragraph (a), by changing the reference "§ 165.8(a)(6)" to read "paragraph (a)(6) of this section" and in paragraph (d) by changing the reference "§ 165.10(a)" to read "§ 165.16(a)."

§ 165.3 [Amended]

6. In newly designated § 165.3, paragraph (d), by changing the reference "§ 165.10" to read "§ 165.16."

7. By revising newly designated § 165.5, to read as follows:

§ 165.5 Acceptable pesticides.

(a) This subpart applies only to those pesticides that were suspended and subsequently canceled under section 6(c) of the Act before December 24, 1988.

(b) The Administrator will accept for safe disposal only those pesticides identified in paragraph (a) of this section, the registrations of which have been canceled, after first having been suspended to prevent an imminent hazard during the time required for cancellation proceedings as specified in section 6(c) of the Act. No other pesticides will be accepted pursuant to section 19(a) of the Act (prior to amendment in 1988), and nothing herein shall obligate the Federal Government to own or operate any disposal facility.

§ 165.10 [Amended]

8. In newly designated § 165.10 by revising the phrase "in subparts A and C of this part" to read " in subpart A of this part."

§ 165.11 [Amended]

9. In newly designated § 165.11 by amending paragraphs (a)(5), (b)(5), and (c)(3) by changing the references to "§ 165.10" to read "§ 165.16" and in paragraphs (b)(6) and (c)(1) by changing the references to to "§ 165.8(a)(6)" and "§ 165.8(a)(4)", respectively, to read "§ 165.11(a)(6)" and "§ 165.11(a)(4)," respectively.

§ 165.14 [Amended]

10. In newly designated § 165.14, paragraphs (a) and (d), by changing the reference "§ 165.8(a)" and "§ 165.8", respectively, to "§ 165.11(a)" and "§ 165.11" respectively.

§ 165.18 [Amended]

11. In newly designated § 165.18, paragraph (a), by revising the phrase "§ 165.7 and § 165.8" to read "§§ 165.11 and 165.12" and by amending paragraph (b) by changing the reference "§ 165.10" to read "§ 165.16."

12. By adding new subparts I, J, K, and L, to read as follows:

Subpart I — Voluntary Recall Plans

§ 165.160 Scope.

This subpart describes the procedures EPA will use in requesting and approving a voluntary recall plan under section 19(b)(2) of the Act for pesticides that have been suspended and subsequently canceled under section 6. The subpart sets out the elements of a voluntary recall plan that must be addressed for EPA to determine whether the plan is adequate to protect health and the environment, the consequences of failure to submit a plan and the consequences of failure to adhere to the plan after the Administrator orders the plan carried out.

§ 165.161 Applicability.

This subpart applies to each registrant of a suspended and canceled pesticide if the Administrator finds that a voluntary recall by the registrant and others in the chain of distribution of the suspended and canceled pesticide may be as safe and effective as a mandatory recall. Where specified, this subpart applies to the registrant's own inventory of suspended and canceled pesticides as well as to the recalled pesticides.

§ 165.163 Definitions.

Terms used in this subpart shall have the meanings set forth in the Act. In addition, the following terms are defined for the purposes of this subpart.

End user. Means any person who holds any quantity of a suspended and canceled pesticide which was obtained for purposes of applying or using the pesticide, rather than for purposes of distributing or selling it or further processing it for distribution or sale.

Holder. For purposes of this subpart means the owner of a pesticide at the time of cancellation of a pesticide that has previously been suspended under FIFRA section 6(c) or the owner of a pesticide at the end of the period designated for sales of existing stocks of the pesticide.

Management options. Means the methods to manege the pesticide after it has been recalled, including, but not limited to, legal pesticide and non-pesticide use, recycling (e.g., recovery), treatment (e.g., neutralization, deactivation of the active ingredient, degradation), burning for energy or materials recovery, and disposal.

Recall. Means the process of transferring stocks of a suspended and canceled pesticide, other than those stocks owned by the registrant, from the holder of the pesticide back to the custody and control of the registrant who produced the pesticide and all activities necessary to accomplish this.

§ 165.165 Submission procedures.

(a) *Who must submit a plan.* EPA will request the registrant of a suspended and canceled pesticide to submit a recall plan if the Administrator determines that a voluntary recall is appropriate pursuant to § 165.161. The request will specify the level of the distribution chain to be included in the recall plan.

(b) *Notification to registrant.* EPA will request the registrant, either through a written request by certified mail or through a notice in the **Federal Register**, to develop and submit a recall plan. Within 15 days after receipt of EPA's request or within the time specified by the Notice, the registrant must respond, in writing, indicating whether he will submit the plan. The voluntary recall plan must be submitted within 60 days after receipt of EPA's initial request or publication in the **Federal Register**.

(c) *Failure to respond or submit.* EPA will invoke the mandatory recall procedures of subpart J of this part by promulgation of a rule in the **Federal Register** if:

(1) The registrant fails to respond within 15 days indicating that he intends to submit a plan.

(2) The registrant fails to submit such a plan within 60 days after receipt of EPA's request for a recall plan, or publication of a notice in the **Federal Register** requesting the registrant to submit a recall plan.

§ 165.167 Contents of a voluntary recall plan.

Each voluntary recall plan shall the information requested in paragraphs (a) through (i) of this section:

(a) *Identification of persons responsible for the recall.* The recall plan must identify the primary contact person within the registrant's company who is responsible for conducting the recall together with his business address and telephone number. In addition, the plan must identify any other persons, within the company or in the distribution chain of the pesticide, who will be responsible for assuring that specific elements of the recall are carried out, and shall describe their responsibilities.

(b) *Identification of potential holders of the pesticide.* (1) The recall plan must define the level of recall (wholesaler, distributor, retailer, user) that the registrant will undertake, and include a description of the steps the registrant will take to contact potential holders at each level of recall. The plan must specifically address the steps that the registrant will take with regard to supplemental registrants to ensure that holders of the supplemental registrant's products are notified.

(2) The plan must provide that holders of the registrant's suspended and canceled pesticide not specifically identified by the recall plan shall, upon request to the registrant, be afforded the same opportunity for recall as those covered by the recall plan.

(c) *Information to be obtained from holders.* The plan must list the information that will be obtained from each potential holder contacted by the registrant. At a minimum, the plan shall prescribe the following items of information to be collected from each person contacted:

(1) Name, address, (both street and, if applicable, P.O. Box, city, state and zip code) and telephone number of the person.

(2) Whether the potential holder possesses any stocks of the suspended and canceled pesticide and if the potential holder does possess the pesticide in question, the following information about each pesticide:

(i) Brand name(s) and EPA Registration Number(s) of the pesticide(s).

(ii) Size (volume or weight) and type(s) of containers in his possession.

(iii) Number of units of each size container full and the number of containers partially full.

(iv) Total amount (volume or weight) of the suspended and canceled pesticide held.

(3) The physical location of the stocks of pesticides, if not at the address of the holder.

(d) *Information to be provided to holders of the pesticide.* The plan shall describe the information on the recall that will be furnished to each holder of a suspended and canceled pesticide subject to recall. If information is not known at the time of initial notification of holders, the plan must include followup notification by the registrant when the information is available. At a minimum, the following topics must be included:

(1) Notification that the material is suspended and canceled and must not be sold or distributed and, if applicable, used.

(2) A description of the registrant's responsibilities and planned activities in conducting the recall, with respect to:

(i) Interim storage of the pesticide in the holder's possession.

(ii) Preparation of the pesticide for transport.

(iii) Transportation of the pesticide.

(3) A description of the responsibilities of the holder if he chooses to participate in the recall, with respect to:

(i) Interim storage of the pesticide, i.e., safe storage of the pesticide by the holder until the registrant takes custody.

(ii) Preparation of the pesticide for transport. The registrant must provide necessary information on proper packing, consolidation of stocks, or separation of pesticide products, including any applicable laws and regulations that must be complied with.

(iii) Transportation of the pesticide. The registrant must provide sufficient information to the holder to ensure the safe transportation of the pesticide, including any information on applicable laws and regulations that must be complied with.

(4) A date or schedule for taking the pesticide into the registrant's custody, whether or not the pesticide will be physically removed from the holders location at that time.

(5) Notification that if a Stop Sale, Use or Removal Order (SSURO) has been issued, it must be vacated by the official who issued the SSURO prior to anyone moving the pesticide, and information on the steps for requesting the vacation of a Federal and/or State SSURO if one has been issued.

(6) Management options available for the pesticide, including, but not limited to, a discussion of:

(i) The management options being considered by the registrant.

(ii) The management options available to the holder if he chooses not to participate in the recall.

(iii) If any of the holder's management options include discarding the pesticide as a solid waste (as defined under the Resource Conservation and Recovery Act regulations 40 CFR part 240.101(y)), then the registrant must provide the holder with any information the registrant has which could help the holder to determine whether the pesticide meets any of the listing descriptions in 40 CFR part 261, subpart D, or exhibits any of the hazardous

VOL 58 ISS 85 MY 5 1993 UMI

waste characteristics identified in 40 CFR part 261, subpart C.

(7) Information on reimbursement of the purchase price of the pesticide in accordance with § 165.232, if applicable.

(8) The name, address and telephone number of a contact person or authorized representative of the registrant for further information or questions.

(e) *Transportation of recalled pesticides.* (1) The recall plan must describe the means by which the pesticide will be transported from each holder to a storage facility or to a facility carrying out a chosen management option.

(2) The plan must describe how the registrant intends to provide for transportation. Such description must include a discussion of any arrangements that are or will be made by the registrant, and who will pay for costs of transportation. The registrant must provide transportation at no cost to a holder, if the holder requests the registrant to provide transportation, unless the parties have agreed to an alternative cost allocation as provided by section 19(d)(1) of the Act. In no case shall necessary transportation be delayed pending agreement on such allocation of costs.

(3) The plan must state that, regardless of possible cost allocation between the registrant and the holder, the registrant will ensure that any necessary transportation arranged by the registrant is accomplished safely, and in accordance with applicable laws and regulations.

(4) The plan must state that, upon taking custody of the pesticide, the registrant will provide the holder with a receipt, which will include the following information:

(i) The name, address (both street and P.O. Box, if applicable, city, state and zip code;) and telephone number of the holder.

(ii) The EPA Registration Number of the pesticide(s).

(iii) The number of units of each size (volume or weight) container.

(iv) The total amount (volume or weight) of pesticide received from the holder.

(v) The date the registrant or his agent took custody of the pesticide.

(f) *Storage of recalled pesticides.* The plan must list the address (both street and P.O. Box, if applicable, city, state and zip code) of each storage facility where recalled pesticides will be stored. The plan must specify that storage of recalled pesticides will be in accordance with all applicable laws and regulations governing storage.

(g) *Transfer or movement of recalled pesticides from the storage area.* The recall plan must specify that prior to moving the recalled pesticide from one storage facility to another storage facility, or utilizing additional storage facilities, the registrant will notify EPA at the address listed in § 165.174(c), 15 days prior to the change.

(h) *Management options.* The recall plan must list the available options for management of the recalled pesticide known by the registrant.

(1) If the registrant chooses to hold the recalled pesticide in storage, then after receipt of the pesticide from the holder, the registrant must evaluate the management options and provide information on the options being considered to EPA in an update to the recall plan. Such updates may be made at the time the registrant submits his quarterly reports.

(2) If the registrant chooses to pursue one or more of the management options besides storage, the registrant must update the recall plan. Such updates may be made at the time the registrant submits his quarterly reports as specified in § 165.174(a).

(i) *Recall schedule.* The recall plan must provide a schedule for conducting the recall, identifying interim milestones such as completing identification of holders, completing contact with holders, beginning transport, and completion of the recall. A recall is considered complete when all stocks offered for recall by all holders have been turned over to the custody of the registrant and are either in storage or the registrant is pursuing one of the management options identified. The registrant must adhere to the recall schedule unless an extension or modification of the schedule is approved in writing by EPA. The recall plan must specify that requests for modifications or extensions of the schedule will be submitted in writing to the EPA Office of Compliance Monitoring at the address given in § 165.174(c) at least 10 working days prior to the date of the milestone deadline.

(j) *Alternatives to elements of the plan.* Where any of the elements in paragraphs (a) through (i) of this section are not appropriate for the circumstances of a particular voluntary recall, the recall plan may provide an alternative to one or more of the elements. The plan must explain why the particular element is not appropriate and demonstrate that the plan accomplishes the same objectives as the elements in paragraphs (a) through (i) of this section.

(k) *Special conditions.* In addition to paragraphs (a) through (i) of this section, if the physical or chemical properties of the pesticide warrant special storage or handling, in the request for submission of a recall plan, EPA may require that registrants include these special conditions in the plan.

§ 165.170 Approval of the recall plan.

(a) The recall plan must be submitted to the address listed in § 165.174(c). If EPA approves the plan, it will notify the registrant and order the recall either by notice in the **Federal Register** or by certified mail to the registrant or both. Generally, EPA will approve the plan if it determines that:

(1) The plan is complete; and

(i) the plan includes each element listed in § 165.167(a) through (i); or

(ii) If the plan contains alternatives to one or more of the elements as provided in § 165.167(j), that the plan adequately accomplishes the same objectives as the elements in § 165.167(a) through (i).

(2) The registrant has proposed a recall to the level in the distribution chain specified in the recall request.

(3) If conducted according to the plan, the recall is likely to be effective in recalling stocks of suspended and canceled pesticides to the level of distribution the registrant has proposed, in a timely manner.

(4) If conducted according to the plan, the recall is likely to be adequate to protect health and the environment.

(b) If EPA determines that the recall plan is not adequate to protect health or the environment, EPA may, at its discretion, afford the registrant the opportunity to modify the plan, or notify the registrant of its intent to reject the plan. The notification of intent to reject will explain the plan's inadequacies and the basis for the inadequacies. Registrants will then have 15 days after receipt of the notification to present comments or arguments either orally or in writing to the Agency official who is responsible for a final determination on the adequacy of the plan. The only issue for such informal hearing is whether the plan is adequate to protect public health or the environment.

(c) If, after an informal hearing as described in paragraph (b) of this section, EPA makes a final determination that the plan does not adequately protect health and the environment, it will notify the registrant by certified mail, and require by regulation that the mandatory recall procedures of subpart J of this part be instituted.

(d) EPA will evaluate the effectiveness of the recall based on the reports

required by § 165.174. At any time during or after the recall, EPA may reevaluate its determination of adequacy of the plan to protect health and the environment and, after an opportunity for an informal hearing as described in paragraph (b) of this section, may determine that the plan is inadequate. EPA will notify registrants by certified mail of a final determination of inadequacy, and require by regulation that the mandatory recall procedures of subpart J of this part be instituted.

§ 165.172 Recordkeeping.

Registrants shall keep the records listed below for pesticides recalled under the recall plan and records required by paragraphs (c), (f), (g), and (h) of this section for suspended and canceled pesticides owned by the registrant. The registrant conducting the voluntary recall must keep records concerning the recall for a period of 3 years following the completion of the recall. The registrant shall make the records available to EPA or its designated representative for inspection and copying, or shall provide them to EPA upon request. The following records shall be maintained:

(a) A copy of the recall plan approved by EPA with any approved modifications.

(b) The names, addresses and telephone numbers of all persons identified by the registrant as potential holders of the suspended and canceled pesticide, and other persons who identified themselves to the registrant as holders of the registrant's pesticide seeking to have it recalled.

(c) Records of the information required by § 165.167(c) concerning the identity and quantity of the suspended and canceled pesticide in the hands of holders. These records must be updated to show any changes in the amount of the suspended and canceled pesticide being held by each holder, until such time as the registrant takes custody of the pesticide.

(d) For each holder, the date when the pesticide was transferred from the custody of the holder to the custody of the registrant and a copy of receipt of the pesticide, or notation of the fact that the holder declined to participate in the recall and the reason for the refusal.

(e) A copy of the written information provided to the holders regarding interim storage and transportation.

(f) If the pesticide was transported by the registrant, documentation to show that the pesticide was transported in accordance with the recall plan.

(g) Records verifying that the pesticide is or was being stored in a facility meeting storage requirements specified in an order issued under section 6 and any other applicable law and regulations.

(h) Records of receipt of the recalled pesticide at the storage facility. These records shall be maintained at the storage facility.

§ 165.174 Reporting.

(a) If EPA orders that the voluntary recall be conducted, the registrant must report, in writing, at least quarterly during the recall period to EPA. Each report must contain the following information:

(1) The number of persons identified to date as potential holders of the suspended and canceled pesticide.

(2) The number of potential holders contacted to date.

(3) The number of persons who were identified as holders of the pesticide.

(4) For each holder, the information required by § 165.167(c).

(5) The total amount of pesticide subject to recall.

(6) The amount of suspended and canceled pesticide transferred from the custody of the holder to the registrant's storage facility.

(7) The amount of pesticide owned by the registrant and the physical location where it is being stored.

(b) Within 45 days after completion of the recall (see § 165.167(i)) the registrant must submit a final report to EPA, in writing, on the outcome of the recall action. The final report will consist of:

(1) For each person from whom the registrant accepted suspended and canceled pesticides, the information required by § 165.167(c) and when the pesticide was transferred to the custody of the registrant.

(2) If the holder has declined to participate in the recall, the reason for the refusal, if known.

(3) The location of each storage facility where the suspended and canceled pesticide was or is being held.

(4) The management options being considered by the registrant for the recalled material or, if the registrant is pursuing a management option for the recalled material, the option chosen.

(c) Reports to the EPA shall be sent to the following address unless otherwise directed by EPA: Director, Compliance Division, Office of Compliance Monitoring (EN-342), U. S. Environmental Protection Agency, 401 M St., SW., Washington, DC 20460.

§ 165.176 Enforcement.

Failure by a registrant to comply with an order to conduct a voluntary recall according to the plan approved by the Administrator under section 19(b) may be a violation of FIFRA sections 12(a)(2)(B), 12(a)(2)(M), or 12(a)(2)(N) depending on the offense. Additionally, the Administrator may take action against persons subject to a voluntary recall order who have failed substantially to comply with the terms of such an order under FIFRA sections 13 and 14, including seeking civil penalties of up to $5,000 per offense, and criminal penalties of up to $50,000 and/or 1 year imprisonment per offense, under section 14 of FIFRA, or seek injunctive relief under section 16(c) of FIFRA.

Subpart J—Mandatory Recalls

§ 165.180 Scope.

This subpart describes the minimum requirements for a mandatory recall of suspended and canceled pesticides. While the requirements in this subpart must be adhered to in all mandatory recalls, nothing in this subpart is intended to limit the scope of the recall. Persons required to conduct a recall may augment these procedures or conduct a broader recall program than is required by this subpart.

§ 165.181 Applicability.

The requirements of this subpart apply to any person who is or was a registrant, distributor or seller of the pesticide subject to recall, or any successor in interest to such a person, and who is identified by regulation as being responsible for conducting the recall. Where specified, this subpart applies to the registrant's own inventory of suspended and canceled pesticides as well as to the recalled pesticides.

§ 165.183 Definitions.

Terms used in this subpart shall have the meanings set forth in the Act. In addition, the following terms are defined for the purposes of this subpart.

Holder. For the purposes of this subpart means the owner of a pesticide at the time of cancellation of a pesticide that has previously been suspended under section 6(c) of the Act or the owner of a pesticide at the end of the period designated for sales of existing stocks of the pesticide.

Management options. Means the methods to manage the pesticide after it has been recalled, including (but not limited to) legal pesticide and non-pesticide use, recycling (e.g., recovery), treatment (e.g., neutralization, deactivation of the active ingredient, degradation), burning for energy or materials recovery, and disposal.

Recall. Means the process of transferring stocks of a suspended and canceled pesticide, other than those stocks owned by the registrant, from the

VOL
58
ISS
85
MY
5
1993
UMI

holder of the pesticide back to the custody and control of the registrant who produced the pesticide and all activities necessary to accomplish this.

§ 165.186 When a mandatory recall will be required.

A mandatory recall will be required when:

(a) The Administrator determines that a recall is necessary to protect human health and the environment but does not request submission of a voluntary recall plan from the registrant under subpart I of this part.

(b) The Administrator determines that a voluntary recall plan, submitted by a registrant after EPA solicitation, is inadequate to protect human health or the environment.

(c) A voluntary recall plan is not submitted by a person requested to do so under § 165.165.

(d) The Administrator determines, during or after the recall, in accordance with § 165.170(d) that the voluntary recall plan was not adequate to protect health and the environment.

§ 165.188 Initiation of the recall.

(a) *Proposed rule for mandatory recall.* EPA will notify persons required to conduct a mandatory recall (the recallers) by proposing a regulation requiring a recall of a suspended and canceled pesticide.

(1) Proposed mandatory recalls will be published either concurrent with the Notice of Intent to Cancel in the **Federal Register**, or through a notice published in the **Federal Register** after the Notice of Intent to Cancel has been published.

(2) The proposal will incorporate appropriate requirements of this subpart and specify the level of recall in the chain of distribution required.

(3) The proposal may include special terms for the conduct of the recall not addressed in these regulations (e.g., special storage or handling conditions).

(4) An appropriate period for public comment will be provided.

(b) *Final rule for mandatory recall.* EPA will publish a final rule in the **Federal Register** for the mandatory recall, specifying the effective date for initiation of the recall.

§ 165.190 Requirements of the recall.

A mandatory recall must be conducted as described in this section.

(a) *Responsibilities of registrants.* Each registrant is responsible for:

(1) Developing a recall plan.

(2) Coordinating the recall.

(3) Ensuring that all persons to whom the registrant sold or distributed the pesticide have received a copy of the recall plan.

(4) Providing for storage of recalled pesticides at no cost to holders, subject to any alternative cost allocation as provided by section 19(d)(1) of the Act. This includes reimbursement of storage costs incurred by recallers under the terms of the recall plan.

(5) At the request of any holder of the registrant's pesticide, providing for transportation of the pesticide to a storage facility or to a facility carrying out a chosen management option, at no cost to the holder. This includes reimbursement of transportation costs incurred by recallers under the terms of the recall plan. If an end-user declines to participate in a recall because of transportation costs, then the registrant must inform the end-user in writing that the registrant will provide transportation at no cost, upon request.

(6) Collecting and reporting information on the conduct of the recall from all participants in the recall.

(b) *Responsibilities of other recallers.* Each recaller who is not a registrant (supplemental registrant, distributor, seller, or any successor in interest to such a person), and who is subject to the recall regulation must conduct a recall by:

(1) Notifying his customers of the recall.

(2) Obtaining registrant's recall plan, which may include responsibilities for recording information as specified in paragraph (e) of this section and providing certain information to holders as specified in paragraph (f) of this section.

(3) If he has a storage facility, making it available for storage of pesticide recalled from his customers, if specified by the registrant's recall plan.

(4) If requested by a holder who obtained the pesticide from him, providing for proper transportation of the recalled pesticide to his storage facility, unless the registrant's recall plan specifies otherwise. If the registrant's recall plan specifies transportation to a facility other than the recaller's, the registrant must provide for transportation to such facility.

(5) Transporting all pesticides under his custody, as well as pesticides recalled from his customers, to the person recalling it or directly to the registrant, as specified in the registrant's recall plan.

(6) Maintaining the records required by § 165.192, and furnishing these records to the registrant.

(7) Reporting to the registrant the information required by § 165.194.

(c) *Recall plan.* (1) Within 10 days after the effective date for initiation of the recall, the registrant shall develop a written plan for conducting a recall in accordance with this subpart. Registrants may form consortia to develop a single recall plan, however, all members of the consortia are legally responsible for conducting the recall according to the plan, subject to the limitation in section 19(d)(3) of the Act. No person other than the registrant is required to develop a recall plan.

(2) The plan must be specific to the particular mandatory recall action and must be distributed, within 20 days after the effective date for initiation of the recall, to all persons, including supplemental registrants, to whom the registrant sold or distributed the pesticide that is subject to recall.

(3) The recall plan must include the name, address and telephone number of the person who is responsible for coordinating the recall and any other persons, within the company, who will be responsible for specific elements of the recall, (e.g., transportation arrangements from the holder to the registrant's storage facility, receipt of records from recallers) and their responsibilities.

(d) *Identification of primary contact.* (1) Each registrant must, within 10 days after the effective date for initiation of the recall, provide EPA with the name, address and telephone number of the person responsible for coordinating the recall. This information must be mailed to the address listed in § 165.194(g).

(2) All other persons responsible for conducting the recall (distributors, dealers, sellers, supplemental registrants, etc.) must, within 10 days after receipt of the recall plan, provide EPA with the name, address and telephone number of the person responsible for coordinating the recall. This information must be mailed to the address listed in § 165.194(g).

(e) *Identification and contact of holders.* Persons responsible for conducting a recall must take all reasonable steps to identify and contact all persons to whom he sold or distributed the suspended and canceled pesticide that is subject to recall. Holders of the registrant's suspended and canceled pesticide not specifically covered by the recall plan must, upon request to the recaller who sold them the pesticide, be afforded the same opportunity for recall as those covered by the recall plan. Upon contact of persons who may be holders of the suspended and canceled pesticide, the recaller or his representative will:

(1) Record the name, address (both street and P.O. Box, if applicable; city, state and zip code) and telephone number of the potential holder.

(2) Determine and record if the potential holder does possess any stocks of the suspended and canceled pesticide; and if the potential holder does possess the pesticide(s) in question, record the:

(i) Brand name(s) and EPA Registration Number(s) of the suspended and canceled pesticide(s).

(ii) Size (volume or weight) and type(s) of the containers in his/her possession as well as the condition of the containers (intact, rusting, leaking, etc.).

(iii) Number of units of each size container full and the number of containers partially full.

(iv) Total amount (volume or weight) of the pesticide held.

(3) Record the physical location of the stocks of the pesticide, if not at the address of the holder.

(f) *Information to be provided to the holder of the pesticide.* Each recaller shall provide the holders of suspended and canceled pesticides identified under paragraph (e) of this section, orally, immediately after verification that the person is a holder, and in writing within 10 days, the following information:

(1) Notification that the material is suspended and canceled and may not be sold or distributed.

(2) Information concerning interim storage of the pesticide by the holder until such time as the recaller takes custody of the pesticide.

(3) Information on proper transportation of the pesticide, and, if requested, how the registrant will provide for transportation of the pesticide to a specified storage facility or to a facility carrying out a chosen management option.

(4) A means for a holder who is an end-user (e.g., a response form, card or telephone number for the end-user's use) to inform the recaller whether he wishes to participate in the recall, and of his reasons for not participating.

(5) Schedule for taking the pesticide into the registrant's custody.

(6) Notification that if a Stop Sale, Use or Removal Order (SSURO) has been issued, it must be vacated by the official who issued the SSURO prior to anyone moving the pesticide and the steps for requesting the vacation of a Federal and/or State SSURO if one has been issued.

(7) Information on reimbursement for the purchase price of the pesticide, if applicable, in accordance with § 165.232.

(8) Management options available for the pesticide, including, but not limited to, a discussion of:

(i) The management options being considered by the registrant.

(ii) The management options available to the holder if he chooses not to participate in the recall.

(iii) If any of the holder's management options include discarding the pesticide as a solid waste (as defined under the Resource Conservation and Recovery Act regulations), then the registrant must provide the holder with any information the registrant has which could help the holder to determine whether the pesticide meets any of the listing descriptions in 40 CFR part 261, subpart D, or exhibits any of the hazardous waste characteristics identified in 40 CFR part 261, subpart C.

(g) *Transportation of recalled pesticides.* (1) No person may transport recalled pesticides except in accordance with all applicable Federal and State laws and regulations.

(2) Each recaller shall provide the holder with information on the proper transportation of the pesticide to a storage facility or to a facility carrying out a chosen management option.

(3) At the request of any holder of the registrant's pesticide, the registrant shall provide for transportation of the suspended and canceled pesticide at no cost to the holder, unless the registrant and the holder agree to an alternative cost allocation as provided by section 19(d)(1) of the Act. Necessary transportation shall not be delayed pending agreement on the allocation of costs.

(4) Each recaller who takes custody of a recalled pesticide must provide the holder with a receipt for the material taken into custody. The receipt shall have:

(i) The name, address (both street and P.O. Box, if applicable, city, state and zip code) and telephone number of the holder.

(ii) The EPA Registration Number of the pesticide(s).

(iii) The number of units of each size container both full and partially full.

(iv) The total amount (volume or weight) of pesticide received from the holder.

(v) The date the registrant took custody of the recalled pesticide.

(h) *Storage of recalled pesticides.* Recallers who store recalled pesticides must notify EPA in writing of the address of each storage facility where the recalled pesticide will be stored. This information must be reported to EPA as specified in § 165.194(b)(2). If that person wishes to move the recalled pesticide to a storage facility not previously listed or utilize additional storage facilities, he must notify EPA at the address listed in § 165.194(f) and provide the address of the new facility 15 days prior to the change, unless movement of the recalled pesticide is to the registrant's storage facility. Storage of recalled pesticides must be in accordance with all applicable laws and regulations governing storage.

(i) *Management options.* The recall plan must list a range of available options for management of the recalled pesticide.

(1) If the registrant chooses to hold the recalled pesticides in storage, then after receipt of the pesticide from the holder, the registrant must evaluate the management options and provide information on the options being considered to EPA in an update to the recall plan. Such updates may be made at the time the registrant submits his interim or final reports.

(2) If the registrant chooses to pursue one or more of the management options besides storage, the registrant must update the recall plan. Such updates may be made at the time the registrant submits his interim report.

(j) *Completion of the recall.* (1) The recall shall be concluded within 6 months of the date of initiation. A recall action is considered complete when all stocks offered for recall by the holder have been turned over to the custody of the registrant and are either in storage or the registrant is pursuing one of the management options identified and a final report has been filed with EPA. The responsibilities of recallers other than the registrant have been completed when all stocks identified by the recaller have been transferred to the custody and control of the registrant and all required reporting has been completed.

(2) If a recaller needs more time to complete the recall, he may submit a written request for an extension stating the reason for the requested extension to the EPA Office of Compliance Monitoring at the address listed in § 165.194(g) at least 10 working days prior to the end of the 6 month period. The Office of Compliance Monitoring will review the request and either approve or deny the request. If the request is denied, the original completion date applies.

§ 165.192 Recordkeeping.

(a) Each recaller must develop and maintain the following records:

(1) A copy of the recall plan developed by the registrant.

(2) Lists of all persons other than those identified and contacted by the recaller as potential holders of the registrant's suspended and canceled pesticide(s), i.e., persons who identified themselves to the recaller as holders of the suspended and canceled pesticide seeking recall.

(3) Records of the information required by § 165.190(e) concerning the

identity and quantity of the suspended and canceled pesticide in the hands of holders. These records must be kept current so as to accurately show any changes in the amount of the suspended and canceled pesticide being held until the registrant takes custody of the pesticide.

(4) For each holder, the date when the pesticide was transferred from the custody of the holder to the custody of the person conducting the recall or the registrant and a copy of the receipt of the pesticide, or notation of the fact that the pesticide was not offered for recall and the reason why it was not offered.

(5) A written copy of the information provided to the holders regarding interim storage and transportation.

(6) Documentation of how the recalled pesticide was transported to a storage facility, if applicable.

(7) Documentation showing that the recalled pesticide is being stored in a storage facility meeting all applicable storage requirements. If additional storage facilities were used or the recalled pesticide was moved from one storage facility to another, the names and addresses of the additional storage facilities must be maintained, if applicable.

(8) Records of receipt of the recalled pesticide at the storage facility, if applicable. These records shall be maintained at the storage facility.

(b) Registrants are required to keep the following records for their own inventory of suspended and canceled pesticides.

(1) The total amount of suspended and canceled pesticide owned by the registrant.

(2) Documentation that the pesticides were properly transported to a storage facility.
